Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the statement of profit and loss.

De-recognition

A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the de-recognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the statement of profit and loss.

Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the standalone balance sheet if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

3.11 Investment in subsidiaries

Investments (equity instruments as well as subordinate debt) in subsidiaries are carried at cost less accumulated impairment losses, if any. Where an indication of impairment exists, the carrying amount of the investment is assessed and written down immediately to its recoverable amount. On disposal of investments in subsidiaries, the difference between net disposal proceeds and carrying amounts are recognised in the Statement of Profit and Loss.

3.12 Foreign currencies

The Trust's financial statements are presented in INR, which is also the Trust's functional currency. The Trust does not have any foreign operation and has assessed the functional currency to be INR.

Transactions and balances

Transactions in foreign currencies are initially recorded by the Trust at their respective functional currency spot rates at the date the transaction first qualifies for recognition. Monetary assets and liabilities denominated in foreign currencies are translated at the functional currency spot rates of exchange at the reporting date.

Differences arising on settlement or translation of monetary items are recognised in the statement of profit or loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions.

3.13 Fair value measurement

The Trust measures financial instruments, such as, derivatives at fair value at each balance sheet date.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:

► In the principal market for the asset or liability, or

► In the absence of a principal market, in the most advantageous market for the asset or liability.

The principal or the most advantageous market must be accessible by the Trust.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Trust uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

► Level 1 — Quoted (unadjusted) market prices in active markets for identical assets or liabilities
► Level 2 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable
► Level 3 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable

For assets and liabilities that are recognised in the financial statements on a recurring basis, the Trust determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

The Trust's Management determines the policies and procedures for both recurring fair value measurement, such as derivative instruments and unquoted financial assets measured at fair value, and for non-recurring measurement, such as assets held for distribution in discontinued operations.

At each reporting date, the Management analyses the movements in the values of assets and liabilities which are required to be remeasured or re-assessed as per the Trust's accounting policies. For this analysis, the Management verifies the major inputs applied in the latest valuation by agreeing the information in the valuation computation to contracts and other relevant documents.

The management also compares the change in the fair value of each asset and liability with relevant external sources to determine whether the change is reasonable.

On an annual basis, the Management of Investment Manager presents the valuation results to the Audit Committee and the Trust's independent auditors. This includes a discussion of the major assumptions used in the valuations.

For the purpose of fair value disclosures, the Trust has determined classes of assets and liabilities on the basis of the nature, characteristics and risks of the asset or liability and the level of the fair value hierarchy as explained above.

This note summarises accounting policy for fair value. Other fair value related disclosures are given in the relevant notes.

- Disclosures for Significant accounting judgement, estimates and assumptions (note 31)
- Financial instruments (including those carried at amortised cost) (note 25 and 26)
- Quantitative disclosure of fair value measurement hierarchy (note 25 and 26)

3.14 Distribution to unit holders

The Trust recognises a liability to make cash distributions to unit holders when the distribution is authorised and a legal obligation has been created. As per the InvIT Regulations, a distribution is authorised when it is approved by the Board of Directors of the Investment Manager. A corresponding amount is recognised directly in equity.

3.15 Cash and cash equivalents

Cash and cash equivalents in the balance sheet comprise cash at banks and on hand and short-term deposits with an original maturity of three months or less, which are subject to an insignificant risk of changes in value.
For the purpose of the statement of cash flows, cash and cash equivalents consist of cash and short-term deposits, as defined above, net of outstanding bank overdrafts as they are considered an integral part of the Trust's cash management.

3.16 Earnings Per Unit (EPU)

Basic earnings per unit are calculated by dividing the net profit for the period attributable to unit holders by the weighted average number of units outstanding during the period.

For the purpose of calculating diluted earnings per unit, the weighted average number of units outstanding during the period are adjusted for the effects of all dilutive potential units.

3.17 New pronouncements issued but not effective

Ministry of Corporate Affairs ("MCA") notifies new standards or amendments to the existing standards under Companies (Indian Accounting Standards) Rules as issued from time to time. For the period ended September 30, 2024, MCA has not notified any new standards or amendments to the existing standards applicable to the Trust.

(₹ in million)

Particulars	As at September 30, 2024 (Unaudited)	As at March 31, 2024 (Audited)
I. Unit capital *		
Issued, subscribed and paid up equity share capital		
At the beginning of the period	1,35,091.23	87,929.33
Issued during the period	-	51,146.50
Less: Capital reduction during the period	(445.48)	(3984.60)
At the end of the period	**1,34,645.75**	**1,35,091.23**

* Under the provisions of the InvIT Regulations, Trust is required to distribute to Unitholders not less than 90% of the net distributable cash flows of the Trust for each financial year. Accordingly, a portion of the Unit Capital contains a contractual obligation of the Trust to pay to its Unitholdcrs cash distributions. Hence, the Unit Capital is a compound financial instrument which contains equity ond liability components in accordance with Ind AS 32 - Financial Instruments. However, in accordance with Chapter 3 and Chapter 4 of the SEBI circular, the Unit capital have been presented as "Equity" in order to comply with the requirements of Section H of Chapter 3 lo the SEBI circular, dealing with the minimum presentation and disclosure requirements for key financial statements. Consistent with Unit Cupital being classified as equity, the distributions to Unitholders is also presented in Statement of Changes in Unitholders' Equity when the distributions are approved by the Board of Directors of Investment Manager.

Units are classified as equity. Incremental costs attributable to the issue of units are directly recorded in equity, net of tax

II. Reconciliation of the number of units outstanding and the amount of unit capital:

Note 24 : Operating Segments

The Trust comprise of owning and investing in infrastructure SPVs to generate cash flow for the distribution to the beneficiaries. Based on the guiding principles given in Ind AS 108 'Operating Segment', this activity falls within a single operating segment and accordingly the disclosures of the Ind AS 108 have not separately been provided.

IRB Infrastructure Trust
Notes to Unaudited Interim Standalone Financial Information as at September 30, 2024

Note 25 : Fair Values

Financial assets and liabilities

The carrying values of financials instruments of the Trust are reasonable and approximations of fair values.

The accounting classification of each category of financial instruments, their carrying amounts and the categories of financial assets and liabilities measured at fair value, are set out below:

(₹ in million)

Particulars	Carrying Value		Fair Value	
	As at September 30, 2024 (Unaudited)	As at March 31, 2024 (Audited)	As at September 30, 2024 (Unaudited)	As at March 31, 2024 (Audited)
Financial assets				
Financial assets measured at amortised cost				
Investment in subsidiaries	52,855.81	69,752.19	-	-
Loans	1,79,691.60	1,62,699.54	-	-
Other financial assets	28,816.71	21,621.24	-	-
Cash and cash equivalents	96.82	150.39	-	-
Other Bank balances	3,191.40	2,041.10	-	-
Financial assets measured at fair value through statement of Profit & Loss				
Investments in Mutual funds	817.26	85.40	818.55	86.84
Financial liabilities				
Financial liabilities measured at amortised cost				
Trade payables	109.51	102.32	-	-
Borrowings (net of unamortised Tranasaction cost)	63,053.19	62,349.54	-	-
Financial liabilities				
Financial liabilities measured at fair value through statement of Profit & Loss				
Other financial liabilities	42,013.08	40,760.96	42,013.08	40,760.96

The management assessed that the fair value of other cash and cash equivalents, other bank balance, trade payables, borrowings and other financial liabilities approximate their carrying amounts largely due to the short-term maturities of these instruments.

The fair value of the financial assets and liabilities is included at the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The discount for lack of marketability represents the amounts that the Trust has determined that market participants would take into account when pricing the investments.

The Trust is required to present the Statement of total assets at fair value and Statement of total returns at fair value as per SEBI Circular No. CIR/IMD/DF/114/2016 dated October 20, 2016 as a part of these financial statements - Refer Statement of Net assets at fair value and Statement of Total Returns at fair value.

The above investments does not include equity investments in joint ventures which are carried at cost and hence are not required to be disclosed as per Ind AS 107 'Financial Instrument Disclosure'.

Note 26 : Fair Value Hierarchy

All financial instruments for which fair value is recognised or disclosed are categorised within the fair value hierarchy described as follows, based on the lowest level input that is significant to the fair value measurement as a whole.

Level 1: Quoted (unadjusted) price is active market for identical assets or liabilities

Level 2: Valuation technique for which the lowest level input that has a significant effect on the fair value measurement are observed, either directly or indirectly.

Level 3: Valuation technique for which the lowest level input has a significant effect on the fair value measurement is not based on observable market data.

There were no transfers between Level 1, Level 2 and Level 3 during the year.

The following table presents fair value hierarchy of assets and liabilities measured at fair value on a recurring basis as of September 30, 2024:

(₹ in million)

Particulars	As at September 30, 2024 (Unaudited)	Fair value measurement at end of the reporting period using		
		Level 1	Level 2	Level 3
Assets				
Investments in mutual fund (Quoted)	818.55	818.55	-	-
Liabilities				
Other financial liabilities	42,013.08	-	-	42,013.08

The following table presents fair value hierarchy of assets and liabilities measured at fair value on a recurring basis as of March 31, 2024:

(₹ in million)

Particulars	As at March 31, 2024 (Audited)	Fair value measurement at end of the reporting period using		
		Level 1	Level 2	Level 3
Assets				
Investments in mutual fund (Quoted)	86.84	86.84	-	-
Liabilities				
Other financial liabilities	40,760.96	-	-	40,760.96

There has been no transfer between Level 1, Level 2 & Level 3 during the year.

Sensitivity: Higher probability by 5% and lower discount rate by 0.5% will increase the fair value by Rs. 4,491.25 million (31 March 2024 - Rs. 4,397.66 million). Lower probability by 5% and higher discount rate by 0.5% will reduce fair value by Rs. 4,274.96 million (31 March 2024 - Rs. 4,171.25 million).

Fair value movement for Payable to IRB Infrastructure Developers Limited is as under:

Particulars	As at September 30, 2024 (Unaudited)	As at March 31, 2024 (Audited)
Opening balance as at April 01, 2024 (Previous period: April 01, 2023)	40,760.95	35,778.03
Add: Recognised during the year	1,227.70	4,935.37
Less: Payment of deferred consideration	-	-
Add: Adjustment on account of interest unwinding	24.42	47.55
Closing balance of payable as on September 30, 2024 (Previous period: March 31, 2024)	**42,013.08**	**40,760.95**

Note 27 : Taxes

In accordance with section 10 (23FC) of the Income Tax Act, the income of business Trust in the form of interest received or receivable from Project SPV is exempt from tax. Accordingly, the Trust is not required to provide any current tax liability. Further, deferred tax assets on carry forward losses is not being created since there is no virtual certainty of reversal of the same in the near future.

Note 28 : Investment Management Fees

Pursuant to the terms of the Investment Management Agreement, the fees will be paid to the Investment Manager for the services provided by it ("Management Fees"). The Management Fees have been revised from the previous Financial Year with the approval of the Unitholders, where the votes cast by Unitholders so entitled and voting in favor of a resolution are not less than one-and-a-half times the votes cast against such resolution.

Note 29 : Financial Risk Management objectives and policies

The Trust's risk management policies are established to identify and analyse the risks faced by the Trust, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management policies and systems are reviewed regularly to reflect changes in market conditions and the Trust's activities.

The Board of Directors of Investment Manager have overall responsibility for the establishment and oversight of the Trust's risk management framework.

In performing its operating, investing and financing activities, the Trust is exposed to the Credit risk, Liquidity risk and Market risk.

a. Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, currency risk and other price risk, such as equity price risk and commodity risk. Financial instruments affected by market risk include loans borrowings and deposits.

b. Credit risk

Credit risk is the risk that a counter party will not meet its obligations under a financial instrument, leading to a financial loss. The Trust is exposed to credit risk from its investing activities including loans to subsidiaries, deposits with banks and other financial instruments. As at September 30, 2024, the credit risk is considered low since substantial transactions of the Trust are with its subsidiaries.

c. Interest Rate Risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Trust's exposure to the risk of changes in market interest rates relates primarily to the Trust's long-term debt obligations with floating interest rates.

Interest rate sensitivity

The following table demonstrates the sensitivity to a reasonably possible change in interest rates on that portion of loans and borrowings affected, after excluding the credit exposure for fixed rate borrowings. With all other variables held constant, the Trust's profit before tax is affected through the impact on floating rate borrowings, as follows:

(₹ in million)

Particulars	As at September 30, 2024 (Unaudited)	As at March 31, 2024 (Audited)
If the interest rate is 50 basis point higher (lower), the impact on profit or loss would be		
- Decreased by	313.57	315.15
- Increased by	(313.57)	(315.15)

d. Liquidity risk

Liquidity risk is the risk that the Trust may not be able to meet its present and future cash and collateral obligations without incurring unacceptable losses. The Trust's objective is to, at all times maintain optimum levels of liquidity to meet its cash and collateral requirements.

The Trust closely monitors its liquidity position and deploys a robust cash management system. It maintains adequate sources of financing including debt and overdraft from banks at an optimised cost.

(₹ in million)

September 30, 2024	Carrying Amount	Total	On demand	Less than 1 year	1 to 5 years	> 5 years
Borrowings (Gross of unamortised transaction cost)	63,720.40	63,720.40	1,000.00	958.50	7,668.00	54,093.90
Other financial liabilities	42,013.08	42,013.08	-	-	42,013.08	-
Trade payables	109.51	109.51	-	109.51	-	-
Total	**1,05,842.99**	**1,05,842.99**	**1,000.00**	**1,068.01**	**49,681.08**	**54,093.90**

March 31, 2024	Carrying Amount	Total	On demand	Less than 1 year	1 to 5 years	> 5 years
Borrowings (Gross of unamortised transaction cost)	63,030.66	63,030.66	-	647.39	6,390.00	55,993.27
Other financial liabilities	40,760.96	40,760.96	-	-	40,760.96	-
Trade payables	102.34	102.34	0.27	102.07	-	-
Total	**1,03,893.95**	**1,03,893.95**	**0.27**	**749.46**	**47,150.96**	**55,993.27**

At present, the Trust does expects to repay all liabilities at their contractual maturity. In order to meet such cash commitments, the operating activity is expected to generate sufficient cash inflows.

e. Financial Instruments

Credit risk from balances with banks and financial institutions, loans and advances is managed by the Trust's management in accordance with the Trust's policy. Investments of surplus funds are made only with approved counterparties and within credit limits assigned to each counterparty. Counterparty credit limits are reviewed by the top management on an annual basis, and may be updated throughout the year subject to approval of the Company's board of directors. The limits are set to minimise the concentration of risks and therefore mitigate financial loss through counterparty's potential failure to make payments.

f. Investment in Equity shares of Subsidiaries

The Trust has investments in equity shares of Subsidiaries. The settlement of such instruments is linked to the completion of the respective underlying projects. Such Financial Assets are not impaired as on the reporting date.

Note 30 : Capital management

Capital includes equity attributable to the Unit holders to ensure that it maintains an efficient capital structure and healthy capital ratios in order to support its business and maximise shareholder value. The Trust manages its capital structure and makes adjustments to it, in light of changes in economic conditions or its business requirements. To maintain or adjust the capital structure, the Trust may adjust the distribution of cash flow of return capital to Unit holders or issue new units. No changes were made in the objectives, policies or processes during the period ended September 30, 2024 and year ended March 31, 2024.

The Trust monitors capital using a gearing ratio, which is net debt divided by total equity. Net debt is calculated as loans and borrowings (gross of unamortised transaction cost) less cash and cash equivalents.

(₹ in million)

Particulars	As at September 30, 2024 (Unaudited)	As at March 31, 2024 (Audited)
Borrowings (Secured)	63,713.22	63,030.66
Less: cash and cash equivalents	(96.82)	(150.39)
Net debt	**63,616.40**	**62,880.27**
Unit capital	1,34,645.75	1,35,091.23
Other equity	25,675.21	18,052.09
Total equity	**1,60,320.96**	**1,53,143.32**
Gearing ratio (%)	39.68%	41.06%

In order to achieve this overall objective, the Trust's capital management, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. Breaches in meeting the financial covenants would permit the bank to immediately call loans and borrowings. There have been no breaches in the financial covenants of any interest-bearing borrowings in the current year.

Note 31 : Significant accounting judgement, estimates and assumptions

The preparation of the Trust's financial statements requires management to make judgments, estimates and assumptions that affect the reported amounts of revenue, expenses, assets and liabilities and the accompanying disclosures and the disclosure of contingent liabilities. Uncertainty about these assumptions and estimates could result in out comes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

Judgement

In the process of applying the Trust's accounting policies, management has made the judgement, which have the most significant effect on the amounts recognised in the financial statements.

Classification of unit holders Trusts

Under the provisions of the InvIT Regulations, Trust is required to distribute to Unit holders not less than ninety percent of the net distributable cash flows of Trust for each financial year. Accordingly, a portion of the unit holders' Trusts contains a contractual obligation of the Trust to pay to its Unit holders cash distributions. The Unit holder's Trusts could therefore have been classified as compound financial instrument which contain both equity and liability components in accordance with Ind AS 32- Financial Instruments: Presentation.

However, in accordance with SEBI Circulars(No.CIR/IMD/DF/114/2016 dated 20-Oct-2016 and No.CIR/IMD/DF/127/2016 dated 29-Nov-2016) issued under the InvIT Regulations, the unit holders' Trusts have been classified as equity in order to comply with the mandatory requirements of Section H of Annexure A to the SEBI Circular dated 20-Oct-2016 dealing with the minimum disclosures for key financial statements. In line with the above, the income distribution payable to unit holders is recognized as liability when the same is approved by the Investment Manager.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities or fair value disclosures within the next financial year. The Trust based its assumptions and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the Trust. Such charges are reflected in the assumptions when they occur.

Fair valuation and disclosures

SEBI Circulars issued under the InvIT Regulations required is diclosures relating to net assets at fair value and total returns at fair value. In estimating the fair value of investments in subsidiaries (which constitute substantial portion of the net assets), the Trust engages independent qualified external valuers to perform the valuation. The management works closely with the valuers to establish the appropriate valuation techniques and inputs to the model. The management reports the valuation report and findings to the Board of the Investment Manager half yearly to explain the cause of fluctuations in the fair value of the road projects. The inputs to the valuation models are taken from observable markets where possible, but where this is not feasible, a degree of judgement is required in establishing fair values. Judgements include considerations of inputs such as WACC, Tax rates, Inflation rates etc. Changes in assumptions about these factors could affect the fair value.

Impairment of non-financial assets

Non-financial assets of the Trust primarily comprise of investments in subsidiaries, Impairment exists when the carrying value of an asset or cash generating unit exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The recordable amounts for the investments in subsidiaries are based on value in use of the underlying projects. The value in use calculation is based on a DCF model. The cash flows are derived from budgets / forecasts over the life of the projects.

INDEPENDENT AUDITOR'S REPORT

To the Unit holders of IRB Infrastructure Trust

Report on the Audit of the Standalone Financial Statements

Opinion

We have jointly audited the accompanying standalone financial statements of IRB Infrastructure Trust ("the Trust"), which comprise the Standalone Balance Sheet as at March 31, 2024, the Standalone Statement of Profit and Loss (including Other Comprehensive Income) , Standalone Statement of Changes in Unit Holders' Equity, Standalone Statement of Cash Flows for the year then ended, Standalone Statement of Net Assets at Fair value as at March 31, 2024, Standalone Statement of Total Returns at Fair Value and Net Distributable cashflows ('NDCF') of the Trust for the year then ended as an additional disclosure in accordance with the Securities and Exchange Board of India ("SEBI") Master Circular SEBI/HO/DDHS-PoD-2/P/CIR/2023/115 dated July 06, 2023, as amended, ("the SEBI Circular") for the year ended March 31, 2024 and notes to the standalone financial statements, including material accounting policy information and other explanatory information (hereinafter referred to as the "standalone financial statements").

In our opinion and to the best of our information and according to the explanations given to us, the aforesaid standalone financial statements give the information required by SEBI (Infrastructure Investment Trusts) Regulations, 2014, as amended from time to time read with SEBI Circular, together known as ("InvIT Regulations") and give a true and fair view in conformity with the Indian Accounting Standards prescribed under rule 2(1)(a) of Companies (Indian Accounting Standards) Rules, 2015, as amended ("Ind AS") and other accounting principles generally accepted in India, to the extent not inconsistent with the InvIT Regulations, of the state of affairs of the Trust as at March 31, 2024, and profit (including other comprehensive income), changes in unit holders' equity, its cash flows for the year ended on that date, its net asset assets at fair value as at March 31, 2024, its total returns at fair value and net distributable cashflows of the Trust for the year ended as on date and other financial information of the Trust for the year ended March 31, 2024.

Basis for Opinion

We conducted our joint audit of the standalone financial statements in accordance with the Standards on Auditing (SAs) issued by the Institute of Chartered Accountants of India ("ICAI"). Our responsibilities under those Standards are further described in the 'Auditor's Responsibilities for the Audit of the Standalone Financial Statements' section of our report. We are independent of the Trust in accordance with the Code of Ethics issued by ICAI, and we have fulfilled our other ethical responsibilities in accordance with these requirements and the Code of Ethics. We believe that the audit evidence obtained by us is sufficient and appropriate to provide a basis for our audit opinion on the standalone financial statements.

Emphasis of Matter

We draw attention to Note 8 of the accompanying standalone financial statements, which describes the presentation of 'Unit Capital' as 'Equity' to comply with InvIT Regulations. Our opinion is not modified in respect of this matter.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the standalone financial statements for the current year. These matters were addressed in the context of our audit of the standalone financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. We have determined the matters described below to be the key audit matters to be communicated in our report.

Sr. No	Key Audit Matter	How the Key Audit Matters were addressed in our audit
1	The Trust has significant investments (including sub-debt) and has granted loans to its subsidiaries amounting to Rs. 69,752.19 million and Rs. 1,62,699.54 million respectively. The value of investments and loans in aggregate comprise of 95% of the balance sheet. (Refer note 4.1, 4.2 and 5.4 of the standalone financial statements). The subsidiaries are licensed to collect toll from road infrastructure projects under concession arrangements with NHAI/HMDA under Toll-Operate-Transfer (TOT) and Build-Operate-Transfer (BOT) model. The Trust performs an annual assessment of impairment for its investments at each cash generating unit (CGU) level, to identify any indicators of impairment. The recoverable amount of the CGUs which is based on the higher of the value in use or fair value less costs to sell, has been derived from discounted forecast cash flow models which requires management to make significant estimates and assumptions related to future revenue growth, concession period, operations costs, the discount rate and assessments of the status of the project and cost to complete balance work.	Our audit procedures included: 1. Read the policy, evaluated the design and implementation and verified, on a test check basis the operating effectiveness of key controls placed around the impairment assessment process of the recoverability of the investments and loans. 2. Assessed the net worth of subsidiaries on the basis of latest available financial statements. Further: - Compared the carrying amount of investments and loans with the relevant subsidiaries balance sheet to identify their net assets, being an approximation of their minimum recoverable amount. Where the net assets are in excess of their carrying amount, also assessed that those subsidiaries have historically been profit making. - For the investments and loans where the carrying amount exceeded the net asset value, comparing the carrying amount of the investment with the expected value of the business based discounted cash flow analysis. 3. Tested and verified some of the key assumptions such as future revenue growth, concession period, traffic growth which were most sensitive to the recoverable value of the investments and loans. 4. Assessed the work performed by management as well as management's

		external valuation expert, including the valuation methodology and the key assumptions used. Also assessed the competence, capabilities and objectivity of the expert used by the management in the process of evaluating impairment models. 5. Involved our internal valuation specialist, where appropriate, to evaluate the reasonability of the methodology, approach and key assumptions mainly weighted average cost of capital used in the valuation carried out for determining the fair value of respective subsidiaries.
2	The Trust has payable of Rs. 40,760.96 million as on March 31, 2024 to IRB Infrastructure Developers Limited ("Sponsor") on account of transfer of 9 project companies by the Sponsor (Refer note 10.2 of the standalone financial statements). Pursuant to settlement of IRB Infrastructure Trust ('Trust') by Sponsor, as a Private InvIT, the Trust has entered into Debt Novation Agreements (DNA). As per the terms of DNA, in consideration of assets taken over in 9 project companies, Trust has issued units and agreed to transfer to the Sponsor, the claim amounts when and to the extent the same are eventually received by project companies, on account of Sponsor claims. Such Sponsor claims are lodged after obtaining Commercial Operation Date by respective project companies. The amount realisable against claims has been estimated by the valuers based on the weighted average of probabilities of realisation of such claims. Based on the fair value of liability as estimated by the valuers, a resultant impact in the value of liability has been recognised under the head 'Loss of fair value measurement of other payables'. There is significant judgement involved on assessing fair value of these payables which	Our audit procedures included: 1. Evaluated the design and implementation and testing operating effectiveness of key controls placed around the assessment process of the amount payable to Sponsor. 2. Obtained Trust's assessment of the fair valuation of the deferred consideration payable. These projections are based on underlying infrastructure project cash flows which are sensitive to some of the claims to be settled with NHAI/HDMA. 3. Assessed the work performed by management as well as management's external valuation expert, including the valuation methodology and the key assumptions used. Further, also assessed the competence, capabilities and objectivity of the expert used by the management in the process of evaluating impairment models. 4. Involved our internal valuation specialist, where appropriate, to evaluate the reasonability of the methodology, approach and discount rate used in the valuation carried out for determining the fair value of deferred consideration payable.

	is based on key assumptions such as timing of collection, the discount rate, and the probability of success in respect of the claims.	
3	Disclosures relating to Statement of Net Assets at Fair Value and Statement of Total returns at Fair value as per InvIT Regulations. The Trust is required to disclose Statement of Net Assets at Fair Value and Statement of Total Returns at Fair Value pursuant to SEBI Circulars issued under the InvIT Regulations which requires valuation of assets. Such fair valuation has been carried out by the independent valuer appointed by the Investment Manager of the Trust. For the above purpose, fair value is determined by the management using discounted cash flow ('DCF') valuation method which involves significant management judgement in respect of various estimates used as inputs such as determination of future cash flows, discount rates, revenue growth rates, inflation rates, tax rates, amongst others. The determination of fair value involves judgement due to inherent high estimation uncertainty in the underlying assumptions. Considering the judgement involved in determination of fair values due to inherent uncertainty and complexity of the assumptions used in determination of fair values, this is considered as a key audit matter for the current year audit.	Our audit procedures included: 1. Obtained an understanding of regulatory requirements by reading the requirements of SEBI Regulations along with the relevant SEBI circulars, pursuant to which the Statements are prepared by the Investment Manager. 2. Obtained an understanding of the Trust's policies and procedures adopted by the Investment Manager for computation and disclosure of the Statements. 3. Assessed the work performed by management as well as management's external valuation expert, including the valuation methodology and the key assumptions used. Also assessed the competence, capabilities and objectivity of the expert used by the management in the process. 4. Involved our internal valuation specialist, where appropriate, to evaluate the reasonability of the methodology, approach and discount rate used in the valuation carried out for determining the fair value. 5. Tested arithmetic accuracy of cash flows projections and sensitivity analysis. 6. Evaluated the appropriateness and adequacy of disclosures for compliance with the relevant requirements of SEBI regulations.

Information Other than the Standalone Financial Statements and Auditor's Report Thereon

The Board of Directors of the Investment Manager (the "Board") are responsible for the other information. The other information comprises the Annual Report but does not include the standalone financial statements and our auditor's report thereon. The Annual report is expected to be made available to us after the date of auditor's report.

Our opinion on the standalone financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the standalone financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the standalone financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

When we read the Annual report, if we conclude that there is a material misstatement therein, we are required to communicate the matter to those charged with governance.

Responsibilities of the Investment Manager and Those Charged with Governance for the Standalone Financial Statements

The Board are responsible for the preparation of these standalone financial statements that give a true and fair view of the financial position, financial performance, changes in unit holders' equity, cash flows of the Trust, net assets at fair value as at March 31, 2024, total returns at fair value, net distributable cashflows for the year ended as on date and other financial information in accordance with the requirement of InvIT Regulations; the Indian Accounting Standards ('Ind AS') defined under Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015 , as amended, and other accounting principles generally accepted in India, to the extent not inconsistent with the InvIT Regulations. This responsibility also includes maintenance of adequate accounting records for safeguarding of the assets of the Trust and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies; making judgments and estimates that are reasonable and prudent; and design, implementation and maintenance of adequate internal financial controls, that were operating effectively for ensuring the accuracy and completeness of the accounting records, relevant to the preparation and presentation of the standalone financial statement that give a true and fair view and are free from material misstatement, whether due to fraud or error.

In preparing the standalone financial statements, the Board are responsible for assessing the Trust's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board either intends to liquidate the Trust or to cease operations, or has no realistic alternative but to do so.

The Board are also responsible for overseeing the Trust's financial reporting process.

Auditor's Responsibilities for the Audit of the Standalone Financial Statements

Our objectives are to obtain reasonable assurance about whether the standalone financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material

if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these standalone financial statements.

We give in "Annexure A" a detailed description of Auditor's responsibilities for Audit of the Standalone Financial Statements.

Other Matter

The standalone financial statements of the Trust for the year ended March 31, 2023, were audited by Gokhale & Sathe, Chartered Accountants, one of the joint auditor of the Trust, whose report dated May 12, 2023 expressed an unmodified opinion on those statements. Our opinion is not modified in respect of this matter.

Report on Other Legal and Regulatory Requirements

Based on our audit and as required by InvIT Regulations, we report that:

(a) We have sought and obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit.

(b) The Standalone Balance Sheet, the Standalone Statement of Profit and Loss (including other comprehensive income), the Standalone Statement of changes in unit holder's equity, the Standalone statement of cash Flow, Standalone net assets at fair value as at March 31, 2024, Standalone total returns at fair value and net distributable cashflows of the Trust for the year ended dealt with by this Report are in agreement with the books of account.

(c) In our opinion, the aforesaid standalone financial statements comply with the Indian Accounting Standards ('Ind AS') as defined in Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended, and other accounting principles generally accepted in India, to the extent not inconsistent with the InvIT Regulations.

ANNEXURE A TO THE INDEPENDENT AUDITOR'S REPORT ON EVEN DATE ON THE STANDALONE FINANCIAL STATEMENTS OF IRB INFRASTRUCTURE TRUST

Auditor's Responsibilities for the Audit of the Standalone Financial Statements

As part of an audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the standalone financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances but not for the purpose of expressing an opinion on whether the Trust has in place an adequate internal financial controls with reference to standalone financial statements in place and the operating effectiveness of such controls.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board.

- Conclude on the appropriateness of Board's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Trust's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the standalone financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Trust to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the standalone financial statements, including the disclosures, and whether the standalone financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our joint audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the standalone financial statements for the year ended March 31, 2024 and are therefore, the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Notes:

1. All figures in bracket are outflow.
2. Taxes paid are treated as arising from operating activities and are not bifurcated between investing and financing activities.
3. The Standalone Statement of cash flows has been prepared under Indirect Method as per Ind AS 7 "Statement of Cash Flows" .
4. The Borrowings reflected in above Debt Reconciliation Statement are gross of Unamortised Transaction Cost.

Note :

1 Excludes interest due but not received of Rs.7,703.64 millions, Rs.5,009.88 millions,Rs. 922.36 millions,Rs. 12,713.52 millions and Rs. 2,124.77 Millions for the six months ended March 31, 2024, six months ended September 30, 2023, six months ended March 31, 2023, year ended March 31, 2024 and year ended March 31, 2023.

2 Netted - off with disbursement of short-term unsecured loan to related parties. (Refer RPT disclosures of standalone financial results).

3 The same is earmarked towards capex for ongoing projects.

IRB Infrastructure Trust

Notes to financial statements for the year ended March 31, 2024

1. Trust Information and Nature of Operations

IRB Infrastructure Trust (the "Trust") is a trust settled pursuant to the indenture of trust dated August 27, 2019 which is registered under Indian Trust Act, 1882 and under the Securities Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended from time to time. The Trust is settled by the Sponsor, IRB Infrastructure Developers Limited ("IRB" or the "Sponsor"), an infrastructure development company in India. The Trustee to the Trust is IDBI Trusteeship Services Limited (the "Trustee"). Investment manager for the Trust is MMK Toll Road Private Limited (the "Investment Manager"). The Trust has received registration certificate from SEBI having registration number IN/InviT/19-20/0012.

The Trust has been formed to invest in infrastructure assets primarily being in the road sector in India. The Trust's road projects are eligible infrastructure projects under the InvIT Regulations and held through special purpose vehicles ("Project SPVs" together as "Project SPV Group"). The Trust's portfolio comprises of fifteen road projects as listed below:-

The Trust had acquired the projects at Sr no 1 to 11 and 13 from the Sponsor. The SPV at Sr. no 11 has been added to portfolio from 11.08.2023. The SPV at Sr. no 12 has been added to portfolio from 10.11.2023. The SPV at Sr. no 13 has been added to portfolio from 28.12.2023. The SPV at Sr. no 14 & 15 has been added to portfolio from 01.01.2024.

Sr No.	Project SPV Name	Type

The registered office of the Investment Manager is Off No-11th Floor/1101 Hiranandani Knowledge Park, Technology Street, Hill Side Avenue, Powai Mumbai 400076.

The financial statements were authorised for issue in accordance with resolution passed by the board of directors of the Investment manager on May 03, 2024.

The Trust has been listed on NSE w.e.f. 03.04.2023

2. Basis of preparation

The Standalone Financial Statements which comprises the Standalone Balance Sheet as at March 31, 2024, the Standalone Statement of Profit and Loss (including Other Comprehensive Income), the Standalone Statement of Changes in Unit Holder's Equity, the Standalone Statement of Cash Flows for the year then ended, Statement of Net Assets at Fair value as at March 31, 2024, Statement of Total Returns at Fair Value and Net Distributable cashflows for the year then ended as an additional disclosure in accordance with the Securities and Exchange Board of India ("SEBI") Master Circular SEBI/HO/DDHS-PoD-2/P/CIR/2023/115 dated July 06, 2023, as amended, ("the SEBI Circular") for the year ended March 31, 2024 and notes to the Standalone Financial Statements, including material accounting policy information and other explanatory information has been prepared in accordance with the requirements of SEBI (Infrastructure Investment Trusts) Regulations, 2014, as amended from time to time read with SEBI Circular, together known as ("lnvlT Regulations"); the Indian Accounting Standards prescribed under Rule 2(1) (a) of Companies (Indian Accounting Standards) Rules, 2015, as amended, and other accounting principles generally accepted in India to the extent not inconsistent with the lnvlT Regulations (refer note 8 below on presentation of "Unit Capital" as "Equity" instead of compound instruments under Ind AS 32 - Financial Instruments: Presentation).

The financial statements have been prepared on an accrual basis except for Statement of Cash flows and under the historical cost convention except for certain financial assets and liabilities (refer accounting policy regarding financial instruments) which have been measured at fair value and on Going Concern Basis.

The financial statements are presented in Indian Rupee ('INR') which is the functional currency of the Trust and all values are rounded to the nearest millions, except when otherwise indicated. Wherever the amount represented '0' (zero) construes value less than Rupees five thousand.

The accounting policies adopted, and methods of computation followed are consistent with those of the previous financial year, except for items disclosed below:

The Ministry of Corporate Affairs has notified Companies (Indian Accounting Standard) Amendment Rules 2023 dated 31 March 2023 to amend the following Ind AS which are effective from 1 April 2023

Ind AS 1, Presentation of Financial Statements
An entity shall disclose material accounting policy information. Accounting policy information is material if, when considered together with other information included in an entity's financial statements, it can reasonably be expected to influence decisions that the primary users of general purpose financial statements make on the basis of those financial statements.

Ind AS 8, Accounting policies, Change in Accounting Estimates and Errors
Definition of 'Change in Accounting Estimates' in account has been replaced by revised definition of 'Accounting Estimate'. As per revised definition, accounting estimates are monetary amounts in the financial statements that are subject to measurement uncertainty. An entity develops an accounting estimate to achieve the objective set out by the accounting policy. Developing accounting estimates involves the use of judgements or assumptions based on the latest available, reliableinformation.
An entity may need to change an accounting estimate if changes occur in the circumstances on which the accounting estimate was based or as a result of new information, new developments or more experience. By its nature, a change in an accounting estimate does not relate to prior periods and is not the correction of an error.

3. Summary of material accounting policies

3.1. Use of estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements and the results of operations during the reporting period end. Although these estimates are based upon management's best knowledge of current events and actions, actual results could differ from these estimates.

3.2. Current versus non-current classification

The Trust presents assets and liabilities in the balance sheet based on current/ non-current classification.
An asset is treated as current when it is:
- Expected to be realised or intended to be sold or consumed in normal operating cycle
- Held primarily for the purpose of trading
- Expected to be realised within twelve months after the reporting period, or
- Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period.

All other assets are classified as non-current.

A liability is current when:
- It is expected to be settled in normal operating cycle
- It is held primarily for the purpose of trading
- It is due to be settled within twelve months after the reporting period, or
- There is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period.

All other liabilities are classified as non-current.

Deferred tax assets and liabilities are classified as non-current assets and liabilities respectively.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The Trust has identified twelve months as its operating cycle.

3.3. Revenue recognition

Revenue is recognised to the extent that it is probable that the economic benefits will flow to the Trust and the revenue can be reliably measured, regardless of when the payment is being made. Revenue is measured at the transaction price of the consideration received or receivable, taking into account contractually defined terms of payment and excluding taxes or duties collected on behalf of the government.

The specific recognition criteria described below must also be met before revenue is recognised:

Interest income
Revenue is recognised on a time proportion basis taking into account the amount outstanding and the rates applicable. For all debt instruments measured either at amortised cost or at fair value through other comprehensive income, interest income is recorded using the effective interest rate (EIR).

Dividends
Revenue is recognised when the Trust's right to receive the payment is established, which is generally when shareholders approve the dividend.

3.4. Taxes

Current income tax
Current income tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted at the reporting date in the countries where the Trust operates and generates taxable income.

Current income tax relating to items recognised outside the Statement of Profit and Loss is recognised outside the Statement of Profit and Loss (either in other comprehensive income or in equity). Current tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity. Management periodically evaluates positions taken in the tax returns with respect to situations in which applicable tax regulations are subject to interpretation and establishes provisions where appropriate.

Deferred tax
Deferred tax is provided using the liability method on temporary differences between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes at the reporting date.

Deferred tax liabilities are recognised for all taxable temporary differences, except:
- When the deferred tax liability arises from the initial recognition of goodwill or an asset or liability in a transaction that is not a business combination and at the time of the transaction, affects neither the accounting profit nor taxable profit or loss.

- In respect of taxable temporary differences associated with investments in subsidiaries, when the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred tax assets are recognised for all deductible temporary differences, the carry forward of unused tax credits and any unused tax losses. Deferred tax assets are recognised to the extent that

it is probable that taxable profit will be available against which the deductible temporary differences, and the carry forward of unused tax credits and unused tax losses can be utilised, except:

- When the deferred tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction affects neither the accounting profit nor taxable profit or loss

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are re-assessed at each reporting date and are recognised to the extent that it has become probable that future taxable profits will allow the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the year when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the reporting date.

Deferred tax relating to items recognised outside statement of profit and loss is recognised outside statement of profit and loss (either in other comprehensive income or in equity).

Deferred tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity. Deferred tax assets and deferred tax liabilities are offset if a legally enforceable right exists to set off current tax assets against current tax liabilities and the deferred taxes relate to the same taxable entity and the same taxation authority.

3.5. Goods and Services Tax (GST) paid on acquisition of assets or on incurring expenses

Expenses and assets are recognised net of the amount of goods and service tax paid, except:

When the tax incurred on a purchase of assets or services is not recoverable from the tax authority, in which case, the tax paid is recognised as part of the cost of acquisition of the asset or as part of the expense item, as applicable.

When receivables and payables are stated with the amount of tax included. The net amount of tax recoverable from, or payable to, the tax authority is included as part of receivables or payables in the balance sheet unless the tax is available for Input tax credit.

3.6. Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of an asset that necessarily takes a substantial period of time to get ready for its intended use or sale are capitalised as part of the cost of the asset. All other borrowing costs are expensed in the period in which they occur. Borrowing costs consist of interest and other costs that an entity incurs in connection with the borrowing of Trusts. Borrowing cost also includes exchange differences to the extent regarded as an adjustment to the borrowing costs.

3.7. Provisions

Provisions are recognised when the Trust has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. When the Trust expects some or all of a provision to be reimbursed, for example,

under an insurance contract, the reimbursement is recognised as a separate asset, but only when the reimbursement is virtually certain. The expense relating to a provision is presented in the Statement of Profit and Loss net of any reimbursement.

If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, when appropriate, the risks specific to the liability. When discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost.

3.8. Contingent liabilities and contingent assets

A contingent liability is a possible obligation that arises from past events whose existence will be confirmed by the occurrence or non-occurrence of one or more uncertain future events beyond the control of the Trust or a present obligation that is not recognised because it is not probable that an outflow of resources will be required to settle the obligation. A contingent liability also arises in extremely rare cases where there is a liability that cannot be recognised because it cannot be measured reliably. The Trust does not recognise a contingent liability but discloses its existence in the financial statements.
A contingent asset is not recognised unless it becomes virtually certain that an inflow of economic benefits will arise. When an inflow of economic benefits is probable, contingent assets are disclosed in the financial statements.
Contingent liabilities and contingent assets are reviewed at each balance sheet date.

3.9. Financial instrument

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets

Initial recognition and measurement
All financial assets are recognised initially at fair value plus, in the case of financial assets not recorded at fair value through Statement of Profit and Loss, directly attributable transaction cost to the acquisition of the financial asset. Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the market place (regular way trades) are recognised on the trade date, i.e., the date that the Trust commits to purchase or sell the asset.

Subsequent measurement
For purposes of subsequent measurement, financial assets are classified in following categories;

- at amortised cost
- at fair value through profit or loss (FVTPL)
- at fair value through other comprehensive income (FVTOCI)

Financial Assets at amortised cost
A financial asset is measured at the amortised cost if both the following conditions are met:

a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and
b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

This category is the most relevant to the Trust. All the Loans and other receivables under financial assets (except Investments) are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market.

After initial measurement such financial assets are subsequently measured at amortised cost using the effective interest rate (EIR) method. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The losses arising from impairment are recognised in the Statement of Profit and Loss.

Financial Assets at Fair Value through Statement of Profit and Loss/Other comprehensive income

All investments in scope of Ind AS 109 are measured at fair value. The Trust has investment in Debt oriented mutual Trust which are held for trading, are classified as at FVTPL. The Trust makes such election on an instrument by instrument basis. The classification is made on initial recognition and is irrevocable. The gain/ loss on sale of investments are recognised in the Statement of Profit and Loss.
Instruments included within the FVTPL category are measured at fair value with all changes recognized in the Statement of Profit and Loss.

Derecognition

A financial asset is primarily derecognised (i.e. removed from the Trust's balance sheet) when:
The rights to receive cash flows from the asset have expired, or
The Trust has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either (a) the Trust has transferred substantially all the risks and rewards of the asset, or (b) the Trust has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Trust has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the Trust continues to recognise the transferred asset to the extent of the Trust's continuing involvement. In that case, the Trust also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Trust has retained.

3.10. Impairment of assets

Impairment of financial assets

Expected credit losses are recognized for all financial assets subsequent to initial recognition other than financial assets in FVTPL category.

For financial assets other than trade receivables, as per Ind AS 109, the Trust recognizes 12 month expected credit losses for all originated or acquired financial assets if at the reporting date the credit risk of the financial asset has not increased significantly since its initial recognition. The expected credit losses are measured as lifetime expected credit losses if the credit risk on financial assets increases significantly since its initial recognition.

The impairment losses and reversals are recognized in Statement of Profit and Loss.

Impairment of non-financial assets

The Trust assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Trust estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset unless the asset does not generate cash inflows that are largely independent of those from other assets or Trust's assets. When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, or payables, as appropriate.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

The Trust's financial liabilities include trade and other payables, loans and borrowings.

Subsequent measurement
The measurement of financial liabilities depends on their classification, as described below:

Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Financial liabilities are classified as held for trading if they are incurred for the purpose of repurchasing in the near term. This category also includes derivative financial instruments entered into by the Trust that are not designated as hedging instruments in hedge relationships as defined by Ind AS 109.
Gains or losses on liabilities held for trading are recognised in the statement of profit and loss.

Loans and borrowings
This is the category most relevant to the Trust. After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in profit or loss when the liabilities are de-recognised as well as through the EIR amortisation process.
Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the statement of profit and loss.

De-recognition
A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the de-recognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the statement of profit and loss.

Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount is reported in the standalone balance sheet if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

3.11 Investment in subsidiaries

Investments (equity instruments as well as subordinate debt) in subsidiaries are carried at cost less accumulated impairment losses, if any. Where an indication of impairment exists, the carrying amount of the investment is assessed and written down immediately to its recoverable amount. On disposal of investments in subsidiaries, the difference between net disposal proceeds and carrying amounts are recognised in the Statement of Profit and Loss.

3.12 Foreign currencies

The Trust's financial statements are presented in INR, which is also the Trust's functional currency. The Trust does not have any foreign operation and has assessed the functional currency to be INR.

Transactions and balances
Transactions in foreign currencies are initially recorded by the Trust at their respective functional currency spot rates at the date the transaction first qualifies for recognition. Monetary assets and liabilities denominated in foreign currencies are translated at the functional currency spot rates of exchange at the reporting date.

Differences arising on settlement or translation of monetary items are recognised in the statement of profit or loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions.

3.13 Fair value measurement

The Trust measures financial instruments, such as, derivatives at fair value at each balance sheet date.
Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:
► In the principal market for the asset or liability, or
► In the absence of a principal market, in the most advantageous market for the asset or liability.
The principal or the most advantageous market must be accessible by the Trust.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Trust uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

► Level 1 — Quoted (unadjusted) market prices in active markets for identical assets or liabilities
► Level 2 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable
► Level 3 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable

For assets and liabilities that are recognised in the financial statements on a recurring basis, the Trust determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

The Trust's Management determines the policies and procedures for both recurring fair value measurement, such as derivative instruments and unquoted financial assets measured at fair value, and for non-recurring measurement, such as assets held for distribution in discontinued operations.

At each reporting date, the Management analyses the movements in the values of assets and liabilities which are required to be remeasured or re-assessed as per the Trust's accounting policies. For this analysis, the Management verifies the major inputs applied in the latest valuation by agreeing the information in the valuation computation to contracts and other relevant documents.

The management also compares the change in the fair value of each asset and liability with relevant external sources to determine whether the change is reasonable.

On an annual basis, the Management of Investment Manager presents the valuation results to the Audit Committee and the Trust's independent auditors. This includes a discussion of the major assumptions used in the valuations.

For the purpose of fair value disclosures, the Trust has determined classes of assets and liabilities on the basis of the nature, characteristics and risks of the asset or liability and the level of the fair value hierarchy as explained above.

This note summarises accounting policy for fair value. Other fair value related disclosures are given in the relevant notes.
- Disclosures for Significant accounting judgement, estimates and assumptions (note 28)
- Financial instruments (including those carried at amortised cost) (note 22 and 23)
- Quantitative disclosure of fair value measurement hierarchy (note 22 and 23)

3.14 Distribution to unit holders

The Trust recognises a liability to make cash distributions to unit holders when the distribution is authorised and a legal obligation has been created. As per the InvIT Regulations, a distribution is authorised when it is approved by the Board of Directors of the Investment Manager. A corresponding amount is recognised directly in equity.

3.14 Cash and cash equivalents

Cash and cash equivalents in the balance sheet comprise cash at banks and on hand and short-term deposits with an original maturity of three months or less, which are subject to an insignificant risk of changes in value.
For the purpose of the statement of cash flows, cash and cash equivalents consist of cash and short-term deposits, as defined above, net of outstanding bank overdrafts as they are considered an integral part of the Trust's cash management.

3.15 Earnings Per Unit (EPU)

Basic earnings per unit are calculated by dividing the net profit for the year attributable to unit holders by the weighted average number of units outstanding during the year.

For the purpose of calculating diluted earnings per unit, the weighted average number of units outstanding during the period are adjusted for the effects of all dilutive potential units.

3.16 New pronouncements issued but not effective

Ministry of Corporate Affairs ("MCA") notifies new standards or amendments to the existing standards under Companies (Indian Accounting Standards) Rules as issued from time to time. For the year ended March 31, 2024, MCA has not notified any new standards or amendments to the existing standards applicable to the Trust.

I. Unit capital*		
a. Issued, subscribed and fully paid up Unit Capital		
Unit capital issued, subscribed and fully paid up		
At the beginning the year	87,929.33	85,504.33
Issued during the year	51,146.50	2,425.00
Less : Capital Reduction during the year (refer note 30)	(3,984.60)	-
At the end of the year	**135,091.23**	**87,929.33**

* Under the provisions of the InvIT Regulations, Trust is required to distribute to Unitholders not less than 90% of the net distributable cash flows of the Trust for each financial year. Accordingly, a portion of the Unit Capital contains a contractual obligation of the Trust to pay to its Unitholdcrs cash distributions. Hence, the Unit Capital is a compound financial instrument which contains equity ond liability components in accordance with Ind AS 32 - Financial Instruments. However, in accordance with Chapter 3 and Chapter 4 of the SEBI circular, the Unit capital have been presented as "Equity" in order to comply with the requirements of Section H of Chapter 3 lo the SEBI circular, dealing with the minimum presentation and disclosure requirements for key financial statements. Consistent with Unit Cupital being classified as equity, the distributions to Unitholders is also presented in Statement of Changes in Unitholders' Equity when the distributions are approved by the Board of Directors of Investment Manager.

Units are classified as equity. Incremental costs attributable to the issue of units are directly recorded in equity, net of tax

II. Reconciliation of the number of units outstanding and the amount of unit capital:

Note 22 : Fair Values

Financial assets and liabilities

The carrying values of financials instruments of the Trust are reasonable and approximations of fair values.

The accounting classification of each category of financial instruments, their carrying amounts and the categories of financial assets and liabilities measured at fair value, are set out below:

(Rs. in million)

	Carrying amount		Fair Value	
	March 31, 2024	**March 31, 2023**	**March 31, 2024**	**March 31, 2023**
Financial assets				
Financial assets measured at amortised cost				
Investment in subsidiaries	69,752.19	94,424.44	-	-
Loans	162,699.54	35,772.98	-	-
Other financial assets	21,621.24	7,965.17	-	-
Cash and cash equivalents	150.39	6.56	-	-
Other Bank balances	2,041.10	-	-	-
Financial assets measured at fair value through statement of Profit & Loss				
Investments in Mutual funds	85.40	20.08	86.84	20.08
Financial liabilities				
Financial liabilities measured at amortised cost				
Trade payables	102.32	81.35	-	-
Borrowings (net of unamortised Tranasaction cost)	62,349.54	4,872.91	-	-
Financial liabilities				
Financial liabilities measured at fair value through statement of Profit & Loss				
Other financial liabilities	40,760.96	35,778.03	40,760.96	35,778.03

The management assessed that the fair value of other cash and cash equivalents, other bank balance, trade payables, borrowings and other financial liabilities approximate their carrying amounts largely due to the short-term maturities of these instruments.

The fair value of the financial assets and liabilities is included at the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The discount for lack of marketability represents the amounts that the Trust has determined that market participants would take into account when pricing the investments.
The above investments does not include equity investments in joint ventures which are carried at cost and hence are not required to be disclosed as per Ind AS 107 'Financial Instrument Disclosure.

Note 23 : Fair Value Hierarchy

All financial instruments for which fair value is recognised or disclosed are categorised within the fair value hierarchy described as follows, based on the lowest level input that is significant to the fair value measurement as a whole.

Level 1: Quoted (unadjusted) price is active market for identical assets or liabilities

Level 2: Valuation technique for which the lowest level input that has a significant effect on the fair value measurement are observed, either directly or indirectly.

Level 3: Valuation technique for which the lowest level input has a significant effect on the fair value measurement is not based on observable market data.

There were no transfers between Level 1, Level 2 and Level 3 during the year.

The following table presents fair value hierarchy of assets and liabilities measured at fair value on a recurring basis as of March 31, 2024:

(Rs. in million)

	As on March 31, 2024 (Audited)	Fair value measurement at end of the reporting period using		
		Level 1	**Level 2**	**Level 3**
Assets				
Investments in mutual fund (Quoted)	86.84	86.84	-	-
Liabilities				
Other financial liabilities	40,760.96	-	-	40,760.96

The following table presents fair value hierarchy of assets and liabilities measured at fair value on a recurring basis as of March 31, 2023:

(Rs. in million)

	As on March 31, 2023 (Audited)	Fair value measurement at end of the reporting year using		
		Level 1	Level 2	Level 3
Assets				
Investments in mutual fund (Quoted)	20.08	20.08	-	-
Liabilities				
Other financial liabilities	35,778.03	-	-	35,778.03

There has been no transfer between Level 1, Level 2 & Level 3 during the year.
Sensitivity: Higher probability by 5% and lower discount rate by 0.5% will increase the fair value by Rs.4,397.66 million (31 March 2023 - Rs.4,166.87 million). Lower probability by 5% and higher discount rate by 0.5% will reduce fair value by Rs.4,171.25 million (31 March 2023 - Rs.3,946.06 million).

Fair value movement for Payable to IRB Infrastructure Developers Limited is as under:

	March 31, 2024	March 31, 2023
Opening balance as at April 01, 2023 (Previous period: April 01, 2022)	35,778.03	35,168.79
Add: Recognised during the year	4,935.37	560.53
Less: Payment of deferred consideration	-	-
Add: Adjustment on account of interest unwinding	47.55	48.71
Closing balance of payable as on March 31, 2024 (Previous period: March 31, 2023)	**40,760.95**	**35,778.03**

Note 24 : Taxes
In accordance with section 10 (23FC) of the Income Tax Act, the income of business Trust in the form of interest received or receivable from Project SPV is exempt from tax. Accordingly, the Trust is not required to provide any current tax liability. Further, deferred tax assets on carry forward losses is not being created since there is no virtual certainty of reversal of the same in the near future.

Note 25 : Investment Management Fess
Pursuant to the terms of the Investment Management Agreement, the fees will be paid to the Investment Manager for the services provided by it ("Management Fees"). The Management Fees have been revised for the Financial Year with the approval of the Unitholders, where the votes cast by Unitholders so entitled and voting in favor of a resolution are not less than one-and-a-half times the votes cast against such resolution. Pursuant to a resolution of the Unitholders, the Management Fees for the year ended March 31, 2024 has been revised to Rs. 146.32 million

Note 26 : Financial Risk Management objectives and policies

The Trust's risk management policies are established to identify and analyse the risks faced by the Trust, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management policies and systems are reviewed regularly to reflect changes in market conditions and the Trust's activities.

The Board of Directors of Investment Manager have overall responsibility for the establishment and oversight of the Trust's risk management framework.
In performing its operating, investing and financing activities, the Trust is exposed to the Credit risk, Liquidity risk and Market risk.

a. Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, currency risk and other price risk, such as equity price risk and commodity risk. Financial instruments affected by market risk include loans borrowings and deposits.

b. Credit risk

Credit risk is the risk that a counter party will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. The Trust is exposed to credit risk from its investing activities including loans to subsidiaries, deposits with banks and other financial instruments. As at March 31, 2024, the credit risk is considered low since substantial transactions of the Trust are with its subsidiaries.

c. Interest Rate Risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Trust's exposure to the risk of changes in market interest rates relates primarily to the Trust's long-term debt obligations with floating interest rates.

Interest rate sensitivity

The following table demonstrates the sensitivity to a reasonably possible change in interest rates on that portion of loans and borrowings affected, after excluding the credit exposure for fixed rate borrowings. With all other variables held constant, the Trust's profit before tax is affected through the impact on floating rate borrowings, as follows:

(Rs. in million)

Particulars	March 31, 2024	March 31, 2023
If the interest rate is 50 basis point higher (lower), the impact on profit or loss would be		
- Decreased by	315.15	-
- Increased by	(315.15)	-

d. Liquidity risk

Liquidity risk is the risk that the Trust may not be able to meet its present and future cash and collateral obligations without incurring unacceptable losses. The Trust's objective is to, at all times maintain optimum levels of liquidity to meet its cash and collateral requirements.

The Trust closely monitors its liquidity position and deploys a robust cash management system. It maintains adequate sources of financing including debt and overdraft from banks at an optimised cost.

e. Financial Instruments
Credit risk from balances with banks and financial institutions, trade receivables, loans and advances is managed by the Group's management in accordance with the Group's policy. Investments of surplus funds are made only with approved counterparties and within credit limits assigned to each counterparty. Counterparty credit limits are reviewed by the top management on an annual basis, and may be updated throughout the year subject to approval of the Company's board of directors. The limits are set to minimise the concentration of risks and therefore mitigate financial loss through counterparty's potential failure to make payments.

f. Investment in Equity shares of Subsidiaries
The Trust has investments in equity shares of Subsidiaries. The settlement of such instruments is linked to the completion of the respective underlying projects. Such Financial Assets are not impaired as on the reporting date.

(Rs. in million)

March 31, 2024	Carrying Amount	Total	On demand	Less than 3 months	Less than 1 year	1 to 5 years	> 5 years
Borrowings (Gross of unamortised transaction cost)	63,030.66	63,030.66	-	-	647.39	6,390.00	55,993.27
Other financial liabilities	40,760.96	40,760.96	-	-	-	40,760.96	-
Trade payables	102.34	102.34	-	0.27	102.07	-	-
Total	**103,893.95**	**103,893.95**	**-**	**0.27**	**749.46**	**47,150.96**	**55,993.27**

March 31, 2023	Carrying Amount	Total	On demand	Less than 3 months	Less than 1 year	1 to 5 years	> 5 years
Borrowings (Gross of unamortised transaction cost)	4,872.91	**4,872.91**	-	-	4,872.91	-	-
Other financial liabilities	35,778.03	**35,778.03**	-	-	-	35,778.03	-
Trade payables	81.35	**81.35**	-	0.01	50.56	30.78	-
Total	**40,732.29**	**40,732.29**	**-**	**0.01**	**4,923.47**	**35,808.80**	**-**

At present, the Trust does expects to repay all liabilities at their contractual maturity. In order to meet such cash commitments, the operating activity is expected to generate sufficient cash inflows.

Note 27 : Capital management

Capital includes equity attributable to the Unit holders to ensure that it maintains an efficient capital structure and healthy capital ratios in order to support its business and maximise shareholder value. The Trust manages its capital structure and makes adjustments to it, in light of changes in economic conditions or its business requirements. To maintain or adjust the capital structure, the Trust may adjust the distribution of cash flow of return capital to Unit holders or issue new units. No changes were made in the objectives, policies or processes during the year ended March 31, 2024 and year ended March 31, 2023.

The Trust monitors capital using a gearing ratio, which is net debt divided by total equity. Net debt is calculated as loans and borrowings (gross of unamortised transaction cost) less cash and cash equivalents.

(Rs. in million)

	March 31, 2024	March 31, 2023
Borrowings (Secured)	63,030.66	4,872.91
Less: cash and cash equivalents	(150.39)	(6.56)
Net debt	**62,880.27**	**4,866.35**
Unit capital	135,091.23	87,929.33
Other equity	18,052.09	9,526.42
Total equity	**153,143.32**	**97,455.75**
Capital and net debt	**216,023.60**	**102,322.11**
Gearing ratio (%)	**41.06%**	**4.99%**

In order to achieve this overall objective, the Trust's capital management, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. Breaches in meeting the financial covenants would permit the bank to immediately call loans and borrowings. There have been no breaches in the financial covenants of any interest-bearing borrowings in the current year.

Note 28 : Significant accounting judgement, estimates and assumptions

The preparation of the Trust's financial statements requires management to make judgments, estimates and assumptions that affect the reported amounts of revenue, expenses, assets and liabilities and the acTrusting disclosures and the disclosure of contingent liabilities. Uncertainty about these assumptions and estimates could result in out comes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

Judgement

In the process of applying the Trust's accounting policies, management has made the judgement, which have the most significant effect on the amounts recognised in the financial statements.

Classification of unit holders Trusts

Under the provisions of the InvIT Regulations, Trust is required to distribute to Unit holders not less than ninety percent of the net distributable cash flows of Trust for each financial year. Accordingly, a portion of the unit holders' Trusts contains a contractual obligation of the Trust to pay to its Unit holders cash distributions. The Unit holder's Trusts could therefore have been classified as compound financial instrument which contain both equity and liability components in accordance with Ind AS 32-Financial Instruments: Presentation.
However, in accordance with SEBI Circulars(No.CIR/IMD/DF/114/2016 dated 20-Oct-2016 and No.CIR/IMD/DF/127/2016 dated 29-Nov-2016) issued under the InvIT Regulations, the unit holders' Trusts have been classified as equity in order to comply with the mandatory requirements of Section H of Annexure A to the SEBI Circular dated 20-Oct-2016 dealing with the minimum disclosures for key financial statements. In line with the above, the income distribution payable to unit holders is recognized as liability when the same is approved by the Investment Manager.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities or fair value disclosures within the next financial year. The Trust based its assumptions and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the Trust. Such charges are reflected in the assumptions when they occur.

Fair valuation and disclosures

SEBI Circulars issued under the InvIT Regulations required is diclosures relating to net assets at fair value and total returns at fair value. In estimating the fair value of investments in subsidiaries (which constitute substantial portion of the net assets), the Trust engages independent qualified external valuers to perform the valuation. The management works closely with the valuers to establish the appropriate valuation techniques and inputs to the model. The management reports the valuation report and findings to the Board of the Investment Manager half yearly to explain the cause of fluctuations in the fair value of the road projects. The inputs to the valuation models are taken from observable markets where possible, but where this is not feasible, a degree of judgement is required in establishing fair values. Judgements include considerations of inputs such as WACC, Tax rates, Inflation rates etc. Changes in assumptions about these factors could affect the fair value.

Impairment of non-financial assets

Non-financial assets of the Trust primarily comprise of investments in subsidiaries, Impairment exists when the carrying value of an asset or cash generating unit exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The recordable amounts for the investments in subsidiaries are based on value in use of the underlying projects. The value in use calculation is based on a DCF model. The cash flows are derived from budgets / forecasts over the life of the projects.

Note 29 : Transfer of projects

On April 7, 2022, the Trust has executed arrangement with the Sponsor for implementation of Palsit Dankuni Tollway Private Limited ('SPV') by the Trust and accordingly, the project is being executed by the SPV and the Trust.

On October 12, 2023, the Trust has executed arrangement with the Sponsor for implementation of Samakhiyali Tollway Private Limited ('SPV') by the Trust and accordingly, the project is being executed by the SPV and the Trust.

On July 29, 2023, the Trust has executed arrangement with the Sponsor for implementation of IRB Golconda Expressway Private Limited ('SPV') by the Trust and accordingly, the project is being executed by the SPV and the Trust.

Note 30 : Distribution made

(Rs. in million)

	March 31, 2024	March 31, 2023
Distributed during the period as :		
Interest	449.55	-
Return of Capital	3,984.60	-
	4,434.15	**-**

Note: The Board of Directors of the Investment Manager have declared 1st Distribution of Rs.1.52 per unit which comprises of Rs.0.44 per unit as interest and Rs. 1.08 per unit as return of capital in their meeting held on October 25, 2023. The Board of Directors of the Investment Manager have declared 2nd Distribution of Rs.2.82 per unit towards return of capital in their meeting held on January 25, 2024

Note 31 : Subsequent Events

The Board of Directors of the Investment Manager have declared 3rd Distribution of Rs.0.24 per unit towards interest distribution in their meeting held on May 03, 2024.

Note 32 Other Statutory Information

i) The Trust has not traded or invested in Crypto currency or Virtual Currency during the current or previous year.
ii) The Trust does not hold benami property and no proceedings under Benami transaction (Prohibition) Act 1988 have been initiated against the Trust.
iii) The Trust does not have any transactions with companies struck off.
iv) The Trust does not have any such transaction which is not recorded in the books of accounts that has been surrendered or disclosed as income during the year in the tax assessments under the Income Tax Act, 1961.
v) The Trust did not have any long-term contracts including derivative contract.
vi) The Trust has not been declared a wilful defaulter by any bank / financial institution or any other lender during the year.

Note 33 : Previous year comparatives

Previous year's figures has been reclassified / regrouped wherever necessary to confirm to current year classification. The impact of the same is not material to the user of the Standalone financial statements.

INDEPENDENT AUDITOR'S REPORT

To the Unit Holders of IRB Infrastructure Trust

REPORT ON THE AUDIT OF THE STANDALONE IND AS FINANCIAL STATEMENTS

OPINION

We have audited the accompanying Standalone Ind AS Financial Statements of IRB Infrastructure Trust ("the InvIT" or "the Trust"), which comprise the Standalone Balance Sheet as at March 31, 2023, the Standalone Statement of Profit and Loss (including Other Comprehensive Income), the Standalone Statement of Cash Flows, the Standalone Statement of Changes in Unit Holders' Equity and the Standalone Statement of Net Assets at Fair value as at March 31, 2023 and the Standalone Statement of Total Returns at Fair Value and the Standalone Statement of Net Distributable Cash Flows ('NDCFs') for the year then ended, and notes to the Standalone Financial Statements including a Summary of Significant Accounting Policies and Other Explanatory Information (hereinafter referred to as "the standalone financial statements").

In our opinion and to the best of our information and according to the explanations given to us, the aforesaid Standalone Financial Statements give the information required by the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended from time to time including any guidelines and circulars issued thereunder (together referred to as the "SEBI InvIT Regulations") in the manner so required and give a true and fair view in conformity with the Indian Accounting Standards (Ind AS) and/or any addendum thereto as defined in the rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended ("Ind AS") and other accounting principles generally accepted in India, of the State of Affairs of the Trust as at March 31, 2023, its profits and total comprehensive income, movement of Unit Holders' fund and its Cash flows for the year ended March 31,2023, its Net Assets at fair value as at March 31, 2023, its total returns at Fair Value and the net distributable cash flow for the year ended on that date.

BASIS FOR OPINION

We conducted our audit of the Standalone Financial Statements in accordance with the Standards on Auditing ("SAs") issued by the Institute of Chartered Accountants of India. Our responsibilities under those Standards are further described in the Auditor's Responsibilities for the Audit of the Standalone Financial Statements section of this report. We are independent of the Trust in accordance with the code of ethics issued by the Institute of Chartered Accountants of India together with the ethical requirements that are relevant to our audit of the Standalone Financial Statements under the provisions of the SEBI InvIT Regulations and we have fulfilled our other ethical responsibilities in accordance with these requirements and the Code of Ethics. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion on the Standalone Financial Statements.

KEY AUDIT MATTERS

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the Standalone Financial Statements of the financial period. These matters were addressed in the context of our audit of the Standalone Financial Statements as a whole, and in forming our opinion thereon, and we do not provide a

separate opinion on these matters. We have determined the matters described below to be the key audit matters to be communicated in our report.

PARTICULARS	HOW THEY WERE ADDRESSED IN OUR AUDIT
1. <u>Loss on fair value measurement of other payable / deferred consideration payable to IRB Group.</u> Pursuant to settlement of IRB Infrastructure Trust by IRB Infrastructure Developers Limited (Sponsor), as a Private INVIT, the Trust has entered into Debt Novation Agreements (DNA). As per the terms of DNA, in consideration of assets taken over in 9 SPVs, Trust has issued units and agreed to transfer to the Sponsor, the claim amounts when and to the extent the same are eventually received by Project SPVs, on account of Sponsor Claims. Such Sponsor Claims shall be lodged after obtaining COD by respective SPVs. The amount realizable against claims has been estimated by the valuers appointed by the Management based on the weighted average of probabilities of realization of such claims. Based on the fair value of liability as estimated by the valuers, a resultant impact in the value of liability has been recognized under the head 'Loss on fair value measurement of other payable'.	• We reviewed the Placement Memorandum filed with SEBI and the consequential legal documentation entered into by the Trust, including inter alia the Debt Novation Agreements and their reflection in the underlying SPVs. • We have reviewed the methodology adopted by the valuer in deriving the value including the assumptions made. • We assessed the estimates of Fair Value provided in the Valuation Report and realizability of claims as indicated therein. • We also reviewed the reasonableness of the variables applied in the said computation. • Based on the above, the fair value of liability to the Sponsor, as estimated by the valuer, taking into consideration the weighted average of probabilities of realization has been validated.
2. <u>Impairment Testing</u> The Group has toll collection rights as intangible assets pursuant to the concession agreement. The carrying value of these rights acquired under BOT basis is being compared to the recoverable value (which is value in use in the instant case) thereof to ascertain if there is any impairment. The process involves estimating the value in use of the asset which is determined by forecasting and discounting future cash flows. The same is sensitive to changes in discount rate, traffic growth rates, toll growth rates etc. The determination of the recoverable amount of the toll collection right involves significant judgment due to inherent uncertainty in the assumptions supporting the recoverable amount of these rights. Accordingly, the evaluation of impairment of toll collection rights has been determined as a Key Audit Matter.	• We evaluated management's assessment on impairment for intangible assets under development and intangible assets – toll collection rights by testing the assumptions and methodologies used by the Management. • Referred to valuation reports and Traffic Growth Study Reports and determined reasonableness of future toll revenue. • Evaluated the potential changes in major components as compared to previous year vis-à-vis actual performance in order to evaluate whether the inputs and assumptions used in the cash flow forecasts were suitable. • Assessed the appropriateness of the weighted average cost of capital used in determining recoverable amount. • Performed sensitivity analysis of key assumptions used in valuation. • Tested the arithmetical accuracy of the model.

INFORMATION OTHER THAN THE STANDALONE FINANCIAL STATEMENTS AND AUDITOR'S REPORT THEREON

The Board of Directors of Investment Manager is responsible for the preparation of the other information. The other information comprises the information included in the Report of Investment Manager including annexures to Investment Manager's Report and other information as required to be given by SEBI InvIT Regulations, but does not include the standalone financial statements and our report thereon.

Our opinion on the standalone financial statements does not cover the other information and we do not express any form of assurance conclusion thereon. In connection with our audit of the standalone financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the standalone financial statements or our knowledge obtained during the course of our audit or otherwise appears to be materially misstated.

If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

RESPONSIBILITIES OF THE BOARD OF DIRECTORS OF INVESTMENT MANAGER FOR THE STANDALONE FINANCIAL STATEMENTS

The Board of Directors of Investment Manager is responsible for the preparation of these Standalone Financial Statements that give a true and fair view of the Standalone financial position as at 31 March 2023, financial performance including other comprehensive income, movement of Unit Holders' fund and its Cash flows for the year ended March 31, 2023, its Net Assets at fair value as at March 31, 2023, its total returns at Fair Value and the net distributable cash flow of the trust for the year ended March 31, 2023 in accordance with the accounting principles generally accepted in India, including the Indian Accounting Standards specified and/or any addendum thereto as defined in Rule 2(1)(a) of Companies (Indian Accounting Standards) Rules, 2015, as amended read with the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulation 2014 as amended from time to time including any guidelines and circulars issued thereunder (together referred to as the "InvIT Regulations").

This responsibility also includes maintenance of adequate accounting records in accordance with the provisions of the InvIT Regulations for safeguarding of the assets of the Trust and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies; making judgements and estimates that are reasonable and prudent; and design, implementation and maintenance of adequate internal financial controls for ensuring the accuracy and completeness of accounting records, relevant to the preparation and presentation of the Standalone financial statements that give a true and fair view and are free from material misstatement, whether due to fraud and error.

In preparing the Standalone Financial Statements, the Board of Directors of Investment Manager is responsible for assessing the Trust's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of Investment Manager either intends to liquidate the Trust or to cease operations, or has no realistic alternative but to do so.

The Board of Directors of Investment Manager are also responsible for overseeing the Trust's financial reporting process.

AUDITOR'S RESPONSIBILITY FOR THE AUDIT OF THE STANDALONE IND AS FINANCIAL STATEMENTS

Our objectives are to obtain reasonable assurance whether the Standalone Financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also,

- Identify and assess the risks of material misstatement of the standalone financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations or the override of internal control.
- Obtain an understanding of internal financial control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of such controls.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Board of Directors of Investment Manager.
- Conclude on the appropriateness of use of the going concern basis of accounting by the Board of Directors of Investment Manager and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Trust's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Trust to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

Materiality is the magnitude of misstatements in the standalone financial statements that, individually or in aggregate, makes it probable that the economic decisions of a reasonably knowledgeable user of the financial statements may be influenced. We consider quantitative materiality and qualitative factors in (i) planning the scope of our audit work and in evaluating the results of our work; and (ii) to evaluate the effect of any identified misstatements in the financial statements.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Standalone Financial Statements of the current period and are therefore the key audit matters. We describe these matters in our report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS

Based on our audit and as required by SEBI InvIT Regulations, we report that:

a. We have sought and obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;

b. The Balance Sheet and the Statement of Profit and Loss including other comprehensive income, dealt with by this Report are in agreement with the books of account of the Trust; and

c. In our opinion, the aforesaid standalone financial statements comply with the Indian Accounting Standards specified under Rule 2(1)(a) of Companies (Indian Accounting Standards) Rules, 2015, as amended.

2 Netted - off with disbursement of short-term unsecured loan to project SPV.

IRB Infrastructure Trust

Notes to financial statements for the year ended March 31, 2023

1. Trust Information and Nature of Operations

IRB Infrastructure Trust (the "Trust") is a trust settled pursuant to the indenture of trust dated August 27, 2019 which is registered under Indian Trust Act, 1882 and under the Securities Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended from time to time. The Trust is settled by the Sponsor, IRB Infrastructure Developers Limited ("IRB" or the "Sponsor"), an infrastructure development company in India. The Trustee to the Trust is IDBI Trusteeship Services Limited (the "Trustee"). Investment manager for the Trust is MMK Toll Road Private Limited (the "Investment Manager"). The Trust has received registration certificate from SEBI having registration number IN/InviT/19-20/0012.

The Trust has been formed to invest in infrastructure assets primarily being in the road sector in India. The Trust's road projects are eligible infrastructure projects under the InvIT Regulations and held through special purpose vehicles ("Project SPVs" together as "Project SPV Group"). The Trust's portfolio comprises of ten road projects as listed below:-

The Trust had acquired the projects at Sr no 1 to 9 from the Sponsor which are road infrastructure projects developed on DBFOT basis. The SPV at Sr. no 10 has been added to portfolio from 02.04.2022.

Sr. No.	**Project SPV Name**
1	AE Tollway Limited (AETL)
2	CG Tollway Limited (CGTL)
3	IRB Hapur Moradabad Tollway Limited (IRBHMTL)
4	IRB Westcoast Tollway Limited (IRBWTL)
5	Kishangarh Gulabpura Tollway Limited (KGTL)
6	Kaithal Tollway Limited (KTL)
7	Solapur Yedeshi Tollway Limited (SYTL)
8	Udaipur Tollway Limited (UTL)
9	Yedeshi Aurangabad Tollway Limited (YATL)
10	Palsit Dankuni Tollway Private Limited(PDTPL) (w.e.f. 02.04.2022)

The registered office of the Investment Manager is Off No-11th Floor/1101 Hiranandani Knowledge Park, Technology Street, Hill Side Avenue, Powai Mumbai 400076.

The financial statements were authorised for issue in accordance with resolution passed by the board of directors of the Investment manager on May 12, 2023.

The Trust has been listed on NSE w.e.f. 03.04.2023

2. Basis of preparation

The financial statements of IRB Infrastructure Trust have been prepared in accordance with Indian Accounting Standards as defined in Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended, prescribed under Section 133 of the Companies Act, 2013 ("Ind AS") read with SEBI (Infrastructure Investment Trusts) Regulations, 2014, as amended and the circulars issued thereunder ("InvIT Regulations") and other accounting principles generally accepted in India.

The financial statements have been prepared on an accrual basis and under the historical cost convention except for certain financial assets and liabilities (refer accounting policy regarding financial instruments) which have been measured at fair value.

The financial statements are presented in Indian Rupee ('INR') which is the functional currency of the Trust and all values are rounded to the nearest millions, except when otherwise indicated. Wherever the amount represented '0' (zero) construes value less than Rupees five thousand.

3. Summary of significant accounting policies

3.1. Use of estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements and the results of operations during the reporting period end. Although these estimates are based upon management's best knowledge of current events and actions, actual results could differ from these estimates.

3.2. Current versus non-current classification

The Trust presents assets and liabilities in the balance sheet based on current/ non-current classification.
An asset is treated as current when it is:
- Expected to be realised or intended to be sold or consumed in normal operating cycle
- Held primarily for the purpose of trading

- Expected to be realised within twelve months after the reporting period, or
- Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period.
All other assets are classified as non-current.

A liability is current when:
- It is expected to be settled in normal operating cycle
- It is held primarily for the purpose of trading
- It is due to be settled within twelve months after the reporting period, or
- There is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period.

All other liabilities are classified as non-current.

Deferred tax assets and liabilities are classified as non-current assets and liabilities respectively.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The Trust has identified twelve months as its operating cycle.

3.3. Revenue recognition

Revenue is recognised to the extent that it is probable that the economic benefits will flow to the Trust and the revenue can be reliably measured, regardless of when the payment is being made. Revenue is measured at the transaction price of the consideration received or receivable, taking into account contractually defined terms of payment and excluding taxes or duties collected on behalf of the government.

The specific recognition criteria described below must also be met before revenue is recognised:

Interest income
Revenue is recognised on a time proportion basis taking into account the amount outstanding and the rates applicable. For all debt instruments measured either at amortised cost or at fair value through other comprehensive income, interest income is recorded using the effective interest rate (EIR).

Dividends
Revenue is recognised when the Trust's right to receive the payment is established, which is generally when shareholders approve the dividend.

3.4. Taxes

Current income tax
Current income tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted at the reporting date in the countries where the Trust operates and generates taxable income.

Current income tax relating to items recognised outside the Statement of Profit and Loss is recognised outside the Statement of Profit and Loss (either in other comprehensive income or in equity). Current tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity. Management periodically evaluates positions taken in the tax returns with respect to situations in which applicable tax regulations are subject to interpretation and establishes provisions where appropriate.

Deferred tax

Deferred tax is provided using the liability method on temporary differences between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes at the reporting date.

Deferred tax liabilities are recognised for all taxable temporary differences, except:

- When the deferred tax liability arises from the initial recognition of goodwill or an asset or liability in a transaction that is not a business combination and at the time of the transaction, affects neither the accounting profit nor taxable profit or loss.

- In respect of taxable temporary differences associated with investments in subsidiaries, when the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred tax assets are recognised for all deductible temporary differences, the carry forward of unused tax credits and any unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carry forward of unused tax credits and unused tax losses can be utilised, except:

- When the deferred tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction affects neither the accounting profit nor taxable profit or loss

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are re-assessed at each reporting date and are recognised to the extent that it has become probable that future taxable profits will allow the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the year when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the reporting date.

Deferred tax relating to items recognised outside statement of profit and loss is recognised outside statement of profit and loss (either in other comprehensive income or in equity).

Deferred tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity. Deferred tax assets and deferred tax liabilities are offset if a

legally enforceable right exists to set off current tax assets against current tax liabilities and the deferred taxes relate to the same taxable entity and the same taxation authority.

3.5. Goods and Services Tax (GST) paid on acquisition of assets or on incurring expenses

Expenses and assets are recognised net of the amount of goods and service tax paid, except:

When the tax incurred on a purchase of assets or services is not recoverable from the tax authority, in which case, the tax paid is recognised as part of the cost of acquisition of the asset or as part of the expense item, as applicable.

When receivables and payables are stated with the amount of tax included. The net amount of tax recoverable from, or payable to, the tax authority is included as part of receivables or payables in the balance sheet.

3.6. Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of an asset that necessarily takes a substantial period of time to get ready for its intended use or sale are capitalised as part of the cost of the asset. All other borrowing costs are expensed in the period in which they occur. Borrowing costs consist of interest and other costs that an entity incurs in connection with the borrowing of Trusts. Borrowing cost also includes exchange differences to the extent regarded as an adjustment to the borrowing costs.

3.7. Provisions

Provisions are recognised when the Trust has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. When the Trust expects some or all of a provision to be reimbursed, for example, under an insurance contract, the reimbursement is recognised as a separate asset, but only when the reimbursement is virtually certain. The expense relating to a provision is presented in the Statement of Profit and Loss net of any reimbursement.

If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, when appropriate, the risks specific to the liability. When discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost.

3.8. Contingent liabilities and contingent assets

A contingent liability is a possible obligation that arises from past events whose existence will be confirmed by the occurrence or non-occurrence of one or more uncertain future events beyond the control of the Trust or a present obligation that is not recognised because it is not probable that an outflow of resources will be required to settle the obligation. A contingent liability also arises in extremely rare cases where there is a

liability that cannot be recognised because it cannot be measured reliably. The Trust does not recognise a contingent liability but discloses its existence in the financial statements.
A contingent asset is not recognised unless it becomes virtually certain that an inflow of economic benefits will arise. When an inflow of economic benefits is probable, contingent assets are disclosed in the financial statements.
Contingent liabilities and contingent assets are reviewed at each balance sheet date.

3.9. Financial instrument

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets

Initial recognition and measurement
All financial assets are recognised initially at fair value plus, in the case of financial assets not recorded at fair value through Statement of Profit and Loss, directly attributable transaction cost to the acquisition of the financial asset. Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the market place (regular way trades) are recognised on the trade date, i.e., the date that the Trust commits to purchase or sell the asset.

Subsequent measurement
For purposes of subsequent measurement, financial assets are classified in following categories;
- at amortised cost
- at fair value through profit or loss (FVTPL)
- at fair value through other comprehensive income (FVTOCI)

Financial Assets at amortised cost
A financial asset is measured at the amortised cost if both the following conditions are met:
a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and
b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

This category is the most relevant to the Trust. All the Loans and other receivables under financial assets (except Investments) are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market.

After initial measurement such financial assets are subsequently measured at amortised cost using the effective interest rate (EIR) method. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The losses arising from impairment are recognised in the Statement of Profit and Loss.

Financial Assets at Fair Value through Statement of Profit and Loss/Other comprehensive income

All investments in scope of Ind AS 109 are measured at fair value. The Trust has investment in Debt oriented mutual Trust which are held for trading, are classified as at FVTPL. The Trust makes such election on an instrument by instrument basis. The classification is made on initial recognition and is irrevocable. The gain/ loss on sale of investments are recognised in the Statement of Profit and Loss.
Instruments included within the FVTPL category are measured at fair value with all changes recognized in the Statement of Profit and Loss.

Derecognition

A financial asset is primarily derecognised (i.e. removed from the Trust's balance sheet) when:
The rights to receive cash flows from the asset have expired, or
The Trust has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either (a) the Trust has transferred substantially all the risks and rewards of the asset, or (b) the Trust has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Trust has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the Trust continues to recognise the transferred asset to the extent of the Trust's continuing involvement. In that case, the Trust also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Trust has retained.

3.10. Impairment of assets

Impairment of financial assets

Expected credit losses are recognized for all financial assets subsequent to initial recognition other than financial assets in FVTPL category.

For financial assets other than trade receivables, as per Ind AS 109, the Trust recognizes 12 month expected credit losses for all originated or acquired financial assets if at the reporting date the credit risk of the financial asset has not increased significantly since its initial recognition. The expected credit losses are measured as lifetime expected credit losses if the credit risk on financial assets increases significantly since its initial recognition.

The impairment losses and reversals are recognized in Statement of Profit and Loss.

Impairment of non-financial assets

The Trust assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Trust estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset unless the asset does not generate cash inflows that are largely independent of those from other assets or Trust's assets. When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, or payables, as appropriate.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

The Trust’s financial liabilities include trade and other payables, loans and borrowings.

Subsequent measurement

The measurement of financial liabilities depends on their classification, as described below:

Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Financial liabilities are classified as held for trading if they are incurred for the purpose of repurchasing in the near term. This category also includes derivative financial instruments entered into by the Trust that are not designated as hedging instruments in hedge relationships as defined by Ind AS 109.

Gains or losses on liabilities held for trading are recognised in the statement of profit and loss.

Loans and borrowings
This is the category most relevant to the Trust. After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in profit or loss when the liabilities are de-recognised as well as through the EIR amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the statement of profit and loss.

De-recognition
A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the de-recognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the statement of profit and loss.

Offsetting of financial instruments
Financial assets and financial liabilities are offset and the net amount is reported in the standalone balance sheet if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

3.10 Investment in subsidiaries

Investments (equity instruments as well as subordinate debt) in subsidiaries are carried at cost less accumulated impairment losses, if any. Where an indication of impairment exists, the carrying amount of the investment is assessed and written down immediately to its recoverable amount. On disposal of investments in subsidiaries, the difference between net disposal proceeds and carrying amounts are recognised in the Statement of Profit and Loss.

3.11Foreign currencies

The Trust's financial statements are presented in INR, which is also the Trust's functional currency. The Trust does not have any foreign operation and has assessed the functional currency to be INR.

Transactions and balances
Transactions in foreign currencies are initially recorded by the Trust at their respective functional currency spot rates at the date the transaction first qualifies for recognition. Monetary assets and liabilities denominated in foreign currencies are translated at the functional currency spot rates of exchange at the reporting date.

Differences arising on settlement or translation of monetary items are recognised in the statement of profit or loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions.

3.12 Fair value measurement

The Trust measures financial instruments, such as, derivatives at fair value at each balance sheet date.
Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:

► In the principal market for the asset or liability, or
► In the absence of a principal market, in the most advantageous market for the asset or liability.
The principal or the most advantageous market must be accessible by the Trust.
The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.
A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.
The Trust uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.
All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:
► Level 1 — Quoted (unadjusted) market prices in active markets for identical assets or liabilities
► Level 2 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable
► Level 3 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable
For assets and liabilities that are recognised in the financial statements on a recurring basis, the Trust determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.
The Trust's Management determines the policies and procedures for both recurring fair value measurement, such as derivative instruments and unquoted financial assets measured at fair value, and for non-recurring measurement, such as assets held for distribution in discontinued operations.
At each reporting date, the Management analyses the movements in the values of assets and liabilities which are required to be remeasured or re-assessed as per the Trust's accounting policies. For this analysis, the Management verifies the major inputs applied in the latest valuation by agreeing the information in the valuation computation to contracts and other relevant documents.
The management also compares the change in the fair value of each asset and liability with relevant external sources to determine whether the change is reasonable.
On an annual basis, the Management of Investment Manager presents the valuation results to the Audit Committee and the Trust's independent auditors. This includes a discussion of the major assumptions used in the valuations.
For the purpose of fair value disclosures, the Trust has determined classes of assets and liabilities on the basis of the nature, characteristics and risks of the asset or liability and the level of the fair value hierarchy as explained above.
This note summarises accounting policy for fair value. Other fair value related disclosures are given in the relevant notes.
- Disclosures for valuation methods, significant estimates and assumptions (note 28)
- Financial instruments (including those carried at amortised cost) (note 24 and 25)
- Quantitative disclosure of fair value measurement hierarchy (note 24 and 25)

3.13 Contributed Equity

Units are classified as equity. Incremental costs attributable to the issue of units are directly recorded in equity, net of tax.

3.14 Distribution to unit holders

The Trust recognises a liability to make cash distributions to unit holders when the distribution is authorised and a legal obligation has been created. As per the InvIT Regulations, a distribution is authorised when it is approved by the Board of Directors of the Investment Manager. A corresponding amount is recognised directly in equity.

3.15 Cash and cash equivalents

Cash and cash equivalents in the balance sheet comprise cash at banks and on hand and short-term deposits with an original maturity of three months or less, which are subject to an insignificant risk of changes in value.
For the purpose of the statement of cash flows, cash and cash equivalents consist of cash and short-term deposits, as defined above, net of outstanding bank overdrafts as they are considered an integral part of the Trust's cash management.

3.16 Earnings Per Unit (EPU)

Basic earnings per unit are calculated by dividing the net profit for the year attributable to unit holders by the weighted average number of units outstanding during the year.

For the purpose of calculating diluted earnings per unit, the weighted average number of units outstanding during the period are adjusted for the effects of all dilutive potential units.

3.17 Segment Information

The Trust is engaged in to invest in infrastructure assets primarily being in the road sector in India which in the context of Ind AS 108 - Operating Segments is considered as the only segment. The Trust's activities are restricted within India and hence no separate geographical segment disclosure is considered necessary.

3.17 New pronouncements issued but not effective

Ministry of Corporate Affairs ("MCA") notifies new standards or amendments to the existing standards under Companies (Indian Accounting Standards) Rules as issued from time to time. On March 31, 2023, MCA amended the Companies (Indian Accounting Standards) Amendment Rules, 2023, as below:

Ind AS 1: Disclosure of Material Accounting policy information and similar consequential amendment to Ind AS 34.

Ind AS 1: Disclosure of the judgements, apart from those involving estimations, that management has made in the process of applying the entity's accounting policies and that have the most significant effect on the amounts recognised in the financial statements.

Ind AS 8: Definition of Accounting Estimate as "Accounting estimates are monetary amounts in financial statements that are subject to measurement uncertainty". Further amendments to paragraphs delineating Changes to Accounting Estimates.

Ind AS 12: Amendments to taxable temporary difference, initial recognition of asset or liability and Deductible taxable differences.

Ind AS 12: Deferred tax related to assets and liabilities arising from Single Transaction.

Ind AS 107: Information about measurement basis (or bases) for financial instruments to be disclosed as material accounting policy.

Ind AS 109: Amendment to paragraph on reassessment of embedded derivative.

Ind AS 115: Amendments to Appendix 1 which gives there in the major differences, if any, between Indian Accounting Standard (Ind AS) 115 and the corresponding International Financial Reporting Standard (IFRS) 15, Revenue from Contracts with Customers, IFRIC 12, Service Concession Arrangements and SIC 29 Service Concession Arrangements: Disclosures, issued by the International Accounting Standards Board

Note 24 : Fair Values

Financial assets and liabilities

The carrying values of financials instruments of the trust are reasonable and approximations of fair values.

The accounting classification of each category of financial instruments, their carrying amounts and the categories of financial assets and liabilities measured at fair value, are set out below:

(Rs. in Millions)

	Carrying amount	Fair Value	Carrying amount	Fair Value
	As at March 31, 2023	As at March 31, 2023	As at March 31, 2022	As at March 31, 2022
Financial assets				
Financial assets measured at amortised cost				
Loans	35,772.98	35,772.98	33,795.94	33,795.94
Other financial assets	7,965.17	7,965.17	5,610.67	5,610.67
Financial assets measured at fair value through statement of Profit & Loss				
Investments in mutual trusts	20.08	20.08	20.04	20.04
Financial assets measured at amortised cost				
Cash and cash equivalents	6.56	6.56	0.25	0.25
Other Bank balances	-	-	-	-
Financial liabilities				
Financial liabilities measured at amortised cost				
Trade payables	81.35	81.35	81.71	81.71
Borrowings	4,872.91	4,872.91	3,607.93	3,607.93
Other financial liabilities	35,778.03	35,778.03	35,168.79	35,168.79

The management assessed that the fair value of cash and cash equivalents, trade receivables, trade payables, bank overdrafts and other current liabilities approximate their carrying amounts largely due to the short-term maturities of these instruments.

The fair value of the financial assets and liabilities is included at the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The discount for lack of marketability represents the amounts that the trust has determined that market participants would take into account when pricing the investments.

The trust is required to present the Statement of total assets at fair value and Statement of total returns at fair value as per SEBI Circular No. CIR/IMD/DF/114/2016 dated October 20, 2016 as a part of these financial statements - Refer Statement of Net assets at fair value and Statement of Total Returns at fair value.

Note 25 : Fair Value Hierarchy

All financial instruments for which fair value is recognised or disclosed are categorised within the fair value hierarchy described as follows, based on the lowest level input that is significant to the fair value measurement as a whole.

Level 1: Quoted (unadjusted) price is active market for identical assets or liabilities

Level 2: Valuation technique for which the lowest level input that has a significant effect on the fair value measurement are observed, either directly or indirectly.

Level 3: Valuation technique for which the lowest level input has a significant effect on the fair value measurement is not based on observable market data.

There were no transfers between Level 1, Level 2 and Level 3 during the year.

The following table presents fair value hierarchy of assets and liabilities measured at fair value on a recurring basis as of March 31, 2023:

(Rs. in Millions)

	As at March 31, 2023	Fair value measurement at end of the reporting year using		
		Level 1	Level 2	Level 3
Assets				
Loans	35,772.98	-	-	35,772.98
Cash and cash equivalents	6.56			6.56
Other Financial assets	7,965.17	-	-	7,965.17
Investments in mutual fund (Quoted)	20.08	20.08	-	-
Liabilities				
Trade payable	81.35	-	-	81.35
Other financial liabilities	35,778.03	-	-	35,778.03
Borrowings	4,872.91			4,872.91

Trade payable	81.71	-	-	81.71
Other financial liabilities	35,168.79	-	-	35,168.79

Note 26 : Financial risk management objectives and policies

The trust's risk management policies are established to identify and analyse the risks faced by the trust, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management policies and systems are reviewed regularly to reflect changes in market conditions and the trust's activities.

The Board of Directors of Investment Manager have overall responsibility for the establishment and oversight of the trust's risk management framework.

In performing its operating, investing and financing activities, the trust is exposed to the Credit risk, Liquidity risk and Market risk.

a. Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, currency risk and other price risk, such as equity price risk and commodity risk. Financial instruments affected by market risk include loans borrowings and deposits.

Credit risk

Credit risk is the risk that a counter party will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. The trust is exposed to credit risk from its investing activities including loans to subsidiaries, deposits with banks and other financial instruments. As at March 31, 2023, the credit risk is considered low since substantial transactions of the trust are with its subsidiaries.

Interest Rate Risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The trust's exposure to the risk of changes in market interest rates relates primarily to the trust's long-term debt obligations with floating interest rates.

c. Liquidity risk

Liquidity risk is the risk that the trust may not be able to meet its present and future cash and collateral obligations without incurring unacceptable losses. The trust's objective is to, at all times maintain optimum levels of liquidity to meet its cash and collateral requirements.

The trust closely monitors its liquidity position and deploys a robust cash management system. It maintains adequate sources of financing including debt and overdraft from banks at an optimised cost.

The liquidity risk is managed on the basis of expected maturity dates of the financial liabilities. The average credit period taken to settle trade payables is about 30 to 90 days. The other payables are with short-term durations. The carrying amounts are assumed to be a reasonable approximation of fair value. The following table analyses financial liabilities by remaining contractual maturities:

(Rs. in Millions)

March 31, 2023	**On demand**	**Less than 3 months**	**Less than 1 year**	**1 to 5 years**	**> 5 years**	**Total**
Borrowings	-		4,872.91		-	**4,872.91**
Other financial liabilities			-	35,778.03		**35,778.03**
Trade payables	-	0.01	50.56	30.78	-	**81.35**
Total	**-**	**0.01**	**4,923.47**	**35,808.80**	**-**	**40,732.29**

March 31, 2022	**On demand**	**Less than 3 months**	**Less than 1 year**	**1 to 5 years**	**> 5 years**	**Total**
Borrowings	-		3,607.93		-	**3,607.93**
Other financial liabilities			-	35,168.79		**35,168.79**
Trade payables	-	-	35.28	46.43	-	**81.71**
Total	**-**	**-**	**3,643.21**	**35,215.22**	**-**	**38,858.44**

At present, the trust does expects to repay all liabilities at their contractual maturity. In order to meet such cash commitments, the operating activity is expected to generate sufficient cash inflows.

Note 27 : Capital management

Capital includes equity attributable to the equity holders to ensure that it maintains an efficient capital structure and healthy capital ratios in order to support its business and maximise shareholder value. The trust manages its capital structure and makes adjustments to it, in light of changes in economic conditions or its business requirements. To maintain or adjust the capital structure, the trust may adjust the distribution of cash flow of return capital to shareholders or issue new shares. No changes were made in the objectives, policies or processes during the year ended March 31, 2023
The trust monitors capital using a gearing ratio, which is net debt divided by total capital plus net debt. Net debt is calculated as loans and borrowings less cash and cash equivalents.

(Rs. in Millions)

	As at March 31, 2023	As at March 31, 2022
Borrowings	4,872.91	3,607.93
Less: cash and cash equivalents	(6.56)	(0.25)
Net debt (A)	**4,866.35**	**3,607.69**
Unit capital	87,929.33	85,504.33
Other equity	9,526.42	5,992.74
Total equity (B)	**97,455.75**	**91,497.07**
Capital and net debt C = A + B	**1,02,322.10**	**95,104.76**
Gearing ratio (%) (C / A)	**4.76%**	**3.79%**

In order to achieve this overall objective, the trust's capital management, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. Breaches in meeting the financial covenants would permit the bank to immediately call loans and borrowings. There have been no breaches in the financial covenants of any interest-bearing borrowings in the current year.

Note 28 : Significant accounting judgement, estimates and assumptions

The preparation of the trust's financial statements requires management to make judgments, estimates and assumptions that affect the reported amounts of revenue, expenses, assets and liabilities and the actrusting disclosures and the disclosure of contingent liabilities. Uncertainty about these assumptions and estimates could result in out comes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

Judgement

In the process of applying the trust’s accounting policies, management has made the judgement, which have the most significant effect on the amounts recognised in the financial statements.

Classification of unit holders trusts

Under the provisions of the InvIT Regulations, trust is required to distribute to Unit holders not less than ninety percent of the net distributable cash flows of trust for each financial year. Accordingly, a portion of the unit holders’ trusts contains a contractual obligation of the trust to pay to its Unit holders cash distributions. The Unit holder's trusts could therefore have been classified as compound financial instrument which contain both equity and liability components in accordance with Ind AS 32-Financial Instruments: Presentation.
However, in accordance with SEBI Circulars(No.CIR/IMD/DF/114/2016 dated 20-Oct-2016 and No.CIR/IMD/DF/127/2016 dated 29-Nov-2016) issued under the InvIT Regulations, the unit holders’ trusts have been classified as equity in order to comply with the mandatory requirements of Section H of Annexure A to the SEBI Circular dated 20-Oct-2016 dealing with the minimum disclosures for key financial statements. In line with the above, the income distribution payable to unit holders is recognized as liability when the same is approved by the Investment Manager.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities or fair value disclosures within the next financial year, are described below. The trust based its assumptions and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the trust. Such charges are reflected in the assumptions when they occur.

Fair valuation and disclosures

SEBI Circulars issued under the InvIT Regulations required is diclosures relating to net assets at fair value and total returns at fair value. In estimating the fair value of investments in subsidiaries (which constitute substantial portion of the net assets), the Trust engages independent qualified external valuers to perform the valuation. The management works closely with the valuers to establish the appropriate valuation techniques and inputs to the model. The management reports the valuation report and findings to the Board of the Investment Manager half yearly to explain the cause of fluctuations in the fair value of the road projects. The inputs to the valuation models are taken from observable markets where possible, but where this is not feasible, a degree of judgement is required in establishing fair values. Judgements include considerations of inputs such as WACC, Tax rates, Inflation rates etc. Changes in assumptions about these factors could affect the fair value. (refer note 24 for details).

Impairment of non-financial assets

Non-financial assets of the trust primarily comprise of investments in subsidiaries, Impairment exists when the carrying value of an asset or cash generating unit exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The recordable amounts for the investments in subsidiaries are based on value in use of the underlying projects. The value in use calculation is based on a DCF model. The cash flows are derived from budgets / forecasts over the life of the projects.

Note 29 : Investment Manager Fees

Pursuant to the terms of the Investment Management Agreement, the fees will be paid to the Investment Manager for the services provided by it ("Management Fees"). The Management Fees have been revised for the Financial Year with the approval of the Unitholders, where the votes cast by Unitholders so entitled and voting in favor of a resolution are not less than one-and-a-half times the votes cast against such resolution. Pursuant to a resolution of the Unitholders, the Management Fees for the Financial Year 2023 has been revised to Rs.47.70 millions

Note 30 : Taxes

In accordance with section 10 (23FC) of the Income Tax Act, the income of business trust in the form of interest received or receivable from Project SPV is exempt from tax. Accordingly, the trust is not required to provide any current tax liability. Further, deferred tax assets on carry forward losses is not being created since there is no virtual certainty of reversal of the same in the near future.

Note 31

On April 7, 2022, the Trust has executed arrangement with the Sponsor for implementation of Palsit Dankuni Tollway Private Limited ('SPV') by the Trust and accordingly, the project is being executed by the SPV and the Trust.

Note 32 : Events after reporting period

There is no subsequent event after the reporting period which requires adjustments to the financial statements.

Note 33 : Previous period comparatives

Previous period's figures have been regrouped/reclassified, wherever necessary, to confirm to current period's classification.

Note 34 : Subsequent Events

The Trust has been listed on NSE w.e.f. 03.04.2023

INDEPENDENT AUDITOR'S REPORT

To the Unit Holders of IRB Infrastructure Trust

REPORT ON THE AUDIT OF THE STANDALONE IND AS FINANCIAL STATEMENTS

OPINION

We have audited the accompanying standalone financial statements of IRB Infrastructure Trust ("the InvIT" or "the Trust"), which comprise the Balance Sheet as at 31 March 2022, the Statement of Profit and Loss including Other Comprehensive Income, the Statement of Cash Flows and the Statement of Changes in Unit Holders' Equity and Statement of Total Returns at fair value for the year ended 31 March 2022 ("the financial period"), the Statement of Net Assets at fair value as at 31 March 2022, and Notes to the Standalone Financial Statements including a Summary of Significant Accounting Policies and Other Explanatory Information (hereinafter referred to as "the standalone financial statements").

In our opinion and to the best of our information and according to the explanations given to us, the aforesaid Standalone Financial Statements give the information required by the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended from time to time including any guidelines and circulars issued thereunder (together referred to as the "SEBI InvIT Regulations") in the manner so required and give a true and fair view in conformity with the Indian Accounting Standards prescribed under rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended ("Ind AS") and other accounting principles generally accepted in India, of the State of Affairs of the Trust as at 31 March 2022, its **Profit** including other Comprehensive Income, its Cash Flows, changes in Unit holders' Equity and the Total Returns at Fair Value for the year ended 31 March 2022 and the Net Assets at fair value as at 31 March 2022.

BASIS FOR OPINION

We conducted our audit of the Standalone Financial Statements in accordance with the Standards on Auditing ("SAs") issued by the Institute of Chartered Accountants of India. Our responsibilities under those Standards are further described in the Auditor's Responsibilities for the Audit of the Standalone Financial Statements section of this report. We are independent of the Trust in accordance with the code of ethics issued by the Institute of Chartered Accountants of India together with the ethical requirements that are relevant to our audit of the Standalone Financial Statements under the provisions of the SEBI InvIT Regulations and we have fulfilled our other ethical responsibilities in accordance with these requirements and the Code of Ethics. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion on the Standalone Financial Statements.

KEY AUDIT MATTERS

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the Standalone Financial Statements of the financial period. These matters were addressed in the context of our audit of the Standalone Financial Statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. We have determined the matters described below to be the key audit matters to be communicated in our report.

PARTICULARS	HOW THEY WERE ADDRESSED IN OUR AUDIT
1. <u>Loss on fair value measurement of other payable / deferred consideration payable to IRB Group.</u> Pursuant to settlement of IRB Infrastructure Trust by IRB Infrastructure Developers Limited (Sponsor), as a Private INVIT, the Trust has entered into Debt Novation Agreements (DNA). As per the terms of DNA, in consideration of assets taken over in 9 SPVs, Trust has issued units and agreed to transfer to the Sponsor, the claim amounts when and to the extent the same are eventually received by Project SPVs, on account of Sponsor Claims. Such Sponsor Claims shall be lodged after obtaining COD by respective SPVs. The amount realizable against claims has been estimated by the valuers appointed by the Management based on the weighted average of probabilities of realization of such claims. Based on the fair value of liability as estimated by the valuers, a resultant impact in the value of liability has been recognized under the head 'Loss on fair value measurement of other payable'.	• We reviewed the Placement Memorandum filed with SEBI and the consequential legal documentation entered into by the Trust, including inter alia the Debt Novation Agreements and their reflection in the underlying SPVs. • We have reviewed the methodology adopted by the valuer in deriving the value including the assumptions made. • We assessed the estimates of Fair Value provided in the Valuation Report and realizability of claims as indicated therein. • We also reviewed the reasonableness of the variables applied in the said computation. • Based on the above, the fair value of liability to the Sponsor, as estimated by the valuer, taking into consideration the weighted average of probabilities of realization has been validated.
2. <u>Impairment Testing</u> The Group has toll collection rights as intangible assets pursuant to the concession agreement. The carrying value of these rights acquired under BOT basis is being compared to the recoverable value (which is value in use in the instant case) thereof to ascertain if there is any impairment. The process involves estimating the value in use of the asset which is determined by forecasting and discounting future cash flows. The same is sensitive to changes in discount rate, traffic growth rates, toll growth rates etc. The determination of the recoverable amount of the toll collection right involves significant judgment due to inherent uncertainty in the assumptions supporting the recoverable amount of these rights. Accordingly, the evaluation of impairment of toll collection rights has been determined as a Key Audit Matter.	• We evaluated management's assessment on impairment for intangible assets under development and intangible assets – toll collection rights by testing the assumptions and methodologies used by the Management. • Referred to valuation reports and Traffic Growth Study Reports and determined reasonableness of future toll revenue. • Evaluated the potential changes in major components as compared to previous year vis-à-vis actual performance in order to evaluate whether the inputs and assumptions used in the cash flow forecasts were suitable. • Assessed the appropriateness of the weighted average cost of capital used in determining recoverable amount. • Performed sensitivity analysis of key assumptions used in valuation. • Tested the arithmetical accuracy of the model.

INFORMATION OTHER THAN THE STANDALONE FINANCIAL STATEMENTS AND AUDITOR'S REPORT THEREON

The Board of Directors of Investment Manager is responsible for the preparation of the other information. The other information comprises the information included in the Report of Investment Manager including annexures to Investment Manager's Report and other information as required to be given by SEBI InvIT Regulations, but does not include the standalone financial statements and our report thereon.

Our opinion on the standalone financial statements does not cover the other information and we do not express any form of assurance conclusion thereon. In connection with our audit of the standalone financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the standalone financial statements or our knowledge obtained during the course of our audit or otherwise appears to be materially misstated.

If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

RESPONSIBILITIES OF THE BOARD OF DIRECTORS OF INVESTMENT MANAGER FOR THE STANDALONE FINANCIAL STATEMENTS

The Board of Directors of Investment Manager is responsible for the preparation of these Standalone Financial Statements that give a true and fair view of the financial position as at 31 March 2022, financial performance including other comprehensive income, cash flows, changes in unit holders' equity and total returns at fair value for the year ended 31 March 2022 and the net assets at fair value as at 31 March 2022 in accordance with the accounting principles generally accepted in India, including the Indian Accounting Standards specified under Rule 2(1)(a) of Companies (Indian Accounting Standards) Rules, 2015, as amended and relevant rules issued thereunder read with the SEBI InvIT Regulations. This responsibility also includes maintenance of adequate accounting records in accordance with the provisions of the SEBI InvIT Regulations for safeguarding of the assets of the Trust and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies; making judgements and estimates that are reasonable and prudent; and for ensuring the accuracy and completeness of accounting records, relevant to the preparation and presentation of the Standalone Financial Statements that give a true and fair view and are free from material misstatement, whether due to fraud and error.

In preparing the Standalone Financial Statements, the Board of Directors of Investment Manager is responsible for assessing the Trust's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of Investment Manager either intends to liquidate the Trust or to cease operations, or has no realistic alternative but to do so.

The Board of Directors of Investment Manager are also responsible for overseeing the Trust's financial reporting process.

AUDITOR'S RESPONSIBILITY FOR THE AUDIT OF THE STANDALONE IND AS FINANCIAL STATEMENTS

Our objectives are to obtain reasonable assurance whether the Standalone Financial Statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the standalone financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations or the override of internal control.

- Obtain an understanding of internal financial control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of such controls.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by Board of Directors of Investment Manager.

- Conclude on the appropriateness of use of the going concern basis of accounting by the Board of Directors of Investment Manager and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Trust's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Trust to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

Materiality is the magnitude of misstatements in the standalone financial statements that, individually or in aggregate, makes it probable that the economic decisions of a reasonably knowledgeable user of the financial statements may be influenced. We consider quantitative materiality and qualitative factors in (i) planning the scope of our

audit work and in evaluating the results of our work; and (ii) to evaluate the effect of any identified misstatements in the financial statements.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the Standalone Financial Statements of the current period and are therefore the key audit matters. We describe these matters in our report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS

Based on our audit and as required by SEBI InvIT Regulations, we report that:

a. We have sought and obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;

b. The Balance Sheet, the Statement of Profit and Loss, the Statement of Cash Flows, Statement of Changes in Unit Holder's Equity, the Statement of Net Assets at fair value and the Statement of Total Returns at fair value dealt with by this Report are in agreement with the books of account of the Trust; and

c. In our opinion, the aforesaid financial statements comply with the Indian Accounting Standards specified under Rule 2(1)(a) of Companies (Indian Accounting Standards) Rules, 2015, as amended.

IRB Infrastructure Trust

Cash Flow statement for the year ended March 31, 2022

(Rs. in Millions)

Particulars	For the year ended March 31, 2022	For year ended March 31, 2021
Cash flow from operating activities		
Profit / (Loss) before tax	1,975.75	4,151.21
Adjustments to reconcile profit before tax to net cash flows:		
Profit on sale of investments	(0.40)	(0.43)
Interest income on		
- Others	(4,200.00)	(4,200.00)
Operating profit/(loss) before working capital changes	**(2,224.69)**	**(49.22)**
Movement in working capital:		
Increase/(decrease) in trade payables	14.10	40.48
Increase/(decrease) in other financial liabilities	2,211.79	(2,616.69)
Increase/(decrease) in other current liabilities	(0.50)	1.68
(Increase)/decrease in Other current assets	0.03	(0.03)
(Increase)/decrease in loans	(1,682.67)	28,019.39
(Increase)/decrease in Other Financial assets	(3,375.89)	(2,234.78)
Cash generated from/(used in) operations	**(5,057.84)**	**23,160.83**
Direct taxes paid (net of refunds)	-	-
Net cash flows from/(used in) operating activities (A)	**(5,057.84)**	**23,160.83**
Cash flows from investing activities		
Investment in subsidiaries	(615.00)	(1,205.00)
Investment in sub debt of subsidiaries	(2,264.49)	(34,724.37)
Loan given to subsidiaries Long term	(48.71)	(48.71)
Interest received from others	4,200.00	4,200.00
Gain on sale of Investment	0.44	0.43
Purchase of Investment	-	(50.00)
Sale of Investment	29.95	-
Net cash flows from/(used in) investing activities (B)	**1,302.20**	**(31,827.64)**
Cash flow from financing activities		
Other Equity		
Proceeds from issuance of unit capital	3,816.33	5,105.50
Proceeds / Repayment of curent borrowings	(69.83)	3,677.76
Unit Issue Expenses	(3.26)	(103.81)
Net cash flows from/(used in) financing activities (C)	**3,743.24**	**8,679.45**
Net increase/(decrease) in cash and cash equivalents (A+B+C)	**(12.40)**	**12.64**
Cash and cash equivalents at the beginning of the period	12.65	0.01
Cash and cash equivalents at the end of the period (refer 5.2)	**0.25**	**12.65**
Components of cash and cash equivalents		
Cash on hand	-	-
Balances with scheduled banks		
- On Current Account	0.25	12.65
Total Cash and cash equivalents (refer note 5.2)	**0.25**	**12.65**

IRB Infrastructure Trust

Cash Flow statement for the year ended March 31, 2022

Notes:

1. All figures in bracket are outflow.
2. Taxes paid are treated as arising from operating activities and are not bifurcated between investing and financing activities.
3. Reconciliation between opening and closing balances for liabilities arising from financing activities
4. The cash flow statement has been prepared under Indirect Method as per Ind AS 7 "Statement of Cash Flows" as notified under section 133 of the Companies Act, 2013.

IRB Infrastructure Trust

Notes to financial statements for the year ended March 31, 2022

1. Trust Information and Nature of Operations

IRB Infrastructure Trust (the "Fund" / "Trust") is a trust settled pursuant to the indenture of trust dated August 27, 2019 which is registered under Indian Trust Act, 1882 and under the Securities Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended from time to time. The Trust is settled by the Sponsor, IRB Infrastructure Developers Limited ("IRB" or the "Sponsor"), an infrastructure development company in India. The Trustee to the Trust is IDBI Trusteeship Services Limited (the "Trustee"). Investment manager for the Trust is MMK Toll Road Private Limited (the "Investment Manager"). The Trust has received registration certificate from SEBI having registration number IN/InviT/19-20/0012

The Fund has been formed to invest in infrastructure assets primarily being in the road sector in India. The Fund's road projects are eligible infrastructure projects under the InvIT Regulations and held through special purpose vehicles ("Project SPVs" together as "Project SPV Group"). The Fund's portfolio comprises of nine road projects are listed below:-

The Fund had acquired the following projects from the Sponsor which are road infrastructure projects developed on DBFOT basis.

Sr. No.	Project SPV Name
1	AE Tollway Limited (AETL)
2	CG Tollway Limited (CGTL)
3	IRB Hapur Moradabad Tollway Limited (IRBHMTL)
4	IRB Westcoast Tollway Limited (IRBWTL)
5	Kishangarh Gulabpura Tollway Limited (KGTL)
6	Kaithal Tollway Limited (KTL)
7	Solapur Yedeshi Tollway Limited (SYTL)
8	Udaipur Tollway Limited (UTL)
9	Yedeshi Aurangabad Tollway Limited (YATL)

The registered office of the Investment Manager is Off No-11th Floor/1101 Hiranandani Knowledge Park, Technology Street, Hill Side Avenue, Powai Mumbai 400076.

The financial statements were authorised for issue in accordance with resolution passed by the board of directors of the Investment manager on May 06, 2022.

2. Basis of preparation

The financial statements of IRB Infrastructure Trust have been prepared in accordance with Indian Accounting Standards as defined in Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended, prescribed under Section 133 of the Companies Act, 2013 ("Ind AS") read with SEBI (Infrastructure Investment Trusts) Regulations, 2014, as amended and the circulars issued thereunder ("InvIT Regulations") and other accounting principles generally accepted in India.

The financial statements have been prepared on an accrual basis and under the historical cost convention except for certain financial assets and liabilities (refer accounting policy regarding financial instruments) which have been measured at fair value.

The financial statements are presented in Indian Rupee ('INR') which is the functional currency of the Fund and all values are rounded to the nearest lakhs, except when otherwise indicated. Wherever the amount represented '0' (zero) construes value less than Rupees five hundred

3. Summary of significant accounting policies

3.1. Use of estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements and the results of operations during the reporting period end. Although these estimates are based upon management's best knowledge of current events and actions, actual results could differ from these estimates.

3.2. Current versus non-current classification

The Fund presents assets and liabilities in the balance sheet based on current/ non-current classification.
An asset is treated as current when it is:
- Expected to be realised or intended to be sold or consumed in normal operating cycle
- Held primarily for the purpose of trading
- Expected to be realised within twelve months after the reporting period, or
- Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period.

All other assets are classified as non-current.

A liability is current when:
- It is expected to be settled in normal operating cycle

- It is held primarily for the purpose of trading
- It is due to be settled within twelve months after the reporting period, or
- There is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period.

All other liabilities are classified as non-current.

Deferred tax assets and liabilities are classified as non-current assets and liabilities.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The Fund has identified twelve months as its operating cycle.

3.3. Revenue recognition

Revenue is recognised to the extent that it is probable that the economic benefits will flow to the Fund and the revenue can be reliably measured, regardless of when the payment is being made. Revenue is measured at the fair value of the consideration received or receivable, taking into account contractually defined terms of payment and excluding taxes or duties collected on behalf of the government.

The specific recognition criteria described below must also be met before revenue is recognised:

Interest income
Revenue is recognised on a time proportion basis taking into account the amount outstanding and the rates applicable. For all debt instruments measured either at amortised cost or at fair value through other comprehensive income, interest income is recorded using the effective interest rate (EIR).

Dividends
Revenue is recognised when the Fund's right to receive the payment is established, which is generally when shareholders approve the dividend.

3.4. Taxes

Current income tax
Current income tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted at the reporting date in the countries where the Fund operates and generates taxable income.

Current income tax relating to items recognised outside the Statement of Profit and Loss is recognised outside the Statement of Profit and Loss (either in other comprehensive income or in equity). Current tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity. Management periodically evaluates positions taken in the tax returns with respect to situations in which applicable tax regulations are subject to interpretation and establishes provisions where appropriate.

Deferred tax
Deferred tax is provided using the liability method on temporary differences between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes at the reporting date.

Deferred tax liabilities are recognised for all taxable temporary differences, except:
- When the deferred tax liability arises from the initial recognition of goodwill or an asset or liability in a transaction that is not a business combination and at the time of the transaction, affects neither the accounting profit nor taxable profit or loss.

- In respect of taxable temporary differences associated with investments in subsidiaries, when the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred tax assets are recognised for all deductible temporary differences, the carry forward of unused tax credits and any unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carry forward of unused tax credits and unused tax losses can be utilised, except:

- When the deferred tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction affects neither the accounting profit nor taxable profit or loss

The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are re-assessed at each reporting date and are recognised to the extent that it has become probable that future taxable profits will allow the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the year when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the reporting date.

Deferred tax relating to items recognised outside statement of profit and loss is recognised outside statement of profit and loss (either in other comprehensive income or in equity).

Deferred tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity. Deferred tax assets and deferred tax liabilities are offset if a legally enforceable right exists to set off current tax assets against current tax liabilities and the deferred taxes relate to the same taxable entity and the same taxation authority.

Sales/value added tax and goods and service tax paid on acquisition of assets or on incurring expenses

Expenses and assets are recognised net of the amount of sales/value added taxes and goods and service tax paid, except:

When the tax incurred on a purchase of assets or services is not recoverable from the tax authority, in which case, the tax paid is recognised as part of the cost of acquisition of the asset or as part of the expense item, as applicable.

When receivables and payables are stated with the amount of tax included. The net amount of tax recoverable from, or payable to, the tax authority is included as part of receivables or payables in the balance sheet.

3.5. Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of an asset that necessarily takes a substantial period of time to get ready for its intended use or sale are capitalised as part of the cost of the asset. All other borrowing costs are expensed in the period in which they occur. Borrowing costs consist of interest and other costs that an entity incurs in connection with the borrowing of funds. Borrowing cost also includes exchange differences to the extent regarded as an adjustment to the borrowing costs.

3.6. Provisions

Provisions are recognised when the Fund has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. When the Fund expects some or all of a provision to be reimbursed, for example, under an insurance contract, the reimbursement is recognised as a separate asset, but only when the reimbursement is virtually certain. The expense relating to a provision is presented in the Statement of Profit and Loss net of any reimbursement.

If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, when appropriate, the risks specific to the liability. When discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost.

3.7. Contingent liabilities and contingent assets

A contingent liability is a possible obligation that arises from past events whose existence will be confirmed by the occurrence or non-occurrence of one or more uncertain future events beyond the control of the Fund or a present obligation that is not recognised because it is not probable that an outflow of resources will be required to settle the obligation. A contingent liability also arises in extremely rare cases where there is a liability that cannot be recognised because it cannot be measured reliably. The Fund does not recognise a contingent liability but discloses its existence in the financial statements.
A contingent asset is not recognised unless it becomes virtually certain that an inflow of economic benefits will arise. When an inflow of economic benefits is probable, contingent assets are disclosed in the financial statements.
Contingent liabilities and contingent assets are reviewed at each balance sheet date.

3.8. Financial instrument

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets

Initial recognition and measurement
All financial assets are recognised initially at fair value plus, in the case of financial assets not recorded at fair value through Statement of Profit and Loss, directly attributable transaction cost to the acquisition of the financial asset. Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the market place (regular way trades) are recognised on the trade date, i.e., the date that the Fund commits to purchase or sell the asset.

Subsequent measurement
For purposes of subsequent measurement, financial assets are classified in following categories;
- at amortised cost
- at fair value through profit or loss (FVTPL)
- at fair value through other comprehensive income (FVTOCI)

Financial Assets at amortised cost
A financial asset is measured at the amortised cost if both the following conditions are met:
a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and
b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

This category is the most relevant to the Fund. All the Loans and other receivables under financial assets (except Investments) are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market.

After initial measurement such financial assets are subsequently measured at amortised cost using the effective interest rate (EIR) method. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The losses arising from impairment are recognised in the Statement of Profit and Loss.

Financial Assets at Fair Value through Statement of Profit and Loss/Other comprehensive income

All investments in scope of Ind AS 109 are measured at fair value. The Fund has investment in Debt oriented mutual fund which are held for trading, are classified as at FVTPL. The Fund makes such election on an instrument by instrument basis. The

classification is made on initial recognition and is irrevocable. The gain/ loss on sale of investments are recognised in the Statement of Profit and Loss.
Instruments included within the FVTPL category are measured at fair value with all changes recognized in the Statement of Profit and Loss.

Derecognition

A financial asset (or, where applicable, a part of a financial asset or part of a the Fund of similar financial assets) is primarily derecognised (i.e. removed from the Fund's balance sheet) when:
The rights to receive cash flows from the asset have expired, or
The Fund has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either (a) the Fund has transferred substantially all the risks and rewards of the asset, or (b) the Fund has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Fund has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the Fund continues to recognise the transferred asset to the extent of the Fund's continuing involvement. In that case, the Fund also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Fund has retained.

3.9. Impairment of assets

Impairment of financial assets

Expected credit losses are recognized for all financial assets subsequent to initial recognition other than financial assets in FVTPL category.

For financial assets other than trade receivables, as per Ind AS 109, the Fund recognizes 12 month expected credit losses for all originated or acquired financial assets if at the reporting date the credit risk of the financial asset has not increased significantly since its initial recognition. The expected credit losses are measured as lifetime expected credit losses if the credit risk on financial assets increases significantly since its initial recognition.

The impairment losses and reversals are recognized in Statement of Profit and Loss.

Impairment of non-financial assets

The Fund assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Fund estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset unless the asset does not generate cash inflows that are largely independent of those from

other assets or Fund's assets. When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, or payables, as appropriate.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

The Fund’s financial liabilities include trade and other payables, loans and borrowings including bank overdrafts, financial guarantee contracts and derivative financial instruments.

Subsequent measurement

The measurement of financial liabilities depends on their classification, as described below:

Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss. Financial liabilities are classified as held for trading if they are incurred for the purpose of repurchasing in the near term. This category also includes derivative financial instruments entered into by the Fund that are not designated as hedging instruments in hedge relationships as defined by Ind AS 109.

Gains or losses on liabilities held for trading are recognised in the statement of profit and loss.

Loans and borrowings
This is the category most relevant to the Fund. After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in profit or loss when the liabilities are de-recognised as well as through the EIR amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the statement of profit and loss.

De-recognition
A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from

the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the de-recognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the statement of profit and loss.

Offsetting of financial instruments
Financial assets and financial liabilities are offset and the net amount is reported in the standalone balance sheet if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, to realise the assets and settle the liabilities simultaneously.

3.10 Investment in subsidiaries

Investments (equity instruments as well as subordinate debt) in subsidiaries are carried at cost less accumulated impairment losses, if any. Where an indication of impairment exists, the carrying amount of the investment is assessed and written down immediately to its recoverable amount. On disposal of investments in subsidiaries, the difference between net disposal proceeds and carrying amounts are recognised in the Statement of Profit and Loss.

3.11Foreign currencies

The Fund's financial statements are presented in INR, which is also the Fund's functional currency. The Fund does not have any foreign operation and has assessed the functional currency to be INR.

Transactions and balances
Transactions in foreign currencies are initially recorded by the Fund at their respective functional currency spot rates at the date the transaction first qualifies for recognition. Monetary assets and liabilities denominated in foreign currencies are translated at the functional currency spot rates of exchange at the reporting date.

Differences arising on settlement or translation of monetary items are recognised in the statement of profit or loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions.

3.12 Fair value measurement

The Fund measures financial instruments, such as, derivatives at fair value at each balance sheet date.
Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:
► In the principal market for the asset or liability, or
► In the absence of a principal market, in the most advantageous market for the asset or liability.

The principal or the most advantageous market must be accessible by the Fund.
The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.
A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.
The Fund uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.
All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:
► Level 1 — Quoted (unadjusted) market prices in active markets for identical assets or liabilities
► Level 2 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable
► Level 3 — Valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable
For assets and liabilities that are recognised in the financial statements on a recurring basis, the Fund determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.
The Fund's Management determines the policies and procedures for both recurring fair value measurement, such as derivative instruments and unquoted financial assets measured at fair value, and for non-recurring measurement, such as assets held for distribution in discontinued operations.
At each reporting date, the Management analyses the movements in the values of assets and liabilities which are required to be remeasured or re-assessed as per the Fund's accounting policies. For this analysis, the Management verifies the major inputs applied in the latest valuation by agreeing the information in the valuation computation to contracts and other relevant documents.
The management also compares the change in the fair value of each asset and liability with relevant external sources to determine whether the change is reasonable.
On an annual basis, the Management of Investment Manager presents the valuation results to the Audit Committee and the Fund's independent auditors. This includes a discussion of the major assumptions used in the valuations.
For the purpose of fair value disclosures, the Fund has determined classes of assets and liabilities on the basis of the nature, characteristics and risks of the asset or liability and the level of the fair value hierarchy as explained above.
This note summarises accounting policy for fair value. Other fair value related disclosures are given in the relevant notes.
- Disclosures for valuation methods, significant estimates and assumptions (note 28)
- Financial instruments (including those carried at amortised cost) (note 24 and 25)
- Quantitative disclosure of fair value measurement hierarchy (note 24 and 25)

3.13 Contributed Equity

Units are classified as equity. Incremental costs attributable to the issue of units are directly recorded in equity, net of tax.

3.14 Distribution to unit holders

The Fund recognises a liability to make cash distributions to unit holders when the distribution is authorised and a legal obligation has been created. As per the InvIT Regulations, a distribution is authorised when it is approved by the Board of Directors of the Investment Manager. A corresponding amount is recognised directly in equity.

3.15 Cash and cash equivalents

Cash and cash equivalents in the balance sheet comprise cash at banks and on hand and short-term deposits with an original maturity of three months or less, which are subject to an insignificant risk of changes in value.
For the purpose of the statement of cash flows, cash and cash equivalents consist of cash and short-term deposits, as defined above, net of outstanding bank overdrafts as they are considered an integral part of the Fund's cash management.

3.16 Earnings Per Unit (EPU)

Basic earnings per unit are calculated by dividing the net profit for the year attributable to unit holders by the weighted average number of units outstanding during the year.

For the purpose of calculating diluted earnings per unit, the weighted average number of units outstanding during the period are adjusted for the effects of all dilutive potential units.

3.17 Investment

Investments, which are readily realisable and intended to be held for not more than one year from the date on which such investments are made, are classified as current investments. All other investments are classified as long-term investments.

On initial recognition, all investments are measured at cost. The cost comprises purchase price and directly attributable acquisition charges such as brokerage, fees and duties. If an investment is acquired, or partly acquired, by the issue of shares or other securities, the acquisition cost is the fair value of the securities issued.

Current investments are carried in the financial statements at lower of cost and fair value determined on an individual investment basis. Long-term investments are carried at cost. However, provision for diminution in value is made to recognise a decline other than temporary in the value of the investments.

On disposal of an investment, the difference between its carrying amount and net disposal proceeds is charged or credited to the Statement of profit and loss.

3.18 Segment Information

The Fund is engaged in to invest in infrastructure assets primarily being in the road sector in India which in the context of Ind AS 108 - Operating Segments is considered as the only segment. The Fund's activities are restricted within India and hence no separate geographical segment disclosure is considered necessary.

IRB Infrastructure Trust
Notes to financial statement for year ended March 31, 2022

(Rs. in Millions)

Note 24 : Fair Values

Financial assets and liabilities

The carrying values of financials instruments of the Fund are reasonable and approximations of fair values.

The accounting classification of each category of financial instruments, their carrying amounts and the categories of financial assets and liabilities measured at fair value, are set out below:

(Rs. in Millions)

	Carrying amount	Fair Value	Carrying amount	Fair Value
	As at March 31, 2022	As at March 31, 2022	As at March 31, 2021	As at March 31, 2021
Financial assets				
Financial assets measured at amortised cost				
Loans	33,795.94	33,795.94	32,064.56	32,064.56
Other financial assets	5,610.67	5,610.67	2,234.78	2,234.78
Financial assets measured at fair value through statement of Profit & Loss				
Investments in mutual funds	20.04	20.04	50.00	50.00
Financial assets measured at amortised cost				
Cash and cash equivalents	0.25	0.25	12.65	12.65
Other Bank balances	-	-	-	-
Financial liabilities				
Trade payables	81.71	81.71	67.61	67.61
Borrowings	3,607.93	3,607.93	3,677.76	3,677.76
Other financial liabilities	35,168.79	35,168.79	32,957.00	32,957.00

The management assessed that the fair value of cash and cash equivalents, trade receivables, trade payables, bank overdrafts and other current liabilities approximate their carrying amounts largely due to the short-term maturities of these instruments.

The fair value of the financial assets and liabilities is included at the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The discount for lack of marketability represents the amounts that the company has determined that market participants would take into account when pricing the investments.

The Fund is required to present the Statement of total assets at fair value and Statement of total returns at fair value as per SEBI Circular No. CIR/IMD/DF/114/2016 dated October 20, 2016 as a part of these financial statements - Refer Statement of Net assets at fair value and Statement of Total Returns at fair value.

Note 25 : Fair Value Hierarchy

All financial instruments for which fair value is recognised or disclosed are categorised within the fair value hierarchy described as follows, based on the lowest level input that is significant to the fair value measurement as a whole.

Level 1: Quoted (unadjusted) price is active market for identical assets or liabilities

Level 2: Valuation technique for which the lowest level input that has a significant effect on the fair value measurement are observed, either directly or indirectly.

Level 3: Valuation technique for which the lowest level input has a significant effect on the fair value measurement is not based on observable market data.

There were no transfers between Level 1 and Level 2 during the year. No financial assets/ liabilities that are measured at fair value were Level 3 fair value measured.

The following table presents fair value hierarchy of assets and liabilities measured at fair value on a recurring basis as of March 31, 2022:

(Rs. in Millions)

	As at March 31, 2022	Fair value measurement at end of the reporting year using		
		Level 1	Level 2	Level 3
Assets				
Loans	33,795.94	-	-	33,795.94
Other Financial assets	5,610.67	-	-	5,610.67
Investments in mutual funds(Quoted)	20.04	20.04	-	-
Liabilities				
Trade payable	81.71	-	-	81.71
Other financial liabilities	35,168.79	-	-	35,168.79

The following table presents fair value hierarchy of assets and liabilities measured at fair value on a recurring basis as of March 31, 2021:

(Rs. in Millions)

	As at March 31, 2021	Fair value measurement at end of the reporting year using		
		Level 1	Level 2	Level 3
Assets				
Loans	32,064.56	-	-	32,064.56
Other Financial assets	2,234.78	-	-	2,234.78
Investments in mutual funds(Quoted)	50.00	50.00	-	-
Liabilities				
Trade payable	67.61	-	-	67.61
Other financial liabilities	32,957.00	-	-	32,957.00

Note 26 : Financial risk management objectives and policies

The fund's risk management policies are established to identify and analyse the risks faced by the fund, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management policies and systems are reviewed regularly to reflect changes in market conditions and the fund's activities.

The Board of Directors of Investment Manager have overall responsibility for the establishment and oversight of the fund's risk management framework.

In performing its operating, investing and financing activities, the fund is exposed to the Credit risk, Liquidity risk and Market risk.

a. Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, currency risk and other price risk, such as equity price risk and commodity risk. Financial instruments affected by market risk include loans and borrowings, deposits.

Credit risk

Credit risk is the risk that a counter party will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. The Fund is exposed to credit risk from its investing activities including loans to subsidiaries, deposits with banks and other financial instruments. As at March 31, 2022, the credit risk is considered low since substantial transactions of the Fund are with its subsidiaries.

Interest Rate Risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The fund's exposure to the risk of changes in market interest rates relates primarily to the fund's long-term debt obligations with floating interest rates.

c. Liquidity risk

Liquidity risk is the risk that the Fund may not be able to meet its present and future cash and collateral obligations without incurring unacceptable losses. The Fund's objective is to, at all times maintain optimum levels of liquidity to meet its cash and collateral requirements.

The Fund closely monitors its liquidity position and deploys a robust cash management system. It maintains adequate sources of financing including debt and overdraft from banks at an optimised cost.

The liquidity risk is managed on the basis of expected maturity dates of the financial liabilities. The average credit period taken to settle trade payables is about 30 to 90 days. The other payables are with short-term durations. The carrying amounts are assumed to be a reasonable approximation of fair value. The following table analyses financial liabilities by remaining contractual maturities:

(Rs. in Millions)

March 31, 2022	**On demand**	**Less than 3 months**	**Less than 1 year**	**1 to 5 years**	**> 5 years**	**Total**
Borrowings	-		3,607.93		-	**3,607.93**
Other financial liabilities			-	35,168.79		**35,168.79**
Trade payables	-		81.71	-	-	**81.71**
Total	**-**	**-**	**3,689.64**	**35,168.79**	**-**	**38,858.44**

March 31, 2021	**On demand**	**Less than 3 months**	**Less than 1 year**	**1 to 5 years**	**> 5 years**	**Total**
Borrowings	-		3,677.76		-	**3,677.76**
Other financial liabilities			8,239.25	24,717.75		**32,957.00**
Trade payables	-	67.61	-	-	-	**67.61**
Total	**-**	**67.61**	**11,917.01**	**24,717.75**	**-**	**36,702.38**

At present, the fund does expects to repay all liabilities at their contractual maturity. In order to meet such cash commitments, the operating activity is expected to generate sufficient cash inflows.

Note 27 : Capital management

Capital includes equity attributable to the equity holders to ensure that it maintains an efficient capital structure and healthy capital ratios in order to support its business and maximise shareholder value. The company manages its capital structure and makes adjustments to it, in light of changes in economic conditions or its business requirements. To maintain or adjust the capital structure, the company may adjust the dividend payment to shareholders, return capital to shareholders or issue new shares. No changes were made in the objectives, policies or processes during the period ended March 31, 2022
The company monitors capital using a gearing ratio, which is net debt divided by total capital plus net debt. Net debt is calculated as loans and borrowings less cash and cash equivalents.

(Rs. in Millions)

	As at March 31, 2022	As at March 31, 2021
Borrowings	3,607.93	3,677.76
Less: cash and cash equivalents (including unpaid dividend account)	(0.25)	(12.65)
Net debt (A)	**3,607.69**	**3,665.11**
Unit capital	85,504.33	81,688.00
Other equity	5,992.74	4,020.25
Total equity (B)	**91,497.07**	**85,708.25**
Capital and net debt C = A + B	**95,104.76**	**89,373.36**
Gearing ratio (%) (C / A)	**3.79%**	**4.10%**

`

In order to achieve this overall objective, the fund's capital management, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. Breaches in meeting the financial covenants would permit the bank to immediately call loans and borrowings. There have been no breaches in the financial covenants of any interest-bearing borrowings in the current period.

Note 28 : Significant accounting judgement, estimates and assumptions

The preparation of the Fund's financial statements requires management to make judgments, estimates and assumptions that affect the reported amounts of revenue, expenses, assets and liabilities and the accompanying disclosures and the disclosure of contingent liabilities. Uncertainty about these assumptions and estimates could result in out comes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

Judgement

In the process of applying the Fund's accounting policies, management has made the following judgements, which have the most significant effect on the amounts recognised in the financial statements.

Classification of unit holders Funds

Under the provisions of the InvIT Regulations, Fund is required to distribute to Unit holders not less than ninety percent of the net distributable cash flows of Fund for each financial year. Accordingly, a portion of the unit holders' Funds contains a contractual obligation of the Fund to pay to its Unit holders cash distributions. The Unit holder's Funds could therefore have been classified as compound financial instrument which contain both equity and liability components in accordance with Ind AS 32-Financial Instruments: Presentation.
However, in accordance with SEBI Circulars(No.CIR/IMD/DF/114/2016 dated 20-Oct-2016 and No.CIR/IMD/DF/127/2016 dated 29-Nov-2016) issued under the InvIT Regulations, the unit holders' Funds have been classified as equity in order to comply with the mandatory requirements of Section H of Annexure A to the SEBI Circular dated 20-Oct-2016 dealing with the minimum disclosures for key financial statements. In line with the above, the income distribution payable to unit holders is recognized as liability when the same is approved by the Investment Manager.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities or fair value disclosures within the next financial year, are described below. The Fund based its assumptions and estimates on parameters available when the financial statements were prepared. Existing circumstances and assumptions about future developments, however, may change due to market changes or circumstances arising that are beyond the control of the Fund. Such charges are reflected in the assumptions when they occur.

Impairment of non-financial assets

Non-financial assets of the Fund primarily comprise of investments in subsidiaries, Impairment exists when the carrying value of an asset or cash generating unit exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The recordable amounts for the investments in subsidiaries are based on value in use of the underlying projects. The value in use calculation is based on a DCF model. The cash flows are derived from budgets / forecasts over the life of the projects.

Note 29 : COVID 19

The outbreak of Coronavirus (COVID-19) pandemic globally and in India is causing significant disturbance and slowdown of economic activity. As per the directions of the Ministry of Road Transport & Highways (MoRTH)/ National Highway Authority of India (NHAI), in order to follow MHA guidelines about commercial and private establishment in the wake of COVID-19 epidemic in the country, operations at the toll plaza of the Group were closed down w.e.f. 26th March, 2020. The toll operations were resumed from 20th April, 2020 by ensuring compliance with preventive measures in terms of guidelines/ instructions issue by Govt. of India to contain spread of Covid -19. Due to this, traffic for the toll road has been impacted. Management believes this is temporary and expects traffic will be normalised looking at the recent toll collection. In accordance with the Concession Agreement and NHAI policy no. 8.3.33/2020 and 8.4.20/2020 dated 26th May, 2020, the Group is eligible for extension of concession period with NHAI towards loss of revenue due to COVID-19 pandemic and NHAI is also extending COVID-19 loan to the Concessionaire for shortfall in cashflow. The management has assessed and deretemined that considering the nature of its operations and overall revenue model, COVID-19 does not have any material impact on the Company's financial position as at March 31, 2022 and its financial performance for the period then end.

Note 30 : Events after reporting period

There is no subsequent event after the reporting period which requires adjustments to the financial statements.

Note 31 : Previous period comparatives

Previous period's figures have been regrouped/reclassified, wherever necessary, to confirm to current period's classification.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Investors should read the following discussion and analysis of the Trust's financial condition and results of operations together with the sections "Summary Financial Information" and "Financial Statements" on pages 44 and 347, respectively. This discussion contains forward-looking statements and involves numerous risks and uncertainties, including, but not limited to, those described in the section "Risk Factors" on page 16. Actual results could differ materially from those contained in any forward-looking statements and for further details regarding forward-looking statements, refer to "Forward-Looking Statements" on page 14.

This Letter of Offer includes (i) unaudited interim consolidated financial information of the Trust and the Project SPVs as of and for the six-month period ended September 30, 2024; (ii) audited consolidated financial information of the Trust and the Project SPVs as of and for the Financial Years 2024, 2023 and 2022; (iii) unaudited interim standalone financial information of the Trust as of and for the six-month period ended September 30, 2024; and (iv) audited standalone financial information of the Trust as of and for the Financial Years 2024,2023 and 2022.

This Letter of Offer includes summary financial information of MBEL as of and for the six-month period ended September 30, 2024 and the Financial Years 2024, 2023 and 2022. This Letter of Offer also contains Pro Forma Financial Information of the Trust and MBEL as of and for the Financial Year 2024 and the six-month period ended September 30, 2024 prepared in accordance with the requirements of Chapter 9 of the SEBI Master Circular and the InvIT Regulations.

The following discussion includes a discussion and analysis of the financial condition and results of operations of the Trust and the Project SPVs on a consolidated basis as of and for the six-month period ended September 30, 2024, based on the independent auditors' report on the unaudited interim financial information issued by the auditors for such period, and the Financial Years ended March 31, 2024, March 31, 2023 and March 31, 2022, based on the audited consolidated financial statements of the Trust for such periods. Ind AS differs in certain material respects from Indian GAAP, IFRS and U.S. GAAP. Accordingly, the degree to which our financial statements will provide meaningful information to a prospective investor in countries other than India is entirely dependent on the reader's level of familiarity with Ind AS.

The Project SPVs' and the Target SPV's financial year ends on March 31 of each year. Accordingly, all references to a particular financial year are to the 12-month period ended March 31 of such year.

References herein to the "Current Portfolio" are to the pre-MBEL Acquisition portfolio of the Trust and to the "Expanded Portfolio" are to the post-MBEL Acquisition portfolio of the Trust.

Overview

The Trust is a registered infrastructure investment trust under the InvIT Regulations. The Current Portfolio of the Trust comprises 15 toll-road assets in the states of Telangana, West Bengal, Haryana, Uttar Pradesh, Rajasthan, Gujarat, Goa, Maharashtra, Karnataka and Madhya Pradesh in India and consists of 11 Build-Operate-Transfer (BOT) projects and 4 Toll-Operate-Transfer (TOT) projects.

The Trust has acquired the Current Portfolio comprised of the Project SPVs from the Sponsor and in the case of PDTPL, IRB GEPL and STPL, holds the Project SPV together with the Sponsor. IRB LTPL, IRB KTPL and IRB GTPL were incorporated by and are held by the Trust. Each of the Project SPVs is an eligible infrastructure project as defined under the InvIT Regulations. As of September 30, 2024, the Project SPVs owned the following toll road assets comprising approximately 9,789 Lane Kilometers of highway:

- The Agra - Etawah NH-2 Project: A 124.52 km section of NH-2 between Agra and Etawah Bypass in Uttar Pradesh which is held by AETL;

- The Gulabpura - Chittorgarh NH-79 Project: A 124.87 km section of NH-79 between Gulabpura and Chittorgarh Bypass in Rajasthan which is held by CGTL;

- The Hapur - Moradabad NH-9 Project: A 99.867 km section of NH-9 between Hapur and Moradabad in Uttar Pradesh which is held by IRB HMTL;

- The Goa - Kundapur NH-17 Project: A 187.28 km section of NH-17 between Goa/Karnataka border and Kundapur in Karnataka which is held by IRB WTL;

- The Kishangarh - Gulabpura NH-79/79A Project: A 90.00 km section of NH-79/79A between Kishangarh and Gulabpura in Rajasthan which is held by KGTL;

- The Kaithal - Rajasthan Border NH-152/65 Project: A 166.259 km section of NH-152/65 between Kaithal and Rajasthan Border in Haryana which is held by KTL;

- The Solapur - Yedeshi NH-211 Project: A 98.717 km section of NH-211 between Solapur and Yedeshi in Maharashtra which is held by SYTL;

- The Udaipur - Rajasthan Border NH-8 Project: A 113.80 km section of NH-8 between Udaipur and Rajasthan Border in Rajasthan and Gujarat which is held by UTL;

- The Yedeshi - Aurangabad NH-211 Project: A 189.09 km section of NH-211 between Yedeshi and Aurangabad in Maharashtra which is held by YATL;

- The Palsit – Dankuni NH-19 Project: A 63.83 km section of NH-19 between Palsit and Dankuni in West Bengal which is held by PDTPL;

- The Nehru Outer Ring Road Project: A 158.00 km section of the Nehru Outer Ring Road in Telangana which is held by IRB GEPL;

- The Samakhiyali – Santalpur NH-27 Project: A 90.90 km section of NH-27 between Samakhiyali and Santalpur in Gujarat which is held by STPL;

- The Lalitpur – Lakhnadon NH-44 Project: A 316.08 km section of NH-44 between Lalitpur, Sagar and Lakhnadon in Uttar Pradesh and Madhya Pradesh which will be held by IRB LTPL;

- The Kota Bypass and Cable Stay Bridge Project: A section of 27.820 km of NH-76 (new NH-27) in Rajasthan which will be held by IRB KTPL; and

- The Gwalior - Jhansi Project: An 82.455 km section of NH-75 (new NH-44) between Gwalior and Jhansi in the states of Madhya Pradesh and Uttar Pradesh which will be held by IRB GTPL.

The map set out below depicts the location of the Current Portfolio:

The Sponsor of the Trust is IRB Infrastructure Developers Limited, one of the largest infrastructure development and construction companies in India in terms of net worth in the roads and highways sector according to the NHAI's annual prequalification for public private partnerships in national highway projects report for 2016. The Sponsor has been listed on the Stock Exchanges since 2008. As at September 30, 2024, the Sponsor had six road projects of which two were operational and four were under-construction. The Sponsor also acts as the Project Manager. For further details, see "*The Sponsor and Project Manager*" on page 327.

The Investment Manager of the Trust is MMK Toll Road Private Limited. The Investment Manager has experience in operating a road project for a period of 13 years. 51% of the equity share capital in the Investment Manager is held by the Sponsor, approximately 25% of the equity share capital of the Investment Manager is held by Croxley and approximately 24% of the equity share capital of the Investment Manager is held by the Cintra IM Investor. For further details, see "*The Investment Manager*" and "*Corporate Governance*" on pages 331 and 162, respectively.

The Trustee of the Trust is IDBI Trusteeship Services Limited. The Trustee is registered with the SEBI as a debenture trustee under the Debenture Trustees Regulations. For further details, see "*The Trustee*" on page 339.

MBEL is currently a joint venture between the Sponsor and Anahera. 51% of the equity share capital in MBEL is held by the Sponsor and 49% of the equity share capital of MBEL is held by Anahera. MBEL has entered into a concession agreement with the UPEIDA for the development of access controlled six-lane (expandable to eight-lane) greenfield 'Ganga Expressway' from Bijoli, Meerut to Nagla Barah, Budaun from Km 7.900 to Km 137.600 (total design length 129.700 Km) in the state of Uttar Pradesh on design-build-finance-operate-transfer (toll) basis. The Trust proposes to acquire MBEL by purchasing 80.40% of the equity share capital of MBEL from the Sponsor and Anahera, with the Sponsor and Anahera holding 10.00% and 9.60%, respectively, of the equity share capital in MBEL. Further, the Trust proposes to purchase 80.40% of the outstanding non-convertible debentures issued by MBEL under the MBEL Securities Purchase Agreement. For further details, see "*Objects of the Issue*" and "*Background and Structure of the Trust*" on pages 79 and 93, respectively.

Factors affecting Results of Operations

Our business and results of operations have been affected and will continue to be affected in future by a number of important factors, including:

The terms of the concession agreements and traffic volumes

BOT, TOT and DBFOT projects restrict the Project SPVs' operational and financial flexibility. Toll fees are typically pre-determined with the relevant government entity and cannot be modified to reflect prevailing circumstances, other than annual adjustments to account for inflation as specified in the concession agreements. Accordingly, a Project SPV's or the Target SPV's profitability is largely a function of how effectively it manages costs during the concession period. Significant costs during the concession period include construction costs and operating and maintenance expenses such as periodic maintenance, which is required to be performed as specified in the concession agreement. Periodic maintenance involves the repair of wear and tear of the roads and highways, including overlaying the surface of the roads and highways, if required. The Project Manager has agreed to provide the remaining portion of construction works for the Project SPVs. The Project Manager has also agreed to provide for operations and maintenance works for all the Project SPVs for an initial period of 10 years on a fixed-fee basis.

The Project SPVs and the Target SPV are substantially dependent on the accuracy of the traffic volume forecasts for their respective projects. Projects undertaken on a BOT, TOT or DBFOT basis involve concession agreements that are long-term in nature, usually between 15 to 30 years. The agreed consideration for each of the Project SPVs' and the Target SPV's projects was based on forecasts of traffic volumes and expected revenues over the concession period. For projects expanding roads from four-to-six lanes, tolling typically starts from day one of the concession period at a rate of 75% and continues until the completion of construction, upon which tolling is reset to 100%. For other projects, including greenfield construction, tolling generally starts once construction is completed and COD is achieved. Any material shortfall between the actual traffic volume and the forecast traffic volume or revenue for a project could have a material adverse effect on their cash flows, results of operations and financial condition.

The Project SPVs' projects and the Target SPV's involve agreements that are long-term in nature. All long-term projects have inherent risks associated with them and involve variables that may not necessarily be within the Project SPVs' or the Target SPV's control. Accordingly, we may be exposed to a variety of construction, operation and maintenance and other risks, including unanticipated cost increases and overruns, inability to negotiate satisfactory arrangements with service providers and disagreements with service providers. In addition, the long-term nature of the Project SPVs' or the Target SPV's contracts may expose them to increased risk of unforeseen business and industry changes and developments which could have a material adverse effect on their business, financial condition and results of operations.

General economic and political conditions in India and the level of investment and activity in the infrastructure development sector

The Project SPVs and the Target SPV derive their revenue from their toll-road operations. Demand for toll roads is primarily dependent on sustained economic development in the regions that they operate in and government policies relating to infrastructure development. It is also significantly dependent on budgetary allocations made by the Government of India and the State Governments for the roads and highways sector, as well as funding provided by international and multilateral development finance institutions for infrastructure projects. Investment by the private sector in infrastructure projects is dependent on the potential returns from such projects and is, therefore, linked to Government and State Government policies relating to private sector participation and sharing of risks and returns from such projects.

We believe that the Government's and State Governments' focus on, and sustained increases in budgetary allocation for, infrastructure, and the development of comprehensive infrastructure policies that encourage greater private sector participation and funding for infrastructure projects should further result in large infrastructure projects in India. We believe that we are likely to benefit from the Government and State Governments making infrastructure development a policy priority, which may lead to corresponding significant investment in the roads and highways sector. Since the Project SPVs and the Target SPV's focus on the roads and highways sector, macroeconomic factors in India relating to this sector will have a significant impact on their prospects and results of operations. As the roads and highways sector is driven by increases in agriculture and manufacturing, any slowdown or perceived slowdown in the Indian economy, or in specific sectors of the Indian economy, could materially and adversely impact the Project SPVs' and the Target SPV's business and financial performance.

The Project SPVs or the Target SPV may be unable to collect tolls due to political protests or other agitations relating to tolling. For instance, due to a protest against certain agricultural laws in India, tolling for the Kaithal – Rajasthan project operated by KTL was halted from December 25, 2020 and resumed on December 16, 2021. The Project SPV has informed NHAI of this event and expects to receive compensation under the *force majeure* clause of the relevant Concession Agreement, which provides for the receipt of 50% of the O&M and interest costs as reimbursement in cash and an extension in concession period to compensate for revenue loss during the toll suspension period.

Further, in relation to COVID-19, the NHAI has offered an extension of concession period by three to six months to compensate for reduced revenue due to the COVID-19 lockdown. Certain Project SPVs have applied to the NHAI for appropriate relief (including extension of the concession period) and compensation as per the respective concession agreements for the time period during which the relevant projects have been impacted by COVID-19.

Competition

The Trust, the Project SPVs and the Target SPV operate in a competitive environment. The competition for toll road and other infrastructure projects varies depending on the size, nature and complexity of the project and on the geographical region in which the project is to be executed. Some of their competitors may have greater financial resources, economies of scale and operating efficiencies than the Trust or the Project SPVs or the Target SPV do. There can be no assurance that they can effectively compete with their competitors in the future, and this failure to compete effectively may have a material adverse effect on the Trust's financial condition and results of operations.

Financial Information of the Target SPV

This Letter of Offer includes the summary financial information of MBEL as of and for the six-month period ended September 30, 2024 and the Financial Years 2024, 2023 and 2022. This Letter of Offer also contains Pro Forma Financial Information of the Trust and MBEL as of and for the Financial Year 2024 and the six-month period ended September 30, 2024 prepared in accordance with the requirements of Chapter 9 of the SEBI Master Circular and the InvIT Regulations. See "*Financial Statements*" on page 347 and "*Summary Financial Information*" on page 44.

Pro Forma Financial Information

This Letter of Offer includes the Pro Forma Financial Information prepared in accordance with the requirements of the InvIT Regulations and the SEBI Master Circular in "*Financial Statements*" on page 347. The Pro Forma Financial Information consists of the pro forma balance sheet as at September 30, 2024 and March 31, 2024, the pro forma statement of profit and loss for the six-month period ended September 30, 2024 and the Financial Year 2024. The MBEL Acquisition has been considered material for purposes of the SEBI Master Circular.

The Pro Forma Financial Information has been compiled by management to illustrate the impact of the MBEL Acquisition on the Trust's balance sheet as at September 30, 2024 and March 31, 2024 and the Trust's statement of profit and loss for the six-month period ended September 30, 2024. The pro forma balance sheet as at March 31, 2024 and September 30, 2024 has been prepared as if the MBEL Acquisition had taken place on March 31, 2024 and September 30, 2024, respectively. The pro forma statement of profit and loss for the six-month period ended September 30, 2024 and the Financial Year 2024 has been prepared as if the MBEL Acquisition had taken place on April 1, 2023. See "*Risk Factors - The Pro Forma Financial Information included in this Letter of Offer is prepared for illustrative purposes only. Our actual results may be materially different from the outcome of the event or transaction as presented in the Pro Forma Financial Information.*" on page 20 for risks in relation to the Pro Forma Financial Information.

Note that there can be no assurance that the assumptions for the preparation of the Pro Forma Financial Information will be fulfilled, including that MBEL Acquisition will be completed in the manner described in this Letter of Offer or at all. See "Risk *Factors - We are in the process of acquiring the Target SPV (pursuant to definitive acquisition agreements), which if not completed in a timely manner or at all, or any failure to realize the anticipated benefits of the MBEL Acquisition, may adversely affect us.*" on page 23.

Significant Accounting Policies

The preparation of financial statements in conformity with Ind AS, applicable accounting standards and the Companies Act, 2013 requires our management to make judgments, estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements and the results of operations during the reporting period end. By their nature, these judgments are subject to a degree of uncertainty. Although these estimates are based upon management's best knowledge of current events and actions, actual results could differ from these estimates.

While all aspects of the Project SPVs Consolidated Financial Information should be read and understood in assessing their current and expected financial condition and results, we believe that the following critical accounting policies warrant particular attention:

Intangible assets

As permissible under Ind AS 101, we elected to continue with the carrying value of our toll collection rights (intangible assets), including corresponding obligation, as recognised in the financial statements as at the date of transition April 1, 2016 measured as per the previous GAAP and use that as its deemed cost as at date of transition.

Intangible assets acquired separately are measured on initial recognition at cost. Following initial recognition, intangible assets are carried at cost less any accumulated amortisation and accumulated impairment losses.

Toll Collection Rights

Toll collection rights are stated at cost, net of accumulated amortisation, impairment losses and grant from government. Cost includes toll collection rights awarded by the grantor against construction service rendered by the Project SPV on a DBFOT basis - direct and indirect expenses on construction of roads, bridges, culverts, infrastructure and other assets at the toll plazas.

Toll collection rights are amortised over the period of the concession, using revenue based amortisation as prescribed under Ind AS 36. Under this method, the carrying value of the rights is amortised in the proportion of actual toll revenue for the year to projected revenue for the balance toll period, to reflect the pattern in which the asset's economic benefits will be consumed. At each balance sheet date, the projected revenue for the balance toll period is reviewed by the management. If there is any change in the projected revenue from previous estimates, the amortisation of toll collection rights is changed prospectively to reflect any changes in the estimates.

Non-financial assets are assessed for impairment whenever there is an indication that the intangible asset may be impaired.

Provisions

Provisions are recognised when the group has a present obligation (legal or constructive) as a result of a past event, and it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. When the Group expects some or all of a provision to be reimbursed, for example, under an insurance contract, the reimbursement is recognised as a separate asset, but only when the reimbursement is virtually certain. The expense relating to a provision is presented in the statement of profit and loss net of any reimbursement.

If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, when appropriate, the risks specific to the liability. When discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost. Provisions are reviewed at each balance sheet date and adjusted to reflect the current best estimates.

Principal components of Income and Expenses

Income

Our total income comprises (i) revenue from operations and (ii) other income.

Revenue from operations

Revenue from operations comprises (i) contract revenue (road construction); (ii) income arising out of toll collection (net); (iii) adjustments due to revenue share to NHAI on account of Fastag; and (iv) other operating revenue.

During the construction period of a project, the NHAI may ask the Project SPVs to carry out utility shifting work (which is incidental to the construction of the toll road and typically involves the shifting of utilities that are located at the construction site) or may award the Project SPVs additional scope of work, which is separately paid by the NHAI. Revenue from such utility shifting or change in scope contract, among others, also forms part of the Project SPVs' contract revenue. Note that contract revenue is typically incurred during the initial construction period of a project and is not recurring in nature.

The following table provides a breakdown of revenue from operations for the periods indicated:

Revenue from Operations	Six-month period ended September 30, 2024		Six-month period ended September 30, 2023		Financial Year 2024		Financial Year 2023		Financial Year 2022	
	Amount (in ₹ million)	*% of Total Revenue from Operations*	*Amount (in ₹ million)*	*% of Total Revenue from Operations*	*Amount (in ₹ million)*	*% of Total Revenue from Operations*	*Amount (in ₹ million)*	*% of Total Revenue from Operations*	*Amount (in ₹ million)*	*% of Total Revenue from Operations*
Contract revenue (road construction)	9,107.82	38.58	6,828.77	45.13	19,154.21	49.20	11,672.04	43.37	1,054.48	8.50
Income arising out of toll collection (net)	14,579.67	61.76	8,378.15	55.37	19,924.20	51.18	15,425.76	57.32	10,598.07	85.44
Revenue share to NHAI - FASTag	(80.67)	(0.34)	(75.25)	(0.50)	(147.66)	(0.38)	(185.44)	(0.69)	(212.87)	(1.72)
Other operating revenue	-	0.00	-	0.00	-	0.00	0.23	0.00	965.16	7.78
Total	**23,606.82**	**100.00**	**15,131.67**	**100.00**	**38,930.75**	**100.00**	**26,912.59**	**100.00**	**12,404.84**	**100.00**

Note: The information for the six-month period ended September 30, 2024 and September 30, 2023 is based on the unaudited consolidated interim financial information of the Trust and has been presented in this table together with the audited financial information for the Financial Years 2024, 2023 and 2022 for presentation purposes only.

Other income

The key components of other income are interest income on bank deposits, profit on sale of investments, fair value gain on mutual funds and other non-operating income.

The following table provides a breakdown of other income for the periods indicated:

Other income	Six-month period ended September 30, 2024	Six-month period ended September 30, 2023	Financial Year 2024	Financial Year 2023	Financial Year 2022
	Amount (in ₹ million)				
Interest income on					
- Bank deposits	373.03	208.45	563.24	178.88	73.64
- Others	3.15	0.07	3.73	7.17	8.05
Dividend Income on – Other investments (non-trade, current)	-	0.03	0.03	-	-
Profit on sale of investments	85.02	36.32	190.86	62.95	13.93
Fair value gain on mutual funds	(5.34)	3.95	10.42	11.35	0.78
Other non-operating income	20.80	12.64	71.55	2.73	3.73
Total	**476.66**	**261.46**	**839.83**	**263.08**	**100.13**

Note: The information for the six-month period ended September 30, 2024and September 30, 2023 is based on the unaudited consolidated interim financial information of the Trust and has been presented in this table together with the audited financial information for the Financial Years 2024, 2023 and 2022 for presentation purposes only.

Expenses

Our expenses primarily consist of the following:

- valuation expenses, which comprise payments towards valuation to be carried out for trust;
- audit fees, which includes statutory audit fees and limited review fees;
- operating expenses, which are road work and site expenses, comprising contract expenses in relation to utility shifting or change in scope contracts, operation and maintainace expenses, site and other direct expenses, sub-contracting/security expenses and technical consultancy and supervision charges;
- project management fees, which comprises payments for operation and maintenance of road;
- insurance and security expenses, which comprise payment towards insurance coverage for Trust and Project SPVs;
- trustee fees, which comprise payment to Trustee;
- depreciation on property, plant and equipment;
- amortisation of intangible assets;
- finance costs, which primarily comprise interest expenses on loans availed from banks/financial institutions, debentures and other borrowing costs which include amortisation of transaction costs and unwinding of discount on provision of MMR;
- legal and professional fees;
- Investment Manager fees;
- custodian fees;
- loss on sale of assets;
- fair value loss on measurement of other payable; and
- other expenses, which comprise various administration costs such as power and fuel costs, rent, rates and taxes, water charges, repair and maintanance, travel and conveyance expenses, vehicle expenses, printing

and stationery expenses, membership and subscription, advertisement expenses, sitting fees for directors, corporate social responsiblities expenditures, bank charges and other miscellaneous expenses.

Results of Operations

The financial information for the six-month periods ended September 30, 2024 and September 30, 2023 and the Financial Years 2024, 2023 and 2022 has been prepared on a consolidated basis. The Consolidated Financial Information has been prepared in accordance with Ind AS and the provisions of the InvIT Regulations.

Consolidated Financial Information

This section discusses our results of operations for the six-month periods ended September 30, 2024 and September 30, 2023 and the Financial Years 2024, 2023 and 2022 on the basis of our Consolidated Financial Information.

The historical results presented below are not necessarily indicative of the results that may be expected for any future period. For additional information, see "*Financial Statements*" on page 347.

Six-month period ended September 30, 2024 and six-month period ended September 30, 2023

The table below sets forth certain data from the Consolidated Financial Information for the six-month period ended September 30, 2024 and the six-month period ended September 30, 2023.

Particulars	Six months ended September 30, 2024	Six months ended September 30, 2023
	Amount (in ₹ million)	*Amount (in ₹ million)*
Income		
Revenue from operations	23,606.82	15,131.67

Item that will not be reclassified to profit or loss: (a) re-measurement (loss)/gain on defined benefit plans (net of taxes)	-	-
Other comprehensive (loss) for the period, net of tax	-	-
Total comprehensive income for the period	**(2,868.77)**	**(2,721.24)**

Total income

The total income of the Trust and Project SPVs increased to ₹24,083.48 million during the six-month period ended September 30, 2024 from ₹15,393.13 million in six-month period ended September 30, 2023. This increase in total income was primarily due to ₹8,475.15 million (or 56.01%) increase in revenue from operations.

Revenue from operations

The revenue from operations of the Project SPVs increased to ₹23,606.82 million during the six-month period ended September 30, 2024 from ₹15,131.67 million in six-month period ended September 30, 2023, primarily due to addition of Project SPVs, IRB GEPL, STPL, IRB KTPL, IRB LTPL and IRB GTPL, to the Current Portfolio.

The contract revenue (road construction) increased to ₹9,107.82 million during the six-month period ended September 30, 2024, from ₹6,828.77 million in six-month period ended September 30, 2023 due to commencement of construction activities by STPL and initial upgradation work of IRB KTPL, IRB LTPL and IRB GTPL. The income arising out of toll collection (net) increased to ₹14,579.67 million during the six-month period ended September 30, 2024 from ₹8,378.15 million during the six-month ended September 30, 2023 primarily due to addition of Project SPVs, IRB GEPL, STPL, IRB KTPL, IRB LTPL and IRB GTPL to the Current Portfolio.

Other income

The other income of the Trust and Project SPVs increased to ₹476.66 million during the six-month period ended September 30, 2024 from ₹261.46 million in six-month period ended September 30, 2023. This increase was primarily due to an increase in interest income on bank deposits upon creation of debt service reserve accounts/ major maintenance reserve accounts by KGTL, IRB WTL, KTL, AETL, IRB HMTL and the Trust. The fair value gain on mutual funds also decreased to ₹(5.34) million from ₹3.95 million during six-month ended September 30, 2024 to September 30, 2023.

Total expenses

The total expenses increased to ₹27,155.75 million during the six-month period ended September 30, 2024 from ₹18,316.84 million during six-month period ended September 30, 2023. This increase was primarily due to increase in operating expenses, project management fees, amortisation of intangible assets, finance costs (interest), and fair value loss on measurement of other payable.

Operating expenses

Operating expenses increased to ₹10,098.74 million during the six-month period ended September 30, 2024 from ₹7,198.20 million during the six-month period ended September 30, 2023, primarily due to increase in contract expenses and operation and maintenance expenses. Contract expenses increased from ₹6,632.05 million during six-month period ended September 30, 2023 to ₹8,851.24 million in six-month period ended September 30, 2024. Contract expenses primarily increased due to commencement of construction activities by STPL and initial upgradation work of IRB KTPL, IRB LTPL and IRB GTPL. The operation and maintenance expenses increased from ₹502.27 million during six-month period ended September 30, 2023 to ₹1,155.04 million in six-month period ended September 30, 2024, comprising of provision for resurfacing expenses. The site and other direct expenses increased to ₹63.87 million from ₹39.98 million and technical consultancy and supervision charges increased to ₹28.59 million from ₹23.89 million during six-month period ended September 30, 2024 from six-month period ended September 30, 2023.

Project management fees

Project management fees increased to ₹2,625.90 million during the six-month period ended September 30, 2024, from ₹1,955.49 million during the six-month period ended September 30, 2023, primarily due to the addition of

IRB GEPL, STPL, IRB KTPL, IRB LTPL and IRB GTPL in the portfolio.

Amortisation of Intangible Assets

Amortization expenses are directly proportionate to toll revenue. Amortisation of intangible assets increased to ₹2,505.73 million during the six-month period ended September 30, 2024, from ₹1,658.92 million during the six-month period ended September 30, 2023, primarily attributable to increase in toll collection due to addition of Project SPVs, IRB GEPL, STPL,IRB KTPL, IRB LTPL and IRB GTPL, in the portfolio.

Finance costs (interest)

Finance costs (interest) increased to ₹10,081.30 million during the six-month period ended September 30, 2024 from ₹5,636.42 million during the six-month ended September 30, 2023, primarily due to increase in loans from banks and financial institutions to ₹8,855.33 million from ₹4,188.58 million. These are primarily due to debt drawn pursuant to addition of Project SPVs, IRB GEPL, STPL,IRB KTPL, IRB LTPL and IRB GTPL, to the portfolio

Finance costs (others)

Finance costs (others) were ₹397.62 million in the six-month period ended September 30, 2024 as against ₹481.21 million during the six-month period ended September 30, 2023. This is primarily due to decrease in interest unwinding of trade payable – associates from ₹187.67 million to ₹nil during the six-month period ended September 30, 2024, and increase in amortisation of transaction cost and unwinding of discount on provision of MMR during such period.

Investment Manager Fees

Investment Manager fees decreased to ₹52.65 million from ₹87.56 million during six-month period ended September 30, 2024 from the six-month period ended September 30, 2023.

Fair value loss on measurement of other payable

Fair value loss on measurement of other payable increased to ₹1,227.70 million during the six-month period ended September 30, 2024 from ₹1,178.97 million during the six-month ended September 30, 2023. The said loss is non-cash in nature.

Profit/(loss) before tax

As a result of the factors discussed above, the loss before tax increased to ₹(3,072.27) million during the six-month period ended September 30, 2024 from ₹(2,923.71) million in six-month period ended September 30, 2023.

Tax expenses

The Trust Group recorded current tax of ₹140.36 million during the six-month period ended September 30, 2024 compared to ₹4.85 million during the six-month period ended September 30, 2023. The Trust Group recorded deferred tax of ₹(343.86) million during the six-month period ended September 30, 2024 compared to ₹ (207.32) million during the six-month period ended September 30, 2023. Accordingly, the total tax expenses of the Trust Group decreased to ₹(203.50) million in six-month period ended September 30, 2024 from ₹(202.46) million in six-month period ended September 30, 2023.

Profit/(loss) after tax

As a result of the factors discussed above, the loss after tax of the Trust Group increased to ₹(2,868.77) million in the six-month period ended September 30, 2024 as compared to loss of ₹(2,721.24) million in the six-month ended September 30, 2023.

Total comprehensive income/(loss) for the period

The total comprehensive loss increased to ₹(2,868.77) million in the six-month period ended September 30, 2024 from ₹(2,721.24) million in the six-month period ended September 30, 2023.

Financial Year 2024 compared to Financial Year 2023

The table below sets forth certain data from the Consolidated Financial Information for the Financial Years 2024 and 2023.

Particulars	Financial Year 2024	Financial Year 2023
	Amount (in ₹ million)	*Amount (in ₹ million)*
Income		
Revenue from operations	38,930.75	26,912.59

Total comprehensive income for the year	**(6,650.15)**	**(2,271.59)**

Total income

The total income of the Trust and Project SPVs increased to ₹39,770.58 million in the Financial Year 2024 from ₹27,175.67 million in the Financial Year 2023. This increase in total income was primarily due to an increase in contract revenue from road construction and toll revenue.

Revenue from operations

The revenue from operations of the Project SPVs increased to ₹38,930.75 million in the Financial Year 2024 from ₹26,912.59 million in the Financial Year 2023, primarily due to addition of Project SPVs viz; IRB GEPL and STPL to the Current Portfolio.

The contract revenue (road construction) increased to ₹19,154.21 million in the Financial Year 2024 from ₹11,672.04 million in the Financial Year 2023 due to initial upgradation work of IRB GEPL and commencement of construction activities by STPL. The income arising out of toll collection (net) increased to ₹19,924.20 million in the Financial Year 2024 from ₹15,425.76 million in the Financial Year 2023. Other operating revenue decreased to ₹nil million in the Financial Year 2024 from ₹0.23 million in the Financial Year 2023. The revenue from operations of the Project SPVs were reduced on account of revenue sharing with the NHAI for FASTag by ₹147.66 million in the Financial Year 2024, compared to a reduction of ₹185.44 million in the Financial Year 2023.

Other income

The other income of the Trust and Project SPVs increased to ₹839.83 million in the Financial Year 2024 from ₹263.08 million in the Financial Year 2023. This increase was primarily due to increase in interest income on bank deposits upon creation of debt service reserve accounts/ major maintenance reserve accounts by KGTL, IRB WTL, KTL, AETL, IRB HMTL and the Trust

Total expenses

The total expenses of the Trust and Project SPVs increased to ₹47,608.56 million in the Financial Year 2024 from ₹29,480.14 million in the Financial Year 2023. This increase was primarily due to an increase in operating expenses, project management fees, amortisation of intangible assets, finance costs (interest), investment manager fees and fair value loss on measurement of other payable.

Operating expenses

Operating expenses increased to ₹19,876.05 million in the Financial Year 2024 from ₹12,865.52 million in the Financial Year 2023. This increase was primarily due to an increase in contract expenses. Contract expenses increased to ₹18,037.07 million in the Financial Year 2024 from ₹11,330.91 million in the Financial Year 2023 due to the initial upgradation work of IRB GEPL and commencement of construction activities by STPL. Operation and maintenance expenses increased to ₹1,719.43 million in the Financial Year 2024 from ₹1,471.41 million in the Financial Year 2023, comprising of provision for resurfacing expenses. Technical consultancy and supervision charges amounting to ₹33.65 million were paid during the Financial Year 2024 as against ₹62.84 million paid during the Financial Year 2023. Sub-contracting/security expenses decreased to ₹nil million in the financial year 2024 from ₹0.35 million in the Financial Year 2023.

Project management fees

Project management fees increased to ₹3,573.20 million in the Financial Year 2024 from ₹2,647.70 million in the Financial Year 2023 primarily as a result of addition of IRB GEPL and STPL to the portfolio.

Amortisation of intangible assets

Amortisation of intangible assets increased to ₹3,648.04 million in the Financial Year 2024 from ₹2,809.17 million in the Financial Year 2023, primarily due to the increase in toll collection due to addition of IRB GEPL and STPL to the portfolio.

Finance costs (interest)

Finance costs (interest) increased to ₹13,449.23 million in the Financial Year 2024 from ₹9,005.28 million in the Financial Year 2023. This increase was primarily due to debt drawdown in IRB GEPL and STPL, pursuant to addition to the Current Portfolio, and drawl for under construction project i.e. PDTPL.

Finance costs (others)

Finance cost (others) decreased to ₹1,007.87 million from ₹1,249.41 million in the Financial Year 2024 from the

Financial Year 2023, primarily due to reduction in interest unwinding of trade payables – associates to Rs. 187.67 million in Financial Year 2024 from Rs. 765.06 million in Financial Year 2023.

Investment Manager fees

Investment Manager fees were ₹ 146.32 million in the Financial Year 2024 as against ₹ 56.52 million in Financial Year 2023.

Fair value loss on measurement of other payable

Fair value loss on measurement of other payable increased to ₹4,935.37 million in the Financial Year 2024 from ₹560.53 million in the Financial Year 2023.During the Financial Year 2024, the Trust Group had filed claims in relation to a project with the NHAI. On actualization of claims in fair valuation working, there was a fair value loss of ₹4,935.37 million. The said loss is non-cash in nature.

Profit/(loss) before tax

As a result of the factors discussed above, the loss before tax increased to ₹(7,837.98) million in the Financial Year 2024 from loss of ₹(2,304.47) million in the Financial Year 2023.

Tax expenses

The Trust Group recorded deferred tax of ₹(1,193.08) million in the Financial Year 2024 compared to ₹(468.13) million in the Financial Year 2023 and recorded current tax of ₹5.25 million in the Financial Year 2024 compared to ₹ 435.25 million in the Financial Year 2023. Accordingly, the total tax expenses of the Trust Group increased to ₹(1,187.83) million in the Financial Year 2024 from ₹(32.88) million in the Financial Year 2023.

Profit/(loss) after tax

The loss after tax of the Trust Group increased to ₹(6,650.15) million in the Financial Year 2024 as compared to (loss) of ₹(2,271.59) million in the Financial Year 2023. This increase in loss was primarily due to an increase in the total expenses.

Total comprehensive income/(loss) for the period

The total comprehensive loss decreased to ₹(6,650.15) million in the Financial Year 2024 from ₹(2,271.59) million in the Financial Year 2023.

Financial Year 2023 compared to Financial Year 2022

The table below sets forth certain data from the Consolidated Financial Information for the Financial Years 2023 and 2022.

Particulars	Financial Year 2023	Financial Year 2022
	Amount (in ₹ million)	*Amount (in ₹ million)*
Income

Total comprehensive income for the period/year	**(2,271.59)**	**(4,435.98)**

Note: Legal and professional expenses are included in "Other expenses"

Total income

The total income of the Trust and Project SPVs increased to ₹27,175.67 million in the Financial Year 2023 from ₹12,504.97 million in the Financial Year 2022. This increase in total income was primarily due to an increase in contract revenue from road construction and toll revenue.

Revenue from operations

The revenue from operations of the Project SPVs increased to ₹26,912.59 million in the Financial Year 2023 from ₹12,404.84 million in the Financial Year 2022, primarily due to an increase in toll collection upon issuance of completion certificates for IRB HMTL and KGTL on July 1, 2022 and July 20, 2022, respectively, which lead to a hike in tariff for these projects. Further, PDTPL was acquired by the Trust on April 2, 2022 and became a Project SPV from such date onwards.

The contract revenue (road construction) increased to ₹11,672.04 million in the Financial Year 2023 from ₹1,054.48 million in the Financial Year 2022 due to commencement of construction activities by PDTPL. The income arising out of toll collection (net) increased to ₹15,425.76 million in the Financial Year 2023 from ₹10,598.07 million in the Financial Year 2022. Other operating revenue decreased to ₹0.23 million in the Financial Year 2023 from ₹965.16 million in the Financial Year 2022, primarily due to the receipt of claim amounts by KTL and AETL from the NHAI during the Financial Year 2022 as compensation for inability to collect toll because of protests against the farm laws on their project highways, while such amounts were not received during the Financial Year 2023. The revenue from operations of the Project SPVs were reduced on account of revenue sharing with the NHAI for FASTag by ₹ 185.44 million in the Financial Year 2023, compared to a reduction of ₹212.87 million in the Financial Year 2022.

Other income

The other income of the Trust and Project SPVs increased to ₹263.08 million in the Financial Year 2023 from ₹100.13 million in the Financial Year 2022. This increase was primarily due to an increase in interest income on bank deposits upon creation of debt service reserve accounts by KGTL and HMTL.

Total expenses

The total expenses of the Trust and Project SPVs increased to ₹29,480.14 million in the Financial Year 2023 from ₹17,652.31 million in the Financial Year 2022. This increase was primarily due to an increase in operating expenses, project management fees, amortisation of intangible assets, finance costs (interest), finance costs (others) and investment manager fees, partly offset by a decrease in fair value loss on measurement of other payable.

Operating expenses

Operating expenses increased to ₹12,865.52 million in the Financial Year 2023 from ₹2,029.53 million in the Financial Year 2022. This increase was primarily due to an increase in contract expenses. Contract expenses increased to ₹11,330.91 million in the Financial Year 2023 from ₹1,036.47 million in the Financial Year 2022 due to the commencement of construction activities by PDTPL. Operation and maintenance expenses increased to ₹1,471.41 million in the Financial Year 2023 from ₹939.15 million in the Financial Year 2022 due to resurfacing expenses upon receipt of completion certificates of IRB HMTL and KGTL, and maintenance related expenses in IRB WTL. Technical consultancy and supervision charges amounting to ₹62.84 million were paid during the Financial Year 2023 as against ₹53.20 million paid during the Financial Year 2022. Sub-contracting/security expenses decreased to ₹0.35 million in the financial year 2023 from ₹0.72 million in the Financial Year 2022.

Project management fees

Project management fees increased to ₹2,647.70 million in the Financial Year 2023 from ₹1,960.27 million in the Financial Year 2022 primarily as a result of periodic maintenance expenditure due in few projects.

Amortisation of intangible assets

Amortisation of intangible assets increased to ₹2,809.17 million in the Financial Year 2023 from ₹1,673.16 million in the Financial Year 2022, primarily due to the increase in toll collection upon issuance of completion certificates for IRB HMTL and KGTL on July 1, 2022, and July 20, 2022, respectively, which lead to a hike in tariff for these projects. Further, PDTPL was acquired by the Trust on April 2, 2022.

Finance costs (interest)

Finance costs (interest) increased to ₹9,005.28 million in the Financial Year 2023 from ₹8,670.13 million in the Financial Year 2022. This increase was primarily due to increase in interest on debentures to ₹1,617.52 million from nil, primarily due to refinacing of term loans availed from banks and financial institutions in case of YATL, SYTL and UTL of ₹15,150.00 million, ₹5,910 million and ₹7,000 million, respectively. This was partially set of by decrease in interest to banks and financial institutions from ₹8,670.13 million to ₹7,387.76 million from the Financial Year 2022 to the Financial Year 2023.

Finance costs (others)

Finance cost (others) increased from ₹868.58 million to ₹1,249.41 million from the Financial Year 2022 to the Financial Year 2023, primarily due to increase in amortisation of transaction cost, unwinding of discount on provision of MMR and interest unwinding of trade payable- associates.

Investment Manager fees

Investment Manager fees was ₹56.52 million in the Financial Year 2023 as against ₹42.48 million during the Financial Year 2022.

Fair value loss on measurement of other payable

Fair value loss on measurement of other payable decreased to ₹560.53 million in the Financial Year 2023 from ₹2,161.31 million in the Financial Year 2022. During the Financial Year 2022, the Trust Group had filed claims in relation to a project with the NHAI. On actualization of claims in fair valuation working, there was a fair value loss of ₹2,161.31 million. The said loss is non-cash in nature.

Profit/(loss) before tax

As a result of the factors discussed above, the loss before tax decreased to ₹(2,304.47) million in the Financial Year 2023 from loss of ₹(5,147.34) million in the Financial Year 2022.

Tax expenses

The Trust Group recorded deferred tax of ₹(468.13) million in the financial year 2023 compared to ₹(720.23) million in the Financial Year 2022. Accordingly, the total tax expenses of the Trust Group decreased to ₹(32.88) million in the Financial Year 2023 from ₹(711.36) million in the Financial Year 2022.

Profit/(loss) after tax

The loss after tax of the Trust Group decreased to ₹(2,271.59) million in the Financial Year 2023 as compared to (loss) of ₹(4,435.98) million in the Financial Year 2022. This decrease in loss was primarily due to an increase in the income arising out of toll collection (net).

Total comprehensive income/(loss) for the period

The total comprehensive loss decreased to ₹(2,271.59) million in the Financial Year 2023 from ₹(4,435.98) million in the Financial Year 2022.

Liquidity and Capital Resources

The Project SPVs operate in a capital-intensive industry and their principal liquidity requirements have been to finance their capital expenditures. To fund these costs, the Project SPVs have historically relied on equity contributions, short term and long-term borrowings and cash from operating activities.

The Project SPVs' funding and treasury activities are conducted consistent with corporate policies designed to enhance investment returns while maintaining appropriate liquidity for their requirements. Their short-term liquidity requirements relate to servicing debt and funding working capital requirements. Sources of short-term liquidity include cash balances and receipts from operations. Their long-term liquidity requirements include partial funding of investments in new projects, funding equity contributions in Project SPVs and repayment of long-term debt under credit facilities. Sources of funding for long-term liquidity requirements include loans, equity issuances or debt issues. The principal liquidity requirements have been, and are expected to continue to be, construction, development, implementation and maintenance costs of the BOT and TOT projects.

The Investment Manager believes that after taking into account the expected cash to be generated from our business and operations, we have sufficient funds for both our present and anticipated future requirements for working capital for 12 months following the date of Allotment.

Cash Flows

The following table sets forth certain information relating to the Trust and Project SPVs cash flows for the periods indicated:

(₹ in million)

Particulars	Six-month period ended September 30, 2024	Six-month period ended September 30, 2023	Financial Year 2024	Financial Year 2023	Financial Year 2022
Net cash flows generated from operating activities	15,085.84	(5,005.91)	2,393.02	13,513.70	19,882.59

Particulars	Six-month period ended September 30, 2024	Six-month period ended September 30, 2023	Financial Year 2024	Financial Year 2023	Financial Year 2022
Net cash flows (used in) investing activities	(11,946.10)	(82,284.21)	(1,60,333.24)	(13,801.66)	(18,311.44)
Net cash flows generated from financing activities	(4,202.01)	98,911.78	1,58,812.61	731.91	(1,697.41)
Net increase/ (decrease) in cash and cash equivalents	(1,062.26)	11,621.66	872.39	443.95	(126.26)

Cash flows from operating activities

Six-month period ended September 30, 2024

In the six-month period ended September 30, 2024, the Trust and Project SPVs' net cash flow from operating activities was ₹15,085.84 million and the loss before tax was ₹(3,072.27) million, which was adjusted for non-cash and other items amounting to ₹14,903.35 million and change in working capital amounting to ₹3,414.43 million, primarily on account of increase in trade payables amounting to ₹1,169.13 million, decrease in other liabilities and provisions amounting to ₹(1,511.72) million, increase in other assets amounting to ₹(434.21) million and decrease in other financial assets amounting to ₹4,279.94 million. The cash generated from operations was ₹15,245.52 million and net taxes paid were ₹(159.68) million.

Six-month period ended September 30, 2023

In the six-month period ended September 30, 2023, the Trust and Project SPVs' net cash flow from operating activities was ₹(5,005.91) million and the loss before tax was ₹(2,923.71) million, which was adjusted for non-cash and other items amounting to ₹9,591.59 million and change in working capital amounting to ₹(11,610.23) million, primarily on account of decrease in trade payables amounting to ₹(11,479.70) million, decrease in other financial liabilities amounting to ₹(84.99) millions, increase in trade receivables amounting to ₹238.14 millions, increase in other financial assets amounting to ₹(248.38) million and decrease in other liabilities and provisions amounting to ₹(985.80) million. The cash generated used in operations was ₹(4,942.35) million and net taxes paid were ₹(63.56) million.

Financial Year 2024

In the Financial Year 2024, the Trust and Project SPVs' net cash flow from operating activities was ₹ 2,393.02 million and the loss before tax was ₹(7,837.98) million, which was adjusted for non-cash and other items amounting to ₹22,570.61 million and change in working capital amounting to ₹(12,184.75) million, primarily on account of decrease in trade payables amounting to ₹(14,206.31) million, increase in other liabilities and provision amounting to ₹85.39 millions, decrease in trade receivables amounting to ₹16.52 millions, decrease in other financial liabilities amounting to ₹(1,202.70) million and decrease in other assets amounting to ₹4,027.16 million. The cash generated from operations was ₹2,547.88 million and net taxes paid were ₹(154.86) million in the Financial Year 2024.

Financial Year 2023

In the Financial Year 2023, the Trust and Project SPVs' net cash flow from operating activities was ₹13,513.70 million and the loss before tax was ₹2,304.47 million, which was adjusted for non-cash and other items amounting to ₹14,836.70 million and change in working capital amounting to ₹1,327.31 million, primarily on account of increase in trade payables amounting to ₹1,178.92 million, increase in other financial liabilities amounting to ₹435.72 million, decrease in other liabilities and provision amounting to ₹(45.01) millions, increase in trade receivables amounting to ₹(33.12) millions and increase in other assets amounting to ₹(343.36) million. The cash generated from operations was ₹13,859.54 million and net taxes paid were ₹(345.84) million in the Financial Year 2023.

Financial Year 2022

In the Financial Year 2022, the Trust and Project SPVs' net cash flow from operating activities was ₹19,882.59 million and the loss before tax was ₹5,147.34 million, which was adjusted for non-cash and other items amounting to ₹14,271.25 million and change in working capital amounting to ₹10,726.60 million, primarily on account of increase in trade payables amounting to ₹11,498.13 million, increase in other financial liabilities amounting to ₹306.46 millions, increase in other liabilities amounting to ₹30.37 millions, decrease in trade receivables amounting to ₹48.69 millions and increase in other financial assets amounting to ₹ 989.59 million. The cash generated from operations was ₹19,850.51 million and net taxes paid were ₹32.09 million in the year ended March 31, 2022.

Cash used in investing activities

Six-month period ended September 30, 2024

The Trust and Project SPVs' net cash used in investing activities in the six-month period ended September 30, 2024 was ₹(11,946.10) million, primarily attributable to addition towards construction for projects (classified as toll collection rights under intangible assets).

Six-month period ended September 30, 2023

The Trust and Project SPVs' net cash used in investing activities in the six-month month period ended September 30, 2023 was ₹(82,284.21) million, primarily attributable to addition towards construction for projects (classified as toll collection rights under intangible assets).

Financial Year 2024

The Trust and Project SPVs' net cash used in investing activities in the Financial Year 2024 was ₹(1,60,333.24) million, primarily attributable to addition towards construction for projects (classified as toll collection rights under intangible assets).

Financial Year 2023

The Trust and Project SPVs' net cash used in investing activities in the Financial Year 2023 was ₹(13,801.66) million, primarily attributable to addition towards construction for projects (classified as toll collection rights under intangible assets).

Financial Year 2022

The Trust and Project SPVs' net cash used in investing activities in the year ended March 31, 2022 was ₹(18,311.44) million, primarily attributable to addition towards construction for projects (classified as toll collection rights under intangible assets).

Cash flows generated from financing activities

Six-month period ended September 30, 2024

Net cash generated used in financing activities in the six-month ended September 30, 2024 was ₹(4,202.01) million, primarily consisting of borrowings from banks/financial institutions, proceeds from issue of equity share capital, proceeds from issue of Subordinate Debt, offset in part by repayments of borrowings and finance cost paid and return of capital.

Six-month period ended September 30, 2023

Net cash generated from financing activities in the six-month period ended September 30, 2023 was ₹98,911.78 million, primarily consisting of borrowings from banks/financial institutions, partly offset by repayments of borrowings and finance cost paid.

Financial Year 2024

Net cash generated from financing activities in the Financial Year was ₹ 158,812.61 million, primarily consisting of borrowings from banks/financial institutions and proceeds from issue of equity share capital.

Financial Year 2023

Net cash generated from financing activities in the Financial Year was ₹731.91 million, primarily consisting of borrowings from banks/financial institutions and proceeds from issue of equity share capital.

Financial Year 2022

Net cash generated from financing activities in the Financial Year 2022 was ₹(1,697.41) million, primarily consisting of finance cost.

Indebtedness

The table below provides the types and amounts of our outstanding indebtedness as at September 30, 2024.

(₹ in million)

	As at September 30, 2024
Non-current Borrowings	
Secured	
Term loans	
Indian rupee loan from banks (secured)	1,50,315.60
Less : current maturities expected to be settled within 12 month from balance sheet date	(1,352.53)
Total (a)	**1,48,963.07**
Indian rupee loan from financial institutions	48,154.63
Less : current maturities expected to be settled within 12 month from balance sheet date	(455.00)
Total (b)	**47,699.63**
Non-convertible debentures (secured)	28,003.81
Less : current maturities expected to be settled within 12 month from balance sheet date	(119.58)
Total (c)	**27,884.23**
Less: Unamortised transaction cost **(d)**	(4,113.00)
Total non-current borrowings (e = a + b + c + d)	**220,433.93**
Current Borrowing	
Current maturity of long term loans	
Indian rupee loan from banks	1,352.53
Indian rupee loan from financial institutions	455.00
Non convertible debentures (secured)	119.58
(Unsecured, repayable on demand and interest free)	
Interest accrued but not due on borrowings	13.12
Total current borrowings (f)	**1,940.23**
Total borrowings (e + f)	**222,374.16**
Aggregate secured loans	222,361.04
Aggregate unsecured loans	-

As at September 30, 2024, the Trust and Project SPVs had total borrowings aggregating to ₹222,374.16 million on a consolidated basis, of which ₹222,361.04 million was secured. The Project SPVs' secured financing arrangements are secured by their movable and immovable assets, including a charge on equipment as well as on their intangible assets relating to toll collection rights under the various projects. Also see "*Financial Indebtedness*" on page 800.

(₹ in million)

Particulars	Total	On Demand	Less than 1 year	1 to 5 years	> 5 years
Borrowings (Gross of unamortised transaction cost)	226,487.16	-	1,940.23	44,557.83	179,989.10
Other financial liabilities	43,867.13	-	1,850.20	42,016.93	-
Trade payables	6,783.25	-	6,783.25	-	-
Total	277,137.54	-	10,573.68	86,574.76	179,989.10

Contingent Liabilities and other Off-Balance Sheet Arrangements

Contingent liabilities not provided for

As of September 30, 2024, there are no contingent liabilities which are not provided for in the Consolidated Financial Statements for the Trust and the Project SPVs.

There are no off-balance sheet arrangements that have or are reasonably likely to have an adverse effect on our financial condition, revenues or expenses, results of operations, liquidity, capital expenditures or capital resources that the Investment Manager believe are material to investors.

Transactions with Related Parties

The Project SPVs have in the course of their business entered into various transactions with related parties. These transactions include operation and maintenance charges paid for operation and maintenance activities sub-contracted, loans and advances, certain road work expenses for work road work contracted to various Sponsor entities in similar businesses. Further, the Trust has also provided Shareholder Loans to the Project SPVs. The proposed MBEL Acquisition, will also be a related party transaction.

For further information, see "*Related Party Transactions"* on page 306 and "*Financial Statements*" on page 347.

Material developments since the date of the last balance sheet

- Pursuant to a resolution dated November 14, 2024, the board of directors of the Investment Manager has approved a preliminary and non-binding offer to the IRB InvIT Fund in relation to the transfer of IRB HMTL, IRB WTL, KTL, AETL and KGTL. The non-binding offer is preliminary, non-binding, and subject to various risks and uncertainties, including entry into definitive agreements and obtaining approvals, including from third parties, regulatory authorities, shareholders and unitholders, as applicable. There can be no assurance that any transaction will be entered pursuant to the non-binding offer.
- The Trust has announced its second distribution for the Financial Year 2025 of ₹0.57 per Unit as return of captial which comprises ₹0.04 per Unit as interest to the eligible Unitholders holding Units as of October 31, 2024.

Except as disclosed above and in this Letter of Offer, the Investment Manager is not aware of any circumstances that have arisen since September 30, 2024, that materially and adversely affect, or are likely to affect, the Trust's or the Project SPVs' operations or profitability, the value of the Trust's or the Project SPVs' respective assets, or the Trust's or the Project SPVs' ability to pay their respective material liabilities within the next 12 months.

Quantitative and Qualitative Disclosure about Market Risk

Interest rate risk

As the infrastructure development and construction business is capital intensive, the Project SPVs are exposed to interest rate risk. Interest rates for borrowings have been volatile in India in recent periods. The Project SPVs infrastructure development and construction projects were funded to a large extent by debt and increases in interest

expense could have an adverse effect on their results of operations and financial condition. The Trust and Project SPVs current debt facilities carry interest at variable rates as well as fixed rates with the provision for periodic reset of interest rates. As of September 30, 2024, the majority of the Trust and Project SPVs' total indebtedness was subject to variable rates. Although from time to time we may engage in interest rate hedging transactions or exercise any rights available to us under these financing arrangements to terminate the existing debt financing arrangement on the respective reset dates and enter into new financing arrangements, there can be no assurance that we will be able to do so on commercially reasonable terms, that our counterparties will perform their obligations, or that these agreements, if entered into, will protect us adequately against interest rate risks.

Inflation Risk

In recent years, India has experienced relatively high rates of inflation. While we believe inflation has not had any material impact on our business and results of our operations, inflation generally impacts the overall economy and business environment and could affect us.

Quality of income

The majority of our income on a consolidated basis is from the collection of toll. This is based on actual receipts by each of the Project SPVs. There are no management estimates or judgement involved in the recognition of our revenues. For further information see "*– Factors affecting Results of Operations*", "*– Significant Accounting Policies*" and "*– Components of Income and Expenses*".

Unusual or Infrequent Events or Transactions

Except as described in this Letter of Offer, there have been no events or transactions to our knowledge which may be described as "unusual" or "infrequent".

Known Trends or Uncertainties

Except as described in "*Risk Factors*" on page 16 and elsewhere in this Letter of Offer, to our knowledge, there are no known trends or uncertainties that have had or are expected to have a material adverse impact on our revenues.

Future Relationships between Costs and Income

Except as discussed in "*Risk Factors*" and elsewhere in this Letter of Offer, there are no known factors that will have a material adverse impact on our operations or finances.

Competitive Conditions

Please see "*Risk Factors*" and "*- Factors affecting Results of Operations*" on pages 16 and 780, respectively.

Significant Economic Changes that Materially Affected or are Likely to Affect Income from Continuing Operations

Our business has been subject, and we expect it to continue to be subject, to significant economic changes that materially affect or are likely to affect our income from continuing operations identified above in "*– Factors affecting Results of Operations*" and the uncertainties described in "*Risk Factors*" on pages 780 and 16, respectively.

FINANCIAL INDEBTEDNESS

The following is a summary of the indebtedness of the Project SPVs and the Target SPV, together with a brief description of certain material covenants of the relevant financing agreements. Applicants should also refer to "Background and Structure of the Trust" and "Financial Statements" on pages 93 and 347, respectively.

The Project SPVs and the Target SPV have primarily availed loans, for financing, in part, the project costs in relation to the construction and development of their respective underlying road infrastructure asset. Certain Project SPVs have availed further financing, as necessary, for refinancing existing loans or with respect to the repayment obligations under previously availed loans.

Set forth below is a brief summary of the aggregate borrowings of the Trust, the Project SPVs and the Target SPV as at September 30, 2024.

Principal Terms of the Borrowings availed by the Trust

The Trust represented by the Investment Manager has entered into a loan agreement dated September 18, 2023 (the "**Rupee Loan Agreement**"), to avail secured loans to be utilized towards, *inter alia*, repayment of existing external debt to senior lenders of certain Project SPVs, creation of debt service reserve and major maintenance reserve by certain Project SPVs and meeting transaction expenses as specified in the Rupee Loan Agreement. Such loans availed by the Trust are secured by the first ranking *pari passu* charge on, *inter-alia*, (i) security interest on all present and future movable assets and the receivables of the Trust; (ii) all bank accounts of the Trust; (iii) on the debt service reserve account and all funds deposited therein time to time, (iv) charge by way of assignment on (a) all right, title, interest, claims, benefits and demands whatsoever of the Trust in, to and under all the loans and advances extended by the Trust to certain Project SPVs.

Pursuant to the Rupee Loan Agreement, the Trust has, *inter-alia*, undertaken, that it shall (i) directly control, including have management control, of certain Project SPVS, (ii) hold and retain 100% of shareholding in certain Project SPVs, (iii) upon occurrence of an event of default, not exercise its rights under the financing documents with specified Project SPVs without the prior consent of the security trustee; (iv) create and fund and maintain the debt service reserve on and from the date of first disbursement until the final settlement date, subject to certain conditions; (v) create and maintain an additional cash reserve; and (vi) ensure that certain Project SPVs create and maintain a major maintenance reserve, as set out in the Rupee Loan Agreement.

Events of Default: The Rupee Loan Agreement contains, amongst others, the following events of default:

(i) Failure to make payments when due under the financing documents, at the place and in the currency in which it is expressed to be payable;
(ii) Breach of covenant, undertaking, condition or any other obligation under the financing documents;
(iii) Any representation or warranty or statement made or repeated by the borrowers in any transaction document, is materially false, incorrect, incomplete, inaccurate or misleading;
(iv) The units of the Trust cease to be listed on the stock exchange or cease to exist;
(v) Any fraud or forgery committed by the Trust.

Consequences of Default: The Rupee Loan Agreement sets out, *inter-alia*, the following consequences of default:

(i) Acceleration/part acceleration of the maturity of the loan and declaration that all the outstanding amount be payable on demand;
(ii) Suspension or cancelation of the commitments;
(iii) Sue for creditors process or declare that the security created in favor of the rupee lenders or the common security trustee is enforceable; and
(iv) Exercise any other right that the parties may have under the transaction documents or under applicable law.

This is an indicative list of the terms of the Rupee Loan Agreement and there may be additional terms, conditions and requirements under the Rupee Loan Agreement entered into by us.

Principal Terms of the Borrowings availed by the Project SPVs and the Target SPV

1. **Interest and commissions:** In terms of the loans availed by the Project SPVs and the Target SPV, the interest rate is a base rate specified by the lender plus applicable spread, if any, per annum. The applicable spread varies among different loans. The rate of interest upon non-convertible debentures is at a fixed rate per annum for the next two to seven years.

2. **Maturity and Repayment:** The final maturity period of the loans availed by the Project SPVs and the Target SPV ranges from October 2028 to September 2046. These loans and non-convertible debentures are repayable in accordance with the repayment/redemption schedule specified in the relevant financing agreements, which typically prescribe monthly instalments for rupee loans (except for PDTPL, which prescribes quarterly instalments) and monthly instalments/bullet payment with respect to the non-convertible debentures.

3. **Security:** In terms of borrowings where security needs to be created, the Project SPVs are typically required to create:

    a. A first charge by way of hypothecation of all the Project SPV's or the Target SPV movables, including moveable plant and machinery, machinery spares, tools and accessories, furniture, fixtures, vehicles and all other movable assets, present and future, excluding the project assets;

    b. A first ranking charge over all accounts of the Project SPV or the Target SPV, including, *inter alia*, the escrow account, trust and retention account, DSR account and the sub-accounts that may be opened in accordance with the facility agreement/debenture trust deed and the supplementary escrow agreement, or any of the other project agreements and all funds from time to time deposited therein,

the receivables and authorised investments or other securities for the purpose of being applied to the extent of the waterfall of priority specified in the concession agreement;

c. A first charge on the Project SPV's or the Target SPV intangibles, including but not limited to goodwill and uncalled capital, present and future, excluding the project assets;

d. A first ranking *pari passu* charge over all of the Project SPV's or the Target SPV immovable assets, both present and future, if any;

e. A substitution agreement, as may be executed between the NHAI or other concessioning authorities, the Project SPV and its respective lenders, whereby the NHAI or other concessioning authorities may substitute the Project SPV by a selectee of its respective lenders, for the purpose of securing the payment of lender dues;

f. A pledge of a certain specified percentage of the equity shares of the Project SPVs or the Target SPV that are held by the Sponsor (directly or indirectly);

g. An irrevocable and unconditional corporate guarantee/undertaking from the Sponsor/Trust and/or certain other members of the Sponsor group to meet shortfall between outstanding amount of obligations and termination payments received from NHAI or other concessioning authorities in case of termination of the concession agreements;

h. Assignment on *pari passu* basis by way of hypothecation of all toll receivables, cash flows and revenue and other project documents;

i. The right, title and interest of the Project SPV by way of first charge in, to and under all the applicable permits, insurance policies and uncalled capital of the Project SPV; and

j. The right, title and interest of the Project SPV by way of first charge in, to and under (a) the project documents/project agreements and (b) the guarantees, other performance warranties, indemnities and security that may be furnished in favor of the Project SPV by various contractors.

4. **Covenants:** Borrowing arrangements entered into by the Project SPVs and the Target SPV contain certain restrictive conditions and covenants restricting certain corporate actions and the respective Project SPV/Tagert SPV is required to take the prior approval of the lender/trustee before carrying out such activities. Each of the Project SPVs/Target SPV are also required to adhere to certain financial covenants, which include but are not limited to, maintaining a prescribed debt to equity ratio during the currency of the loan and maintaining a minimum debt service coverage ratio during certain periods.

A Project SPV/Target SPV is required to intimate and/or obtain prior written permission of its lenders, *inter alia*, in the following instances:

a. Effecting any change in the nature or scope of the project or any change in the financing plan;

b. Effecting any change in capital structure (including shareholding pattern) (other than the transfer of shares of the Target SPV to the Trust, where the Sponsor continues to hold at least 51% of the unit capital of the Trust);

c. Raising any equity or preference share capital;

d. Making any capital expenditure other than permitted investments;

e. Making any dividend payments to the Trust or making any other restricted payments (including redemption of any shares of any class, prepayment in relation to any indebtedness, payment of interest on unsecured loans, investment in any entity) except as permitted under the financing agreements;

f. Creation of any security interest in any of the secured property (except the transfer of shares of the Target SPV to the Trust, where the Sponsor continues to hold 51% of the unit capital of the Trust);

g. Incurrence of any other indebtedness, including the issue of debentures other than permitted indebtedness;

h. Entering into any partnership, profit-sharing or royalty agreement;

i. Removal of any person exercising substantial powers of management over the affairs of the Project SPVs or Target SPV in case of an event of default;

j. Amending the constitutional documents of the Project SPVs or Target SPV;

k. Undertaking of any new project or making of any investment or taking any assets on lease;

l. Providing guarantees, indemnities or similar assurances in respect of indebtedness of any other person, (other than in the ordinary course of business);

m. Repay or prepay any subordinated loan or loans brought in as equity taken by the Project SPVs or Target SPV from the Sponsor;

n. Create any subsidiary or permit the Project SPV or Target SPV to become a subsidiary;

o. Undertake or permit any scheme of arrangement or compromise with its creditors or shareholders; and

p. Change in the composition of the board of directors of the Project SPV or Target SPV.

Certain lenders have the ability to opt for a put/call option after a minimum period of five years from the scheduled commercial operation date or ten years from the appointed date (in relation to the Target SPV) or a refinance option after a block of five years as per their internal guidelines.

Additionally, if a Project SPV receives funds in respect of the following then the monies received to be utilized to prepay the loans, upon request from the lenders, on a *pro rata* basis to all the lenders without any prepayment premium: (a) any liquidated damages/ penalties received; (b) any proceeds arising in connection with a breach of warranty or guarantee; (c) any insurance proceeds; (d) any proceeds arising in relation to the expropriation or other taking by any government entity of the project assets; (e) any proceeds arising from any termination payments/ buy-out payments received; and (f) any proceeds resulting from an arbitral or judicial award received. The lenders of certain Project SPVs have the right to accelerate the repayment of the unamortized portion of the loans at any time, in the event the cash flows of such Project SPV are adequate for such acceleration.

In relation to outstanding debentures, the relevant Project SPV is required to undertake mandatory redemption on a *pro-rata* basis to all the debenture holders from the proceeds of any amount received by and on behalf of the issuer from any such event if the event involves receipt of, *inter-alia*: (a) insurance proceeds; (b) proceeds from a breach of warranty or guarantee; (c) payments received on account of buy-out events; (d) liquidated damages or penalties paid under project agreement; or (e) proceeds from expropriation or takeover event.

5. **Events of Default:** Borrowing arrangements entered into by the Project SPVs and Target SPV contain standard events of default, including:

a. Non-payment of principal amount by the Project SPV or the Target SPV;

b. Non-payment of interest, additional interest, liquidated damages, free or other amount by the Project SPV or the Target SPV;

c. Default by the borrower in creation of security interest to the satisfaction of the lenders within the period stipulated;

d. Default or breach in the performance of any covenants and/or covenants under the agreement by the Project SPV or the Target SPV;

e. Misrepresentation made by the Project SPV under the agreement or any financing document provided in connection with the loan;

f. Sale, disposal or creation of any charge or encumbrance on any of the land, building, structures or plant and machinery of the Project SPVs or the Target SPV in breach of any of the provisions of the relevant project agreements, without prior written approval of the relevant lenders;

g. Undertaking any action for reorganization of the Project SPV or the Target SPV without the approval of the relevant lenders;

h. Default in performance or observance of any covenant, condition, warranty or provision contained in any other financing agreement entered into by the Project SPV or the Target SPV;

i. Failure on the part of the Project SPV or the Target SPV to maintain adequate insurances in accordance with the terms of the transaction documents;

j. The Project SPV or the Target SPV ceasing or threatening to cease to carry on its business or giving notice of its intention to do so;

k. The Project SPV or the Target SPV abandoning its project;

l. Violation or breach of any environmental, health and safety standards requirement; and

m. The Project SPV or the Target SPV ceasing or threatening to cease to carry on its business or giving notice of its intention to do so or it becoming unlawful for the borrower to carry on its business.

Additionally, in relation to the Target SPV, the transfer of shareholding of the Sponsor in the borrower directly or indirectly against the stipulation of the loan agreement trigger an event of default except in the case of transfer of the shares of the borrower to the Trust such that the Sponsor continues to hold at least 51% of the unit capital of the Trust.

The descriptions above are indicative, and there may be additional terms and conditions with respect to security, financial or other covenants and events of default under the various borrowing arrangements entered into by the Project SPVs. The Project SPVs are required to ensure that the aforementioned events of default and other events of default, as specified under the various documents and agreements entered into by such Project SPV for the purpose of availing of loans, are not triggered.

Principal Terms of the Borrowings availed by the Target SPV

The Target SPV has, on a private placement basis, issued 159,975 unrated, unlisted, unsecured and redeemable non-convertible debentures of face value of ₹100,000 each aggregating to ₹15,997.5 million to the Sponsor and Anahera ("**MBEL Debentures**"). For the key terms and conditions of the MBEL Debentures, see "*Objects of the Issue*" on page 85.

SECTION VIII – LEGAL AND OTHER INFORMATION

MATERIAL LITIGATION AND REGULATORY ACTION

Except as stated below, there is no outstanding material litigation or regulatory action (i) involving the Project SPVs and Target SPV; (ii) against the Trust or its Associates; (iii) against the Investment Manager or its Associates; (iv) against the Sponsor/Project Manager or its Associates or the Sponsor Group; and (v) against the Trustee.

*For purposes of this section, details of all regulatory actions and criminal matters that are currently outstanding involving the Project SPVs and Target SPV or against the Trust, the Investment Manager, the Sponsor/Project Manager and their respective Associates and the members of the Sponsor Group have been disclosed. Notices received by any of the above entities (collectively, the "**Relevant Parties**") from third parties (excluding notices from statutory, regulatory or tax authorities or notices threatening criminal action) shall not be evaluated for materiality until the Relevant Parties are impleaded as defendants in proceedings before any judicial forum.*

Outstanding litigation against any of the Project SPVs and Target SPV before any judicial forum involving a claim amount exceeding ₹198.85 million, being 0.5% of the income of the Trust and the Project SPVs for the last completed Financial Year (i.e., the Financial Year 2024), in accordance with the Consolidated Financial Statements shall be considered material. In relation to outstanding litigation where the monetary liability is not quantifiable, such litigation shall be considered material in the event that the outcome of such litigation would have a material adverse effect on the position of the Project SPVs and Target SPV.

Outstanding litigation against the Sponsor/Project Manager, the Investment Manager and their respective Associates (excluding the Project SPVs and Target SPV) and the members of the Sponsor Group before any judicial forum involving a claim amount exceeding ₹410.09 million, being 0.5% of the income of the Sponsor for the last completed Financial Year (i.e., the Financial Year 2024), in accordance with its audited consolidated financial statements for the Financial Year 2024 shall be considered material. In relation to outstanding litigation where the monetary liability is not quantifiable, such litigation shall be considered material in the event that the outcome of such litigation would have a material adverse effect on the position of the Sponsor or the Investment Manager, as applicable, or the Trust.

Further, due to the nature and extent of their operations, the Sponsor/Project Manager and the Project Entities (including the Project SPVs and Target SPV) are and may be routinely required to file complaints and/or register first information reports against various persons, on account of such persons, inter-alia, refusing to pay toll, causing injury to the employees or contract labour of such entities and damage to the properties of such entities, which have been not been disclosed. Additionally, there have been various criminal complaints, compensation claims and first information reports filed against the employees and contract labour of the Sponsor/Project Manager and the Project Entities (including the Project SPVs and Target SPV), in which such entities are not impleaded, which have not been disclosed.

With respect to the Trustee, details of all regulatory actions and criminal matters that are currently outstanding against the Trustee have been disclosed. Outstanding litigation against the Trustee that the Trustee has determined to be material has been disclosed.

Taxation proceedings against the Relevant Parties (and, in case of the Project SPVs and Target SPV and involving the Project SPVs and Target SPV) have been disclosed in a consolidated manner.

It is clarified that the above policy on materiality is solely for preparing disclosures for purposes of the Issue, in accordance with the requirements prescribed under the InvIT Regulations.

I. Material Litigation and Regulatory Action against the Trust and its Associates

Material Litigation and Regulatory Action against the Trust

1. IRB WTL, the Trust and the Sponsor have filed Section 17 application before the arbitral tribunal against the NHAI's show cause notice (SCN) dated September 11, 2024. After the unfortunate collapse of the old Kali Bridge on August 7, 2024, the NHAI issued a SCN on September 11, 2024 to IRB WTL, the Trust and the Sponsor. For details, see " – *Material Litigation and Regulatory Action involving the*

Project SPVs and Target SPV – IRB WTL" on page 817.

For details in relation to outstanding material litigation and regulatory action against the Associates of the Trust, please see below.

II. Material Litigation and Regulatory Action against the Sponsor/Project Manager, Associates of the Sponsor/Project Manager and the Sponsor Group

Material Litigation and Regulatory Action against the Sponsor/Project Manager

As at the date of this Letter of Offer, there is no outstanding criminal litigation against the Sponsor/Project Manager. Other than as disclosed below, there is no outstanding material civil litigation, regulatory action or other material litigation against the Sponsor/Project Manager.

Outstanding Material Civil Litigation

1. Hakim Singh Yadav and others (the "**Petitioners**") have filed a writ petition before the High Court of Allahabad against the Sponsor and others (the "**Respondents**") in relation to the road asset operated by AETL, seeking to quash the contract order for the construction of the drainage system and directing the relevant authority concern to revaluate the technical measures adopted in drainage work. The Petitioners have alleged, *inter-alia*, that faulty construction and design of the drainage system have resulted in the flooding of a nearby area. The matter is currently pending.

2. Mr. Shaikh Rafiq and others have filed a writ petition against the Sponsor, Modern Road Makers Private Limited (an Associate of the Sponsor), YATL and others before the High Court of Bombay, Aurangabad (the "**BHC Aurangabad**") bench in relation to acquisition of land for the four laning of Yedshi – Aurangabad road that forms a part of the Solapur – Aurangabad highway, i.e., NH 211. For details, see " *– Material Litigation and Regulatory Action involving the Project SPVs and Target SPV – YATL*" on page 819.

3. Mr. Panditrao Digambarrao Shete Chausalkar and another have filed a writ petition against the Sponsor, YATL and others before the BHC Aurangabad in relation to acquisition of land for the four laning of Yedshi – Aurangabad road that forms a part of the Solapur – Aurangabad highway, i.e., NH 211. For details, see " *– Material Litigation and Regulatory Action involving the Project SPVs and Target SPV – YATL*" on page 819.

4. Mr. Pruthviraj Shahane (the "**Petitioner**") has filed a civil suit against the Sponsor, YATL and others before the Civil Judge (Senior Division), Beed. For details, see " *– Material Litigation and Regulatory Action involving the Project SPVs and Target SPV – YATL*" on page 819.

5. Kishore Mukherjee has filed a writ petition in the High Court of Calcutta against the Sponsor and others praying that the tender for the Palsit to Dankuni project should be halted, an environment impact assessment should be obtained and pending the disposal of the matter, the respondents (including the Sponsor) should be directed not to uproot any trees from Panagarh to Dankuni on NH 19. The matter is currently pending.

6. Kanugula Mahesh Kumar ("**Petitioner**") has filed a public interest litigation before the High Court of Telangana (the "**High Court**") against the State of Hyderabad, the HMDA, the HGCL, the Sponsor and IRB GEPL. For details, see " *– Material Litigation and Regulatory Action involving the Project SPVs and Target SPV – IRB GEPL*" on page 820.

7. Sanat Ghosh and others have filed a petition before the High Court of Calcutta against the Sponsor and PDTPL. For details, see "*—Material Litigation and Regulatory Action involving the Project SPVs and Target SPV –PDTPL*" on page 820.

Outstanding Regulatory Action

NHAI issued a notice to the Sponsor asking to pay damages of ₹30,485 in relation to the toll plaza Krishnavaram. The Sponsor has replied in its letter. As on date, no legal proceedings have been initiated in relation to the aforesaid notice and no further communication has been received.

Other Material Litigation

1. The Sponsor had initiated arbitration proceedings against Hyderabad Growth Corridor Limited (the "**Respondent**") in connection with a road project in Hyderabad. The Sponsor has claimed an amount of ₹982.69 million for losses suffered by the Sponsor due to a failure by the respondent to provide a toll management system. The Respondent has denied the allegations of the Sponsor and stated that it was not required to provide a toll management system under the terms of the contract between the parties. The Sponsor has received an arbitral award partially in its favor, but as of the date of this Letter of Offer, the Respondent has not made the payments as directed in the award. Further, the Sponsor has filed an appeal before the XXIV Additional Chief Judge cum Commercial Court, City Civil Court, Hyderabad against the arbitral award stating the arbitral tribunal has without any reason and in complete disregard of settled principles of law, disallowed part of the compensation claimed by the Sponsor against the Respondent despite finding that the Respondent had failed to fulfil its contractual obligations resulting into drastic reduction in the toll revenue. Further, the Respondent had filed a petition before the Commercial Courts cum Hon'ble XIII District Judge, Ranga Reddy District ("**Court**"), praying to set aside the award for part of the claim under the arbitration award and award the cost of arbitration including the fees paid by the Respondent. The Sponsor had filed its reply in the matter. The Court disposed off the petition with leave to the petitioner to file the petition before the appropriate court. Hyderabad Growth Corridor Limited has filed such petition before the District Judge, Commercial Disputes, Hyderabad. The matter is currently pending.

2. IRB WTL, the Trust and the Sponsor have filed Section 17 application before the arbitral tribunal against the NHAI's Show Cause Notice (SCN) dated September 11, 2024. After the unfortunate collapse of the old Kali Bridge on August 7, 2024, the NHAI issued a SCN on September 11, 2024 to IRB WTL, the Trust and the Sponsor. For details, see " *– Material Litigation and Regulatory Action involving the Project SPVs and Target SPV – IRB WTL*" on page 817.

Material Litigation and Regulatory Action against the Associates of the Sponsor/Project Manager

For details in relation to outstanding material litigation and regulatory action against the Project SPVs and the Target SPV, see "*– Litigation and Regulatory Action involving the Project SPVs and Target SPV*" on page 816. For details in relation to outstanding material litigation and regulatory action against the members of the Sponsor Group, see "*– Litigation and Regulatory Action against the Sponsor Group*" on page 815. Details of outstanding material litigation and regulatory action against the other Associates of the Sponsor/Project Manager are set out below.

I. *Aryan Hospitality Private Limited ("AHPL")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action against AHPL. Other than as disclosed below, there is no outstanding material civil litigation against AHPL.

Jaykumar Govindrao Nikam and others (the "**Petitioners**") have filed a suit before the Civil Judge, Junior Division at Kolhapur alleging that AHPL has encroached the land owned by the Petitioners. The suit pertains to the plot leased for the IRDP Kolhapur project. The concession agreement in relation to the project was entered into between the Maharashtra State Road Development Corporation (the "**MSRDC**"), IRB Kolhapur Integrated Road Company Private Limited ("**IRB Kolhapur**"), and the Kolhapur Municipal Corporation (the "**KMC**"). Under the concession agreement, land owned by the KMC was leased to IRB Kolhapur for the project pursuant to a lease deed between KMC, MSRDC and IRB Kolhapur. The land was then sub-leased by IRB Kolhapur to AHPL. The IRDP Kolhapur project has been bought back by the government. AHPL has cancelled the sub-lease deed and the possession of the land as well as the structure thereon has been given back to IRB Kolhapur on an "*as is where is*" basis, free from encumbrances. AHPL no longer has any interest in the property. The court has passed an order dated November 15, 2024 and added KMC as a party to the suit. The matter is currently pending.

II. *Aryan Toll Road Private Limited ("ATRPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against ATRPL.

III. *Aryan Infrastructure Investments Private Limited ("AIIPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against AIIPL.

IV. *ATR Infrastructure Private Limited ("ATRIPL")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action against ATRIPL. Other than as disclosed below, there is no outstanding material civil litigation against ATRIPL.

Outstanding Material Civil Litigation

Kishore Dyanoba Shevkari (the "**Petitioner**") has filed a writ petition before the High Court of Bombay against the State of Maharashtra and ATRIPL, among others. The petition relates to the choking of the Hume Pipe Culvert because of garbage dumping. The Petitioner has alleged that the choking of the Hume Pipe Culvert has resulted in waterlogging and that has affected his land. The project has been completed and handed back to the government. The matter is currently pending.

V. *IRB Ahmedabad Vadodara Super Express Tollway Private Limited ("IRB AVSETPL")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action against IRB AVSETPL. Other than as disclosed below, there is no outstanding material civil litigation or other material litigation against IRB AVSETPL.

Outstanding Material Civil Litigation

1. Shabbirbhai Noormohmmadbhai, the owner of Pragati Hotel, Bareja, Ahmedabad (the "**Petitioner**") has filed a suit before the Additional Civil Court Judge, Ahmedabad against the Director, IRB, Jetalpur, Ahmedabad, the Deputy Engineer, R&B, Ahmedabad, the District Collector, Ahmedabad, and the State Public Works Department, Gandhinagar seeking a permanent stay order on closing his access to the main carriage way. The suit relates to compensation for land acquisition. The matter is currently pending.

2. Jitendra Chandulal Amin, the owner of Rishi Petrol Pump, Nadiad has filed a suit before the Additional Civil Court Judge, Nadiad agaisnt IRB AVSETPL and others seeking a permanent stay order on closing his access to the main carriage way. The suit relates to compensation for land acquisition. The matter is currently pending.

Other Material Litigation

IRB AVSETPL invoked arbitration in relation to a competing road. The NHAI suggested that the matter be brought before the Conciliation Committee of Industrial Experts (the "**CCIE**"). IRB AVSETPL filed a writ petition in the High Court of Bombay, which directed the parties to immediately refer the matter to arbitration. IRB AVSETPL was also granted a waiver with respect to the payment of premium for three months subject to the submission of an undertaking. The CCIE, pursuant to order dated May 29, 2019 concluded that the conciliation had failed. IRB AVSETPL then invoked arbitration in relation to the competing road along with the matter of premium deferment and appointed an arbitrator. The NHAI did not appoint an arbitrator. IRB AVSETPL then filed a writ petition in the High Court of Delhi, pursuant to which the NHAI was directed to form a tribunal. The interim relief granted by the High Court of Bombay was also extended. The NHAI had challenged the order of the High Court of Bombay in a special leave petition before the Supreme Court of India, but the petition was dismissed.

Subsequently, the High Court of Delhi nominated a presiding arbitrator. However, the NHAI filed a special leave petition before the Supreme Court of India challenging such nomination. The Supreme Court of India passed an order appointing a different presiding arbitrator and the arbitral tribunal was constituted. IRB AVSETPL has filed an application for interim relief and a statement of claims on March 1, 2021 requesting the arbitral tribunal to, *inter-alia*, (a) declare that the NHAI is in breach of its obligations and representations under the concession agreement; (b) direct the NHAI to pay compensation of ₹12.64 billion for the period between December 4, 2015 until December 31, 2020 with an interest at 15% per annum until payment or realization from January 1, 2021 until the subsistence of the breach; and (c) pass an order of mandatory injunction directing the NHAI to cure the breach with respect to the competing road. The NHAI has responded to the application for interim relief filed by IRB AVSETPL. The respondent has filed a counter-claim for an amount of (i) ₹562.2 million (until June 30, 2021)

towards premium deferment; (ii) ₹5,026.1 million (until May 2021) and unpaid premium during the pendency of the proceedings as well as future premium; and (iii) ₹312.1 million towards interest (as on June 30, 2021) as per the provisions of the supplementary agreement. The parties filed written submissions and the arbitral tribunal framed preliminary issues and conducted hearings. In this regard, the arbitral tribunal passed an interim award dated October 14, 2021 in favour of the claimant. The arbitral tribunal subsequently formulated further issues to be settled pursuant to hearings. The NHAI also filed an application seeking to implead the Government of Gujarat as a party in the proceedings. The NHAI challenged the interim award dated October 14, 2021 before the High Court of Delhi, which was dismissed pursuant to an order dated July 4, 2022. Thereafter, the NHAI filed an appeal against such dismissal. The arbitral tribunal also dismissed the NHAI's application to implead the Government of Gujarat, which was further challenged by NHAI. IRB AVSETPL has filed an affidavit of evidence before the arbitral tribunal and updated the previously claimed amount to ₹21,232.70 million, including interest until September 30, 2022 of ₹91.90 million on margin money and commission paid towards procurement of bank guarantees for ₹210.00 million.

The matter of competing road was adjudicated by the arbitral tribunal, and in its award dated April 7, 2024 ("**Award**"), the arbitral tribunal has declared that the competing road came into existence in January 2019 (when 75% of the length of competing road was completed) and not in the year 2015-16. However, due to technical reasons, no compensation was awarded to IRB AVSETPL on account of this competing road. This decision of the arbitral tribunal is challenged by IRB AVSETPL under Section 34 of the Arbitration and Conciliation Act, 1996 ("**A&C Act**") before the High Court of Delhi. The matter is heard, and the judgment is reserved.

The Award has also directed IRB AVSETPL to make the payment of premium to NHAI as per the Premium Deferment Scheme (counter claim No.2). Under the said scheme, the escrow waterfall mechanism prevails wherein the premium payment comes after O&M and debt servicing. IRB AVSETPL is already following this waterfall mechanism. Balance premium, if any, along with accrued interest @ bank rate + 2% shall be paid once the debt servicing is completed and essentially one year before the completion of the concession period including extension thereof. Whereas the counter claim No.1 of NHAI for advancement of premium amounting to ₹ 297.3 million has been rejected by the arbitral tribunal. Additionally, an amount of ₹ 19 million plus interest has been awarded to IRB AVSETPL on account of losses due to unwarranted retention of bank guarantee by NHAI. NHAI has also been directed to return the said bank guarantee to IRB AVSETPL.

Subsequently, NHAI also challenged the Award under Section 34 of the A&C Act to the extent of non-award of interest at the contractual rate against the counter claim No.2 along with the rejection of counter claim No.1. The matter is pending before the High Court of Delhi.

NHAI also filed Section 36 petition under the A&C Act for enforcement of the Award before the High Court of Delhi. The matter is pending. It was followed by a special leave petitions ("**SLP**") filed by NHAI before the Supreme Court of India. The Sponsor was impleaded in the SLP. The matter is pending.

In the meantime, both the parties filed Section 9 applications under the A&C Act. IRB AVSETPL's Section 9 application was disposed of by the High Court of Delhi, granting liberty to IRB AVSETPL to treat the Section 9 application as Section 17 application before the existing arbitral tribunal.

While, NHAI filed Section 9 petition before the High Court of Delhi seeking interim relief to secure the amount awarded under Award. The said application was dismissed by the High Court of Delhi on October 18, 2024 concluding that there is no direction in the Award to make forthwith/ upfront payment to NHAI and that the Award entitles IRB AVSETPL to pay differential revised annual premium later, only subject to payment of interest for the interregnum. The High Court of Delhi further directed that the Rule 7 of the NH Fee Rules, read with Clause 3(c) of the sanction letter dated June 6, 2014 and Clause 31.3.1 of the concession agreement permits withdrawal, towards payment of premium, as per waterfall mechanism envisaged therein. Any direction from NHAI to IRB AVSETPL to pay the claimed amount upfront to NHAI would be violative of Clause 31.3.1 of the concession agreement. NHAI filed SLP before the Supreme Court of India to set aside the order of the High Court of Delhi dated October 18, 2024. The matter is pending.

IRB AVSETPL had initiated arbitration with regard to the disputes concerning (i) execution of supplementary agreement for extension of concession period by 137.48 days under Clause 34.6.2 (force majeure events such as demonetisation, transporter's strike and Covid 19). IRB AVSETPL had prayed for (ii) execution of supplementary agreement for extension of concession period by five years under Article 29 of the concession agreement, (iii) adjustment of INR 1,107.7 million under Clause 34.7.2 (c) of the concession agreement on account of force majeure events such as demonetisation, transporter's strike and Covid 19 from the premium obligations, (iv)

adjustment of ₹1,215 million under Clause 34.7.2 (c) read with NHAI circulars towards exemption of premium payment for the period February 22, 2020 to March 31, 2022 (on account of imposition of restriction on movement due to Covid 19), (v) adjustment of ₹ 237.3 million (upto Aug 2024) paid under Article 27 of the concession agreement under protest towards double user fee against the premium obligations with a direction to restrain NHAI from demanding such amount and (vi) declaring that IRB AVSETPL is eligible for revenue shortfall loan in terms of Article 28 of the concession agreement with a direction to restrain NHAI from demanding premium in any manner except in terms of Article 31 read with Articles 25 and 28 of the concession agreement and the NH Fee Rules. The arbitration proceedings are in progress and the matter is pending.

VI. *IRB Goa Tollway Private Limited ("IGTPL")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action against IGTPL. Other than as disclosed below, there is no outstanding material litigation involving IGTPL.

IGTPL had initiated arbitration proceedings against the NHAI for wrongful termination of contract by the NHAI with respect to the Goa/Karnataka to Panaji-Goa section of NH-4A in the State of Goa. The arbitral tribunal had passed an award in favor of IGTPL which allowed the following claims: (i) approximately ₹1,963.80 million towards 50% of the adjusted equity of ₹1,309.20 million arising out of the termination of contract by the NHAI; (ii) an amount of ₹47.10 million for damages on account of a delay in the fulfilment of the conditions of the contract; and (iii) interest on the amounts mentioned above. The aggregate amount involved is ₹3,039.80 million. The NHAI had filed a petition before the High Court of Delhi ("**Court**") for setting aside the award passed by the arbitral tribunal and a stay on the operations of the award. The stay on the Award was not allowed by the Court. IGTPL availed 75% of the arbitral award amount from the NHAI against bank guarantees amounting to ₹2,279.80 million with the NHAI. Further, the Court also directed NHAI to deposit the balance amount with the Court, pending disposal of the case. Accordingly, NHAI has deposited an amount of ₹103.50 million with the Court. Pursuant to an order dated February 21, 2022, the Court upheld the arbitral award in relation to (i) above and corresponding interest, but set aside the claim in relation to (ii) above. Subsequently, both the parties appealed under Section 37 of the Arbitration and Conciliation Act, 1996 against the order of the Delhi High Court, which were both dismissed. Thereafter, NHAI challenged this order before the Supreme Court of India, which was dismissed. IGTPL has filed an application for withdrawal as well as an application for execution of the arbitral award under Section 36 of the Arbitration and Conciliation Act, 1996. The matter is currently pending.

VII. *IRB Infrastructure Private Limited ("IRBIPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against IRBIPL.

VIII. *Ideal Road Builders Private Limited ("Ideal Road Builders")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action against Ideal Road Builders. Other than as disclosed below, there is no outstanding material civil litigation against Ideal Road Builders.

Outstanding Material Civil Litigation

1. Shamsuddin Miyalal Mushrif has filed a pulic interest litigation before the High Court of Bombay against the Union of India, Ideal Road Builders and others, to declare that the National Highways Act, 1956 and Rule 3 of National Highways (Collection of Fees by any Person for the Use of Section of National Highways/Permanent Bridge/Temporary/Bridge on National Highway) Rules, 1997 are contrary to and violate of the provisions of the Constitution of India, 1950. The petition also seeks the declaration of Section 7 of the National Highways Act, 1956 and Rules 7 and 11 of the National Highways (Fees for the use of National Highway Section and Permanent Bridge-Public Funded Projects) Rules, 1997 and the MoRTH Notifications dated March 4, 2005 and May 5, 2015 illegal, *ultra vires* and invalid, and to stop collection of toll. This is relation to the Ideal Road Builders Khambatki Ghat project. The project has been completed and handed back to the government. The matter is currently pending.

2. Nitin Sardesai and others have filed a public interest litigation before the High Court of Bombay against the State of Maharashtra, Ideal Road Builders and others, seeking the following: (i) to comply with the provisions of the manual of specifications; (ii) to take traffic census on NH 4 and expressway by electronic census system; (iii) to appoint independent agency to monitor traffic; (iv) to remove

advertisements and hoardings; (v) to deposit the toll amount with government; and (vi) discount to local public. The matter relates to the Ideal Road Builders Mumbai-Pune project. The project has been completed and handed back to the government. The matter is currently pending.

3. Nitin Sardesai and others have filed a public interest litigation before the High Court of Bombay against the State of Maharashtra, Ideal Road Builders and others, seeking to quash and set aside a notification dated August 9, 2004 (no. PSP 2000/CR-106(1I) Road-8) and a notification dated September 5, 2006. The following prayers have also been made: (i) to comply with the manual of specifications; (ii) to take traffic census by electronic traffic census system; (iii) to deposit toll amount in separate account of government; (iv) to appoint an independent agency to monitor traffic; and (v) to install advance traffic mentoring system. The matter relates to the Ideal Road Builders Mumbai-Pune project. The project has been completed and handed back to the government. The matter is currently pending.

4. Shrinivas Anant Ghanekar (the "**Petitioner**") has filed a public interest litigation before the High Court of Bombay against the State of Maharashtra, Ideal Road Builders and others, seeking to quash the toll notification and declare the concession agreement illegal and *ultra vires*. The matter relates to the Ideal Road Builders Thane-Ghodbunder project. The suit has been filed based on erronous information provided to the Petitioner's Right to Information Application by the Maharashtra State Road Transport Corporation, as has been admitted in the reply to the petition. The project has been completed and handed back to the government.The matter is currently pending.

Other Material Litigation

Ideal Road Builders Private Limited and others (the "**Petitioners**") have filed a writ petition before the High Court of Bombay against the State of Maharshtra to set aside a notification issued by the Government of Maharashtra exempting LMVs and buses of the Maharashtra State Road Transport Corporation from payment of toll taxes at the Thane Ghodbunder project. Compensation is being paid by the Government of Maharashtra to the entity which operates the Thane Ghodbunder project. The matter is currently pending.

IX. *IRB Kolhapur Integrated Road Development Company Private Limited ("IRB Kolhapur")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action against IRB Kolhapur. Other than as disclosed below, there is no outstanding material civil litigation against IRB Kolhapur.

Outstanding Material Civil Litigation

1. Jairaj Velyan (the "**Petitioner**") has filed a suit before the Civil Judge, Senior Division, Kolhapur, against the State of Maharashtra and others alleging that road construction has resulted in encroachment . The Petitioner has prayed that the encroachment should be removed and the road should be made available for use of the members of the society. IRB Kolhapur has constructed the project as per the concession agreement on land made available by the Kolhapur Municipal Corporation and the project has been bought back by the government. The company has filed an application before the Civil Judge, Junior Division, Kolhapur, for deletion of its name the suit. The matter is currently pending.

X. *IRB MP Expressway Private Limited ("IRB MP") (earlier known as NKT Road and Toll Private Limited)*

Other than as disclosed below, there is no outstanding criminal litigation, material civil litigation or regulatory action against IRB MP.

Outstanding Material Civil Litigation

1. Pravin Wategaonkar and others (the "**Petitioners**") have filed a public interest litigation ("**PIL**") before the High Court of Bombay against Maharashtra State Road Development Corporation ("**MSRDC**"), Comptroller and Auditor General of India ("**CAG**"), Mumbai Pune Expressway Limited ("**MPEL**"), State of Maharashtra and IRB MP seeking an order from the High Court of Bombay, *inter-alia*, to (i) exempt the light motor vehicles from payment of toll on the Mumbai Pune Expressway ("**Expressway**"); (ii) stay the tender process which is underway for the toll collection rights for next ten (10) years on the Expressway; and (iii) declare the toll collection as illegal and restrain MPEL / MSRDC from collecting such toll on the Expressway. The Petitioners have filed civil application in the PIL and prayed that the

Honorable High Court to examine the legality and validity of the documents of MSRDC, to register case against the officers of MSRDC involving in preparing the document and direct the toll contractor to deposit in the court entire toll revenue collected on Mumbai Pune Expressway. The matter is currently pending.

2. Milind Ashok Achyut and others have filed a public interest litigation before the High Court of Bombay against the Ministry of Road Transport and Highways, IRB MP and others seeking an order from the High Court of Bombay, *inter-alia*, to (i) declare the establishment of the Somatane toll plaza (the "**Toll Plaza**") on NH-48 belonging to IRB MP as *ultra vires* the National Highways Fee (Determination of Rates and Collection) Rules, 2008 and arbitrary and illegal; (ii) restrain IRB MP from collecting toll on the Toll Plaza on NH-48 until applicable discounts are displayed and changes made in the FASTag mechanism; (iii) direct IRB MP to deposit the toll fees in an escrow account; and (iv) shift the Toll Plaza in the direction of Pune City. The matter is currently pending.

3. Anil Bhangare and others have filed a public interest litigation before the High Court of Bombay against IRB MP and others seeking an order from the High Court of Bombay to, *inter-alia*, (i) set up a special investigation team to conduct an enquiry into the circumstances under which the Somatane toll plaza (the "**Toll Plaza**") was set up; (ii) remove the Toll Plaza and relocate it; (iii) to make separate lanes for locals and exempt them from toll fees; and (iv) grant a temporary injunction restraining IRB MP from the recovery of toll fees at the Toll Plaza. The matter is currently pending.

Outstanding Criminal Litigation

Anil Bhangare and others (the "**Petitioners**") have filed an original petition against IRB MP and others before the Judicial Magistrate First Class, Vadgaon Maval ("**JMFC**"), stating that the toll receipts at the Somatane toll plaza specify the place of tolling as Dehu Road, which is located at a different location from the Somatane toll plaza. It has been submitted that the toll collected by IRB MP is illegal. The proceedings were stayed by the JMFC due to the pendency of a separate public interest litigation before the High Court of Bombay. The Petitioners have filed an appeal before the Sessions Court, Vadgaon Maval praying, *inter-alia*, that the order passed by the JMFC be set aside and to direct the JMFC to try the matter in accordance with the Code of Criminal Procedure, 1973. The matter is currently pending.

Outstanding Regulatory Action

The Collector of Stamps, Solapur has raised a demand for a deficit in stamp duty of ₹323,000 and a penalty, on the agreement dated November 28, 2001. In its letter dated July 3, 2015, IRB MP informed the Collector of Stamps that such stamp duty is not applicable to the agreement as the section referred to by the Collector of Stamps was not in existence at the time of execution of the agreement. There has been no further response from the Collector of Stamps.

XI. *IRB Sindhudurg Airport Private Limited ("IRB Sindhudurg")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action involving IRB Sindhudurg. Other than as disclosed below, there is no outstanding material civil litigation against IRB Sindhudurg.

Vijay Krishnaji Rane (the "**Petitioner**") has filed a suit before the Civil Court, Oras, Sindhudurg against IRB Sindhudurg and others (the "**Respondents**") praying for the following reliefs: (i) that the Respondents be prevented from creating obstacles on the suit property; and (ii) that the Respondents be prevented from cutting trees and fruits in the suit property. The Petitioner has also prayed that in the event that it is found that the Respondents are encroaching on the suit property, then the possession of the suit property should be given to him. The plaintiff has filed an application to change the description of the suit property. The matter is currently pending.

XII. *Mhaiskar Infrastructure Private Limited ("MIPL")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation against MIPL. Other than as disclosed below, there is no outstanding material civil litigation or regulatory action against MIPL.

Outstanding Material Civil Litigation

1. Nitin Sardesai and others have filed a public interest litigation before the High Court of Bombay against the State of Maharashtra, MIPL, Ideal Road Builders, and others, seeking compliance with certain specifications. For details, see " *– Material Litigation and Regulatory Action against the Sponsor/Project Manager and Associates of the Sponsor/Project Manager – Material Litigation and Regulatory Action against the Associates of the Sponsor/Project – Ideal Road Builders Private Limited*" on page 811.

2. Nitin Sardesai and others have filed a public interest litigation before the High Court of Bombay against the State of Maharashtra, MIPL, Ideal Road Builders Private Limited, and others seeking to quash certain notifications. For details, see " *– Material Litigation and Regulatory Action against the Sponsor/Project Manager and Associates of the Sponsor/Project Manager – Material Litigation and Regulatory Action against the Associates of the Sponsor/Project Manager – Ideal Road Builders Private Limited*" on page 811.

3. Pravin Wategaonkar and others have filed a public interest litigation before the High Court of Bombay against the Maharashtra State Road Development Corporation and others allegeing that MIPL is collecting excess toll on the Mumbai-Pune Expressway. The 15 year concession period in relation to the project has been completed and the project has been handed back to the government. The matter is currently pending.

4. The Depurty Inspector General of Registration and Deputy Controller of Stamps and Collector of Stamps, Mumbai Division, Mumbai ("**Authority**"), passed an order dated March 12, 2008 (the "**Order**") against MIPL demanding a payment of ₹275.40 million as deficit stamp duty and a penalty of ₹49.57 million in relation to an the agreement dated August 4, 2004 executed among MSRDC, Ideal Road Builders and MIPL for construction on the Mumbai-Pune Expressway. MIPL filed a writ petition before the High Court of Bombay challenging the Order. Pursuant to an order dated April 28, 2008, the High Court of Bombay provided interim relief to MIPL and directed it to deposit 50% of the claimed amount. MIPL subsequently deposited ₹137.70 million with the Authority. The matter is currently pending.

Outstanding Regulatory Action

The Collector of Stamps, Andheri, Maharashtra sent a notice to MIPL demanding that stamp duty of ₹1,500,000 a penalty of ₹5,340,000 be paid on the agreement dated August 4, 2004 for the Mumbai Pune project. MIPL has replied to the notice, and has not received any response from the Collector of Stamps.

XIII. *MRM Mining Private Limited ("MRMMPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action involving MRMMPL.

XIV. *Modern Road Makers Private Limited ("MRM")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action against MRM. Other than as disclosed below, there is no outstanding material civil litigation against MRM.

1. Arjun Rama Ghatal has filed complaint before the office of the Tahasildar and the Executive Magistrate, Palghar against MRM and others regarding the payment of land cess and seeking compensation for possession of land and damage to crops caused by the installation of a tar plant machine. The matter is currently pending.

XV. *Thane Ghodbunder Toll Road Private Limited ("TGRPL")*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action against TGRPL. Other than as disclosed below, there is no material civil litigation against or other material litigation involving TGRPL.

Outstanding Material Civil Litigation

Shrinivas Anant Ghanekar has filed a public interest litigation before the High Court of Bombay against the State of Maharashtra, Ideal Road Builders Private Limited, TGRPL, and others. For details, see " *– Material Litigation and Regulatory Action against the Sponsor/Project Manager and Associates of the Sponsor/Project Manager – Material Litigation and Regulatory Action against the Associates of the Sponsor/Project Manager – Ideal Road Builders*" on page 811.

Other Material Litigation

Ideal Road Builders Private Limited, TGRPL and others have filed a writ petition before the High Court of Bombay against the State of Maharashtra. For details, see " *– Material Litigation and Regulatory Action against the Sponsor/Project Manager and Associates of the Sponsor/Project Manager – Material Litigation and Regulatory Action against the Associates of the Sponsor/Project Manager – Ideal Road Builders – Other Material Litigation*" on page 811.

XVI. *VCR Toll Services Private Limited ("VCR")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against VCR

XVII. *Pathankot Mandi Highway Private Limited ("PMHPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against PMHPL.

XVIII. *VM7 Expressway Limited ("VM7")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against VM7.

XIX. *GE1 Expressway Private Limited ("GE1")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against GE1.

XX. *Chittoor Thachur Highway Private Limited ("CTHPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against CTHPL.

XXI. *IRB PS Highway Private Limited ("IPHPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against IPHPL.

XXII. *VDM Ventures Private Limited ("VVPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against VVPL.

XXIII. *Deux Farming Films Private Limited ("DFFPL")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against DFFPL.

XXIV. *IRB Charitable Foundation ("IRBCF")*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against IRBCF.

Material Litigation and Regulatory Action against the Sponsor Group

As at the date of this Letter of Offer, there is no outstanding material civil litigation, criminal litigation, regulatory action or other material litigation against the members of the Sponsor Group. For details in relation to outstanding material litigation and regulatory action against the Sponsor, see "*– Litigation and Regulatory Action involving the Sponsor/Project Manager*" on page 807.

Material Litigation and Regulatory Action involving the Project SPVs and Target SPV

A. *AETL*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory litigation involving AETL. Other than as disclosed below, there is no outstanding material civil litigation involving AETL.

Outstanding Material Civil Litigation

1. Hakim Singh Yadav and others (the "**Petitioners**") have filed a writ petition before the High Court of Allahabad against the Sponsor and others (the "**Respondents**") in relation to the drainage system for the road asset operated by AETL. For details, see "*– Material Litigation and Regulatory Action against the Sponsor/Project Manager and Associates of the Sponsor/Project Manager - Material Litigation and Regulatory Action against the Sponsor/Project Manager - Outstanding Material Civil Litigation*" on page 807.

2. AETL has filed for settlement through conciliation with the NHAI in relation to a dispute with respect to the payment of premium with proportionate reduction of revenue losses on account of COVID-19 and delay in completion of construction. AETL and the NHAI did not reach any settlement, and accordingly, AETL invoked arbitration proceedings against the NHAI under the terms of its concession agreement and submitted claims for amounts aggregating to ₹13,179.8 million towards, *inter alia*, compensation for delay in completion of construction due to the reasons attributable to NHAI, proportionate reduction in payment of premium, compensation on account of various force majeure costs, etc. along with aggregated extension of the concession period by 351.41 days. Upon successful completion of arbitration, the award amount, if any, would be payable to the sub-contractor in terms of their sub-contract agreement. The matter is currently pending.

B. *CGTL*

As at the date of this Letter of Offer, there is no outstanding regulatory action involving CGTL. Other than as disclosed below, there is no outstanding material civil litigation or criminal litigation involving CGTL.

Outstanding Material Civil Litigation

CGTL, KGTL and UTL have filed a writ petition before the High Court of Rajasthan, Jaipur Bench against Union of India and NHAI challenging certain notifications and seeking interim relief from the High Court of Rajasthan, Jaipur Bench. For details, see "*– Material Litigation and Regulatory Action involving the Project SPVs and Target SPV – UTL – Outstanding Material Civil Litigation*" on page 818.

Outstanding Criminal Litigation

1. Mr. Waman Rathod, deputy general toll manager at a toll plaza located on the road asset operated by CGTL, has filed two first information reports at the Police Station, Gangrar, Chittorgarh, Rajasthan in relation to (i) the misbehaviour of certain individuals when asked to pay toll; and (ii) the theft of ₹0.62 million from the cash room at the toll plaza. The matters are currently pending.

2. Mr. Rohit Sharma, a supervisor at a toll plaza located on the road asset operated by CGTL, has filed a first information report at the Raila Police Station, Bhilwara, Rajasthan against the driver of a truck-trailer in relation to a collision with the toll booth and injuries caused to the supervisor. The matter is currently pending.

C. *IRB HMTL*

As at the date of this Letter of Offer, there is no outstanding material civil litigation, criminal litigation, regulatory

action or other material litigation involving IRB HMTL.

D. *IRB WTL*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action involving IRB WTL. Other than as disclosed below, there is no outstanding material civil litigation involving IRB WTL.

1. Mr. Laxman Neelakantha Desai (the "**Petitioner**") has filed a petition against IRB WTL (the "**Respondent**") before the court of Civil Judge Karwar alleging that the blasting of rocks done by the Respondent has caused damage to the property of the Petitioner. The Petitioner has requested a permanent injunction restraining the Respondent from undertaking such activity. The court had passed an order granting a temporary injunction against the Respondent. Subsequently, the parties entered into a mediation agreement, pursuant to which the court passed an order dated April 28, 2017, vacating the earlier injunction. The matter is currently pending.

2. Mr. Vithobha Ganesh Naik (the "**Petitioner**") has filed a suit against IRB WTL before the Principal Judge at Karwar, alleging that IRB WTL is encroaching upon the Petitioner's land to construct the highway. IRB WTL has received summons from the court. The matter is currently pending.

3. IRB WTL filed an interim claim for compensation of under Clause 35.2 and 35.3 of the concession agreement along with claim on account of pending change of scope, change in law, additional works, etc. The interim claim for compensation including interest stands at Rs 3,107.07 crore and extension of concession period by 1316.37 days (upto March 2023, to be updated further). Subsequently the dispute was crystallized, and the arbitration was invoked. The arbitral tribunal is constituted, and matter is under adjudication.

   Further notice of arbitration was issued to NHAI for disputes and claims arising, inter-alia, with respect to a show cause notice ("**SCN**") issued by NHAI on September 11, 2024 to IRB WTL, the Trust and the Sponsor, after the unfortunate collapse of the old Kali bridge on August 7, 2024. The SCN was issued to the Trust being the current promoter and to the Sponsor being the erstwhile promoter of the IRB WTL. Since IRB WTL was already before the arbitral tribunal for other disputes, IRB WTL, the Trust and the Sponsor filed a joint Section 9 petition before the High Court of Delhi requesting that the issue of SCN emanating from alleged O&M failure be referred to arbitral tribunal. The High Court of Delhi agreed with the contention of IRB WTL, the Trust & the Sponsor and referred the matter to the arbitral tribunal for passing necessary orders under Section 17 of the Arbitration & Conciliation Act. The hearing before the arbitral tribunal is concluded and the Section 17 order is awaited.

4. On account of incessant rainfall on July 16, 2024, a landslide occurred beyond the right of way of the project at Shirur causing loss of lives. The local police has filed an FIR against IRB WTL on July 16, 2024 and investigations are ongoing. Meanwhile, National Green Tribunal, Chennai has taken suo moto cognizance of the matter against the NHAI and NHAI has filed a reply on September 23, 2024 based on expert report alleging that the land slide did not occur due to any faulty construction and that it was a force majeure event and happened due to incessant heavy rains witnessed. The matter is currently pending.

E. *KGTL*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action involving KGTL. Other than as disclosed below, there is no outstanding material civil litigation involving KGTL.

CGTL, KGTL and UTL have filed a writ petition before the High Court of Rajasthan, Jaipur Bench against Union of India and NHAI challenging certain notifications and seeking interim relief from the High Court of Rajasthan, Jaipur Bench. For details, see " *– Material Litigation and Regulatory Action involving the Project SPVs – UTL – Outstanding Material Civil Litigation*" on page 818.

F. *KTL*

As at the date of this Letter of Offer, there is no outstanding criminal litigation involving KTL. Other than as disclosed below, there is no outstanding material civil litigation or regulatory action involving KTL.

Outstanding Material Civil Litigation

1. KTL has invoked arbitration against the NHAI under the terms of its concession agreement in relation to an aggregate amount of approximately INR 2,880.7 million and extension of concession period by 582.77 days on grounds of, *inter alia,* compensation for delay in completion of construction for the reasons attributable to the NHAI, balance amount in connection with the indirect political force majeure, *i.e.* toll stoppage due to the farmer protests in 2020-2021 and political force majeure costs on account of restrictions imposed due to the COVID-19 pandemic. The arbitration proceedings are in progress and the matter is currently pending.

Outstanding Regulatory Action

The District Town Planner, Jind (exercising the power of Director, Town and Country Planning, Haryana) (the "**District Town Planner**") issued a notice under the Punjab Scheduled Roads and Controlled Area Restriction of Unregulated Development Act, 1963 ("**Punjab Act**") to the general manager of the toll plaza located at village Badowal, Tehsil Narwama, District Jind, stating that the construction of the toll plaza and other commercial and official building on NH-52 Narwana to Uklana was unauthorized since the construction was on land which has been notified as a controlled area under the Punjab Act. The notice also, *inter-alia*, directed the stoppage of any further construction on the land. KTL responded to the notice requesting the District Town Planner to withdraw the notice, stating that the collection of toll and the construction of the toll plaza were in accordance with the concession agreement, toll notifications and specifications approved by an independent engineer on land acquired by the NHAI. The matter is currently pending.

G. *SYTL*

As at the date of this Letter of Offer, there is no outstanding material civil litigation or criminal litigation involving SYTL. Other than as disclosed below, there is no outstanding regulatory action involving SYTL.

Outstanding Regulatory Action

SYTL approached the NHAI for amicable settlement of claims in relation to delays attributable to the NHAI during the construction of the project. The claims were for an amount of approximately ₹7,905.3 million and an extension of the concession period by 647.43 days. Since the parties were unable to reach a settlement, SYTL has invoked arbitration under its concession agreement. The arbitration proceedings are in progress and the matter is currently pending.

H. *UTL*

As at the date of this Letter of Offer, there is no regulatory action involving UTL. Other than as disclosed below, there is no outstanding material civil litigation and outstanding criminal litigation involving UTL.

Outstanding Material Civil Litigation

CGTL, KGTL and UTL (the "**Petitioners**") have filed a writ petition before the High Court of Rajasthan, Jaipur Bench against Union of India and NHAI (the "**Respondents**") stating that on account of COVID-19 and the subsequent national lockdown, the Petitioners submitted claim for reimbursement of losses and consequent extension of the concession period which shall be computed every month until the toll collection stabilizes to more than 90% of the average daily fee as defined under the concession agreements. Further, under the terms of the concession agreements, the Petitioners are obligated to start premium payment to the NHAI upon the third anniversary of appointed date whereas the schedule completion date was contracted as two and a half year after the appointed date. Hence, once the construction is completed in two and a half year, toll rates would have been revised and only after six months of such revision of toll rates would the Petitioners have to start the premium payment. The Petitioners have stated the scheduled completion date was revised by the NHAI, primarily due to reasons attributable to them and the revised date of completion was revised to November 30, 2020, January 31, 2021 and September 9, 2021 applicable to the Petitioners. However, NHAI addressed a letter to UTL instructing them to commence the premium payment as per the scheduled stipulated under the concession agreements.

Hence, the Petitioners have challenged, *inter-alia*, (i) sub-rule (9) of rule 4, *i.e.*, "Base rate of fee" of the National Highways Fee (Determination of Rates and Collection) Rules, 2008 as it limits the rate of fee applicable for a section of a four lane highway under upgradation to six laning during the construction period; and (ii) office memorandum dated May 18, 2020 issued by the Central Government and consequent policy guidelines / BOT

(Toll) / 2020 dated May 26, 2020 issued by the NHAI and sought an interim relief to maintain the same time gap of six months between the date of revised completion date / toll tariff revision and date of commencement of payment of premium, under the respective concession agreements and issue an appropriate writ directing the NHAI (i) to not take coercive action against the Petitioners; (ii) to grant compensation to the Petitioners due to losses on account of COVID-19; and (iii) to grant an extension to the concession period. Pursuant to an interim order dated September 18, 2020, the High Court of Rajasthan, Jaipur bench, ordered a stay on the operation of Clause 26.2.1 of the model concession agreement.

The judgment along with the rectification order was pronounced by the High Court of Rajasthan on August 25, 2021 and August 26, 2021 respectively. As per direction of the said judgment, CGTL, KGTL and UTL filed undertakings on August 31, 2021. As interim relief, the High Court of Rajasthan gave interim protection to the Petitioners against payment of premium for a period of three months and directed the parties to go for arbitration. Subsequently, CGTL, KGTL and UTL filed petitions before the Delhi High Court praying for extension of relief granted by the High Court of Rajasthan. The order in relation to appointment of the arbitrator passed on November 28, 2021 by the Delhi High Court was challenged by CGTL, KGTL and UTL through a Special Leave Petition filed in the Supreme Court. The Supreme Court has appointed a presiding arbitrator pursuant to an order dated February 7, 2022.

The Delhi High Court passed an order dated November 9, 2021 in relation to interim relief and CGTL, KGTL and UTL filed an appeal against this order before the division bench of the Delhi High Court. The division bench disposed of the appeal in favour of CGTL, KGTL and UTL with the direction that the Delhi High Court holds the sole jurisdiction to hear the petition on interim relief and accordingly, hearings may be commenced before the Delhi High Court. The Delhi High Court has directed that the orders dated August 25, 2021 and August 26, 2021 passed by the Rajasthan High Court, will remain in operation. Pursuant to a judgement dated March 16, 2022, the Delhi High Court has held that the interim order will continue until an application under Section 17 of the Arbitration and Conciliation Act, 1996 is filed by the parties before the arbitral tribunal and taken up for hearing. The arbitral tribunal has been constituted. CGTL, KGTL and UTL filed claims for an amount of approximately ₹5,021.2 million, ₹8,689.6 million and ₹9,060.8 million, respectively and an extension of the concession period by 241.37 days, 387.18 days and 214.99 days, respectively. The Arbitral Tribunal had pronounced Section 17 order on September 10, 2023 in favour of the claimants by further extending the interim relief granted by the Delhi High Court, pending adjudication of the main dispute. Thereafter, NHAI filed Section 16 application challenging the jurisdiction of the arbitral tribunal to adjudicate veracity of the settlement agreements and consequent claims thereto. The arbitral tribunal decided that the said application of the respondent would be heard along with the main case. The arbitral proceedings are in progress and the matter is currently pending.

Outstanding Criminal Action

Hiteshkumar Ramanlal Gandhi, a shift in-charge working at the Kherwara-Khandi Obri toll plaza, filed a first information report at the Kherwara police station, Udaipur against Bhairulal Salvi, a bus driver who refused the pay toll at the toll plaza. When the people working at the toll plaza tried to stop him, the bus driver along with others misbehaved with the workers and destroyed equipment at the toll plaza resulting in the loss of about ₹0.80 million to ₹1.00 million. The matter is currently pending.

I. *YATL*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action involving YATL. Other than as disclosed below, there is no outstanding material civil litigation or regulatory action involving YATL.

Outstanding Material Civil Litigation

1. Mr. Shaikh Rafiq and others (the "**Petitioners**") filed a writ petition against the Sponsor, Modern Road Makers Private Limited and others (the "**Respondents**") before the BHC Aurangaba**d** in relation to acquisition of land for the four laning of Yedshi – Aurangabad road that forms a part of the Solapur – Aurangabad highway, *i.e.*, NH 211. The Petitioners alleged that certain of the Respondents tried to change the alignment of the land already acquired for the project to include additional land in order to protect interest of one of the Respondent which is illegal. The Sponsor filed its response to the petition filed by the Petitioners and *inter-alia* stated that (i) the correct party to be impleaded in the petition is YATL and not itself as YATL is responsible for the operations under the concession agreement and therefore the petition should be dismissed on account of misjoinder and non joinder of necessary parties;

and (ii) acquisition of land is the responsibility of the NHAI and hence, no cause of action lies against itself. The matter is currently pending.

2. Mr. Panditrao Digambarrao Shete Chausalkar and another (the "**Petitioners**") filed a writ petition against the Sponsor and others (the "**Respondents**") before the BHC Aurangabad in relation to acquisition of land for the four laning of Yedshi – Aurangabad road that forms a part of the Solapur – Aurangabad highway, i.e., NH 211. The Petitioners have alleged that an award was passed acquiring land of the Petitioners without following the due procedure of law and the acquisition of the land of the Petitioners is illegal. The Petitioners requested the BHC Aurangabad to set aside the award for acquisition of the lands of the Petitioner and that the Respondents should be restrained from acquiring such land. The matter is currently pending.

3. Mr. Pruthviraj Shahane (the "**Petitioner**") filed a civil suit against the Sponsor and others (the "**Respondents**") before the Civil Judge (Senior Division), Beed, alleging that the Respondents encroached upon its land by erecting electric polls over them instead of erecting them over land which has been acquired for the project. The Petitioner has, *inter-alia*, requested the court to grant a decree of perpetual and mandatory injunction against the Respondents. The matter is currently pending.

4. YATL approached NHAI for an amicable settlement of claims in relation to delays attributable to the NHAI during the construction of the project including the claim towards force majeure event such as Covid-19. Since the parties were unable to reach a settlement, YATL invoked arbitration under its concession agreement. YATL filed claims for compensation of costs on account of delay in completion of construction for the reasons attributable to NHAI and political force majeure costs on account of restrictions imposed due to Covid 19 The claims were for an amount of approximately ₹17,508.0 million and an extension of the concession period by 869.41 days. Since the parties were unable to reach a settlement, YATL has invoked arbitration under its concession agreement. The arbitral tribunal pronounced the award on January 27, 2024 ("**Award**") in favour of YATL and directed NHAI to pay cash compensation of INR 17,195 million inclusive of interest till the date of award plus applicable interest till realization of payment and have granted extension of the concession period by 689 days. NHAI has preferred Section 34 petition challenging the Award and YATL has filed application under Section 36 for enforcement of Award before the High Court of Delhi. The matters are pending.

J. *PDTPL*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action involving PDTPL. Other than as disclosed below, there is no outstanding material civil litigation involving PDTPL.

Material civil litigation

Sanat Ghosh & others (the "**Petitioners**") have filed a public interest litigation petition against the Sponsor and PDTPL before the High Court of Calcutta alleging water logging in certain villages due to the project operated by PDTPL. The Petitioners have prayed, *inter-alia*, that the hume pipes located in and around the lands owned by the Petitioners be changed into culverts. The matter is currently pending.

K. *IRB GEPL*

As at the date of this Letter of Offer, there is no outstanding criminal litigation or regulatory action involving IRB GEPL. Other than as disclosed below, there is no outstanding material civil litigation involving IRB GEPL.

Material civil litigation

1. Kanugula Mahesh Kumar ("**Petitioner**") has filed a petition for a public interest litigation before the High Court of Telangana (the "**High Court**") against the State of Hyderabad, the HMDA, the HGCL, the Sponsor and IRB GEPL, seeking to aside the award of the Toll, Operate and Transfer ("**TOT**") tender for the Nehru Outer Ring Road project (the "**IRB GEPL Project**") to the Sponsor and IRB GEPL, alleging, *inter-alia*, failure to disclose the initial estimated concession value for the project and diversion of funds from the concessioning authority. The Petitioner has also sought quashing or setting aside of the concession agreement and all other agreements entered into by the State of Telangana, the HMDA and the HGCL with the Sponsor and IRB GEPL in relation to the IRB GEPL Project. The Petitioner has also sought an order directing the Sponsor and IRB GEPL not to transfer the bid concession fee of ₹7,380

crore to the HMDA or alternatively, not to transfer any funds from the bid concession fee of ₹7,380 crore to the State of Telangana. The matter is currently pending.

L. *STPL*

As at the date of this Letter of Offer, there is no outstanding material civil litigation, criminal litigation or regulatory action involving STPL.

M. *IRB LTPL*

As at the date of this Letter of Offer, there is no outstanding material civil litigation, criminal litigation or regulatory action involving IRB LTPL.

N. *IRB KTPL*

As at the date of this Letter of Offer, there is no outstanding material civil litigation, criminal litigation or regulatory action involving IRB KTPL.

O. *IRB GTPL*

As at the date of this Letter of Offer, there is no outstanding material civil litigation, criminal litigation or regulatory action involving IRB GTPL.

P. *Target SPV*

As at the date of this Letter of Offer, there is no outstanding civil or criminal litigation or regulatory action against the Target SPV.

III. Material Litigation and Regulatory Action against the Investment Manager and Associates of the Investment Manager

Material Litigation and Regulatory Action against the Investment Manager

As at the date of this Letter of Offer, there is no outstanding material civil litigation or criminal litigation against the Investment Manager. Other than as disclosed below, there is no outstanding regulatory action against or other material litigation involving the Investment Manager.

Outstanding Regulatory Action

The Collector of Stamps, Solapur sent a demand notice dated April 24, 2015 to the Investment Manager demanding a sum of ₹152,000 as deficit stamp duty and a penalty of ₹3,040 on the agreement dated May 29, 2002 executed between the Maharashtra State Road Development Corporation, Ideal Road Builders and the Investment Manager. The Investment Manager filed a reply denying the payment of deficit stamp duty on the grounds that (a) the demand of deficit amount of stamp duty was made payable by citing the provisions included in Section 63 of the Bombay Stamp Act, 1958 inserted vide amendment 12 of 2006 (effective from May 1, 2006) whereas the agreement was already executed prior to the amendment; and (b) Section 63 of the Bombay Stamp Act, 1958 does not have a retrospective effect. In its letter dated July 7, 2015, the Collector of Stamps issued a direction that the Investment Manager and Ideal Road Builders must pay the deficit stamp duty and the penalty within seven days, failing which recovery action for the said amount would be initiated as per the Maharashtra Land Revenue Code, 1966 and the toll would be sealed. No further communication has been received from the Collector of Stamps Solapur in this regard.

Material Litigation and Regulatory Action against the Associates of the Investment Manager

For details of material litigation and regulatory action against the associates of the Investment Manager, see " – *Material Litigation and Regulatory Action against the Sponsor/Project Manager and Associates of the Sponsor/Project Manager*" on page 807.

***IV.* Material Litigation and Regulatory Action against the Trustee**

Outstanding Material Litigation

1. **SBICAP Trustee & Ors Vs. ITSL & Ors.- O.S.No. 25877/2013**

Brief Background

SBI Cap Trustee (the "**Plaintiff**") had filed a suit before the City Civil Court, Bangalore against the Trustee and others (the "**Defendants**") requiring sale of pledged shares for a particular price by SREI Fund/Investors, for whom the Trustee was acting as the share pledge trustee. India Competitive Global Fund (ICGC) acting through the SREI Investment Manager had a First & Exclusive Charge over the Pledged shares. At the instructions of the ICGC & SREI Investment Manager had transferred the Pledged shares to their demat account as they have First & Exclusive right over the shares. ITSL as share pledge trustee has acted on the instructions of the lenders/investors. ICGC/SREI sold the shares and appropriated the amounts towards their dues and transferred the surplus amount to the Plaintiff. The Plaintiff is acting for a consortium of lenders and has residual interest. The Plaintiff's case is that the ICGC/SREI has appropriated more amount than their dues. The aggregate claim amount is Rs. 1,550.3 million. The branch manager of SBI along with their counsel submitted to the court that they are willing to explore settlement. The court referred the matter for pre-conciliation efforts. In the afternoon session, our advocate appeared before the conciliator. Advocate briefly explained the dispute to the conciliator. The Plaintiff informed the conciliator that if Trinity provides the details of the loan transaction and a statement of accounts in relation to the same, this information would help them resolve the dispute quickly. The case was listed on 30.09.2021 for further conciliation. As no representative was present on behalf of the company, the court has recorded that there is no settlement between the parties. The case was adjourned to October 27, 2021 for the parties to proceed with the litigation. The case is now revolving around the proving of the dues by ICGC/SREI and appropriation of amounts. ITSL had no role in sale of shares, maintenance of books of accounts and appropriation of amounts and transfer of surplus amount. The matter was adjourned to 16.11.2021 for framing of Issues, 23.11.2021 for filing of list of witnesses ICGC, SREI & ITSL, for filing of affidavit of evidence by SBI, 07.12.2021 for cross examination of witnesses of SBI, 14.12.2021 for filing of affidavit of evidence by ICGC/SREI /Trinity/ITSL and 21.12.2021 for cross examination of witnesses of Trinity and ITSL and 07.01.2022 for further orders. ITSL has filed an application under Order 1 Rule 10(2) read with Section 151 of the Code of Civil Procedure, 1908 for unsuiting ITSL from the suit and for deleting the name of ITSL from the array of the parties. The matter is now listed on 30.06.2022 for arguments on the application of ITSL for deleting the name of ITSL from the array of the parties. ITSL has no role in sale of shares & appropriation of sale proceeds. The Plaintiff appeared and filed the amended plaint and copies of the documents in two volumes (volume I consisting of 410 pages and volume II consisting of 598 pages). The learned judge upon examining the volumes observed that the Plaintiff had not filed the statement of truth. Therefore, the Learned Judge adjourned the matter for filing the statement of truth and additional written statement, if any. ITSL has filed its additional written statement on 12th August, 2022. The matter adjourned to 25th January, 2023 for the reply arguments by the Defendants 2 & 3. The main contention taken by the Plaintiff's advocate while arguing on interim application (IAs) is that they are entitled for complete residual dues which Defendant No 2 & 3 have received while selling the pledged shares. Plaintiff's IAs dismissed as not survived for consideration. Now the matter is posted on 08th December, 2023.

Current Status –

a) The matter has been Stayed by the order of the Hon'ble High Court of Karnataka and the stay is extended.

b) on 15/02/2024, the case was called out in open Court. Advocate for defendant no.1 present and filed memo stating that, 6 months has expired from the date of interim order on 14.02.2024. Advocate for plaintiff present and filed memo along with case status of W.P.no.17774/2023. The matter has now been fixed on 10.01.2025.

2. **Muthoot Finance Ltd. Vs. Trustees Association of India (TAI), ITSL, Axis Trustee & SBICAP Trustee) – (Case No.29 of 2021) before the Competition Commission of India (CCI)**

Brief Background

On 10.09.2021, the Competition Commission of India (CCI) received an information from Muthoot Finance Limited (Informant) against Trustees Association of India (TAI) and three of its members, i.e., IDBI Trusteeship Services Limited, Axis Trustee Services Limited, and SBI CAP Trustee Company Limited (collectively referred to as 'OPs') for alleged contravention of Sections 3(3) and 4 of the Competition Act, 2002 (Competition Act) (hereinafter referred to as the 'Information'). i.e. for entering into anti-competitive agreement and formation of Cartel. CCI.

The CCI has passed an order dated 23.12.2021 under Section 26(1) of the Competition Act, 2002 (Competition Act) directing the Director General to investigate the conduct of Trustees' Association of India's (TAI), IDBI Trusteeship Services Limited (IDBI), Axis Trustee Services Limited and SBICAP Trustee Company (together referred to as the 'OPs') and its office bearers for *prima facie* violating Section 3(1) read with Section 3(3) of the Competition Act (Prima Facie Order) dealing with anti-competitive horizontal agreement (including cartel).

TAI, ITSL, Axis Trustee & SBICAP Trustee filed Civil Writ Petition Nos. 3781 of 2022, 3791 of 2022, 3842 of 2022 and 3847 of 2022 respectively before Bombay High Court challenging the jurisdiction of CCI as the SEBI as Sectoral Regulator has Jurisdiction to decide the matter. The matter has been adjourned to 15th February, 2023 for hearing on Application by CCI for vacation of Stay.

At the hearing held on 21st February, 2023, the Bombay High Court directed CCI to first decide the jurisdictional issue, leaving all other contentions open. Matter to go before CCI.

Current Status:-

CCI pursuant to its order dated March14 , 2024 rejected the application dated 21.03.2023 and held that the DG may continue its investigation. Additional Director General, CCI pursuant to the letter dated the March 15, 2024 addressed to ITSL, directed to provide the requisite information/documents as sought by CCI through the notice dated 18.02.2022 latest by 26.03.2024. The Trustee has submitted the required information on April 11, 2024 and April 15, 2024 and the DG, CCI had summoned Trustee's officer (Anjalee Athalye) on 11th June, 2024 for deposition/taking statement in the matter. Ex--MD & CEO (Mr.Sanjay Sinha) of Axis Trustee and ITSL was also called for deposition on 22nd July,2024. Ex--MD & CEO(Ms. Padma Betai) of ITSL was also called for deposition on 23rd July,2024. Present MD & CEO (Mr.P.K. Malhotra) of ITSL was called for deposition on 2nd August, 2024. On August 2, 2024, during the deposition, the DG directed MD & CEO to provide details regarding reasons for less fees charged in 3 cases and the turnover generated by TAI in the last 5 financial years which were submitted to SEBI on August 8, 2024 and August 9,2024 respectively

3. R.K. Mohata Family Trust Vs. ITSL & Ors.

Brief Background

One Mr .R.K.Mohata Family Trust has filed Commercial Suit (lodging) No. 27568 of 2021 before Bombay High Court against ITSL & RHFL praying for holding of meeting of debenture holders of RHFL as also damages of Rs.1,05,50,902 against ITSL towards his investment. Hon'ble Bombay High Court vide their orders dated the 31.03.2022 read with the order dated the 06.04.2022 and the order dated the 10.05.2022 directed ITSL to hold the meeting of debenture holders. ITSL convened a meeting of the debenture holders on 13.05.2022 and as directed by Hon'ble Bombay High Court and the results of the voting of meeting have been placed before the Hon'ble Bombay High Court in sealed cover. The matter is *sub-judice* before the Hon'ble Bombay High Court. Authum (AIIL) filed an appeal before the Hon'ble Supreme Court against the order of BHC. The matter was listed for hearing on 31st January, 2023. The matter was part heard and thereafter adjourned.

Current Status

Arising out of SLP(c) No. 411 of 2023 filed by Authum Investments & Infrastructure Ltd. (AIIL) vs. R.K. Mohtta Family Trust & Ors, Supreme Court vide their Order dated the 3rd March,2023 allowed the Resolution Plan filed by AIIL and directed AIIL to make the payments prior to 31st March, 2023. AIIL has made the payment.

4. **SCR 109885 – 1/394/14 - J Patel & 68 Others (All investors of Dynamic India Fund III) vs. Dynamic India Fund III, International Financial Services, ICICI Venture Funds Management Company Limited, ICICI Bank and ITSL , before Supreme Court of Mauritius**

Brief Background

Suit is filed by investors seeking compensation and damages of Rs. USD 103,699,976 for the loss of their investments in Dynamic India Fund III from Dynamic India Fund III, International Financial Services, ICICI Venture Funds Management Company Limited, ICICI Bank and ITSL.

All the defendants including ICICI Venture have raised preliminary objections to the suit.

DIF III has raised five preliminary objections to the suit viz. (i) plaintiffs have been wrongly styled; (ii) suit is a disguised derivative action and the appropriate court to hear it is the commercial court and not the civil court; (iii) there is a connected stay application filed before the commercial court by DIF III that the suit has to be stayed as the suit is a class action suit and hence the commercial court and not the civil court has the jurisdiction to hear the suit; (iv) the Plaintiffs should have put the other shareholders of DIF III into cause; and (v) the plaintiffs have to provide security for costs to all the defendants.

The other defendants have raised preliminary objections with respect to privity of contract and jurisdiction of Mauritius courts.

Nearly 6 years after the Suit was filed in 2014 in Mauritius, on January 28, 2020, the court heard arguments on only two of the preliminary objections raised by ICICI Bank and ICICI Venture viz. (a) Mauritius court lacks jurisdiction to hear disputes between non-Mauritians (both the plaintiffs and the defendants No. 3 and 4 i.e. ICICI Bank and ICICI Venture are not Mauritius residents); and (b) Mauritius court is not the convenient forum to hear the disputes raised.

The arguments relied, amongst others, related to the facts that (a) alleged conduct of ICICI Bank and ICICI Venture did not admittedly happen in Mauritius and offences, if any, happened in India; (b) investments were in real estate projects in India; (c) investments were in a real estate fund in India; and (d) Indian law governs the contractual relationship between the parties.

By an order dated June 9, 2020 the Supreme Court of Mauritius stayed the proceedings as against ICICI Bank and ICICI Venture on the grounds that none of the allegations made against ICICI Bank and ICICI Venture occurred in Mauritius and hence the courts in Mauritius lack jurisdiction to adjudicate such allegations. In the subsequent hearing on July 1, 2020, the Plaintiffs informed the court of their decision not to appeal against the order staying the proceedings as against ICICI Venture and ICICI Bank. The proceedings would continue against the other Defendants viz. DIF III, IFS and the Trustee.

The Supreme Court of Mauritius vide its order dated the 3rd June, 2022 have deleted ICICI Bank and ICICI Venture Fund Management Company Ltd. from the array of the parties allowed to continue the case against Dynamic India Fund III, SANE Mauritius and the WITECO now ITSL.

The Plaintiffs have filed an appeal against the said Judgement dated the 3rd June,2022 passed by The Supreme Court of Mauritius.

ICICI Venture Fund Management Company Ltd. is taking care of the matter on behalf of ITSL as a Trustee and also appointed Counsels to defend ITSL. We have taken up the matter with the ICICI Venture stating that WITECO now ITSL is also not a Mauritius resident and Mauritius court is not the convenient forum to hear the disputes raised and hence lacks the jurisdiction. Further, ITSL is acting only as a trustee and there cannot be any claim against ITSL at all as ICICI Venture Fund Management Company Ltd. was Investment Manager of the Fund who has managed all affairs of the Fund.

Current Status

Hearing for the appeal filed by the plaintiffs, against the order dated June 03, 2022 was scheduled on May 18, 2023. The matter has now been fixed for Merits on May 13, 2024 before the Supreme Court. May 13, 2024 hearing has been postponed to November 25, 2024. Order Reserved, next date not yet notified.

5. Pawan Kapoor & Anr. Vs. SEBI & Ors.(Karvy Data Management Services Ltd)

Brief Background

In the case of Karvy Data Management Services Ltd ; one Pawan Kapoor & Amri Resorts Pvt. Ltd. the debenture holders have filed writ petition before Delhi High Court, inter alia against ITSL alleging various non compliances by ITSL and for not initiating action against Karvy Data Management Services Ltd. for defaults in payment of interest & Principal. The matter was listed before Hon'ble Delhi High Court on 19.12.2022. The Hon'ble Delhi High Court has directed Ministry of Corporate affairs to investigate in the complaint and provide report. The Current Status is an indicated above.

Current Status

The matter was listed on 05/02/2024 for early hearing. The petitioner had filled an application being CM. Appl. 62768/2023 for early hearing which was listed for hearing on 05.12.2023 before HMJ Subramonium Prasad, as Item No. 48 (Supplementary List), in Court No. 7, Delhi High Court. The Hon'ble Court after hearing the parties was not of the opinion to entertain the application filed by the applicant/petitioner, since, no case of urgent hearing was made out. Accordingly, the said application for early hearing was dismissed and the court directed the matter to be listed on the date already fixed i.e. 05.02.2024.

Pursuant to the order dated 19/12/2023 passed by Delhi High Court, MCA has launched inspection of ITSL vide letter dated the 19th December,2023. We have provided the data to Regional Director (RD), MCA, Western Region, Mumbai on 1st January, 2024. RD had called us for personal hearing on 04/01/2024. RD has issued a letter dated 8th January,2024 calling information. ITSL vide its letter dated the 24th January,2024 provided all documents together with supporting documents duly signed by Director of ITSL to Regional Director, MCA, Western Zone.

The matter before Delhi High Court is now fixed on 15th January, 2025.

6. Mr. Kamlakar Babu Alias Baburao Patil & Others and ITSL & Others

Brief Background

One Kamalakar B. P has filed declaratory civil suit bearing No 226/2023 of which we have received notice from court of civil judge (senior division), Thane on 28/07/2023. The suit is basically for declaration of deed of mortgage dated 15/06/2021 executed by defendant no. 2 to no.7 in favour of ITSL as defendant No 1 as void, illegal, invalid, non-est, not binding on the plaintiffs together with relief for permanent injunction from entering into the suit property, selling in auction and/or agreeing to sale in auction the suit property under the garb or colour whatsoever. The plaintiff has also prayed for temporary injunction from selling of the suit property.

Current Status: Now, the Issuer Company has mortgaged different property and disputed property has been released. We have filed an application for deletion of our name from array of the parties. The matter was last listed on 7/12/2024 for orders on ITSL application for deletion of name from array of the parties and the next date is yet to be notified.

7. Contempt Petition (Civil) No.953 of 2023 in Civil Appeal No. 1581 of 2023- Praduman Tondon & Ors. vs. Sanjay Soumitra Dangi & Ors. (Authum/RHFL case) before Supreme Court of India.

Brief Facts

This contempt petition has been filed against Order dated the 3rd March, 2023 passed by Hon'ble Supreme Court of India. The case of the petitioners is that the cut-off date of 15th April 2022 for voting on the resolution plan and the distribution mechanism was not known. The matter was listed on 22/09/2023.

The matter was listed on 9th October,2023 before the bench comprising of Hon'ble Mr. Justice B.R. Gavai, Hon'ble Mr. Justice P S Narasimha and Hon'ble Mr. Justice Prashant Kumar Mishra before the Hon'ble Supreme Court of India.

When the matter was called, the counsel for the petitioners submitted that counter-affidavits have been filed in the matter and they seek time to file rejoinders to the same. Pursuant to the same, the counsel for the petitioners prayed that the matter be next listed on a non-miscellaneous day for hearing. Mr. Sankaranarayanan thereafter apprised the Hon'ble Court that there are three similar contempt petitions that have been filed before the Hon'ble Court, however Respondent No. 20 is only a party to the captioned contempt petition. He further contented that no case has been made out against Respondent no. 20 and therefore they should be deleted from the array of parties in the captioned matter. Such request was however objected to by the Appellant. In reference to the same, the Hon'ble Court passed an oral remark that Respondent no.20 should file an application for deletion from the array of parties, if they wish to be deleted.

Current Status – On 24/09/2024 The Counsel for the Petitioner sought time in the matter. Accordingly, the matter was adjourned by 4 weeks. The matter is now fixed on 17.12.2024

8. **DSP Asset Managers Pvt. Ltd. vs. Grant Thornton (Bharat) LLP & Ors.- Company Application No. 19 of 2024 before NCLT, Mumbai.**

Brief Background:

Aggrieved by the NCLT order dated the 13th May, 2024, DSP Asset Manager has filed an appeal before, NCLAT, New Delhi. We have prepared our Reply to the Appeal on 22/07/2024 for filing with NCLAT, Delhi.

The Allegation against ITSL is that the ITSL has delayed in filing their claim with GT for admission.

Current Status:

When the subject matter was taken up for hearing, the counsel for the appellant apprised the Ld. Registrar about the reasons for delay in refiling of the appeal.

Our advocate requested the Ld. Registrar to permit us to file our response on the said application and take objections, if permitted.

However, the Ld. Registrar apprised us that the respondents do not have any say in case of delay in refiling of the appeal. Accordingly, the Ld. Registrar allowed the said application and directed to list the main appeal before the Court. The date of listed on 11.12.2024.

9. **Spenta Suncity Private Ltd – Moniveda Consultants LLP & Anr. Vs. ITSL & Pradeep Kumar Malhotra - Contempt petition 616 of 2023 And Civil Appeal 9052-9053 of 2022 Before Hon'ble Supreme Court of India- Pradeep Kumar Malhotra and ITSL**

VI. Certain other matters

1. Ravindra Dhariwal, a non-executive director on the board of directors of the Sponsor, resigned from the position of independent director of Future Retail Limited (FRL) with effect from July 23, 2022, due to FRL being referred to insolvency / initiation of corporate insolvency resolution process and his power/role as Independent Director of FRL being suspended as per the provisions of the Insolvency and Bankruptcy Code,

2016. Further, SEBI has initiated an investigation into the affairs of FRL to determine if there was any violation under the provisions of SEBI Regulations/ Rules/ Directives and has issued a show cause notice to the promoter directors and independent directors, who were part of the audit committee during the review period. Accordingly, the above show cause notice has been received by Ravindra Dhariwal since he was member of the audit committee member of FRL during the review period. He has responded to the show cause notice giving justification, as to why no action or penalty should be levied against him for the alleged non-compliances. These matters are currently pending.

GOVERNMENT AND OTHER APPROVALS

On the basis of the list of material approvals, consents, licenses and permissions provided below, the Trust can undertake the Issue and the Trust, the Project SPVs and the Target SPV can undertake each of their respective current business activities and other than as stated below, no further material approval, consent, license or permission from any regulatory authority is required to undertake the Issue or continue such business activities. Unless otherwise stated, these approvals are valid as of the date of this Letter of Offer. For details in connection with the regulatory and legal framework within which we operate, see "Regulations and Policies" on page 286.

Certain licenses and/or approvals may expire/elapse periodically, in the ordinary course of business, and applications to the appropriate authorities for the renewal of such licenses and/or approvals are/will be submitted in accordance with applicable requirements and procedures.

A. Approvals in Relation to the Issue and the MBEL Acquisition

1. Resolutions dated December 9, 2024 of the board of directors of the Investment Manager in relation to the Issue and other related matters.

2. In-principle approval of the NSE dated December 13, 2024 for the listing of the Units to be issued pursuant to the Issue.

3. Letter dated December 6, 2024 issued by the SEBI granting certain exemptions to the Trust in relation to undertaking a fast-track rights issue (read with the letter dated December 11, 2024 from the Investment Manager).

4. Approval dated October 12, 2022 issued by the UPEIDA, approving the transfer of the project to the Trust subject to certain conditions, including, that the Sponsor and GIC Financial Investors shall continue to hold 10% and 9.60% of the Target SPV's equity, respectively, until two years from the commercial operation date for the project (or such other earlier timeline as prescribed under the concession agreement or applicable regulations).

5. Order dated June 4, 2024, pursuant to which the CCI has approved the proposed combination involving the MBEL Acqusition.

B. Registration of the Trust

1. The SEBI has issued a certificate dated November 25, 2019 for registration of the Trust as an infrastructure investment trust (registration number IN/InvIT/19-20/0012).

   The registration certificate has been granted subject to the following conditions, *inter-alia*, as specified in Regulation 7 of the InvIT Regulations:

   (i) the Trust shall abide by the provisions of the SEBI Act and the InvIT Regulations;
   (ii) the Trust shall forthwith inform the SEBI in writing, if any information or particulars previously submitted to the SEBI are found to be false or misleading in any material particular or if there is any material change in the information already submitted;
   (iii) the Trust and the parties to the Trust shall satisfy with the conditions specified in Regulation 4 of the InvIT Regulations at all times;
   (iv) the Trust and the parties to the Trust shall comply, at all times, with the code of conduct as specified in Schedule VI of the InvIT Regulations, wherever applicable.

   The certificate also states:

   (i) that the investment conditions and other restrictions will apply to all investments, distributions etc. made;
   (ii) that for issuance and listing of Units issued in terms of Chapter VIA of the InvIT Regulations, the Trust shall fulfill the conditions as may be prescribed by the SEBI from time to time;
   (iii) that the transaction for transfer of the underlying assets/shares or interest in SPVs to the Trust and the corresponding issue of the Trust's Units to the transferor entity shall happen only after the closure of the initial offer;

(iv) the minimum investment and lot size for an InvIT for a public issue or a private placement;
(v) that the Trust shall keep and maintain the books of accounts, records and such other documents as may be required by the SEBI under the InvIT Regulations from time to time;
(vi) that the Trust shall ensure compliance with the guidelines/directives/instructions/circulars etc. as may be issued from time to time by the SEBI or the Government of India relating to the activities carried on by the Trust;
(vii) that the Trust shall not make use of its status as a SEBI registered InvIT in furtherance of unrelated activities or any other purpose which is not permitted under the InvIT Regulations;
(viii) that the Trust's actions shall be governed by the SEBI Act and the InvIT Regulations in respect of activities carried on as an InvIT;
(ix) that any material change in the information on the basis of which registration is granted must be communicated to SEBI immediately; and
(x) that the registration has been granted on the basis of information available with the SEBI at the relevant point of time and does not preclude the SEBI from cancelling the registration later if anything adverse is found against the Trust or in case of a conviction.

Pursuant to a letter dated January 30, 2020, the SEBI has, *inter-alia*, taken on record the rights and provided to the investors in the Trust.

2. Approval dated January 3, 2020 issued by the NHAI for establishing the Trust and the transfer of the Project SPVs subject to, *inter-alia*, the following conditions:

(i) submission of no-objection certificates from the lenders of all the Project SPVs;
(ii) the concessionaire/developer is required to comply with all the provisions of the concession agreements including 51% holding in the Trust until two years after completion / provisional COD of the projects;
(iii) the incoming investor will comply to all relevant contractual obligations of the concession agreements;
(iv) the proposal submitted pursuant to the letter dated September 16, 2019 for establishing the Trust, transfer of the Project SPVs to the Trust and the transfer of 49% in the Trust shall not have the effect of jeopardizing the interests of the NHAI in any manner; and
(v) an undertaking that all statutory compliances as required by the SEBI guidelines shall be adhered to.

None of the respective promoters or directors of the Sponsor or Investment Manager or the Trustee (i) has been declared a fugitive economic offender under Section 12 of the Fugitive Economic Offenders Act, 2018; (ii) have direct or indirect relations with any infrastructure investment trusts or companies, their

sponsors, promoters, trustees, investment managers and whole-time directors, which are compulsorily delisted by any recognized stock exchange; or (iii) has been a promoter or whole-time director of any company which has been compulsorily delisted in terms of the Securities and Exchange Board of India (Delisting of Equity Shares) Regulations, 2009 or the Securities and Exchange Board of India (Delisting of Equity Shares) Regulations, 2021, as applicable, during the last 10 years.

Filing

The Investment Manager, through the Lead Manager, has filed this Letter of Offer dated December 16, 2024 with the SEBI. The Lead Manager has also submitted a due diligence certificate (in the form prescribed under the Master Circular) dated December 16, 2024 to the SEBI along with this Letter of Offer.

Disclaimer clause of NSE

"As required, a copy of this letter of offer has been submitted to National Stock Exchange of India Limited (hereinafter referred to as NSE). NSE has given vide its letter Ref. No. NSE/LIST/C/2024/1437 dated December 13, 2024, permission to the Issuer to use the Exchange's name in this letter of offer as one of the stock exchanges on which this Issuer's securities are proposed to be listed. The Exchange has scrutinized this letter of offer for its limited internal purpose of deciding on the matter of granting the aforesaid permission to this Issuer.

It is to be distinctly understood that the aforesaid permission given by NSE should not in any way be deemed or construed that the letter of offer has been cleared or approved by NSE; nor does it in any manner warrant, certify or endorse the correctness or completeness of any of the contents of this letter of offer; nor does it warrant that this Issuer's securities will be listed or will continue to be listed on the Exchange; nor does it take any responsibility for the financial or other soundness of this Issuer, its promoters, its management or any scheme or project of this Issuer.

Every person who desires to apply for or otherwise acquire any securities of this Issuer may do so pursuant to independent inquiry, investigation and analysis and shall not have any claim against the Exchange whatsoever by reason of any loss which may be suffered by such person consequent to or in connection with such subscription /acquisition whether by reason of anything stated or omitted to be stated herein or any other reason whatsoever."

Listing

The Units issued through this Letter of Offer are proposed to be listed on the NSE. Applications will be made to the NSE for obtaining permission for listing and trading of the Units.

Minimum Allotment

The minimum allotment and trading lot of Units issued pursuant to the Issue to any investor shall be equivalent to the minimum allotment and trading lot applicable to the Units of the same class. For details, see "*The Issue*" on page 74.

Minimum Subscription

The minimum subscription for purposes of the Issue shall be 90% of the total Issue size through this Letter of Offer (the "**Minimum Subscription**"). If the Minimum Subscription for the Issue is not received, the Application Amounts shall be refunded to the Applicants forthwith and not later than 15 days from the Issue Closing Date. Also see "*Issue Procedure*" on page 837.

Disclaimer clauses from the Investment Manager, the Trustee, the Sponsor/Project Manager and the Lead Manager

The Investment Manager, the Trustee, the Sponsor/Project Manager and the Lead Manager accept no responsibility for statements made otherwise than in this Letter of Offer or in any advertisement or other material issued by the Investment Manager, the Trustee or the Sponsor/Project Manager or by any other persons at the instance of the Investment Manager, the Trustee or the Sponsor/Project Manager and anyone placing reliance on any other source of information would be doing so at his own risk.

Eligible Unitholders who invest in the Issue will be deemed to have represented to the Investment Manager, the Trustee, the Sponsor/Project Manager and the Lead Manager and their respective directors, officers, agents, affiliates and representatives that they are eligible under all applicable laws, rules, regulations, guidelines and approvals to acquire Units in the Issue, and are relying on independent advice / evaluation as to their ability and quantum of investment in the Issue.

The Lead Manager and their respective affiliates may engage in transactions with and perform services for the Trust, the Project SPVs, the Target SPV, the Investment Manager, the Trustee, the Sponsor/Project Manager, the Sponsor Group or their respective affiliates in the ordinary course of business and have engaged, or may in the future engage, in transactions with such parties, for which they have received and may in the future receive, compensation.

Disclaimer with respect to jurisdiction

This Letter of Offer has been prepared under the provisions of Indian laws and the applicable rules and regulations thereunder. Any disputes arising out of the Issue will be subject to the jurisdiction of the appropriate courts in Mumbai, India only.

Prohibition on Offer of Incentives

No person connected with this Issue, including any person connected with the distribution of this Issue, shall offer any incentive, whether direct or indirect, in any manner, whether in cash or kind or services or otherwise to any person for making an application for Allotment of the Units.

Restriction on Further Capital Issues

The Trust shall not make any further issue of Units in any manner during the period between the date of filing this Letter of Offer with the SEBI and the date of listing of the Units to be issued pursuant to the Issue on the NSE or the refund of Application Amounts, as applicable.

Participation by the Sponsor

The Sponsor has undertaken to mandatorily subscribe to its rights entitlement and not renounce such rights, except for purposes of compliance with minimum public unitholding norms as prescribed under the InvIT Regulations, to the extent applicable.

Undertakings by the Investment Manager

The Investment Manager (on behalf of the Trust) undertakes the following:

- at any given time, there shall be only one denomination for the Units;
- the Units to be issued pursuant to this Issue shall rank *pari passu* with the existing Units of the Trust in all respects;
- the Rights Entitlements shall be credited to the demat account of the Unitholders before the date of opening of this Issue for renunciation;
- the Trust shall not withdraw this Issue after announcement of the Record Date; and
- it shall comply with such disclosure and accounting norms specified by SEBI from time to time.

The Units have not been and will not be registered, listed or otherwise qualified in any other jurisdiction outside India and may not be offered or sold, and Applications may not be made by persons in any such jurisdiction, except in compliance with the applicable laws of such jurisdiction.

THE RIGHTS ENTITLEMENTS AND THE UNITS HAVE NOT BEEN AND WILL NOT BE REGISTERED UNDER THE U.S. SECURITIES ACT, OR ANY U.S. STATE SECURITIES LAWS AND MAY NOT BE OFFERED, SOLD, RESOLD OR OTHERWISE TRANSFERRED WITHIN THE UNITED STATES, EXCEPT IN A TRANSACTION EXEMPT FROM THE REGISTRATION REQUIREMENTS OF THE U.S. SECURITIES ACT. THE UNITS AND RIGHTS ENTITLEMENTS REFERRED TO IN THIS LETTER OF OFFER ARE BEING OFFERED AND SOLD IN OFFSHORE TRANSACTIONS OUTSIDE THE UNITED STATES IN COMPLIANCE WITH REGULATION S TO

UNITHOLDERS LOCATED IN JURISDICTIONS WHERE SUCH OFFER AND SALE OF THE UNITS ARE PERMITTED UNDER THE LAWS OF SUCH JURISDICTIONS. THE OFFERING TO WHICH THIS LETTER OF OFFER RELATES IS NOT, AND UNDER NO CIRCUMSTANCES IS TO BE CONSTRUED AS, AN OFFERING OF ANY UNITS OR RIGHTS ENTITLEMENTS FOR SALE IN THE UNITED STATES OR AS A SOLICITATION THEREIN OF AN OFFER TO BUY ANY OF THE SAID SECURITIES.

SECTION IX – ISSUE PROCEDURE

This section is for the information of the Applicants proposing to apply in the Issue. Investors should carefully read the provisions contained in this Letter of Offer, the Rights Entitlement Letter and the Application Form, before submitting the Application Form. The Trustee, the Sponsor, the Investment Manager and the Lead Manager are not liable for any amendments or modifications or changes in applicable laws or regulations, which may occur after the date of this Letter of Offer. Applicants are advised to make their independent investigation (for which the Investment Manager, the Sponsor, the Trust and the Lead Manager take no responsibility or liability) and ensure that the Application Form is correctly filled up.

I. Overview

The Issue and the Units issued pursuant to the Issue, are subject to the terms and conditions contained in this Letter of Offer, the Rights Entitlements Letter, the Application Form, the InvIT Regulations, and the circulars, clarifications, guidelines and notifications issued by the SEBI, the Government of India and other governmental, statutory and regulatory authorities from time to time, including approvals, from RBI or other regulatory authorities, and the terms and conditions as stipulated in the Allotment Advice. The Issue shall be undertaken in accordance with the InvIT Regulations, the SEBI Master Circular and other applicable law.

II. Dipatch and Availability of Issue Material

The Investment Manager and the Lead Manager will dispatch this Letter of Offer, Application Form, the Rights Entitlement Letter and other Issue materials only to Eligible Unitholders holding Units as of the Record Date (i) who have provided an address in India or through electronically on their email ID(s) registered with the depository participants (ii) who are foreign corporate or institutional Unitholders in jurisdictions where it is not illegal to make an offer or invitation to Offer or such an invitation or offer or would subject the Trust, the Parties to the Trust, the Lead Manager and their respective affiliates to any filing or registration requirement (other than in India) (such jurisdictions, the "**Identified Jurisdictions**").

No action has been or will be taken to permit the Issue in any jurisdiction where action would be required for that purpose, except that this Letter of Offer has been filed with the SEBI and the Stock Exchange. Accordingly, the Rights Entitlements or Units may not be offered or sold, directly or indirectly, and this Letter of Offer or any offering materials or advertisements in connection with the Issue may not be distributed, in whole or in part, in any jurisdiction other than India and to foreign corporate or institutional Unitholders in Identified Jurisdictions, except in accordance with legal requirements applicable in such jurisdiction. Receipt of this any Issue material will not constitute an invitation or offer in those jurisdictions in which it would be illegal to make such an invitation or offer or would subject the Trust, the Parties to the Trust, the Lead Manager and their respective affiliates to any filing or registration requirement (other than in India) and, in those circumstances, this Letter of Offer and other Issue material must be treated as sent for information only and should not be acted upon for subscription to the Units and should not be copied or redistributed. Accordingly, persons receiving a copy of this Letter of Offer, the Application Form and any other Issue material should not, in connection with the issue of the Units or the Rights Entitlements, distribute or send such material in or into any jurisdiction where to do so, would or might contravene local securities laws or regulations or would subject the Trust, the Parties to the Trust, the Lead Manager and their respective affiliates to any filing or registration requirement (other than in India). If this Letter of Offer, the Application Form or other Issue material is received by any person in any such jurisdiction, or by their agent or nominee, they must not seek to subscribe to the Units or the Rights Entitlements.

This Letter of Offer and the Application Form will be sent only to the e-mail addresses of Eligible Unitholders who have provided their e-mail addresses to the Investment Manager.

The Investment Manager, the Registrar and the Lead Manager shall make arrangements for distribution of the Application Form along with this Letter of Offer to all Eligible Unitholders prior to the Issue Opening Date.

NO OFFER IN THE UNITED STATES

THE RIGHTS ENTITLEMENTS AND THE UNITS HAVE NOT BEEN AND WILL NOT BE REGISTERED UNDER THE U.S. SECURITIES ACT, OR ANY U.S. STATE SECURITIES LAWS AND MAY NOT BE OFFERED, SOLD, RESOLD OR OTHERWISE TRANSFERRED WITHIN THE UNITED STATES, EXCEPT IN A TRANSACTION EXEMPT FROM THE REGISTRATION REQUIREMENTS OF THE U.S.

SECURITIES ACT. THE UNITS AND RIGHTS ENTITLEMENTS REFERRED TO IN THIS LETTER OF OFFER ARE BEING OFFERED AND SOLD IN OFFSHORE TRANSACTIONS OUTSIDE THE UNITED STATES IN COMPLIANCE WITH REGULATION S TO UNITHOLDERS LOCATED IN JURISDICTIONS WHERE SUCH OFFER AND SALE OF THE UNITS ARE PERMITTED UNDER LAWS OF SUCH JURISDICTIONS. THE OFFERING TO WHICH THIS LETTER OF OFFER RELATES IS NOT, AND UNDER NO CIRCUMSTANCES IS TO BE CONSTRUED AS, AN OFFERING OF ANY UNITS OR RIGHTS ENTITLEMENTS FOR SALE IN THE UNITED STATES OR AS A SOLICITATION THEREIN OF AN OFFER TO BUY ANY OF THE SAID SECURITIES.

Neither the Trust, nor any person acting on behalf of the Trust, will accept a subscription or renunciation from any person, or the agent of any person, who appears to be, or who the Trust, or any person acting on behalf of the Trust, has reason to believe is, in the United States when the buy order is made. No Application Form should be postmarked in the United States, electronically transmitted from the United States or otherwise dispatched from the United States or from any other jurisdiction where it would be illegal to make an offer of securities under this Letter of Offer.

Please note that none of the Investment Manager, the Sponsor, the Lead Manager or the Registrar will be liable for non-dispatch of physical copies of the Issue materials, including this Letter of Offer, the Rights Entitlement Letter and the Application Form, or delay in the receipt of this Letter of Offer, the Rights Entitlement Letter or the Application Form attributable to non-availability of the e-mail addresses of Eligible Unitholders or electronic transmission delays or failures (including corruption of the document being transmitted electronically), or if the Application Forms or the Rights Entitlement Letters are delayed or misplaced in transit. To update the respective email addresses or mobile numbers in the records maintained by the Registrar or Investment Manager, Eligible Unitholders should visit https://rights.kfintech.com or www.irbinfratrust.co.in.

The distribution of the Issue Materials and the issue of Units on a rights basis to persons in certain jurisdictions outside India is restricted by legal requirements prevailing in those jurisdictions.

Receipt of the Issue materials (including by way of electronic means) will not constitute an offer, invitation to or solicitation by anyone in any jurisdiction or in any circumstances in which such an offer, invitation or solicitation is unlawful or not authorized or to any person to whom it is unlawful to make such an offer, invitation or solicitation. In those circumstances, the Issue materials must be treated as sent for information only and should not be acted upon for making an Application and should not be copied or re-distributed.

Any person who makes an application to acquire Rights Entitlements and the Units offered in the Issue will be deemed to have declared, represented and warranted that such person is authorized to acquire the Rights Entitlements and the Units in compliance with all applicable laws and regulations prevailing in such person's jurisdiction and India, without requirement for the Trust, Parties to the Trust, the Lead Manager or their respective affiliates to make any filing or registration (other than in India).

III. Credit of Rights Entitlements in Demat Accounts of Eligible Unitholders

In accordance with InvIT Regulations read with the SEBI Master Circular, the credit of Rights Entitlements and Allotment of Units shall be made in the dematerialized form only. Prior to the Issue Opening Date, the Investment Manager and the Lead Manager shall ensure credit of the Rights Entitlements to (i) the demat accounts of the Eligible Unitholders holding the Units in dematerialised form (other than fractional entitlement); and (ii) a demat suspense escrow account opened by the Investment Manager, for the Eligible Unitholders which would comprise Rights Entitlements relating to (a) the Units held in a demat suspense account; or (b) the demat accounts of the Eligible Unitholder which are frozen or details of which are unavailable with the Investment Manager or with the Registrar on the Record Date; or (d) credit of the Rights Entitlements returned/reversed/failed; or (f) the ownership of the Units under dispute, including any court proceedings, as applicable.

Renouncees

All rights and obligations of the Eligible Unitholders in relation to Applications and refunds pertaining to the Issue shall apply to the Renouncees as well.

Basis for the Issue

The Units will be offered for subscription for cash to the Eligible Unitholders whose names appear as unitholders as per the list to be furnished by the Depositories in respect of the Units held in dematerialized form on the Record Date.

Rights Entitlements

As your name appears as a unitholder in respect of the Units held in dematerialized form as on the Record Date, you may be entitled to subscribe to the number of Units as set out in the Rights Entitlement Letter.

Eligible Unitholders can also obtain the details of their respective Rights Entitlements from the website of the Registrar (https://rights.kfintech.com) by entering their DP ID and Client ID. The link for details of Rights Entitlements will also be available on the website of the Trust (www.irbinfratrust.co.in).

Rights Entitlements shall be credited to the respective demat accounts of Eligible Unitholders before the Issue Opening Date only in dematerialized form.

IV. Terms of the Issue

Issue Price

Each Unit is being offered at a price of ₹293.65 per Unit* in the Issue. The Issue Price for the Units has been arrived at by the Investment Manager in consultation with the Lead Manager.

**The Issue Price is ₹293.6511986. For presentation purposes only, the Issue Price has been presented as rounded-off to two decimal places.*

Rights Entitlements Ratio

The Units are being offered on a rights basis to the Eligible Unitholders in the ratio of one Unit for every 19.07 Units* held by the Eligible Unitholders as on the Record Date.

** The Rights Entitlement Ratio is one Unit for every 19.0700901541096 Units held by Eligible Unitholders on the Record Date. For presentation purposes only, the Rights Entitlement Ratio has been presented as rounded-off to two decimal places.*

Renunciation of Rights Entitlements

The Issue includes a right exercisable by Eligible Unitholders to renounce the Rights Entitlements credited to their respective demat account either in full or in part. The renunciation from non-resident Eligible Unitholders to resident Eligible Unitholders and vice versa shall be subject to provisions of the FEMA Rules and other circulars, directions, or guidelines issued by RBI or the Ministry of Finance from time to time. However, the facility of renunciation shall not be available to or operate in favor of an Eligible Unitholder being an erstwhile OCB except is in compliance with the FEMA Rules and other circulars, directions, or guidelines issued by RBI or the Ministry of Finance.

The renunciation of Rights Entitlements credited in your demat account can be made either by sale of such Rights Entitlements using the secondary market platform of the Stock Exchange or through an off-market transfer. For details, see " – *Procedure for Renunciation of Rights Entitlements*" on page 843.

In this regard, the Investment Manager will make necessary arrangements with NSDL and CDSL for the crediting of the Rights Entitlements to the demat accounts of the Eligible Unitholders in a dematerialized form. A separate ISIN for the Rights Entitlements has also been generated which is INE0C8K20067. Such ISIN shall remain frozen (for debit) until the Issue Opening Date.

The said ISIN shall be suspended for transfer by the Depositories post the Issue Closing Date.

Eligible Unitholders are requested to provide relevant details (such as copies of self-attested PAN and details confirming the legal and beneficial ownership of their respective Units) to the Investment Manager or the Registrar not later than two Working Days prior to the Issue Closing Date, to enable the credit of their Rights Entitlements by way of transfer from the demat suspense escrow account to their demat account at least one day before the Issue Closing Date, to enable such Eligible Unitholders to make an application in the Issue, and such communication shall serve as an intimation to such Eligible Unitholders in this regard. Such Eligible Unitholders are also requested to ensure that their demat account, details of which have been provided to Investment Manager or the Registrar, is active to facilitate such transfer.

Additionally, the Investment Manager will submit the details of the total Rights Entitlements credited to the demat accounts of the Eligible Unitholders and the demat suspense escrow account to the Stock Exchange after completing the corporate action. The details of the Rights Entitlements with respect to each Eligible Unitholders can be accessed by such respective Eligible Unitholders on the website of the Registrar after keying in their respective details along with other security control measures implemented thereat.

Trading of the Rights Entitlements

Prior to the Issue Opening Date, the Investment Manager will obtain the approval from the Stock Exchange for trading of Rights Entitlements. Applicants shall be able to trade their Rights Entitlements either through on-market renunciation or through off-market renunciation. The trades through on-market renunciation and off-market renunciation will be settled by transferring the Rights Entitlements through the depository mechanism.

On-market renunciation shall take place electronically on the secondary market platform of the Stock Exchange in accordance with the settlement rules of the Stock Exchange. The transactions will be settled on trade-for-trade basis. The Rights Entitlements shall be tradable in dematerialized form only.

On-market renunciation shall take place only on December 18, 2024 (the renunciation period for on-market renunciation). No assurance can be given regarding the active or sustained on-market renunciation or the price at which the Rights Entitlements will trade. Eligible Unitholders are requested to ensure that renunciation through off-market transfer is completed in such a manner that the Rights Entitlements are credited to the demat account of the Renouncees on or prior to the Issue Closing Date. For details, see "*—Procedure for Renunciation of Rights Entitlements–On Market Renunciation*" and "*—Procedure for Renunciation of Rights Entitlements–Off Market Renunciation*" on page 844. Once the Rights Entitlements are credited to the demat account of the Renouncees, application in the Issue can be made until the Issue Closing Date. For details, please see the section entitled "*—Procedure for Application*" on page 844.

Please note that the Rights Entitlements which are neither renounced nor subscribed by the Applicants on or before the Issue Closing Date shall lapse and shall be extinguished after the Issue Closing Date.

No Units for such lapsed Rights Entitlements will be credited, even if such Rights Entitlements were purchased from market. Persons who are credited the Rights Entitlements are required to make an application to apply for Units offered under the Issue for subscribing to the Units offered pursuant to the Issue.

Terms of Payment

Full amount of ₹293.65 per Unit* shall be payable on Application.
**The Issue Price is ₹293.6511986. For presentation purposes only, the Issue Price has been presented as rounded-off to two decimal places.*

Fractional Entitlements

The trading lot for Units is 200,000 Units. Unitholders are entitled to Rights Entitlements in the Rights Entitlement Ratio. Rights Entitlement shall be credited in multiples of 200,000 (i.e., the existing trading lot). Rights Entitlements of any Eligible Unitholders, to the extent such Rights Entitlements are not in the multiples of 200,000, shall be considered fractional entitlements ("**Fractional Entitlements**").

Fractional Entitlements will not be credited to the Eligible Unitholders' demat accounts. However, such Unitholders would be given preference for the allotment of one additional lot if they apply for it, as per the procedure mentioned in the section entitled "*—Basis of Allotment*" on page 846.

The Units are being offered on a rights basis to existing Eligible Unitholders in the ratio of one Unit for every 19.0700901541096 Units held as on the Record Date. Fractional Entitlements of the Rights Entitlement will be credited to a suspense account. Accordingly, if the Unitholding of any of the Eligible Unitholders is less than 19.0700901541096 Units or is not in the multiple of 19.0700901541096 Units, the fractional Entitlements of such Eligible Unitholders shall be ignored. However, the Eligible Unitholders whose Fractional Entitlements are being ignored, will be given preferential consideration for the Allotment of one additional lot if they apply for additional Units in the Issue over and above their Rights Entitlements, if any, subject to availability of lots in the Issue post allocation towards Rights Entitlements applied for.

Illustration in relation to Fractional Entitlements

For example, if an Eligible Unitholder holds 19.0700901541096 Units, such Unitholder will be entitled to one Unit and will also be given a preferential consideration for the Allotment of one lot if such Eligible Unitholder has applied for additional Units in the Issue, over and above his/her/its Rights Entitlements, subject to availability of lots in the Issue post allocation towards Rights Entitlements applied for. Further, Eligible Unitholders holding less than 19.0700901541096 Units shall have 'zero' entitlement. Such Eligible Unitholders are entitled to apply for additional Units in the Issue and will be given preference in the Allotment of one lot, if such Eligible Unitholders apply for additional lots in the Issue, subject to availability of lots in the Issue post-allocation.

Ranking

The Units to be issued and allotted pursuant to the Issue shall be subject to the provisions of this Letter of Offer, the Rights Entitlement Letter, the Application Form, the InvIT Regulations, and the guidelines, notifications and regulations issued by SEBI, the Government of India and other governmental, statutory and regulatory authorities from time to time, including approvals, from RBI or other regulatory authorities, and the terms and conditions as stipulated in the Allotment advice. The Units to be issued and Allotted under the Issue shall rank *pari passu* with the existing Units, in all respects including distributions.

Listing and trading of the Units to be issued pursuant to the Issue

Subject to receipt of the listing and trading approvals, the Units proposed to be issued on a rights basis shall be listed and admitted for trading on the Stock Exchange. Unless otherwise permitted by the InvIT Regulations, the Units Allotted pursuant to the Issue will be listed as soon as practicable and all steps for completion of necessary formalities for listing and commencement of trading in the Units will be taken within such period prescribed under the InvIT Regulations. The Investment Manager has received in-principle approval from NSE pursuant to a letter dated December 13, 2024. The Investment Manager will apply to NSE for final approvals for the listing and trading of the Units subsequent to their Allotment. No assurance can be given regarding the active or sustained trading in the Units or the price at which the Units offered under the Issue will trade after the listing thereof.

The existing Units are listed and traded on NSE (Scrip Symbol: IRBIT) under the ISIN: INE0C8K23012 (the main ISIN). The Units shall be credited to a temporary ISIN which will be frozen until the receipt of the final listing and trading approvals from the Stock Exchange. Upon receipt of such listing and trading approvals from the Stock Exchange, the Units shall be debited from the temporary ISIN and credited to the new main ISIN for the Units issued pursuant to the Issue and shall be available for trading. Accordingly, the temporary ISIN shall be permanently deactivated in the depository system of CDSL and NSDL.

The listing and trading of the Units issued pursuant to the Issue shall be based on the current regulatory framework then applicable. Accordingly, any change in the regulatory regime would affect the listing and trading schedule.

In case the Investment Manager fails to obtain listing or trading permission from the Stock Exchange, we shall refund through verifiable means, the entire monies received within the timelines prescribed under applicable law.

Market Lot

The Units of the Trust shall be tradable only in dematerialized form. The trading lot for Units in dematerialized mode is 200,000 Units.

Arrangements for Disposal of Odd Lots

The Units issued pursuant to the Issue shall be traded in dematerialised form only and shall be issued in the applicable trading lot. Accordingly, no arrangement for disposal of odd lots are required for the Units issued pursuant to the Issue.

Notices

The Investment Manager and the Lead Manager will dispatch this Letter of Offer, Application Form, the Rights Entitlement Letter and other Issue materials only to Eligible Unitholders holding Units as of the Record Date (i) who have provided an address in India or through electronically on their email ID(s) registered with the depository participants or (ii) who are foreign corporate or institutional Unitholders in Identified Jurisdictions. The Issue materials will be provided, only through e-mail, by the Registrar on behalf of the Investment Manager or the Lead

Manager to Eligible Unitholders.

This Letter of Offer and the Application Form shall also be submitted with the Stock Exchange for making the same available on its website.

V. Procedure for Application

Application Form

The Application Form can be used by the Applicants, Eligible Unitholders as well as the Renouncees, to make Applications in the Issue basis the Rights Entitlements credited in their respective demat accounts or demat suspense escrow account, as applicable. Please note that one single Application Form shall be used by the Applicants to make Applications for all Rights Entitlements available in a particular demat account and applying in the Issue. In case of multiple demat accounts, the Applicants are required to submit a separate Application Form for each demat account.

Applicants will be required, *inter-alia*, to indicate the following in the Application Form:

- name of the Applicant to whom the Units are to be Allotted;
- number of Units held as on the Record Date;
- number of Units entitled to;
- number of Units applied for within the Rights Entitlements;
- number of additional Units applied for, if any;
- total number of Units applied for;
- the details of the Application Amount deposited by the Applicant into the Designated Account;
- details of the demat account to which the Units should be credited;
- the details of the Applicant's bank account along with fund transfer details, in case of any refund;
- that it is permitted to acquire the Units under the laws of any applicable jurisdiction and that it has necessary capacity and authority, and has obtained all necessary consents and authorizations to enable it to commit to this participation in the Issue and to perform its obligations in relation thereto (including, without limitation, on behalf of any person) and honor such obligations;
- it is eligible to invest in India and in the Units under applicable law, including the SEBI Master Circular and the FEMA Rules, and has not been prohibited by the SEBI or any regulatory authority from buying, selling or dealing in units or securities; and
- any other information which may be relevant to the Application.

Please note that Applications without depository account details shall be treated as incomplete and shall be rejected.

Each Applicant shall be required to make payment of the entire Application Amount for the Units at the Issue Price, only through electronic transfer to the Designated Account during the Issue Period, along with the Application Form.

Options available to the Eligible Unitholders

The Rights Entitlement Letter will clearly indicate the number of Units that the Eligible Unitholder is entitled to.

If an Eligible Unitholder applies in the Issue, then such Eligible Unitholder can:

(i) apply for its Units to the full extent of its Rights Entitlements; or
(ii) apply for its Units to the extent of part of its Rights Entitlements (without renouncing the other part); or
(iii) apply for Units to the extent of part of its Rights Entitlements and renounce the other part of its Rights Entitlements; or
(iv) apply for its Units to the full extent of its Rights Entitlements and apply for additional Units in the Issue; or
(v) renounce its Rights Entitlements in full.

Procedure for Application

Applicants may note that forms not filled completely or correctly as per instructions provided in this Letter of Offer and the Application Form are liable to be rejected. The Applications should adhere to the following:

(i) Applications must be made only in the prescribed Application Form;

(ii) Application Form must be completed in full, in BLOCK LETTERS in ENGLISH and in accordance with the instructions contained herein and in the Application Form. Incomplete Application Forms are liable to be rejected. Applicants must provide details of valid and active DP ID, Client ID and PAN clearly and without error. Invalid accounts, suspended accounts or where such account is classified as invalid or suspended shall not be considered for Allotment. Applicants should note that the Registrar, the Lead Manager and the Investment Manager will not be liable for errors in data entry due to incomplete or illegible Application Forms; and

(iii) Applicants are required to sign the Application Form. Applicants should ensure that the thumb impressions and signatures other than in the languages specified in the Eighth Schedule to the Constitution of India, are attested by a Magistrate or a Notary Public or a Special Executive Magistrate under official seal.

Submission of Application Form and Mode of Payment

All Application Forms are required to be duly completed with information including the name of the Applicant, the number of the Units applied for and the Application Amount deposited in the Designated Account, and include details of the bank account from which payment of amount was made as well as a confirmation of funds transfer.

The Application Form is required to be submitted to the Investment Manager and the Registrar electronically at the following addresses:

MMK Toll Road Private Limited
Attention: Mr. Kaustubh Shevade
Email: kaustubh.shevade@irb.co.in

KFin Technologies Limited
Attention: Mr. Williams R/Mr. M Murali Krishna
Email: williams.r@kfintech.com/murali.m@kfintech.com

The Investment Manager and the Registrar are not required to provide any written acknowledgement of the Application Form.

Additional Units

Applicants are eligible to apply for additional Units in the Issue, over and above their Rights Entitlements, provided that they are eligible to apply for Units under applicable law and they have applied for all the Units forming part of their Rights Entitlements without renouncing them in whole or in part. Where the number of additional Units applied for exceeds the number available for Allotment, the Allotment would be made as per the Basis of Allotment finalized in consultation with the Designated Stock Exchange. Applications for additional Units in the Issue, shall be considered and Allotment shall be made in accordance with the InvIT Regulations and in the manner prescribed under the section "*— Basis of Allotment*" on page 846.

Eligible Unitholders who renounce their Rights Entitlements cannot apply for additional Units in the Issue. Non-resident Renouncees, who are not Eligible Unitholders, cannot apply for additional Units in the Issue.

Also see "*Other Regulatory and Statutory Disclosures – Participation by the Sponsor*" on page 836.

Procedure for Renunciation of Rights Entitlements

The Applicants may renounce the Rights Entitlements, credited to their respective demat accounts, either in full or in part, (a) by using the secondary market platform of the Stock Exchange; or (b) through an off-market transfer, during the Renunciation Period. The Applicants should have the demat Rights Entitlements credited/lying in his/her own demat account prior to the renunciation.

Applicants may be subject to adverse foreign, state or local tax or legal consequences as a result of trading in the Rights Entitlements. Applicants who intend to trade in the Rights Entitlements should consult their tax advisors

or stock brokers regarding any cost, applicable taxes, charges and expenses (including brokerage) that may be levied for trading in Rights Entitlements.

The Trust, the Parties to the Trust, the Lead Manager and their respective affiliates accept no responsibility to bear or pay any cost, applicable taxes, charges and expenses (including brokerage), and such costs will be incurred solely by the Applicants.

On Market Renunciation

The Applicants may renounce the Rights Entitlements, credited to their respective demat accounts by trading/selling them on the secondary market platform of the Stock Exchange through a registered stock broker in the same manner as the existing Units of the Trust.

In this regard, the Rights Entitlements credited to the respective demat accounts of the Eligible Unitholders shall be admitted for trading on the Stock Exchange under ISIN INE0C8K20067 subject to requisite approvals. The details for trading in Rights Entitlements will be as specified by the Stock Exchange from time to time.

The Rights Entitlements are tradable in dematerialized form only.

The On Market Renunciation shall take place only during the Renunciation Period for On Market Renunciation, i.e., on December 18, 2024.

The Applicants holding the Rights Entitlements who desire to sell their Rights Entitlements will have to do so through their registered stock brokers by quoting the ISIN and indicating the details of the Rights Entitlements they intend to sell. The Applicants can place order for sale of Rights Entitlements only to the extent of Rights Entitlements available in their demat account.

The On Market Renunciation shall take place electronically on secondary market platform of NSE under automatic order matching mechanism in accordance with the settlement rules of the Stock Exchange. The transactions will be settled on trade-for-trade basis. Upon execution of the order, the stock broker will issue a contract note in accordance with the requirements of the Stock Exchange and SEBI.

Off Market Renunciation

The Eligible Unitholders may renounce the Rights Entitlements credited to their respective demat accounts by way of an offmarket transfer through a depository participant. The Rights Entitlements can be transferred in dematerialised form only.

Eligible Unitholders are requested to ensure that renunciation through off-market transfer is completed in such a manner that the Rights Entitlements are credited to the demat account of the Renouncees on or prior to the Issue Closing Date.

The Applicants holding the Rights Entitlements who desire to transfer their Rights Entitlements will have to do so through their depository participant by issuing a delivery instruction slip, the details of the buyer and the details of the Rights Entitlements they intend to transfer. The buyer of the Rights Entitlements (unless already having given a standing receipt instruction) has to issue a receipt instruction slip to their depository participant. The Applicants can transfer Rights Entitlements only to the extent of Rights Entitlements available in their demat account.

The instructions for transfer of Rights Entitlements can be issued during the working hours of the depository participants and only during the Renunciation Period. The detailed rules for transfer of Rights Entitlements through off-market transfer shall be as specified by the NSDL and CDSL from time to time.

In cases where multiple Application Forms are submitted for Applications pertaining to Rights Entitlements credited to the same demat account, such Applications shall be liable to be rejected.

Applicants are requested to strictly adhere to these instructions. Failure to do so could result in an Application being rejected, with the Trust, the Sponsor, the Investment Manager, the Trustee, the Lead Manager and the Registrar not having any liability to the Applicant.

Allotment of the Units in Dematerialized Form

Please note that the Units applied for in the Issue can be allotted only in dematerialized form and to the same depository account in which the Units are held by such investor on the Record Date.

Grounds for Technical Rejection

Applications made in the Issue are liable to be rejected on the following grounds:

(a) DP ID and Client ID mentioned in Application not matching with the DP ID and Client ID records available with the Registrar.
(b) Account holder not signing the Application or declaration mentioned therein.
(c) Submission of more than one application for Rights Entitlements available in a particular demat account.
(d) Submitting the GIR number instead of the PAN (except for Applications on behalf of the Central or State Government, the residents of Sikkim, the officials appointed by the courts and persons exempt from holding a PAN under applicable law).
(e) Applications by persons not competent to contract under the Indian Contract Act, 1872, except Applications by minors having valid demat accounts as per the demographic details provided by the Depositories.
(f) Application Forms which are not submitted by the Applicants within the time periods prescribed in the Application Form and this Letter of Offer.
(g) Physical Application Forms not duly signed by the sole or joint Applicants.
(h) Application Forms accompanied by stock invest, outstation cheques, post-dated cheques, money order, postal order or outstation demand drafts.
(i) If an Applicant is debarred by SEBI.
(j) Applications which: (i) appears to the Investment Manager or its agents to have been executed in, electronically transmitted from or dispatched from the United States or other jurisdictions where the offer and sale of the Units is not permitted under laws of such jurisdictions; (ii) does not include the relevant certifications set out in the Application Form, including to the effect that the person submitting and/or renouncing the Application Form is not in the United States and eligible to subscribe for the Units under applicable securities laws or; or (iii) where the Investment Manager believes acceptance of such Application Form may infringe applicable legal or regulatory requirements; and the Investment Manager shall not be bound to issue or allot any Units in respect of any such Application Form.
(k) Multiple application forms.

Depository account and bank details for Applicants holding Units in demat accounts and applying in the Issue

INVESTORS MUST ENSURE THAT THE NAME GIVEN IN THE APPLICATION FORM IS EXACTLY THE SAME AS THE NAME IN WHICH THE DEPOSITORY ACCOUNT IS HELD. IN CASE THE APPLICATION FORM IS SUBMITTED IN JOINT NAMES, IT SHOULD BE ENSURED THAT THE DEPOSITORY ACCOUNT IS ALSO HELD IN THE SAME JOINT NAMES AND ARE IN THE SAME SEQUENCE IN WHICH THEY APPEAR IN THE APPLICATION FORM.

Applicants applying under the Issue should note that on the basis of name of the Applicants, Depository Participant's name and identification number and beneficiary account number provided by them in the Application Form, the Registrar will obtain Demographic Details from the Depository. Hence, Applicants applying under the Issue should carefully fill in their Depository Account details in the Application.

These Demographic Details would be used for all correspondence with such Applicants including mailing of the letters intimating unblocking of bank account of the respective Applicant and/or refund. The Demographic Details given by the Applicants in the Application Form would not be used for any other purposes by the Registrar. Hence, Applicants are advised to update their Demographic Details as provided to their Depository Participants.

By signing the Application Forms, the Applicants would be deemed to have authorised the Depositories to provide, upon request, to the Registrar, the required Demographic Details as available on its records.

In case no corresponding record is available with the Depositories that match three parameters, (a) names of the Applicants, (b) the DP ID, and (c) the beneficiary account number, then such Application Forms are liable to be rejected.

Last date for Application

The last date for submission of the duly filled in the Application Form is 3 p.m. IST on December 20, 2024, being the Issue Closing Date. The Investment Manager will have the right to extend the Issue Period as it may determine from time to time, provided that the Issue will not remain open for a period longer than 15 Working Days.

Please ensure that the Application Form and necessary details are filled in. In place of Application number, Applicants can mention the reference number of the e-mail received from Registrar informing about their Rights Entitlement or last eight digits of the demat account.

Withdrawal of Application

No Applicant shall withdraw their Application post the Issue Closing Date.

Issue Schedule

Last date for credit of Rights Entitlements	December 17, 2024
Issue Opening Date	December 18, 2024
Last date for On-Market Renunciation of Rights Entitlements*	December 18, 2024
Issue Closing Date#@	December 20, 2024
Finalization of Basis of Allotment	On or about December 20, 2024
Date of Allotment	On or about December 20, 2024
Date of Credit of Units	On or about December 23, 2024
Date of Listing	On or about December 24, 2024

** Eligible Unitholders are requested to ensure that any renunciation is completed in such a manner that Rights Entitlements are credited to the demat accounts of the Renouncees on or prior to the Issue Closing Date.*
The Investment Manager will have the right to modify the Issue Period as it may determine from time to time, provided that the Issue will open for a period of at least three Working Days and will not remain open for a period longer than 15 Working Days.
@ On the Issue Closing Date, Application Forms and Application Amount shall be accepted until 3 p.m. IST.

VI. Basis of Allotment

Subject to the provisions contained in this Letter of Offer, the Rights Entitlement Letter, the Application Form, the Indenture of Trust and the approval of the Designated Stock Exchange, the Investment Manager will proceed to Allot the Units in the following order of priority:

(a) Full allotment to those Eligible Unitholders who have applied for their Rights Entitlement either in full or in part and also to the renouncee(s), who has/have applied for the Units renounced in their favour, in full or in part, as adjusted for fractional entitlement.;

(b) Allotment to Eligible Unitholders who having applied for the Units in full to the extent of their Rights Entitlement and have also applied for additional Units shall be made as far as possible on an equitable basis, having due regard to the number of Units held by them on the record date, provided there is an undersubscribed portion after making allotment in (a) above;

(c) Allotment to the Renouncees, who having applied for the Units renounced in their favour and also applied for additional Units, provided there is an undersubscribed portion after making full allotment specified in (a) and (b) above. The allotment of such additional Units may be made on a proportionate basis;

(d) Allotment to the Sponsor and its associates who are Eligible Unitholders and who have disclosed their intent to subscribe to additional Units, if there is an unsubscribed portion after making full allotment specified in (a), (b) and (c) above; and

(e) Allotment to the underwriter appointed for the Issue, if any, at the discretion of the board of directors of the Investment Manager, subject to disclosure in this Letter of Offer.

The Units allotted in the manner specified above shall be listed within six Working Days from the Issue Closing Date, or such other timeline as may be prescribed under Applicable Law.

VII. Allotment Advice or Refund

The Investment Manager will email Allotment Advice, refund intimations or demat credit of securities and/or letters of regret, along with crediting the Allotted Units to the respective beneficiary accounts (only in dematerialised mode), if any, within a period of seven business days from the Issue Closing Date. It is clarified that the foregoing shall apply to any additional Units subscribed by and allotted to any Eligible Unitholder, over and above their Rights Entitlements, in accordance with the Basis of Allotment. In case of failure to do so, within the maximum time prescribed under applicable law (currently 15 days from the Issue Closing Date), the Investment Manager and the Trustee shall pay interest at such rate as specified under applicable law.

The Rights Entitlements will be credited in the dematerialized form using electronic credit under the depository system and the Allotment Advice shall be sent, through email, to the email address provided to the Investment Manager or at the address recorded with the Depository.

In the case of non-resident Applicants who remit their Application Amount from funds held in the NRE or the FCNR Accounts, refunds and/or payment of interest or dividend and other disbursements, if any, shall be credited to such accounts.

Payment of Refund

The payment of refund, if any, including in the event of oversubscription or failure to list or otherwise would be done through electronic mode or such other modes as may be permitted under applicable law.

Dematerialized Credit of Units

The demat credit of Units to the respective beneficiary accounts will be credited within the timelines required under applicable laws.

Applicants shall be Allotted the Units in dematerialized (electronic) form. The Investment Manager and the Registrar have entered into:

- Agreement dated January 14, 2020 with NSDL; and
- Agreement dated January 16, 2020 with CDSL.

The Investment Manager shall file an allotment report with the SEBI providing details of the Allottees and the Allotment made within 15 days of the Issue Closing Date.

INVESTORS MAY PLEASE NOTE THAT THE UNITS CAN BE TRADED ON THE STOCK EXCHANGE ONLY IN DEMATERIALIZED FORM.

IMPORTANT

1. Please read this Letter of Offer carefully before taking any action. The instructions contained in the Application Form and the Rights Entitlement Letter are an integral part of the conditions of this Letter of Offer and must be carefully followed; otherwise the Application is liable to be rejected.

2. All enquiries in connection with this Letter of Offer, the Rights Entitlement Letter or Application Form must be addressed (quoting the Registered Folio Number or the DP ID and Client ID number, the Application Form number and the name of the first Eligible Unitholder as mentioned on the Application Form and postmarked in India or in the e-mail) to the Registrar at the following address:

   KFin Technologies Limited
   B, Plot No. 31 &32 Gachibowli Financial District, Nanakramguda
   Hyderabad 500 032, Telangana
   Attention: M. Murali Krishna
   E-mail: einward.ris@kfintech.com

The Investment Manager will have the right to modify the Issue Period as it may determine from time to time, provided that the Issue will remain open for at least three Working Days and will not remain open for a period longer than 15 Working Days.

SECTION X – OTHER INFORMATION

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under NHDP Phase V. Under Phase V NHAI has planned to convert 6,500 km of existing 4-lane National Highways into 6-lane National Highway. Sections envisaged under 6-laning comprise the Golden Quadrilateral section (5,700 km) and some other sections which are 800 km in length.

The project under consideration, Six Laning of Gulabpura to Chittorgarh section of NH-79 from km 90.000 to km 214.870is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. M/s CG Tollway Ltd. (Concessionaire) has been awarded the Project for a concession period of 20 years starting from 4th November 2017. The Project has been commissioned and is currently in the operation / maintenance phase for four laning. Six laning of project has also been completed in August 2021.

Length ofprojectroadis124.870Kms. The project road is section of NH-79, which connects Ajmer to Ghat Bilod. Project section of NH-79 passes through district of Bhiwara and Chittorgarh. Project road connects to Udaipur via NH-76.

Project road alignment passes through the towns/ built-up areas Fakirabad, Bhilwara, Gulabpura, & Chittorgarh. Following figure shows alignment of project road section from Gulabpura to Chittorgarh

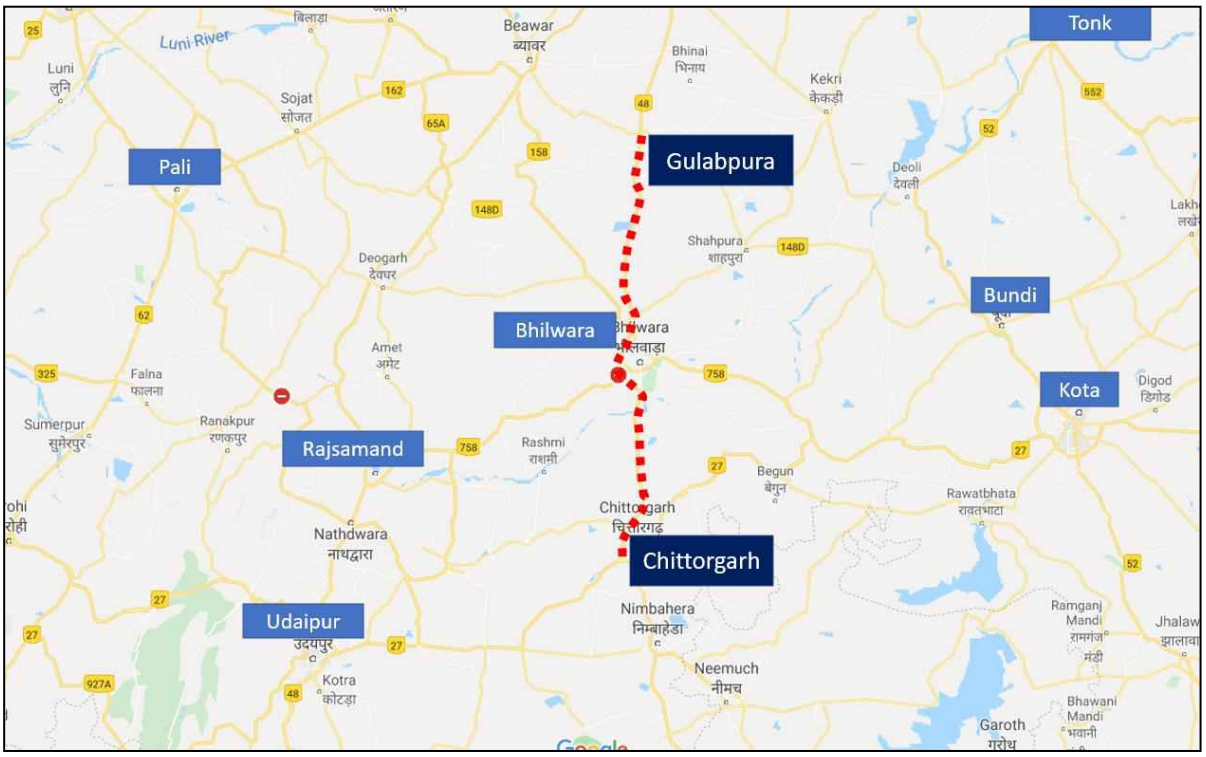

Figure 1-1: Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged GMD Consultants to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.

This report named as "Traffic Study &Toll Revenue Projection Report" mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

National Highway 79 (NH-79) is an important link for traffic connecting Delhi, Jaipur to Udaipur, Chittorgarh and down south.

It is one of the major north-south road connectivity for the traffic from northern states of Haryana, Punjab and Delhi to Industrial and tourist areas of Rajasthan like Jaipur, Chittorgarh, Udaipur and then to Dahod, Ratlam and other parts of Madhya Pradesh.

2.2 Project Stretch Description

Section of NH-79 from Gulabpura to Chittorgarh is part of major transportation link in the area connecting industrial / tourist cities of Jaipur, Bhilwara, Chitttorgar and Udaipur. Important cities of Firozabad, Shikohabad, and Jaswant Nagar fall on project alignment. Major mining industries of marble, Zink, felspar, quarts of Udaipur and textile industry of Bhiwara provide are major contributor of commercial traffic on project corridor. Additionally, Udaipur, Chittorgarh and Bhilwara major tourist centers of India. This adds substantial value for passenger traffic on the project corridor section.

Like other parts of India rapid ribbon development is happening around these cities on project highway. This also contributes to sustainable traffic growth.

There are two operative toll plazas at project stretch. First is at Lambia Kalan at Km 121.020 and second at Jojro ka Khera at Km 184.020. The following figure show project alignment and toll plaza locations.

Figure 2-1: Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

Six laning of project stretch is in progress and soon will be completed. The following photographs illustrate the project section along the corridor.

Figure 2-2: Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza locations on Gulabpura- Chittorgarh section of NH-79 for years 2018-19, 2019-20, 2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	**Km 121.020 Toll Plaza at Lambia Kalan**	AADT for Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to	For Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023	For Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April	For Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April	For Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023

		November 2023 & Four month from April 2024 to July 2024	to November 2023 & Four month from April 2024 to July 2024	2023 to November 2023 & Four month from April 2024 to July 2024	2023 to November 2023 & Four month from April 2024 to July 2024	to November 2023 & Four month from April 2024 to July 2024
2	**Km 184.020 Toll Plaza at Jojro ka Khera**	AADT for Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Min Bus /LCV
- Bus
- Truck
- 3-Axle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.

Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Lambial Kalan Toll Plaza at Km 121.020

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)-2019-20	Annual Average Daily Traffic (Nos.)-2020-21	Annual Average Daily Traffic (Nos.)-2021-22	Annual Average Daily Traffic (Nos.)-2022-23	Annual Average Daily Traffic (Nos.)-2023-24	Annual Average Daily Traffic (Nos.)-2024-25

7	Oversized Vehicle	21	21	21	14	12	8
Total		**11781**	**10896**	**13592**	**16532**	**17926**	**19404**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in Table 3-5.

Table 3-5 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5

Vehicle Type	PCUs
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under.

Table 3-6 : Traffic in PCU at Project Stretch Base Year 2023-24

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2019-2020	Lambia Kalan Km 121.020	13612	38754	2.85
	Jojro ka Khera Km 184.020	11781	34208	2.90
2020-2021	Lambia Kalan Km 121.020	11511	32446	2.82
	Jojro ka Khera Km 184.020	10896	31630	2.90
2021-2022	Lambia Kalan Km 121.020	13949	38721	2.74
	Jojro ka Khera Km 184.020	13592	38503	2.83
2022-23	Lambia Kalan Km 121.020	17072	45107	2.64
	Jojro ka Khera Km 184.020	16532	45642	2.76
2023-24	Lambia Kalan Km 121.020	17590	45650	2.60
	Jojro ka Khera Km 184.020	17926	49431	2.76
2024-25	Lambia Kalan Km 121.020	17411	45002	2.58

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
	Jojro ka Khera Km 184.020	19404	52617	2.71

It can be observed from above that project traffic has PCU index close to 3 which is an indicator of high proportion of commercial traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at four toll plaza locations.

It can be observed that PCU index is consistent at both toll plaza locations.

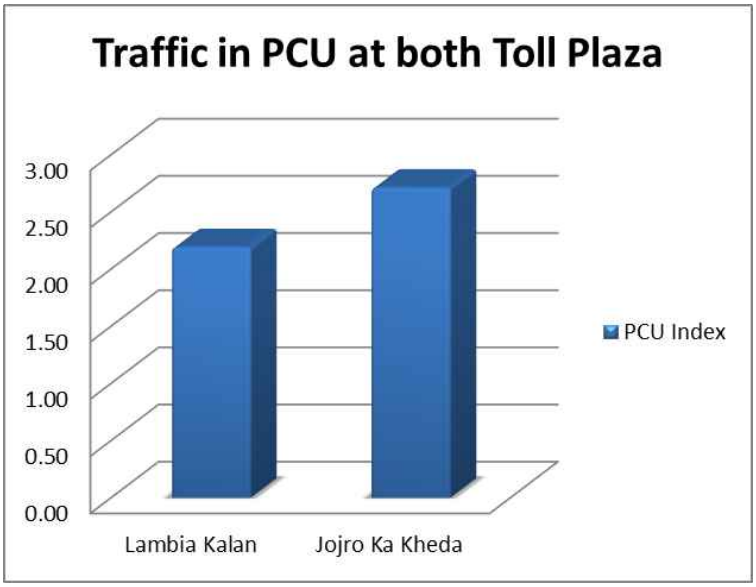

Figure 3-1: Comparison of PCU Index

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

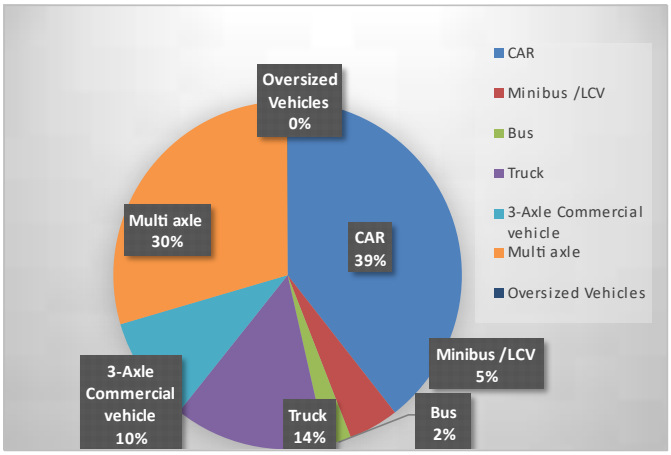

Figure 3-2 :Model Split of Tollable Vehicle-Km 121.020

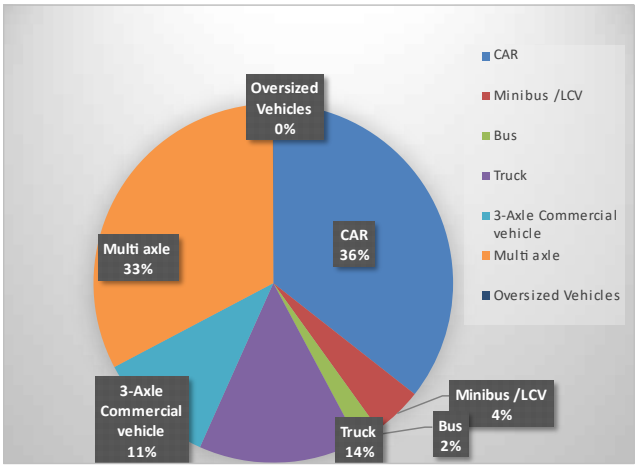

Figure 3-3 :Model Split of Tollable Vehicle- Km 184.020

It is observed that car traffic forms about 39% & 36% of total traffic at toll plaza locations while multi axle commercial vehicles are about 40% & 44% of total traffic. Truck / Bus and LCV share about 21% and 20% of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category for year 2024-25

Table 3-7 : Journey Type Bifurcation of Traffic at Lambia Kalan TP KM 121.020

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	12501
2	Return Journey	4632
3	Local Commercial Single Journey	236
4	Monthly Pass Local	33
5	Monthly Pass	10

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 72%. Return journey component is 27%. The number of monthly pass Local is 0% and Local commercial Single Journey 1% at Lambia Kalan toll plaza.

The following tables give the details of journey distribution at Jojro ka Khera toll plaza at Km 184.020.

Table 3-8 : Journey Type Bifurcation of Traffic at Jojro ka KheraTPKm 184.020

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	13651
2	Return Journey	5446
3	Local Commercial Single Journey	282
4	Monthly Pass Local	13
5	Monthly Pass	12

It is observed that the project corridor demonstrates a similar pattern of single journey dominated mix of traffic across the entire stretch which is typical of major national highways.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth

d) Per Capita Income growth
e) Industrial Growth
f) Special Industry Potential
g) Regional and National development vision / plan
h) Any other relevant data

3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Project stretch has toll application history from last few years, and it can be assumed that project traffic is settled. However, from an analysis point of view there can be two alternate routes at local level. One uses Ajmer Road to go from Kishangarh to Chittorgarh and the other on east side via Shapur.

At regional level, there can be two alternates for Udaipur traffic after Kishangarh. One via project road (Kishangarh – Bhiwara- Chittorgarh- Udaipur)

The following maps show these routes in relation to project stretches at both local and regional level.

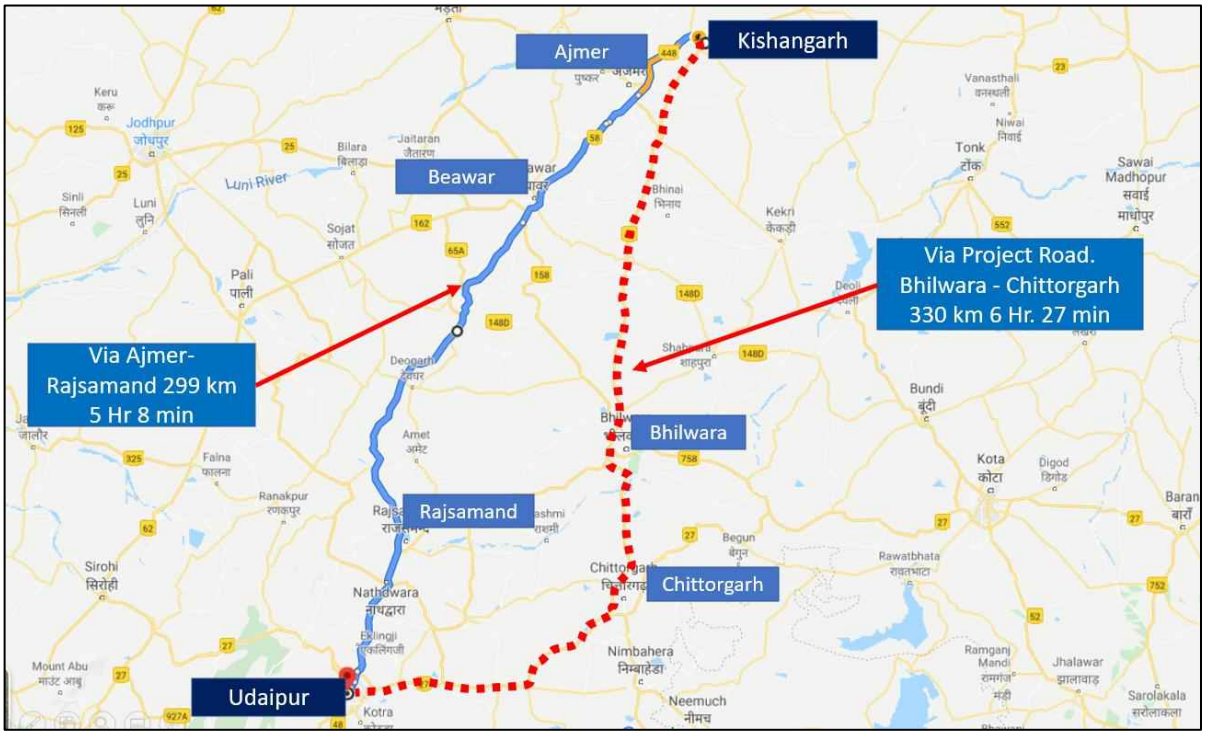

Figure 4-1: Alternate route at regional level.

Figure 4-2: Alternate route at local level.

It can be observed that the project highway forms one of the main spines of the corridor between Kishangarh / Jaipurand Chittorgarh. Traffic on project road is now settled and it can be assumed as dedicated traffic on project road for logistic obligations.

At regional level for Udaipur traffic alternate route is faster and traffic is already using this alternate.

With six laning now nearing completion, the project stretch would become slightly more attractive due to the improved level of service. In such a case further diversion of traffic from the project road is not envisaged.

The following table provides summary of analysis of alternate route/ roads discussed above.

Table 4-1 : Competing Roads Details

Sr. No	Route Details	Designation	Length (Km)	Avg. Speed (KMPH)	Time Taken (Min)	Observations
Regional Level						
1	Kishangarh – Ajmer-Udaipur	Alternate Route	299	58	5 Hr 8 Min	Alternate route has clear advantage for this pair of destination. Traffic Settled. No further diversion expected
	Kishangarh- Chittorgarh-Udaipur	Project Road	330	51	6 Hr 127 Min	
Local Level						
2	Kishangarh – Ajmer-Chittorgarh (West)	Alternate Route	278	50	5 Hr. 28 Min	Project Road has advantage. Alternate route running for years after toll on project road. Traffic Settled. No further diversion expected
	Kishangarh – Shahpur-Chittorgarh (East)	Alternate Route	283	51	5 Hr. 28 Min	
	Kishangarh – Bhilwara-Chittorgarh	Project Road	220	50	4 Hr. 29 Min	

Under these circumstances it is not envisaged that commercial or passenger traffic would switch to alternate roads from the project road. Further, it may be noted that since the project highway has already been commissioned and has a tolling history, the current traffic traversing the project corridor already factors in traffic diversion (if any) that may have taken place.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Gulabpur- Chittorgarh section of NH-79has been done taking the above factors into consideration. **"IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways"** is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways.**

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a

similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*
EI = *Economic Indicator*
A = *Regression constant*
k = *Elasticity coefficient (Regression coefficient)*

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across the state of Rajasthan. Toll plazas at Lambia Kalan and Jojro ka Khera are in the state of Rajasthan. For elasticity calculations, working data from Rajasthan has been analyzed. Additionally, data of Gujarat is also analyzed as project corridor has close transportation link with Gujarat also.

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-1 : Per Capita Income Vs Car Rajasthan

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	57192	591069	4.76	5.77		
2013	58441	659542	4.77	5.82	2%	
2014	61053	733916	4.79	5.87	4%	
2015	64496	814079	4.81	5.91	6%	
2016	68565	899307	4.84	5.95	6%	
2017	71394	988391	4.85	5.99	4%	4.55%

Regression analysis of same is given in figure below.

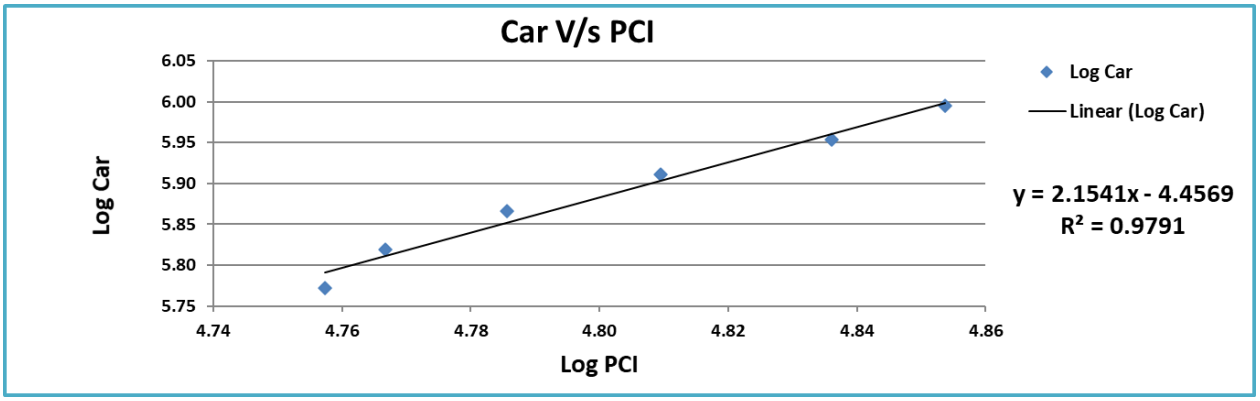

Figure 5-1: Regression and Elasticity PCI vs. Car – Extrapolation Rajasthan

Table 5-2 : Population Vs Bus Rajasthan

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	68548437	83345	7.84	4.92		
2013	69783885	88616	7.84	4.95	2%	
2014	71016445	93892	7.85	4.97	2%	
2015	72245688	97650	7.86	4.99	2%	
2016	73471198	102818	7.87	5.01	2%	
2017	74692571	108680	7.87	5.04	2%	1.73%

Regression analysis of same is given in figure below.

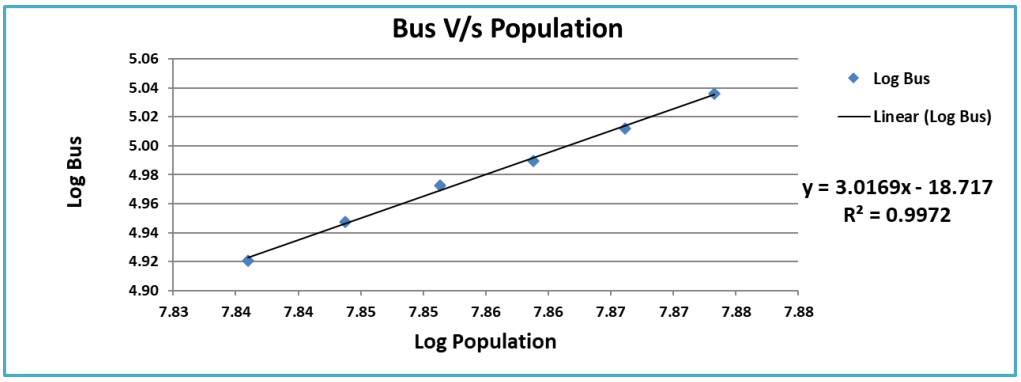

Figure 5-2: Regression and Elasticity Population vs. Bus – Extrapolation Rajasthan

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : LCV Traffic Vs NSDP Rajasthan

Year	NSDP	LCV	Log NDSP	Log LCV	NSDP Growth	Average Growth
2012	395331	69509	5.60	4.84		
2013	409802	76396	5.61	4.88	4%	
2014	434292	33379	5.64	4.52	6%	
2015	465408	91787	5.67	4.96	7%	
2016	501922	99763	5.70	5.00	8%	6.16%

The following figure depicts regression analysis and extrapolation.

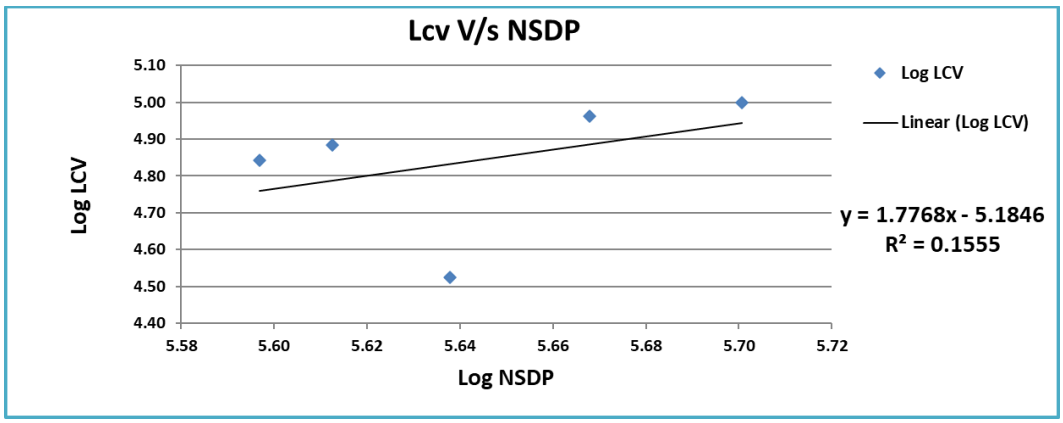

Figure 5-3: Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Rajasthan.

The following figure depicts regression analysis and extrapolation.

Table 5-4 : Truck Traffic Vs NSDP Rajasthan

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth
2012	395331	362028	5.60	5.56		
2013	409802	401983	5.61	5.60	4%	
2014	434292	434379	5.64	5.64	6%	
2015	465408	472365	5.67	5.67	7%	
2016	501922	517604	5.70	5.71	8%	
2017	530172	561158	5.72	5.75	6%	6.06%

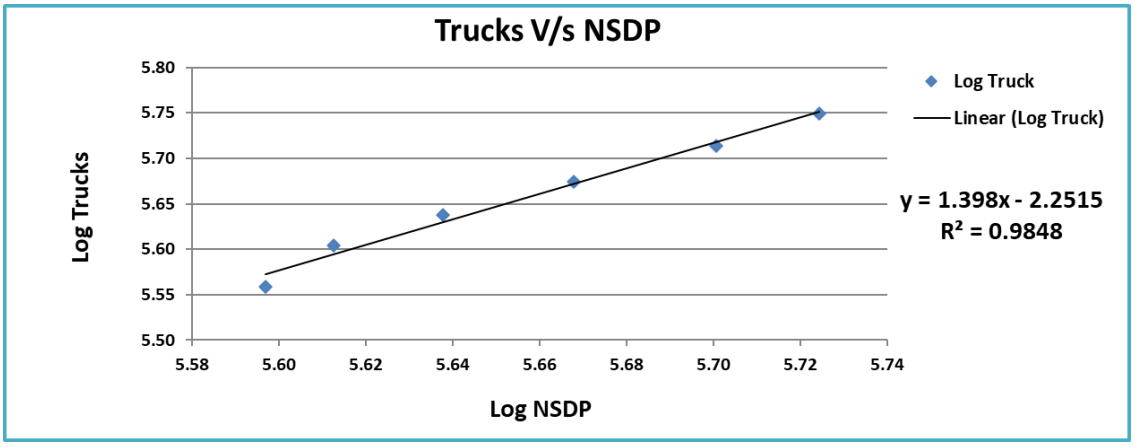

Figure 5-4: Regression and Elasticity NSDP vs. Truck Traffic - extrapolation Rajasthan.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for the good fit regression as reflected by R2 values are presented in the Table below.

Table 5-5 : Summary Regression Analysis Rajasthan

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Rajasthan	Car/Jeep	PCI	y = 2.1541x + -4.4569	R^2 = 0.9791	2.1541	4.55%	9.79%	Good Regression
	Bus	Population	y = 3.0169x - -18.7174	R^2 = 0.9972	3.0169	1.73%	5.22%	Good Regression
	LCV	NSDP	y = 1.7768x - -5.1846	R^2 = 0.1555	1.7768	6.16%	10.95%	Poor Regression
	Truck	NSDP	y = 1.398x - -2.2515	R^2 = 0.9848	1.3980	6.06%	8.46%	Good Regression

Table 5-6 : Per Capita Income Vs Car Gujarat

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	87481	1411898	4.94	6.15		
2013	96683	1602129	4.99	6.20	11%	
2014	102589	1771298	5.01	6.25	6%	
2015	111370	2008748	5.05	6.30	9%	

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2016	120683	2260084	5.08	6.35	8%	
2017	129738	2527537	5.11	6.40	8%	8.21%

Regression analysis of same is given in figure below.

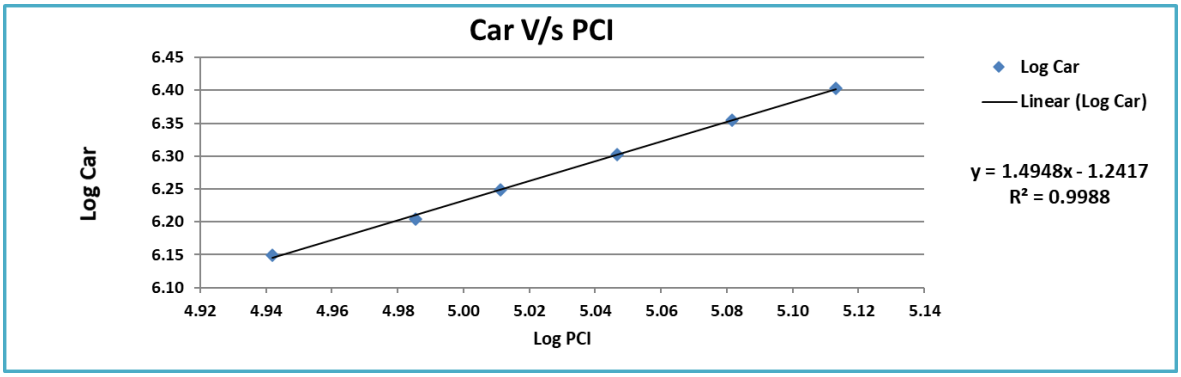

Figure 5-5: Regression and Elasticity PCI vs. Car – Extrapolation Gujarat

Table 5-7 : Population Vs Bus Gujarat

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	60439692	67546	7.78	4.83		
2013	61563037	70615	7.79	4.85	2%	
2014	62684375	72998	7.80	4.86	2%	
2015	63803304	76435	7.80	4.88	2%	
2016	64919427	82734	7.81	4.92	2%	
2017	66032362	74855	7.82	4.87	2%	1.79%

Regression analysis of same is given in figure below.

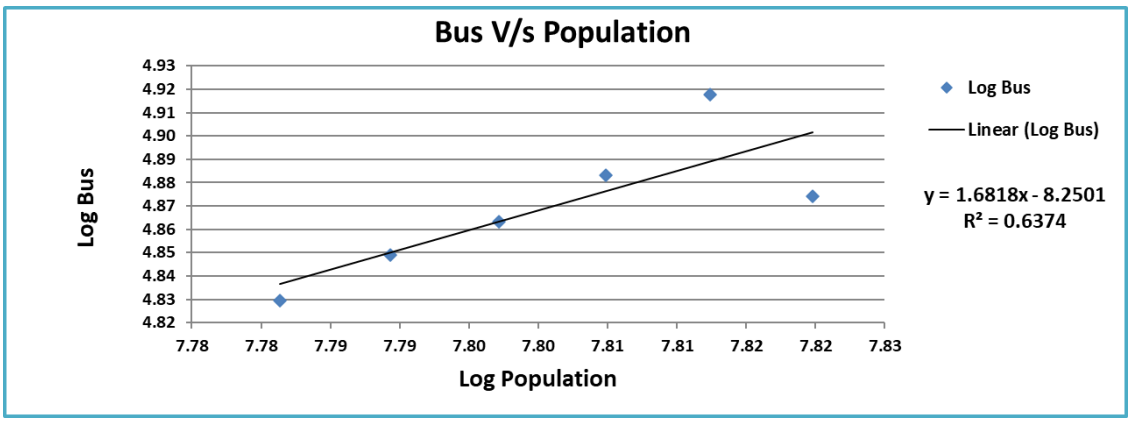

Figure 5-6: Regression and Elasticity Population vs. Bus – Extrapolation Gujarat

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-8 : LCV Traffic Vs NSDP Gujarat

Year	NSDP	LCV	Log NDSP	Log LCV	NSDP Growth	Average Growth
2012	532809	448958	5.73	5.65		
2013	596659	499277	5.78	5.70	12%	
2014	641489	542918	5.81	5.73	8%	
2015	705629	589984	5.85	5.77	10%	
2016	774775	633599	5.89	5.80	10%	9.82%

The following figure depicts regression analysis and extrapolation.

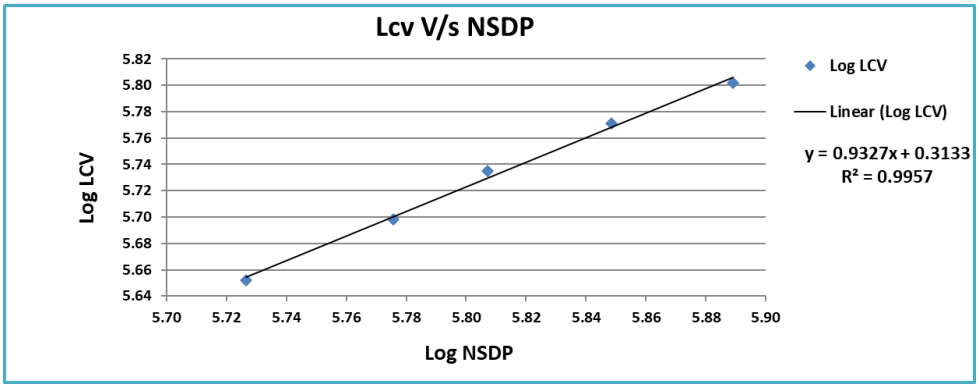

Figure 5-7: Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Gujarat.

The following figure depicts regression analysis and extrapolation.

Table 5-9 : Truck Traffic Vs NSDP Gujarat

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth
2012	532809	301533	5.73	5.48		
2013	596659	319207	5.78	5.50	12%	
2014	641489	332185	5.81	5.52	8%	
2015	705629	352225	5.85	5.55	10%	
2016	774775	375265	5.89	5.57	10%	
2017	843930	396061	5.93	5.60	9%	9.64%

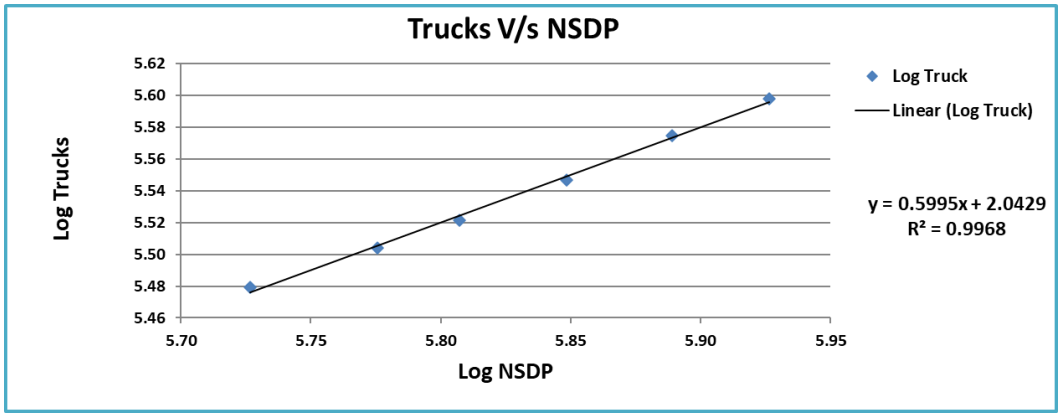

Figure 5-8: Regression and Elasticity NSDP vs. Truck Traffic - extrapolation Gujarat.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-10 : Summary Regression Analysis Gujarat

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Gujarat	Car/Jeep	PCI	y = 1.4948x + -1.2417	R² = 0.9988	1.4948	8.21%	12.27%	Good Regression
	Bus	Population	y = 1.6818x - -8.2501	R² = 0.6374	1.6818	1.79%	3.00%	Fair Regression
	LCV	NSDP	y = 0.9327x - 0.3133	R² = 0.9957	0.9327	9.82%	9.16%	Good Regression
	Truck	NSDP	y = 0.5995x - 2.0429	R² = 0.9968	0.5995	9.64%	5.78%	Good Regression

The economic model for predicting growth is a good tool, however other local, regional, and national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trends of growth. Project stretch of Gulabpura to Chittorgarh is under tolling operation with current concessionaire and has two years of tolling history from 2018-19. As traffic data available with the project concessionaire is of year two years and that too affected by COVI-19, we do not have sufficient data points to be

able to establish a reliable past trend of traffic growth. A minimum of about 5 -6 years' consistent traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economic, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

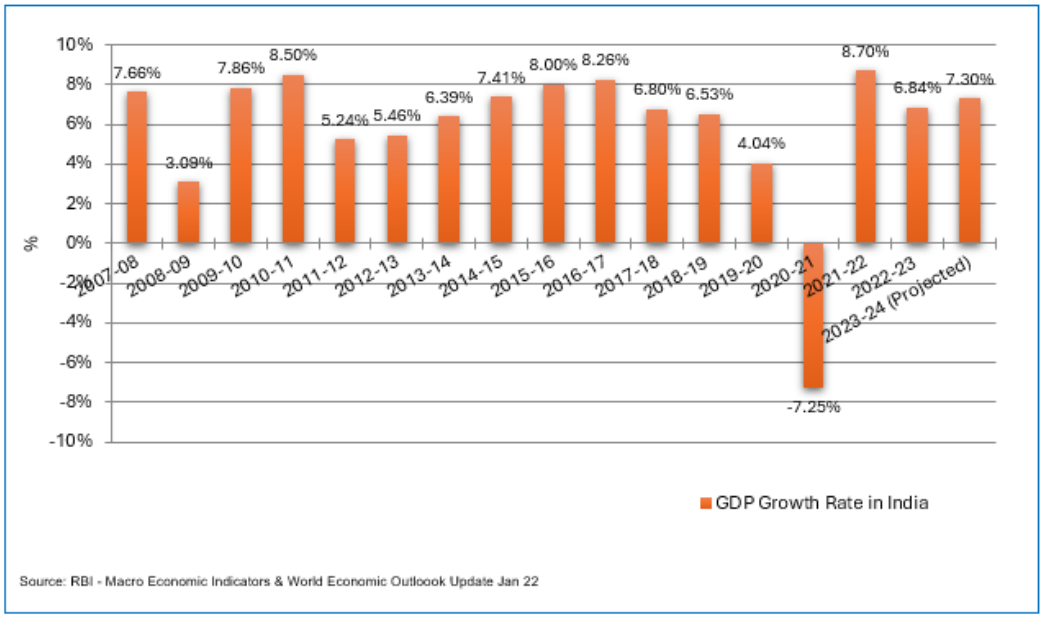

Figure 5-9 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on Make -In- India it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. The World Economic Outlook update also has predicted a growth rate of about 7.5 % in the year 2022-23.

5.6 Developments along and around the Project Corridor & State

This Asset primarily serves traffic travelling between Delhi, Rajasthan, Gujarat and Maharashtra. It is observed that the vehicle distribution to be dominated by heavy vehicles. We further noticed several textile industries and marble/granite industries bordering the Asset. Udaipur serves as a big tourism hub as well as a consumption center which also results in traffic feeding into the demand being generated.

In addition, Chittorgarh has 4 major cement plants located in Chanderiya and Nimbahera villages. There is a regular movement of Cement bulkers to and from these locations along asset. Chanderiya Lead-Zinc Smelter, is the one of the largest zinc-lead smelting complexes in the world, is also located in Chittorgarh. Bhilwara is home to the textile industry and the only center in the country producing insulation bricks. Mining is another major sector for large scale mining of sandstone, soapstone feldspar, quartz, mica China clay and granite. Also, Iron Ore, Led, and Zinc are mined and processed in Bhilwara.

Rajasthan is rich in natural resources and benefits from its strategic geographic location in India. The state is pre-eminent in quarrying, mining in India and has been a leader in crude oil extraction over the past few years. Moreover, Rajasthan is also major tourism attractor in India. Considering the scenario, it may be assumed that the traffic growth on the project highway would remain high and there are minimal risks in terms of growth.

5.6.1 Industrial Units along Project Corridor

Bhilwara district occupies an important place in the mineral map of Rajasthan. The main minerals are lead Zinc, Soap Stone, China Clay, Feldspar, Quartz, Mica, Asbestos and Garnet.

Besides being a major tourist attraction in India Chittorgarh has a very rich profile in industrial mineral extraction. Limestone (Cement Grade), Red Occur, Silica sand, China Clay and Quartz are major minerals which are in abundance. There are a large number of cement plants in the area. Chanderiya Lead-Zinc Smelter is one of the largest zinc-lead smelting complexes in the world.

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The rate of growth is moderate in light of overall regional trends. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, the rate of growth diminishes. The same growth rate is not sustainable for long. Traffic growth is suitably stepped down from future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely Optimistic, **Pessimistic and Most Likely** with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Project Stretch

Table 5-11 : Recommended Growth Rates Optimistic

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046	2046-2051
Car/Jeep/Van	8.61%	8.31%	7.01%	6.58%	6.33%	6.09%
Bus	4.93%	4.73%	3.77%	3.56%	3.41%	3.26%
LCV	5.19%	4.89%	3.83%	3.34%	3.08%	2.83%
2- Axle	5.68%	5.38%	4.55%	4.05%	3.78%	3.53%
3 – Axle	6.02%	5.71%	4.55%	4.05%	3.78%	3.53%
4 to 6 Axle	6.37%	6.03%	4.55%	4.05%	3.78%	3.53%
7 and Above Axle	6.02%	5.71%	4.55%	4.05%	3.78%	3.53%

Table 5-12 : Recommended Growth Rates Pessimistic

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046	2046-2051
Car/Jeep/Van	8.11%	7.81%	6.51%	6.08%	5.83%	5.59%
Bus	4.43%	4.23%	3.27%	3.06%	2.91%	2.76%

3 – Axle	5.52%	5.21%	4.05%	3.55%	3.28%	3.03%
4 to 6 Axle	5.87%	5.53%	4.05%	3.55%	3.28%	3.03%
7 and Above Axle	5.52%	5.21%	4.05%	3.55%	3.28%	3.03%

Table 5-13 : Recommended Growth Rates Most Likely

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046	2046-2051
Car/Jeep/Van	8.36%	8.06%	6.76%	6.33%	6.08%	5.84%
Bus	4.68%	4.48%	3.52%	3.31%	3.16%	3.01%
LCV	4.94%	4.64%	3.58%	3.09%	2.83%	2.58%
2- Axle	5.43%	5.13%	4.30%	3.80%	3.53%	3.28%
3 - Axle	5.77%	5.46%	4.30%	3.80%	3.53%	3.28%
4 to 6 Axle	6.12%	5.78%	4.30%	3.80%	3.53%	3.28%
7 and Above Axle	5.77%	5.46%	4.30%	3.80%	3.53%	3.28%

Traffic and revenue have been worked out on the basis of the above growths and some is presented in subsequent chapter of report.

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza 1- Lambia Kalan121.020 KM

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Gulabpura-Chittorgarh project, the Target Date and Target Traffic are defined as under:

Target Date - 1stJune 2026

Target Traffic - 76316 in PCU

It was observed that as per traffic projections, average traffic volume falls short of target traffic in all scenarios. Probable extension of concession period is estimated according to article 29 of concession agreement which comes to about 3-4 years Traffic forecast and revenue projections are done for probable extended period accordingly.

Most Likely

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	76316	54919	-28%	42%	20%	20	4

Optimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	76316	55187	-28%	42%	20%	20	4

Pessimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	76316	54658	-28%	43%	20%	20	4

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

The fee schedule in the CA of Gulabpura-Chittorgarh section of NH-19 is based on the old toll policy. As per the Toll Notification (Schedule -G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued for 50 trips in month at 2/3d rate. Additionally, concessionaire has announced special monthly passes for local commercial cars at Rs. 670.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van I - Rs. 275 per
    b) Local LCV - Rs. 1200 per trip
    c) Local Commercial Vehicles at 50% rate for single journey

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

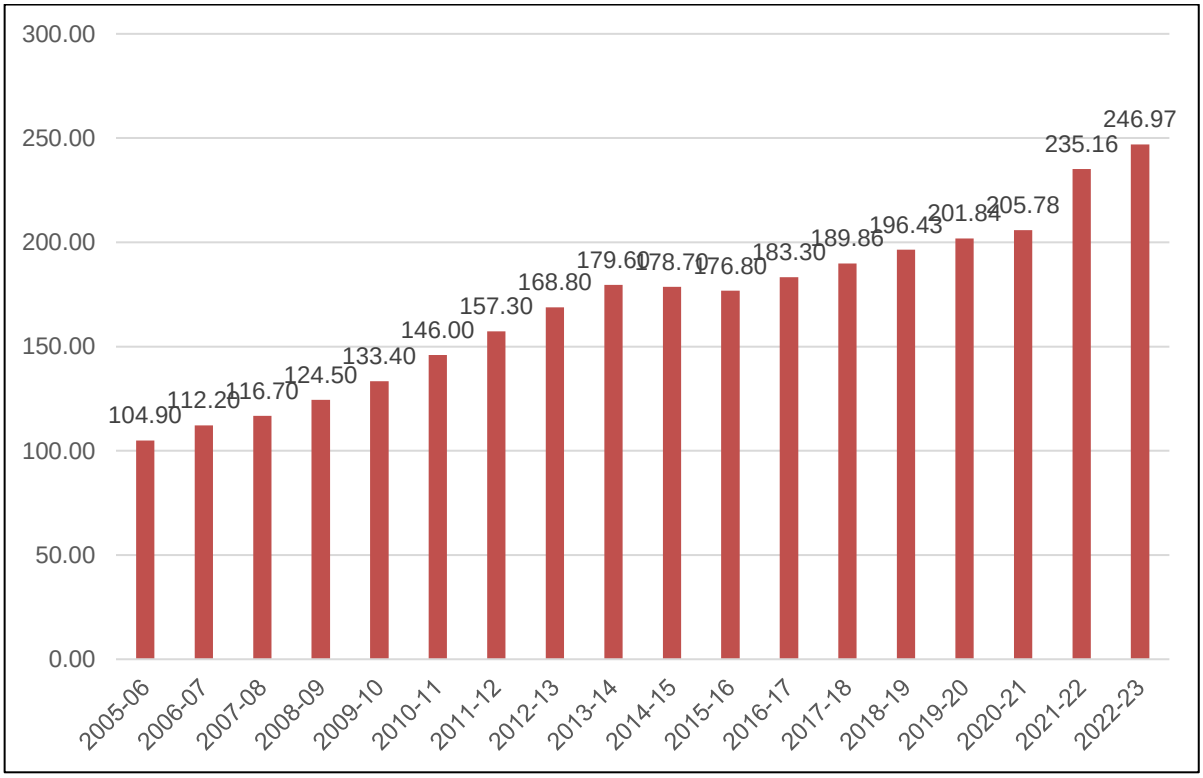

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45
Oversized Vehicles (7 or more Axles)	4.20

There is no bypass or structure to be factored in for rates calculations.

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given as under.

Table 7-2 : Toll Rates for Single Journey@ Km 121.020

Year	Car	Minibus /LCV	Bus	Truck	3-Axle	Multi axle	Oversized Vehicles

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under most likely scenario at each of the toll plaza up to 2041- 42 starting from the year 2024-25 are shown in tables below.

Table 7-10 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Year	TP-1	TP2	Total
2024-25	179.82	218.37	**398.19**

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Gulabpura to Chittrorgarh section of NH-79 in state of Rajasthan from km 90.000 to km 214.870 nearing completion of six laning. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the busy and prominent national highway NH-79 which connects Kishangarh to Udaipur via Bhiwala and Chittorgarh. There are large number of townships, industrial corridors and other business establishments coming up along the project corridor. As discussed, the dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give a positive impact to traffic flow on the project. The following can be considered as major outcomes of the study.

a) There is a good amount of tollable traffic running on the project.

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future post COVID-19 due to various developments in area and overall development of economy.

c) The Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.

Based on the above it can be considered a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under various phases of NHDP. Under Phase IV NHAI has planned to convert existing 2-lane National Highways into 4-lane National Highway.

The project under consideration, Four Laning of Goa / Karnataka Border to Kundapur section of NH-17 from km 93.300 to km 283.300 is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. M/s IRB Westcoast Tollway Ltd. (Concessionaire) has been awarded the Project for a concession period of 28 years starting from the appointed date of 3rd March 2014. The Project is under capacity augmentation to six lanes. Tolling operation under current concession has commenced in February 2020 after partial COD on 31st January 2020.Further to it additional length of 161.050 Km has been completed and put to commercial operation in February 2022. PCOD-3 has been received in March 2023 & the rest of length is expected to complete by Financial Year 2024.

Project road from Goa/ Karnataka Border (Near Karwar) to Kundapur is about 190 km section of Mumbai - Goa highway (NH-17) from Km 93.700 to Km 283.300. NH-17 is most important transportation corridor along west cost of India. It starts at Panvel, at the junction of National Highway 4 (NH 4), and ends at Kanyakumari. NH-17 mainly traverses through the west coast of India, sometimes touching the shores of the Arabian Sea. The NH 17 touches the Arabian Sea at Maravanthe in Karnataka, Thalassery, Alappuzha and Kollam in Kerala. It passes through the Indian states of Maharashtra, Goa, Karnataka, Kerala and Tamil Nadu

The following figure shows the project road alignment.

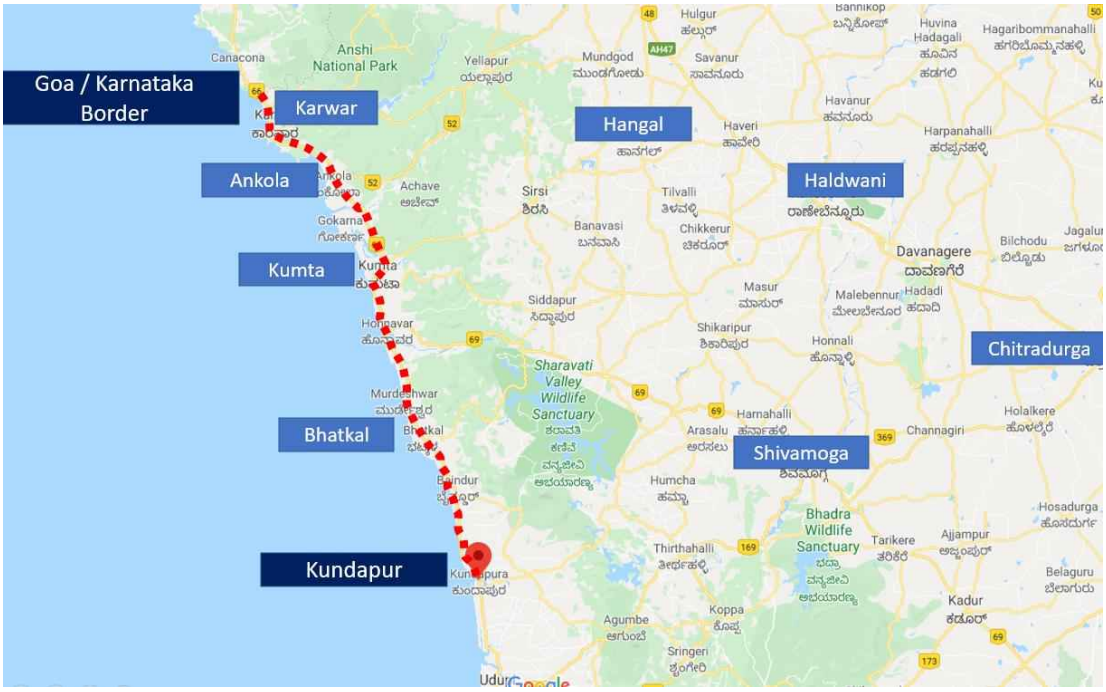

Figure 1-1 : Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged GMD Consultants to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.

This report named as "Traffic Study & Toll Revenue Projection Report" mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth

b) Toll Rate Growth

c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

Project of Four Laning of Goa / Karnataka Border – Kundapur section of NH-17 from Km 93.700 to Km 283.300 is Phase-IV project of NHAI on PPP basis under DBFOT pattern. Ankola, Bhatkal, Kumta and Karwar are the main urban centers on project Corridor. For most of the length of the project road runs parallel to the western coast.
It can be observed that project road forms a main connectivity between Mumbai and southern parts on west coast like Goa, Kanoor, Kocchi, Thiruanantpuram and finally Kanyakumai. Thus, transportation requirements in terms of passenger and goods are largely dependent on this spinal road.

2.2 Project Stretch Description

Project road section of NH-17 (now NH-66) passes through the important places like Karwar, Bhatkal, Ankola. This is the main connectivity between Mumbai and- Goa and Kerala. The Project Road passes through the districts of Karnataka and Goa.

National Highway 66, commonly referred to as NH 66 (Erstwhile NH-17 and a part of NH-47),is a busy National Highway that runs roughly north–south along the western coast of India, parallel to the Western Ghats. It connects Panvel (a city south of Mumbai) to Kanyakumari, passing through the states of Maharashtra, Goa, Karnataka, Kerala and Tamil Nadu
The following are the major centers of areas which have impact on project road in terms of traffic.

Goa: Is a state in India within the coastal region known as the Konkan, in Western India. It is bounded by Maharashtra to the north and Karnataka to the east and south, with the Arabian Sea forming its Western coast. It is India's smallest state by area and the fourth smallest by population. Goa has the highest GDP per capita among all Indian states,[3] that is two and a half times that of the country. It was ranked the 'best placed State' by the "Eleventh Finance Commission" for its infrastructure and ranked on top for the 'best quality of life' in India by the National Commission on Population based on the 12 Indicators.

Kumta: Is a town and a taluk in the Uttara Kannada district of Karnataka, India. Kumta is about 142 km south of Margao and 58 km north of Bhatkal. It is situated 72.7 km from Karwar, the district headquarters. It is one of the important stations along the Konkan Railway line running between Mumbai and Mangalore.

Bhatkal: Is a port town in the Uttara Kannada District of the South Indian state of Karnataka. The town of Bhatkal lies on National Highway 66, which runs between Mumbai and Kochi, and has one of the major railway stations along the Konkan Railway line, which runs between Mumbai and Mangaluru

As the project highway runs along the west coast for most parts of its alignment, there are only radial roads connecting to the project highway which work as feeder network to project road.

Four laning of project highway is higher priority of both central & concerned state governments. Currently highways have bottlenecks at many places which are being improved as a priority. Due to the poor condition of NH-17 and higher number of accidents some part of traffic uses Mumbai -Pune Expressway and then take Bangalore Highway (NH-48) to go to Goa and parts of Karnataka and Kerala. This traffic is expected to come back on the project highway.

There are three operative toll plazas at project stretch. at km 119.00, km 184.00 and km 243.00 respectively. The following figure shows project alignment and toll plaza locations.

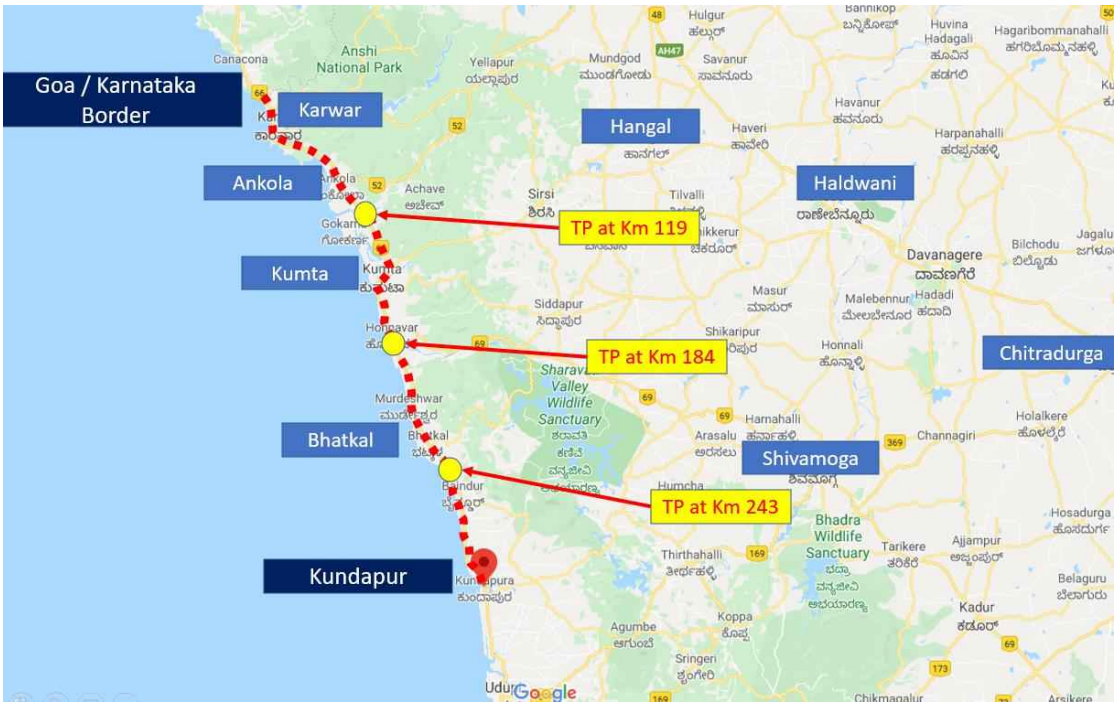

Figure 2-1 : Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

Six laning of project stretch is complete. The following photographs illustrate the project section along the corridor.

Figure 2-2 : Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza locations on Goa Karnataka Border to Kundapur section of NH17 for years 2017-18, 2018-19, 2019-20, 2020-21 ,2021-22,2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project
- Establish base year traffic
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 119 Toll Plaza	AADT for Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024
2	Km 184 Toll Plaza	AADT for Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period from February 2020 to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024
3	Km 243 Toll Plaza	AADT for Period from February 2020	For Period from February 2020 to March	For Period from February 2020 to March	For Period from February 2020 to March	For Period from February 2020 to March

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		to March 2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	2020, 2020-21, 2021-2022, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)

Vehicle Type	
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Minibus /LCV
- Bus
- Truck
- 3 Axle commercial vehicle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Belekeri Toll Plaza at Km 119.00

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- February 20 to March 20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various

vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in ***Table 3-6.***

Table 3-6 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

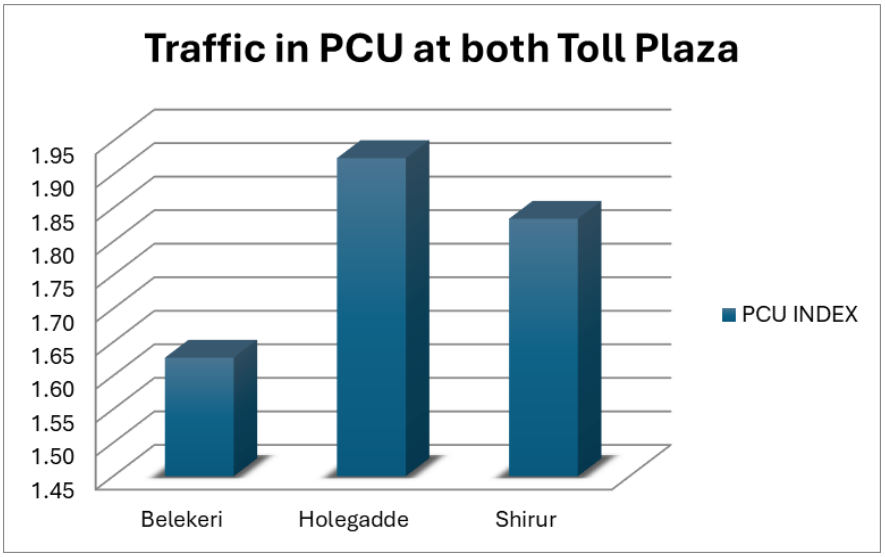
Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-7 : Traffic in PCU at Project Stretch Base Year 2023-24

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2019-20	Belekeri at Km 119.00	2859	5557	1.94
	Holegadde at Km 184.00	5736	12124	2.11
	Shirur at Km 243.00	5679	11986	2.11
	Belekeri at Km 119.00	2821	5150	1.83

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2020-21	Holegadde at Km 184.00	5401	11043	2.04
	Shirur at Km 243.00	5619	11266	2.00
2021-22	Belekeri at Km 119.00	3202	6219	1.94
	Holegadde at Km 184.00	5693	11512	2.02
	Shirur at Km 243.00	6304	12465	1.98
2022-23	Belekeri at Km 119.00	4497	8125	1.81
	Holegadde at Km 184.00	8198	15705	1.92
	Shirur at Km 243.00	9092	16823	1.85
2023-24	Belekeri at Km 119.00	4295	7276	1.69
	Holegadde at Km 184.00	8573	16452	1.92
	Shirur at Km 243.00	9554	17551	1.84
2024-25	Belekeri at Km 119.00	4172	6786	1.63
	Holegadde at Km 184.00	8589	16527	1.92
	Shirur at Km 243.00	9526	17470	1.83

It can be observed from above that project traffic has PCU index from 1.8 to 2.0 which is an indicator of good proportion of commercial traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at three toll plaza locations.



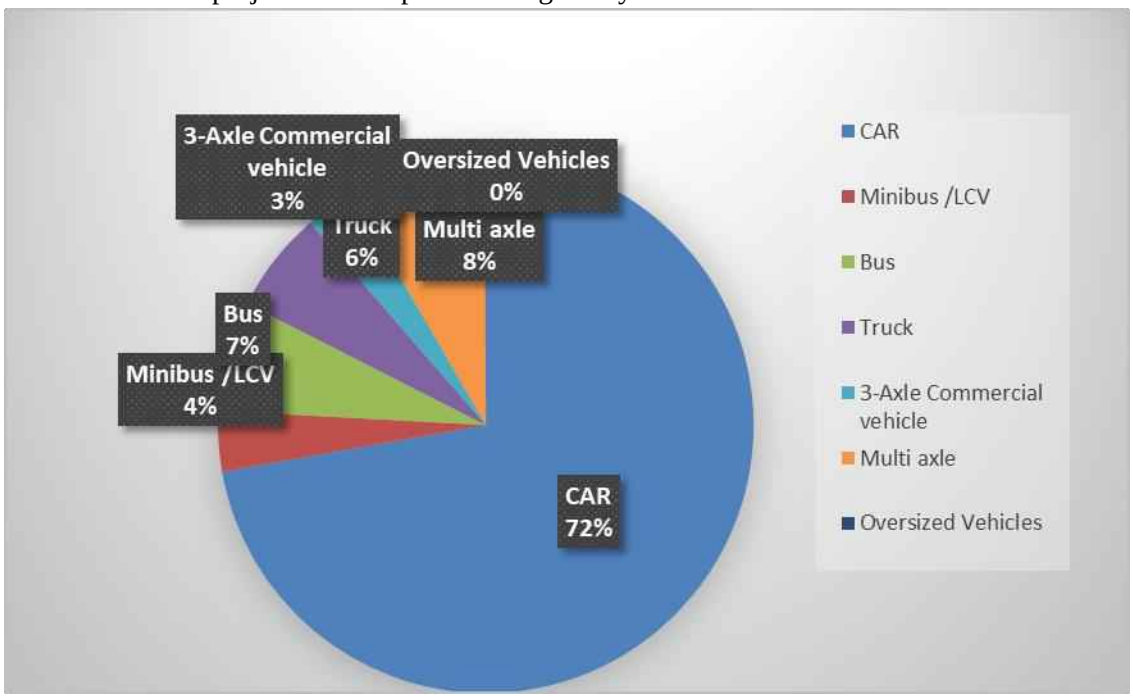


Figure 3-1 : Comparison of PCU Index

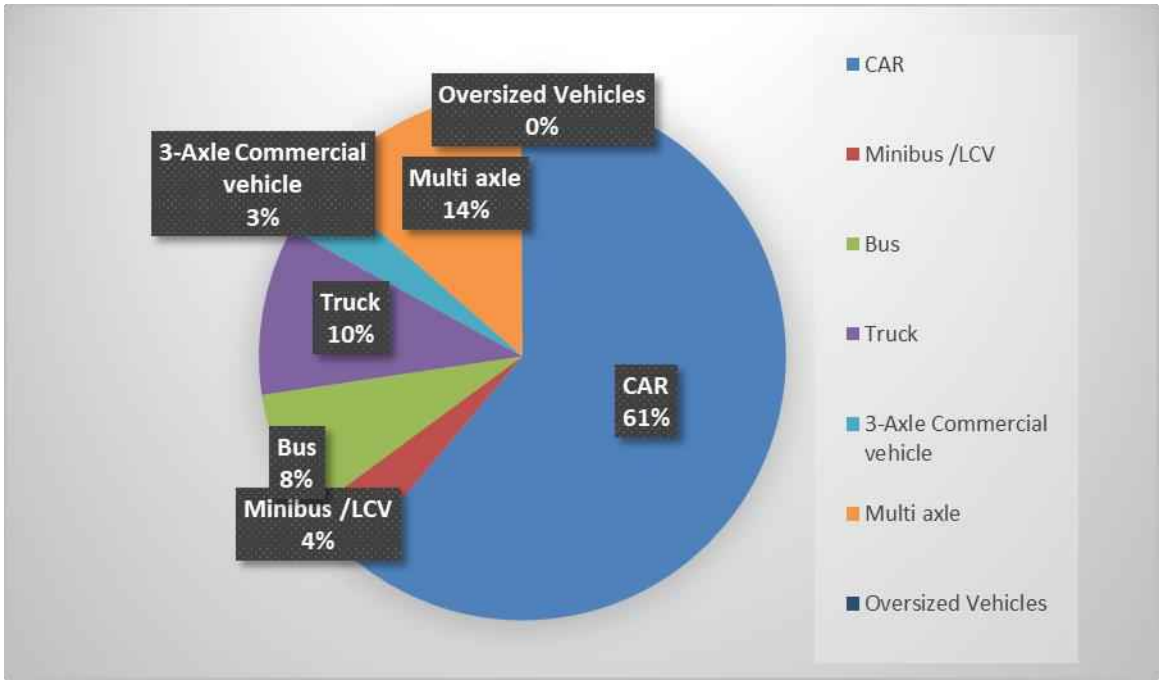
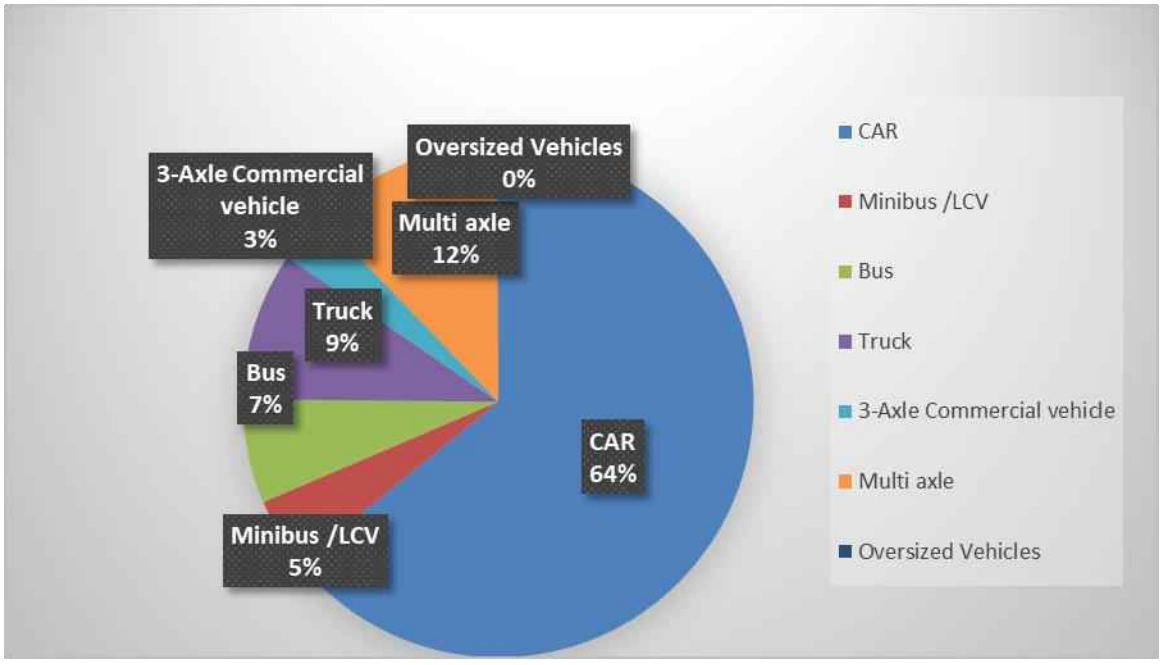


It can be observed that PCU index is consistent at all three plaza locations.

3.4.2 Components of Traffic



As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

Model Split of Tollable Vehicle @ KM 119.000

Model Split of Tollable Vehicle @ KM 184.000

Model Split of Tollable Vehicle @ KM 243.000

It is observed that car traffic forms about 72% of total traffic at toll plaza location 1 while multi axle along with 3 axle commercial vehicles are about 11% of total traffic. Truck / Bus and LCV share about 13% and 4% of traffic volume respectively at toll plaza on 119.000 km.

It is observed that car traffic forms about 61% of total traffic at toll plaza location 2 while multi axle along with 3 axle commercial vehicles are about 17% of total traffic. Truck /

Bus and LCV share about 18% and 4% of traffic volume respectively at toll plaza on 184.000 km.

It is observed that car traffic forms about 64% of total traffic at toll plaza location 3 while multi axle along with 3 axle commercial vehicles are about 15% of total traffic. Truck / Bus and LCV share about 16% and 5% of traffic volume respectively at toll plaza on 243.000 km.

Thus, the project corridor has a good mix of about 60% -70% passenger and 30-40% commercial traffic.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base years 2019-20, 2020-21, 2021-22, 2022-2023, April 2023 to November 2023 & April 2024 to July 2024

Table 3-8 : Journey Type Bifurcation of Traffic at TP-1 KM 119.00

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	2238
2	Return Journey	1748
3	Local Commercial Single Journey	179
4	Monthly Pass Local	2
5	Monthly Pass	5

Table 3-9 : Journey Type Bifurcation of Traffic at TP KM 184.00

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	4940
2	Return Journey	3214
3	Local Commercial Single Journey	423
4	Monthly Pass Local	3

Sr. No	Type	Traffic Volume (Nos.) 2024-25
5	Monthly Pass	8

Table 3-10 : Journey Type Bifurcation of Traffic at TP KM 243.00

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	4957
2	Return Journey	4288
3	Local Commercial Single Journey	263
4	Monthly Pass Local	13
5	Monthly Pass	5

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 54%. Return journey component is 42% and Local Commercial Single Journey is 4% at toll plaza at Km 119.00

The single journey component in total traffic numbers is as high as 58%. Return journey component is 37% and Local Commercial single journey 5% at toll plaza at Km 184.00

The single journey component in total traffic numbers is as high as 52%. Return journey component is 45% and Local Commercial Single Journey is 3% at toll plaza at Km 243.00

It is observed that the project corridor demonstrates a similar pattern of single journey dominated mix of traffic across the entire stretch which is typical of major national highways.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential

- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Project stretch runs on west coast of India. Most of the roads other than NH-17 run radial to NH-17 as a complimentary network. There are large number of stream and rivers falling into Arabian sea on west coast. Hence any parallel road would require many major bridges. This has prevented any parallel road to NH-17. The following figure shows bird's eye view of project corridor.

Figure 4-1 : Project corridor and radial roads.

Still geographically there can be alternate routes to project road between certain pairs of origin and destinations. The following figure shows such routes which are much longer than project road practically cannot be considered as alternate routes.

Figure 4-2 : Alternate route at regional level.

Thus, practically there is no alternate route to the project road between Goa/ Karnataka border and Kundapur. Under these circumstances it is not envisaged that commercial or passenger traffic would switch to alternate roads from the project road. Further with completion of Mumbai Kanyakumari section of road traffic on project road would get a boost in period 2024-2026 when it would be completed.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Goa/ Karnataka Border – Kundapur section of NH-17 has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population

- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, In order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*

EI = *Economic Indicator*

A = *Regression constant*

k = *Elasticity coefficient (Regression coefficient)*

The elasticity for car and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across state of Karnataka. Toll plazas at Km 119.00. Km 184.00 and 243.00 are in the state of Karnataka. Contribution of Goa / Maharashtra is also substantial at stretch. For elasticity calculations, working data from Karnataka and Maharashtra / Goa has been analysed.

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Karnataka State.

Table 5-1 : Per Capita Income Vs Car Karnataka

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	90269	1269430	4.96	6.10		
2013	94382	1420767	4.97	6.15	5%	
2014	101864	1572521	5.01	6.20	8%	
2015	105703	1741831	5.02	6.24	4%	
2016	116819	1916373	5.07	6.28	11%	
2017	131260	2110493	5.12	6.32	12%	7.83%

Regression analysis of same is given in figure below

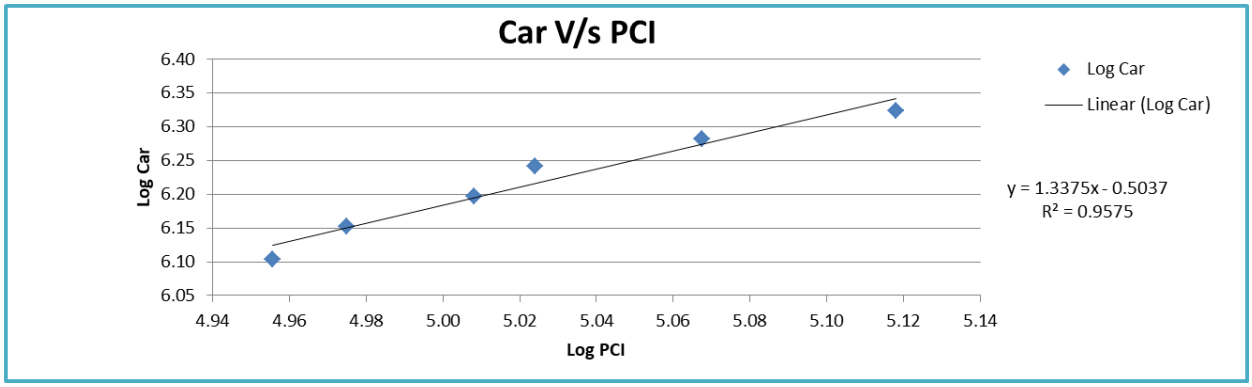


Figure 5-1 : Regression and Elasticity PCI vs. Car – Extrapolation Karnataka

Table 5-2 : Population Vs Bus Karnataka

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	1458545	9513	6.16	3.98		
2013	1466020	9956	6.17	4.00	1%	
2014	1473384	10925	6.17	4.04	1%	
2015	1480636	11224	6.17	4.05	0%	
2016	1487779	11503	6.17	4.06	0%	
2017	1494812	11888	6.17	4.08	0%	0.49%

Regression analysis of same is given in figure below

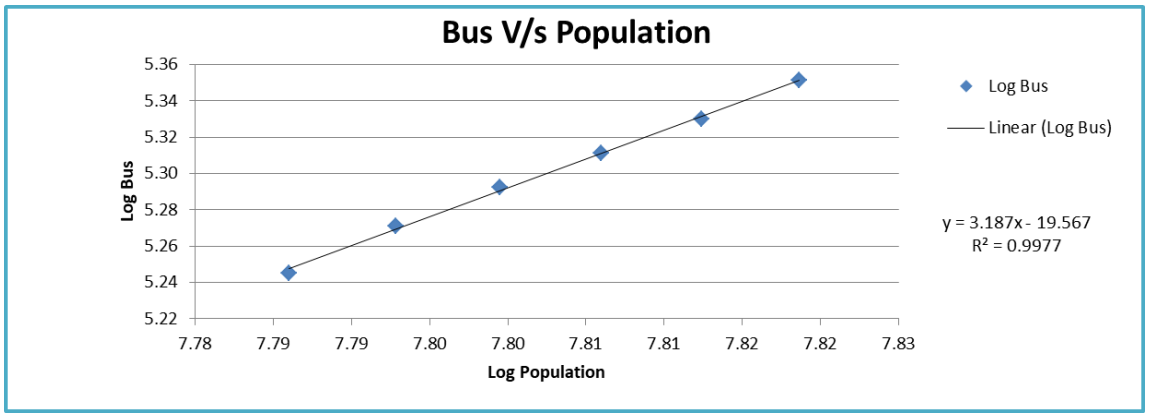

Figure 5-2 : Regression and Elasticity Population vs. Bus – Extrapolation Karnataka

Elasticity of goods traffic has been worked out by regression analysis with NSDP. Following table represents the data and details

Table 5-3 : Goods Traffic Vs NSDP Karnataka

Year	NSDP	LCV	Log NSDP	Log LCV	NSDP Growth	Average Growth
2012	554990	221160	5.74	5.34		
2013	586592	258701	5.77	5.41	6%	
2014	639981	294266	5.81	5.47	9%	
2015	671322	331381	5.83	5.52	5%	
2016	749990	367572	5.88	5.57	12%	7.85%

Following figure depict regression analysis and extrapolation.

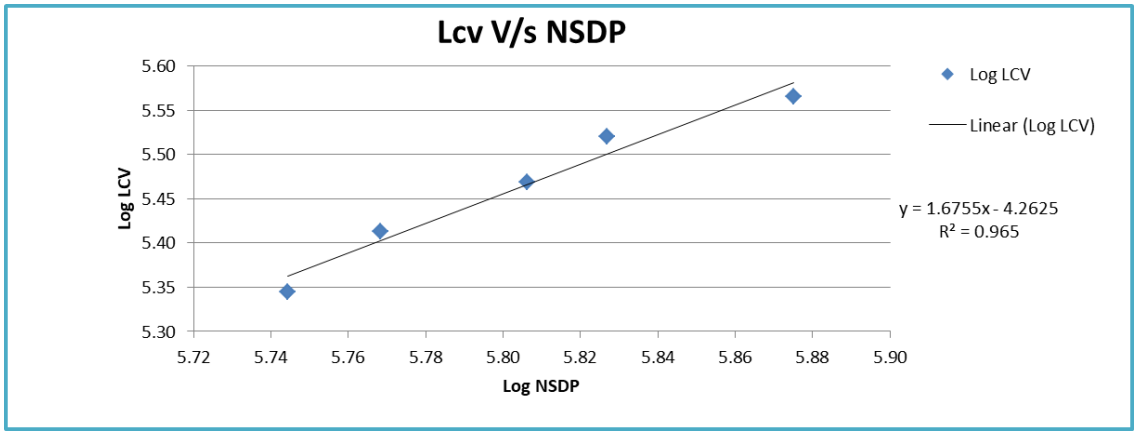

Figure 5-3 : Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Karnataka.

Table 5-4 : Traffic Truck Vs NSDP Karnataka

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	554990	233422	5.74	5.37		
2013	586592	247639	5.77	5.39	6%	
2014	639981	260989	5.81	5.42	9%	
2015	671322	274971	5.83	5.44	5%	
2016	749990	290415	5.88	5.46	12%	
2017	851880	306290	5.93	5.49	14%	9.00%

Following figure depict regression analysis and extrapolation.

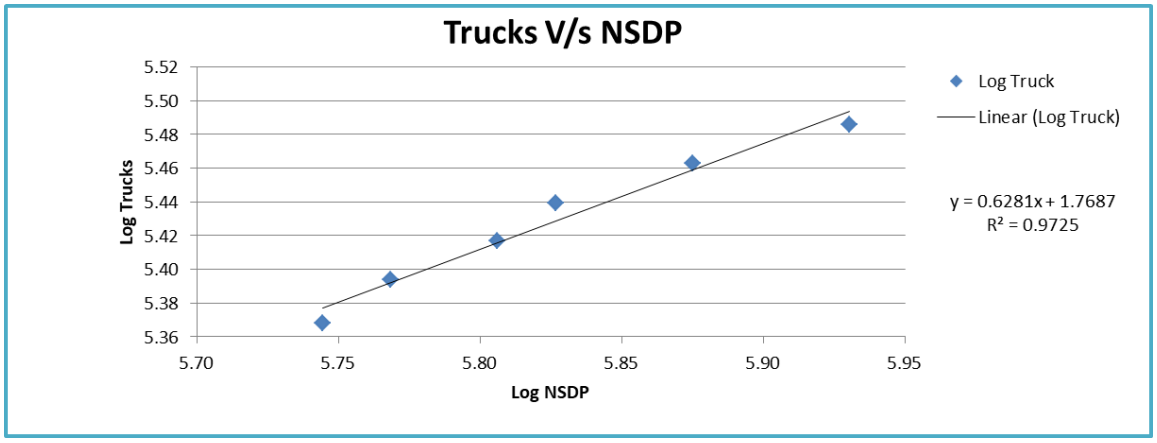

Figure 5-4 : Regression and Elasticity NSDP vs. Truck Traffic - extrapolation Karnataka.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below

Table 5-5 : Summary Regression Analysis Karnataka

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth	Growth Elastic Model
Karnataka	Car/Jeep	PCI	y = 1.3375x + -0.5037	R² = 0.9575	1.3375	7.83%	10.47%
	Bus	Population	y = 3.187x - -19.567	R² = 0.9977	3.1870	1.52%	4.83%
	LCV	NSDP	y = 1.6755x - -4.2625	R² = 0.965	1.6755	7.85%	13.16%
	Truck	NSDP	y = 0.6281x - 1.7687	R² = 0.9725	0.6281	9.00%	5.65%

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Maharashtra State.

Table 5-6 : Per Capita Income Vs Car Maharashtra

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	99564	2307841	5.00	6.36		
2013	103904	2592565	5.02	6.41	4%	
2014	109399	2834847	5.04	6.45	5%	
2015	114746	3113773	5.06	6.49	5%	
2016	122422	3406872	5.09	6.53	7%	
2017	132899	3715744	5.12	6.57	9%	5.96%

Regression analysis of same is given in figure below

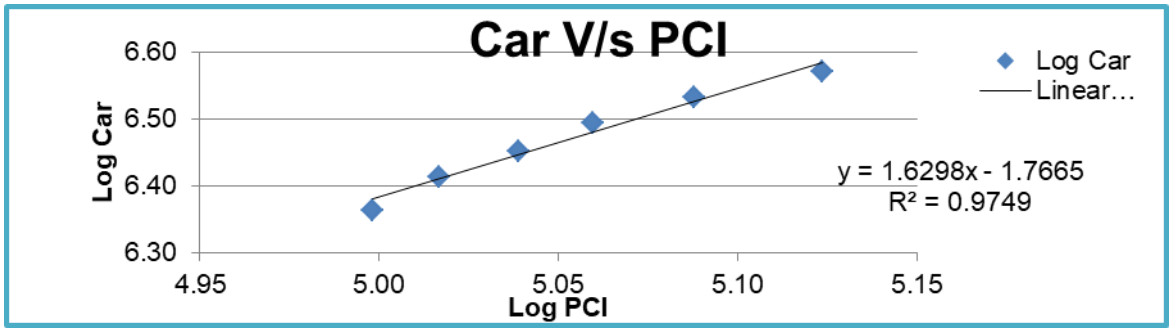

Figure 5-5 : Regression and Elasticity PCI vs. Car – Extrapolation Maharashtra

Table 5-7 : Population Vs Bus Maharashtra

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	112374333	119298	8.05	5.08		
2013	113807248	129535	8.06	5.11	1%	
2014	115229410	140087	8.06	5.15	1%	
2015	116640546	140102	8.07	5.15	1%	
2016	118040394	150427	8.07	5.18	1%	
2017	119428710	160042	8.08	5.20	1%	1.23%

Regression analysis of same is given in figure below

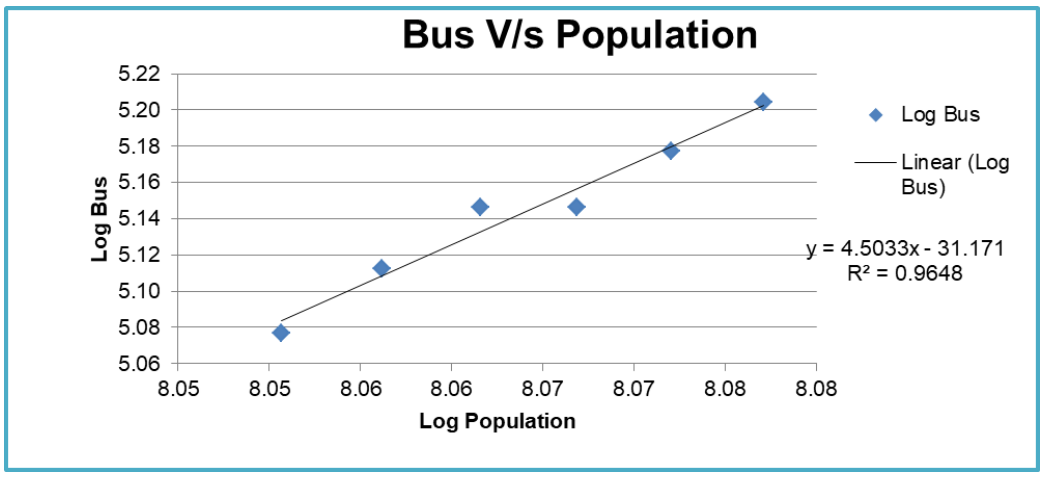

Figure 5-6 : Regression and Elasticity Population vs. Bus – Extrapolation Maharashtra

Elasticity of goods traffic has been worked out by regression analysis with NSDP. Following table represents the data and details.

Table 5-8 : LCV Traffic Vs NSDP Maharashtra

Year	NSDP	LCV	Log NSDP	Log LCV	NSDP Growth	Average Growth (5 Year)
2012	1126595	656407	6.05	5.82		
2013	1189711	739725	6.08	5.87	6%	
2014	1267551	803128	6.10	5.90	7%	
2015	1345341	868632	6.13	5.94	6%	
2016	1452439	927903	6.16	5.97	8%	6.56%

Following figure depict regression analysis and extrapolation.

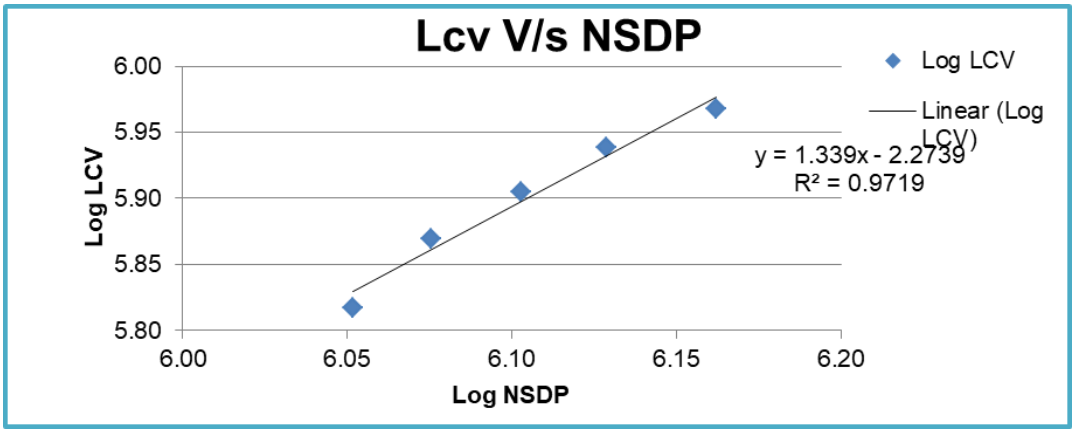

Figure 5-7 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Maharashtra.

Table 5-9 : Trucks Traffic Vs NSDP Maharashtra

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	1126595	411418	6.05	5.61		
2013	1189711	402366	6.08	5.60	6%	
2014	1267551	470128	6.10	5.67	7%	
2015	1345341	491582	6.13	5.69	6%	
2016	1452439	468810	6.16	5.67	8%	
2017	1595514	496439	6.20	5.70	10%	7.22%

Following figure depict regression analysis and extrapolation.

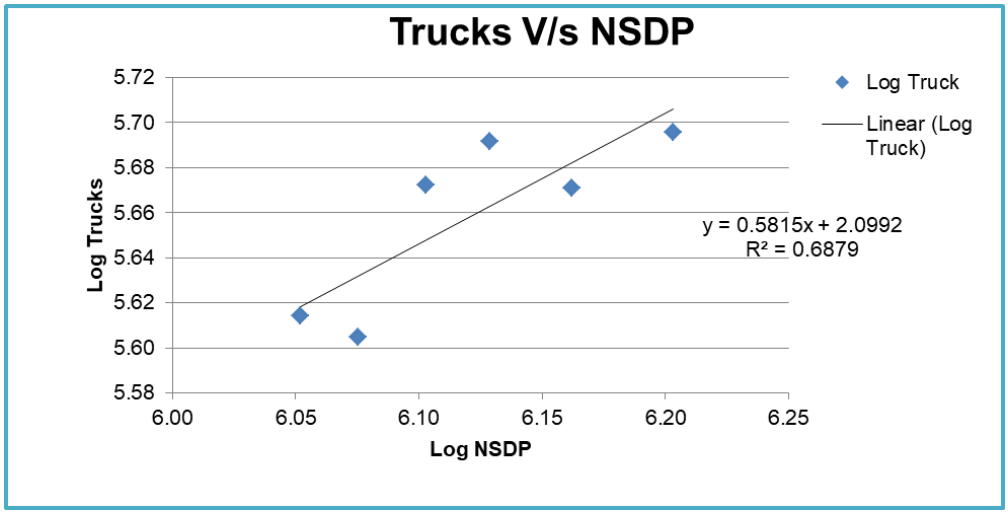

Figure 5-8 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Maharashtra.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below

Table 5-10 : Summary Regression Analysis Maharashtra.

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth	Growth Elastic Model
Maharashtra	Car/Jeep	PCI	y = 1.6298x + -1.7665	R^2 = 0.9749	1.6298	5.96%	9.71%
	Bus	Population	y = 4.5033x - -31.1713	R^2 = 0.9648	4.5033	1.23%	5.52%
	LCV	NSDP	y = 1.339x - -2.2739	R^2 = 0.9719	1.3390	6.56%	8.78%
	Truck	NSDP	y = 0.5815x - 2.0992	R^2 = 0.6879	0.5815	7.22%	4.20%

Economical model for predicting growth is good tool, however other local, regional, national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trend of growth. Project stretch of Goa/ Karnataka Border to Kundapur is under tolling operation with current concessionaire and has only two month of tolling history from February 2020. Further for last two years traffic is impacted by COVID-19 pandemic. Hence sufficient data points to be able to establish a reliable past trend of traffic growth are not available. A minimum of about 5 - 6 years' consistent traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

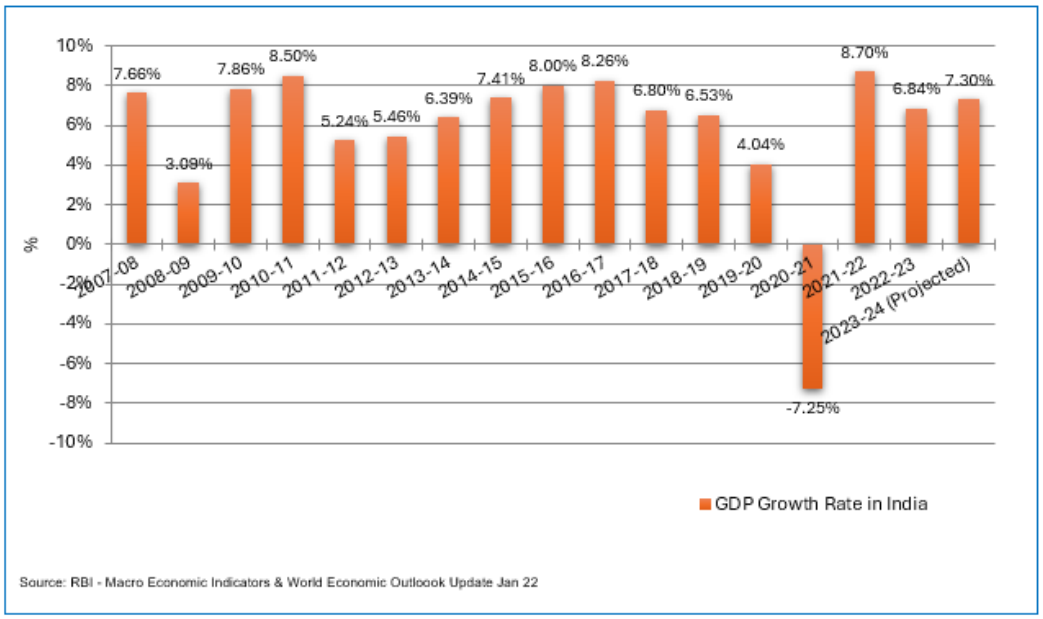

Figure 5-9 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. Government took major policy decision including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honourable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on Make -In- India it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. World Economic Outlook update also has predicted a growth rate of about 7.5 % in year 2022-23.

5.6 Developments along and around the Project Corridor & State

West Coast Ports - West coast is coast of submergence (except Malabar Coast) while east coast is an emergent coast. These imply that sea is deeper in west coast than sea on east coast. So, west coast has favourable conditions for natural harbours. This is the reason that ports on west coast of India contribute more in terms of commercial cargo traffic. Expansion of JNPT port may further boost cargo traffic from Kerala, Karnataka and Parts of Tamilnaduon project corridor.

Mangalore - The coastal city of Mangalore is one of the upcoming and fastest developing metropolises of Karnataka. While Mangalore embeds itself in the conventional city affairs, what sets it apart from others is the amalgamation of its heritage, history, culture, food and scenic coastal lines.

Known for its architectural marvels, temples, churches and pristine beaches, the city attracts tourists throughout the year. Some of the popular tourist spots include Mangaladevi temple, St. Aloysius church, Pilikula Nisarga Dhama (a biological park and a picnic spot), Panambur beach and Surathkal beach. Its proximity to Agumbe, Coorg, Kaup beach and temple town Udupi also makes for a quick getaway for city folks.

Mangalore is the largest exporter of coffee in India. One of the flourishing industries in the city is the automobile leaf spring business. Petrochemicals, iron-ore, fertilizers and agricultural processing are some other thriving industries.

In addition, three special economic zones (SEZs) are being set up in the city with IT companies such as TCS, Wipro and Lotus estimated to invest up to Rs.30 billion, creating 67,000 jobs over the next three years. Mangalore is also one of the top five emerging cities of India for outsourcing, according to Alsbridge.

The city is witnessing aggressive industrial development, aiding in its economic growth. Growth of Mangalore as tourism and Industrial hub would have positive impact on growth of traffic on project road

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as under. Rate of growth is moderated in light of overall regional trend. Growth of Multi-Axle is kept slightly higher as trend of technological advances in logistic industry favours multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, rate of growth diminishes. Same growth rate is not sustainable for long. Traffic growth is suitably stepped down for future years.
Growth rates are recommended for three scenarios for sensitivity analysis namely Optimistic, Pessimistic and Most Likely with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Project Stretch

Table 5-11 : Recommended Growth Rates Optimistic

Category / Year	2024-2025	2026-2030	2031-2035	2036-2040	2041-2045	2046-2050
Car/Jeep/Van	10.02%	9.29%	8.50%	8.14%	8.03%	7.57%
Bus	5.59%	5.28%	4.97%	4.90%	4.75%	4.52%
LCV	5.80%	4.95%	4.12%	3.72%	3.70%	3.28%
2- Axle	5.71%	5.04%	4.36%	4.04%	4.02%	3.68%
3 - Axle	6.04%	5.32%	4.60%	4.26%	4.24%	3.88%
4 to 6 Axle	7.02%	6.17%	5.33%	4.93%	4.90%	4.47%
7 and Above Axle	7.02%	6.17%	5.33%	4.93%	4.90%	4.47%

Table 5-12 : Recommended Growth Rates Pessimistic

Category / Year	2024-2025	2026-2030	2031-2035	2036-2040	2041-2045	2046-2050
Car/Jeep/Van	9.52%	8.79%	8.00%	7.64%	7.53%	7.07%
Bus	5.09%	4.78%	4.47%	4.40%	4.25%	4.02%
LCV	5.30%	4.45%	3.62%	3.22%	3.20%	2.78%
2- Axle	5.21%	4.54%	3.86%	3.54%	3.52%	3.18%
3 - Axle	5.54%	4.82%	4.10%	3.76%	3.74%	3.38%
4 to6 Axle	6.52%	5.67%	4.83%	4.43%	4.40%	3.97%
7 and Above Axle	6.52%	5.67%	4.83%	4.43%	4.40%	3.97%

Table 5-13 : Recommended Growth Rates Most Likely

Category / Year	2024-2025	2026-2030	2031-2035	2036-2040	2041-2045	2046-2050
Car/Jeep/Van	9.77%	9.04%	8.25%	7.89%	7.78%	7.32%
Bus	5.34%	5.03%	4.72%	4.65%	4.50%	4.27%
LCV	5.34%	5.03%	4.72%	4.65%	4.50%	4.27%
2- Axle	5.55%	4.70%	3.87%	3.47%	3.45%	3.03%
3 - Axle	5.46%	4.79%	4.11%	3.79%	3.77%	3.43%
4 to 6 Axle	5.79%	5.07%	4.35%	4.01%	3.99%	3.63%
7 and Above Axle	6.77%	5.92%	5.08%	4.68%	4.65%	4.22%

Project road is part of planned Mumbai- Kochi Economic Corridor under Bharatmala Pariyojna. At present various sections of the corridor are under the advanced stage of construction and planning. Out of total about 1300 km of total length of corridor approximately 900 km is either completed or in under construction. Balance 400 km is to be awarded soon under Bharatmala Pariyojna. It is expected that a substantial part of Mumbai – Kochi Economic Corridor would be operational by year 2024-25. This would

be shorter than the current preferred route of Bangalore highway (NH-48) by about 100 km. In such case it is expected that in the horizon year 2024-25 certain part of traffic between Gujarat / Mumbai and Kochi / Kanyakumari would starts using project corridor as most preferred route. Further development of Tuticorin – Kochi economic corridor and ports at Mangalore, Goa and Kochi would also boost traffic on project corridor by year say 2024-25. Same has been considered while taking additional growth of traffic as discussed above.

Traffic and revenue have been worked out on the basis of the above growths and some is presented in subsequent chapter of report.

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza 1- 119 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)
2024-25	3012	152	277	256	126	347	2	4172	6786
2025-26	3293	160	292	269	133	368	2	4517	7280
2026-27	3598	168	307	283	140	391	2	4889	7809
2027-28	3932	176	324	298	147	415	2	5294	8380
2028-29	4296	184	341	313	154	441	2	5731	8990
2029-30	4695	193	359	329	162	468	2	6208	9650
2030-31	5094	201	377	344	169	492	2	6679	10289
2031-32	5526	209	396	359	176	518	2	7186	10973

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be

modified subject to calculation stipulated therein. For Goa/ Karnataka - Kundarpur project, the Target Date and Target Traffic are defined as under:

Target Date - 1st April 2022

Target Traffic - 21307 in PCU

Pessimistic Case

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2022	21307	11857	-44%	67%	20%	28	5.6

PCUs as per Pessimistic cases have been considered for arriving at the concession Period end date.

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

The fee schedule in the CA of Goa / Karnataka Border- Kundapur section of NH-17 is based on the old toll policy. As per the Toll Notification (Schedule - G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent users monthly pass would be issued for 50 trips in month at 2/3d rate..
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travellers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Passenger Car Jeep Van I - Rs. 275 per month as per fee notification
    b) Local commercial vehicles single at 50% rate for normal single trip

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

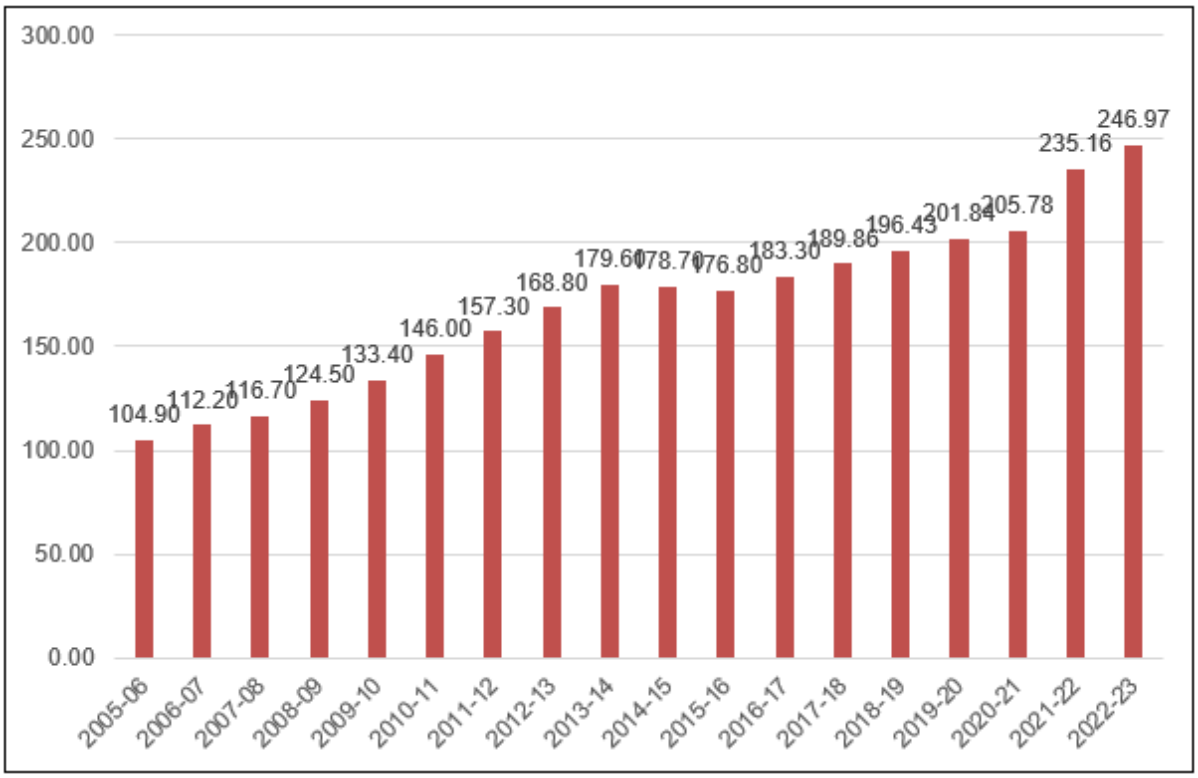

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Oversized Vehicles (7 or more Axles)	4.20

There is no bypass or structure to be factored in for rates calculations.

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

The toll rates have been projected on the basis of existing project length received vide PCOD- III certificate.

Thus, worked out rates for various categories of vehicle and discounts are given as under

Table 7-2 : Toll Rates for Single Journey @ Km 119.000

Year	Car	Minibus /LCV	Bus	Truck	3-Axle	Multi axle	Oversized Vehicles

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2047-48 starting from the year 2024-25 are shown in tables below.

Table 7-12 : Toll Revenue Optimistic Scenario

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Goa/ Karnataka to Kundapur section of NH-17 in state of Karnataka from km 93.70.000 to km 183.300 is four lane. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the busy and prominent national highway NH-17 which is main link for traffic on west coast to from Rajasthan, Gujarat, Maharashtra to Kerala. There are large number of townships, industrial corridors and other business establishment coming up along project corridor. As Indian economy is poised to grow at 6%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give positive impact to traffic flow on project. The following can be considered as major outcomes of the study

a) There is good amount of tollable traffic running on project

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy

c) Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road

Based on above it can be considered a stable healthy project from traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under NHDP Phase V. Under Phase V NHAI has planned to convert 6,500 km of existing 4-lane National Highways into 6-lane National Highway. Sections envisaged under 6-laning comprise the Golden Quadrilateral section (5,700 km) and some other sections which are 800 km in length.

The project under consideration, Six Laning of **Kishangarh** to **Gulabpura** section of NH-79A & NH-79 (length 90.00km) is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. *M/s Kishangarh Gulabpura Tollway Ltd.* (Concessionaire) has been awarded the Project for a concession period of 20 years starting from 21st February 2018. The Project has been commissioned and is currently in the operation / maintenance phase. Six laning of project has also been completed in July 2022.

Length of project road is 90.00 Kms. The project road is section of NH-79A & 79 A, which connects Ajmer to Ghat Bilod. Project section of NH-79 passes through the district of Bhiwara and Ajmer.

Project road alignment passes through the small towns of Shreenagar, Nasirabad, Jharwasa, Bandanwara and Bijainagar (Vijay Nagar). The following figure shows alignment of the project road section from Kishangarh to Gulabpura.

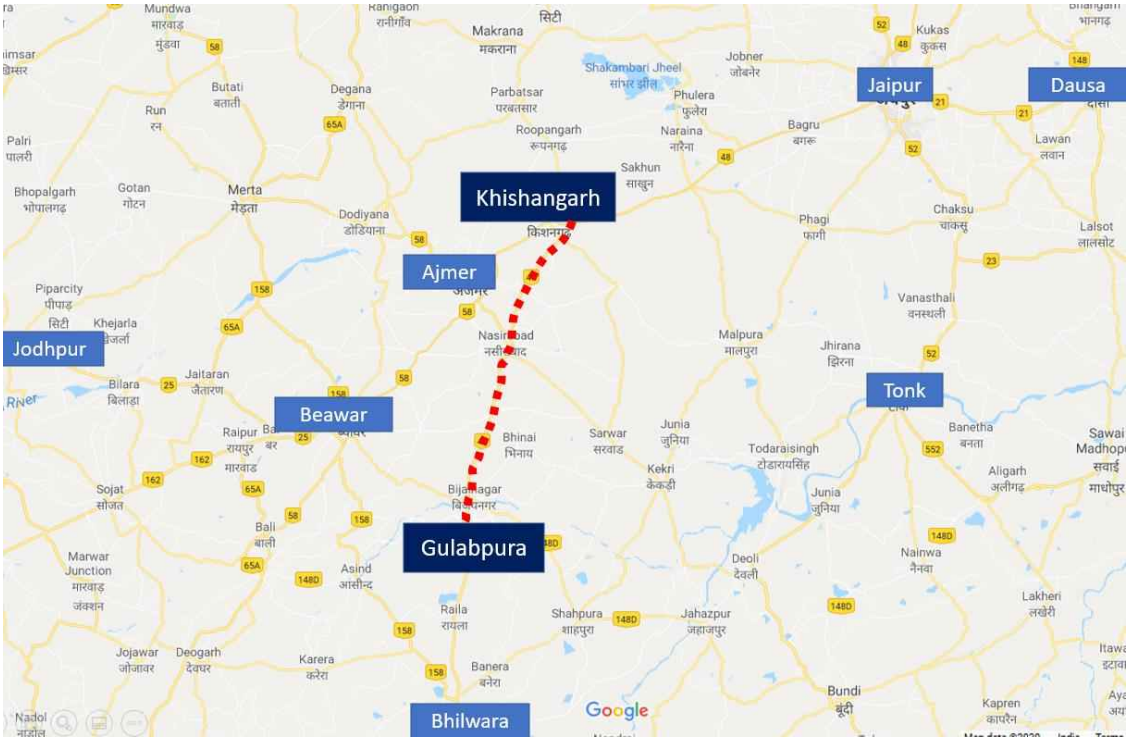

Figure 1-1 : Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged *GMD Consultants* to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.
This report named as **"Traffic Study & *Toll Revenue Projection Report*"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

National Highway 79 (NH 79) is an important link for traffic connecting Delhi, Jaipur to Udaipur, Chittorgarh and down south. The project road is the section of the former NH-79A &NH-79 which has now been re-designated as NH-48. The project road section takes off at Kishangarh and ends at Gulabpura, both in the state of Rajasthan. The NH-79A was the section from Kishangarh to Nasirabad and part of NH-79 (Ajmer to Ghata Billod) was the remaining section from Nasirabad to Gulabpura

It is one of the major north-south road connectivity for the traffic from northern states of Haryana, Punjab and Delhi to Industrial and tourist areas of Rajasthan like Jaipur, Chittorgarh, Udaipur and then to Dahod, Ratlam and other parts of Madhya Pradesh.

After renumbering of all national highways by National Highway Authority of India in 2010, the current NH 48 was formed by merging the old NH 8 (Delhi-Mumbai section) and NH 4 (Mumbai-Chennai). National Highway 48 starts at Delhi and terminates at Chennai and goes through Jaipur, Udaipur, Vadodara, Mumbai, Pune and Bengaluru, traversing through six states of India. It has a total length of 2807 km (1744 miles)

2.2 Project Stretch Description

Section of NH-79 from Kishangarh to Gulabpura is part of major transportation link in the area connecting industrial / tourist cities of Jaipur-, Bhilwara, Chittorgarh and Udaipur. Project stretch would be faster connectivity to Udaipur from Jaipur once six laning is complete.

Major mining industries of marble, Zink, felspar, quarts of Udaipur and textile industry of Bhiwara provide are major contributor of commercial traffic on project corridor. Additionally, Jaipur, Ajmer, Udaipur, Chittorgarh and Bhilwara major tourist centers of India. This adds substantial value for passenger traffic on the project corridor section.

Like other parts of India rapid ribbon development is happening around these cities on project highway. This also contributes to sustainable traffic growth.

There is one operative toll plaza at project stretch at Bandanwara at km 61.020. The following figure shows project alignment and toll plaza locations.

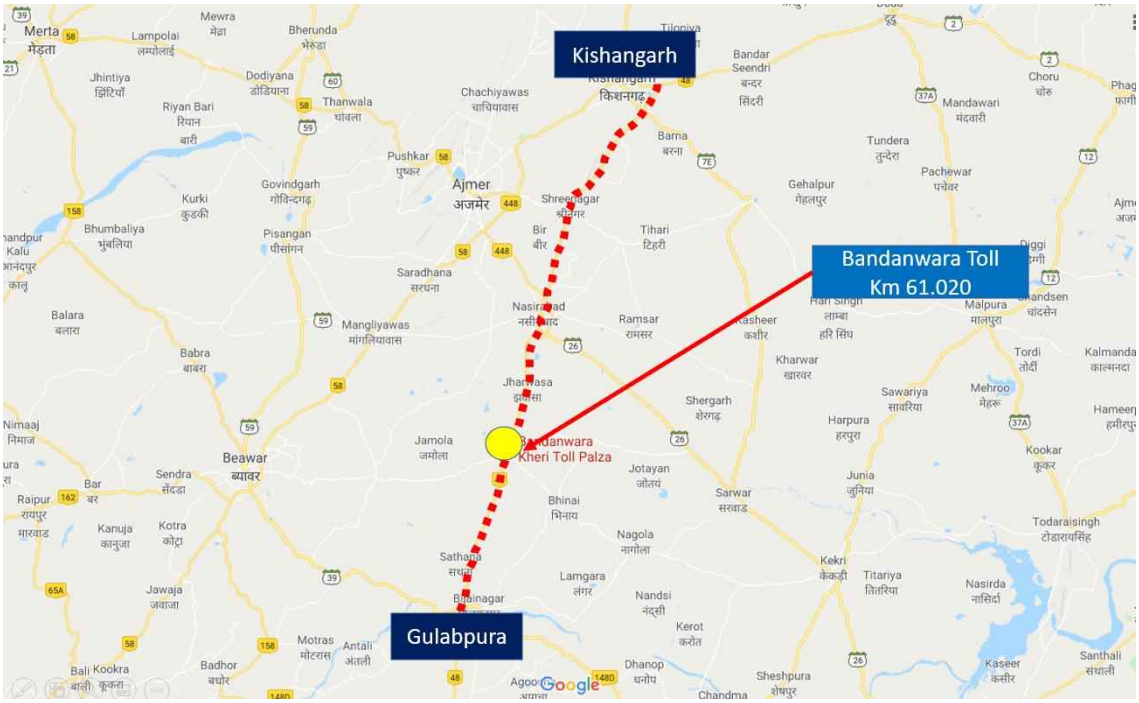

Figure 2-1 : Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

Six laning of project stretch is in progress and will be completed soon. The following photographs illustrate the project section along the corridor.

Figure 2-2 : Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza location on Kishangarh – Gulabpura section of NH-79 for year 2017-18, 2018-19, 2019-20, 2020-21 ,2021-22,2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 61.020 Toll Plaza at Bandanwara	AADT for Year 2018-19, 2019-2020 ,2020-2021, 2021-2022, 2022-2023, Eight	For Year 2018-19, 2019-2020 ,2020-2021, 2021-2022, 2022-2023,	For Year 2018-19, 2019-2020 ,2020-2021, 2021-2022, 2022-2023,	For Year 2018-19, 2019-2020 ,2020-2021, 2021-2022, 2022-2023, Eight	For Year 2018-19, 2019-2020 ,2020-2021, 2021-2022, 2022-2023, Eight

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		month from April 2023 to November 2023 & Four month from April 2024 to July 2024	Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	month from April 2023 to November 2023 & Four month from April 2024 to July 2024	month from April 2023 to November 2023 & Four month from April 2024 to July 2024

3.2 Classified traffic volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Min Bus /LCV
- Truck / Bus
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Bandanwara Toll Plaza at Km 61.020

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25
1	Car	2572	448	3827	5400	6428	6747

Total		**12003**	**2212**	**12707**	**16046**	**18770**	**17695**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in ***Table 3-4***.

Table 3-4 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-5 : Traffic in PCU at Project Stretch Base Year 2019-20, 2020-21, 2021-22, 2022-23,2023-24 & 2024-25

Toll Plaza Location (Km)	Year	Traffic No	PCU	PCU Index
Bandanwara 61.020	**2019-20**	12003	36011	3.00
	2020-21	2212	6478	2.93
	2021-22	12707	36374	2.86
	2022-23	16046	43739	2.73
	2023-24	18770	50940	2.71
	2024-25	17695	46739	2.64

It can be observed from above that project traffic has PCU index is near by 3 which is an indicator of very high proportion of commercial traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at four toll plaza locations.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

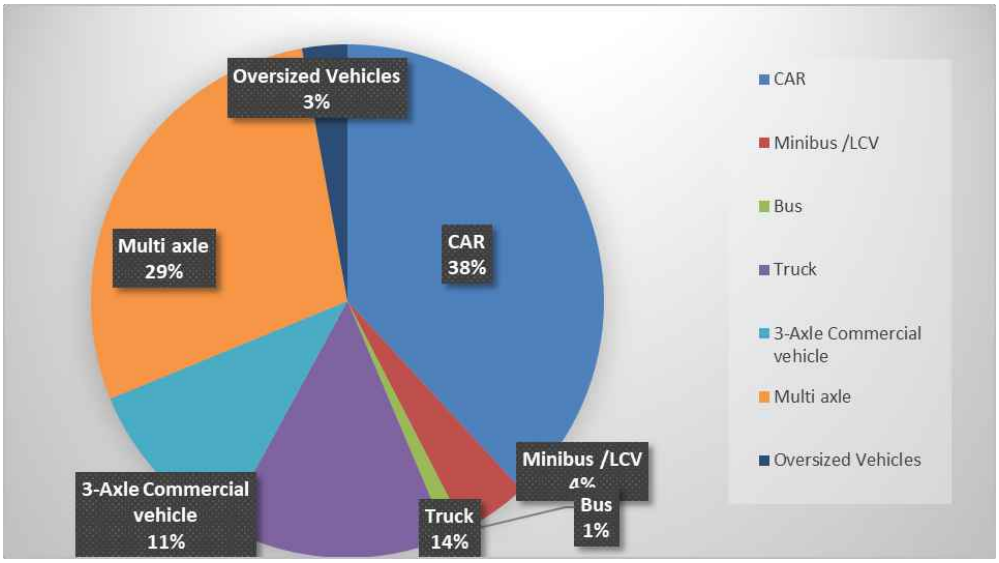

Figure 3-1 : Model Split of Tollable Vehicle

It is observed that car traffic forms about 38% of total traffic at toll plaza locations while multi axle commercial vehicles are about 43% of total traffic. Truck / Bus and LCV share about 15% and 4% of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-6 : Journey Type Bifurcation of Traffic at Bandanwara TP KM 61.020

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	13528
2	Return Journey	3509
3	Local Commercial Single Journey	641
4	Monthly Pass Local	12
5	Monthly Pass	5

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 76%. Return journey component is 20%. The number of Local Commercial Single Journey is 4% and Monthly Pass Local 0% at Bandanwara toll plaza.

It is observed that the project corridor demonstrates pattern of single journey dominated mix of traffic at stretch which is typical of major national highways with high component of long-distance traffic.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Project stretch has toll application history from last few years, and it can be assumed that project traffic is settled. At the local level there is no potential competing route bypassing toll plaza between. At regional level, there can be two alternates for Udaipur traffic after Kishangarh. One via project road (Kishangarh – Bhiwara- Chittorgarh- Udaipur) and one via Ajmer, Beawer and Rajsamand.
The following maps show these routes in relation to project stretch at regional level.

Figure 4-1 : Alternate route at regional level.

It can be observed that the project highway forms one of the main spines of the corridor between Kishangarh / Jaipur and Chittorgarh. Traffic on project road is now settled and it can be assumed as dedicated traffic on project road for logistic obligations.

At regional level for Udaipur traffic alternate route is faster and traffic is already using this alternate. With six laning now nearing completion, the project stretch would become slightly more attractive due to the improved level of service. In such a case further diversion of traffic from the project road is not envisaged.

The following table provides summary of analysis of alternate route/ roads discussed above.

Table 4-1 : Competing Roads Details

Sr. No	Route Details	Designation	Length (Km)	Avg. Speed (KMPH)	Time Taken (Min)	Observations
Regional Level						
1	Jaipur – Ajmer- Udaipur	Alternate Route	395	61	6 Hr 23 Min	At present alternate route via Ajmer is a bit faster but after completion of six laning level of service would increase at project road as well
	Jaipur- Bhilwara - Chittorgarh- Udaipur	Project Road	398	51	6 Hr 58 Min	

It may be noted that since the project highway has already been commissioned and has a tolling history, the current traffic traversing the project corridor already factors in traffic diversion (if any) that may have taken place. Further after completion of six laning, level of service would improve on

project corridor, and this would create favorable conditions for traffic. Under these circumstances it is not envisaged that commercial or passenger traffic would switch to alternate roads from the project road. It is expected that there would be some additional traffic on project corridor once six lane is completed due to improvement in level of service.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Kishangarh to Gulabpur section of NH-79 has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*

EI = *Economic Indicator*

A = *Regression constant*

k = *Elasticity coefficient (Regression coefficient)*

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across the state of Rajasthan. Toll plaza at Bandanwara is in the state of Rajasthan but it has influence of Gujarat also. For elasticity calculations, working data from Rajasthan and Gujarat has been analyzed.

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-1 : Per Capita Income Vs Car Rajasthan

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	57192	591069	4.76	5.77		
2013	58441	659542	4.77	5.82	2%	
2014	61053	733916	4.79	5.87	4%	
2015	64496	814079	4.81	5.91	6%	
2016	68565	899307	4.84	5.95	6%	
2017	71394	988391	4.85	5.99	4%	4.55%

Regression analysis of same is given in figure below.

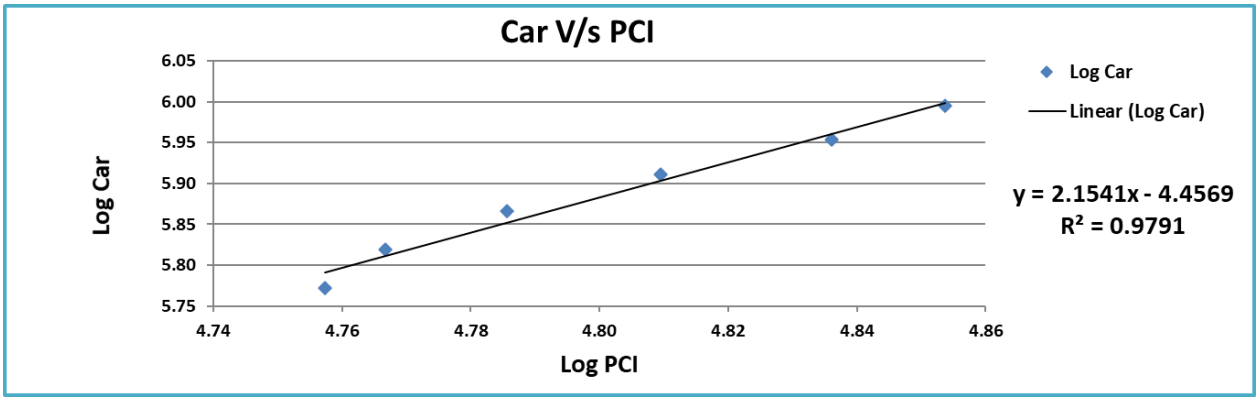

Figure 5-1 : Regression and Elasticity PCI vs. Car – Extrapolation Rajasthan

Table 5-2 : Population Vs Bus Rajasthan

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	68548437	83345	7.84	4.92		
2013	69783885	88616	7.84	4.95	2%	
2014	71016445	93892	7.85	4.97	2%	
2015	72245688	97650	7.86	4.99	2%	
2016	73471198	102818	7.87	5.01	2%	
2017	74692571	108680	7.87	5.04	2%	1.73%

Regression analysis of same is given in figure below.

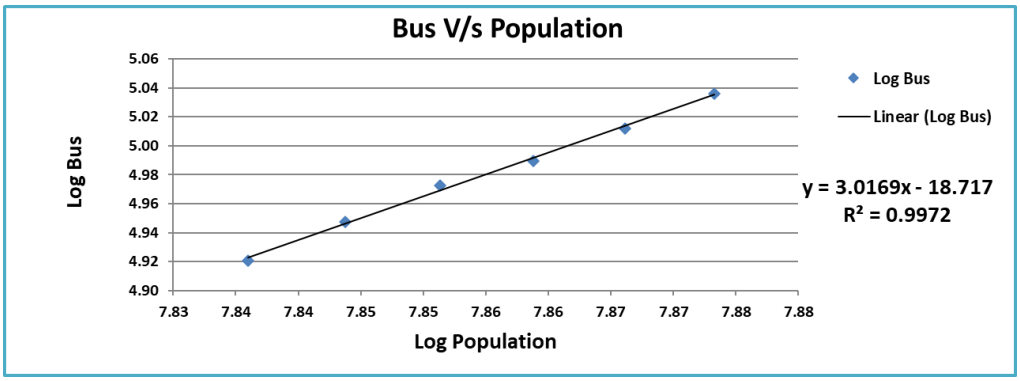

Figure 5-2 : Regression and Elasticity Population vs. Bus – Extrapolation Rajasthan

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : LCV Traffic Vs NSDP Rajasthan

Year	NSDP	LCV	Log NDSP	Log LCV	NSDP Growth	Average Growth
2012	395331	69509	5.60	4.84		
2013	409802	76396	5.61	4.88	4%	
2014	434292	33379	5.64	4.52	6%	
2015	465408	91787	5.67	4.96	7%	
2016	501922	99763	5.70	5.00	8%	6.16%

The following figure depicts regression analysis and extrapolation.

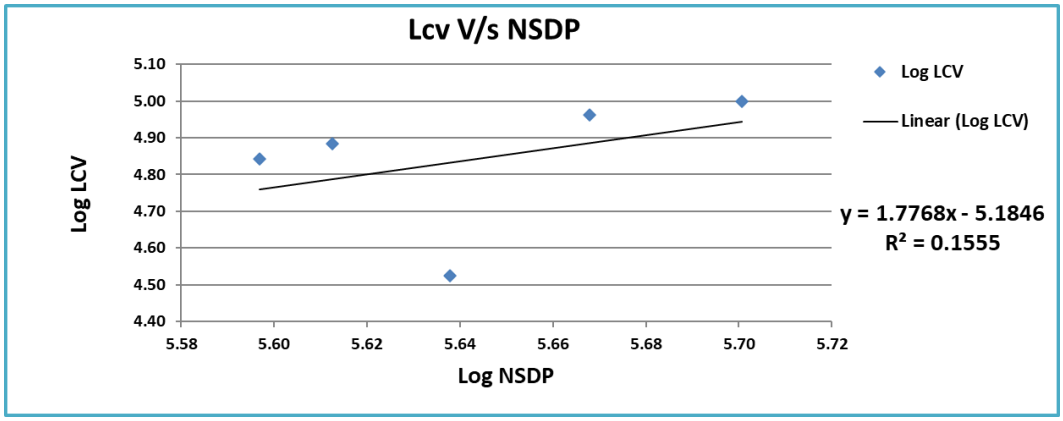

Figure 5-3 : Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Rajasthan.

The following figure depicts regression analysis and extrapolation.

Table 5-4 : Goods Traffic Vs NSDP Rajasthan

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth
2012	395331	362028	5.60	5.56		
2013	409802	401983	5.61	5.60	4%	
2014	434292	434379	5.64	5.64	6%	
2015	465408	472365	5.67	5.67	7%	
2016	501922	517604	5.70	5.71	8%	
2017	530172	561158	5.72	5.75	6%	6.06%

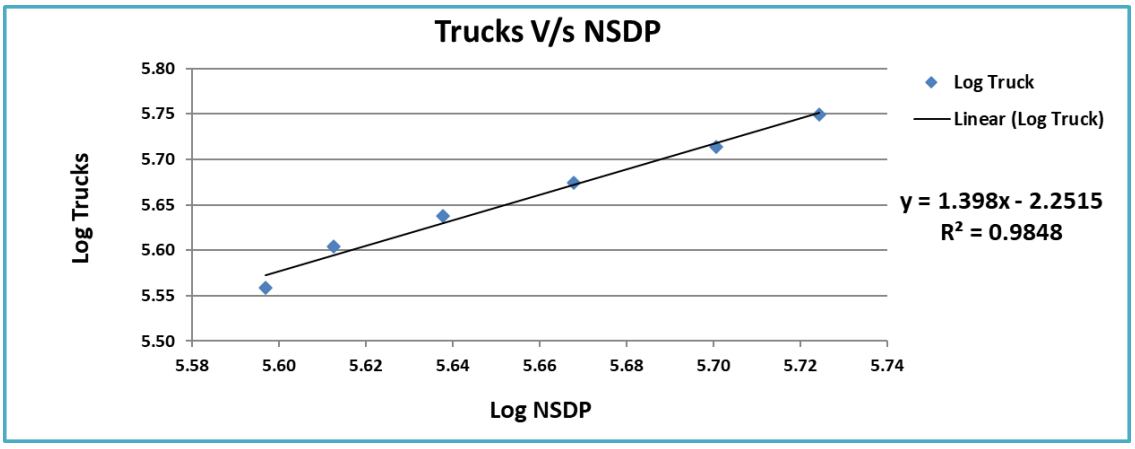

Figure 5-4 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Rajasthan.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-5 : Summary Regression Analysis Rajasthan

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Rajasthan	Car/Jeep	PCI	y = 2.1541x + -4.4569	R² = 0.9791	2.1541	4.55%	9.79%	Good Regression
	Bus	Population	y = 3.0169x - -18.7174	R² = 0.9972	3.0169	1.73%	5.22%	Good Regression
	LCV	NSDP	y = 1.7768x - -5.1846	R² = 0.1555	1.7768	6.16%	10.95%	Poor Regression
	Truck	NSDP	y = 1.398x - -2.2515	R² = 0.9848	1.3980	6.06%	8.46%	Good Regression

Table 5-6 : Per Capita Income Vs Car Gujarat

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	87481	1411898	4.94	6.15		
2013	96683	1602129	4.99	6.20	11%	
2014	102589	1771298	5.01	6.25	6%	
2015	111370	2008748	5.05	6.30	9%	
2016	120683	2260084	5.08	6.35	8%	
2017	129738	2527537	5.11	6.40	8%	8.21%

Regression analysis of same is given in figure below.

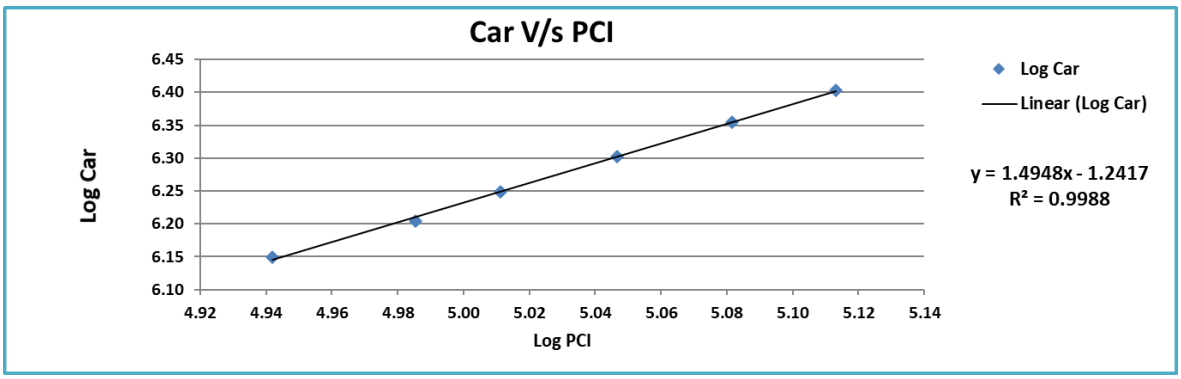

Figure 5-5 : Regression and Elasticity PCI vs. Car – Extrapolation Gujarat

Table 5-7 : Population Vs Bus Gujarat

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	60439692	67546	7.78	4.83		
2013	61563037	70615	7.79	4.85	2%	
2014	62684375	72998	7.80	4.86	2%	
2015	63803304	76435	7.80	4.88	2%	
2016	64919427	82734	7.81	4.92	2%	
2017	66032362	74855	7.82	4.87	2%	1.79%

Regression analysis of same is given in figure below.

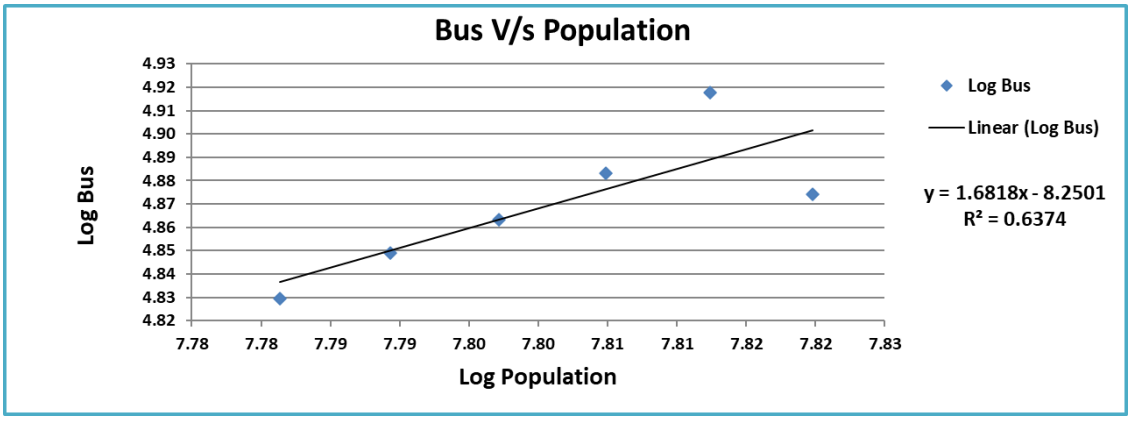

Figure 5-6 : Regression and Elasticity Population vs. Bus – Extrapolation Gujarat

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-8 : LCV Traffic Vs NSDP Gujarat

Year	NSDP	LCV	Log NSDP	Log LCV	NSDP Growth	Average Growth
2012	532809	448958	5.73	5.65		
2013	596659	499277	5.78	5.70	12%	
2014	641489	542918	5.81	5.73	8%	
2015	705629	589984	5.85	5.77	10%	
2016	774775	633599	5.89	5.80	10%	9.82%

The following figure depicts regression analysis and extrapolation.

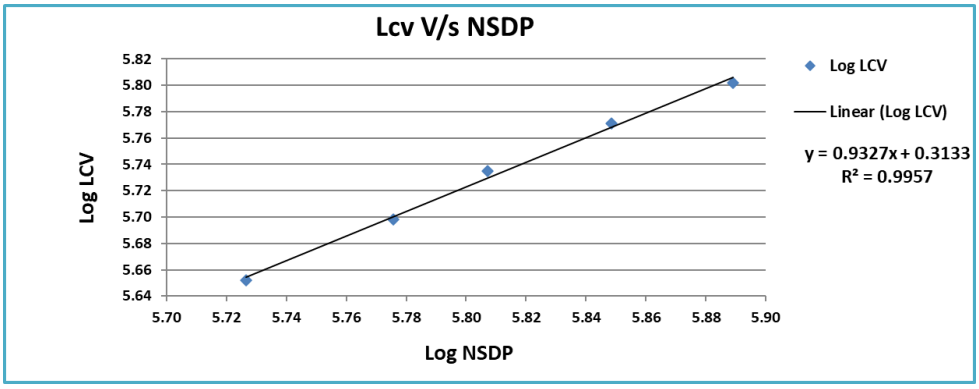

Figure 5-7 : Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Gujarat.

The following figure depicts regression analysis and extrapolation.

Table 5-9 : Goods Traffic Vs NSDP Gujarat

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth
2012	532809	301533	5.73	5.48		
2013	596659	319207	5.78	5.50	12%	
2014	641489	332185	5.81	5.52	8%	
2015	705629	352225	5.85	5.55	10%	
2016	774775	375265	5.89	5.57	10%	
2017	843930	396061	5.93	5.60	9%	9.64%

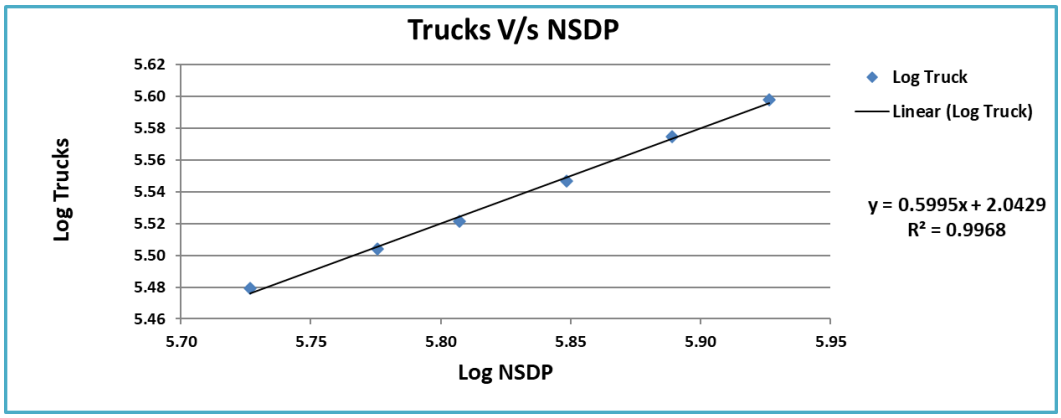

Figure 5-8 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Gujarat.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-10 : Summary Regression Analysis Gujarat

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Gujarat	Car/Jeep	PCI	y = 1.4948x + -1.2417	R^2 = 0.9988	1.4948	8.21%	12.27%	Good Regression
	Bus	Population	y = 1.6818x - -8.2501	R^2 = 0.6374	1.6818	1.79%	3.00%	Fair Regression
	LCV	NSDP	y = 0.9327x - 0.3133	R^2 = 0.9957	0.9327	9.82%	9.16%	Good Regression
	Truck	NSDP	y = 0.5995x - 2.0429	R^2 = 0.9968	0.5995	9.64%	5.78%	Good Regression

The economic model for predicting growth is a good tool, however other local, regional, and national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trends of growth. Project stretch of Kishangarh to Gulabpura is under tolling operation with current concessionaire and has two years of tolling history from 2018-19. As traffic data is available with the project concessionaire of year two years, we do not have sufficient data points to be able to establish a reliable past trend of traffic growth. A minimum of about 5 -6 years' traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

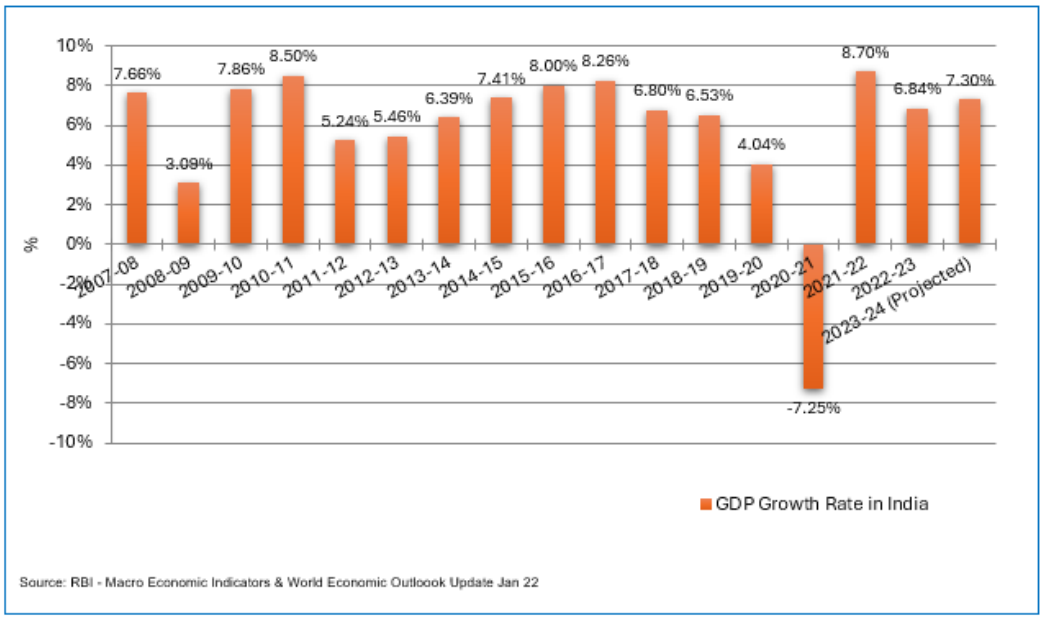

Figure 5-9 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. The World Economic Outlook update also has predicted a growth rate of about 7.5 % in the year 2022-23.

5.6 Developments along and around the Project Corridor & State

This Highway passes through Ajmer district of Rajasthan, having Industrial Areas of RIICO Kishangarh and Silora. There are Large Scale Industries of Cement, Marble & Granite and Medium Scale Industries of engineering and instrumentation in this area. Asset primarily serves traffic travelling between Delhi, Rajasthan, Gujarat and Maharashtra. It is observed that the vehicle distribution to be dominated by heavy vehicles. We further noticed several textile industries and marble/granite industries bordering the Asset. Udaipur serves as a big tourism hub as well as a consumption centre which also results in traffic feeding into the demand being generated.

In addition, Chittorgarh has 4 major cement plants located in Chanderiya and Nimbahera villages. There is a regular movement of Cement bulkers to and from these locations along

asset. Chanderiya Lead-Zinc Smelter, is the one of the largest zinc-lead smelting complexes in the world, is also located in Chittorgarh. Bhilwara is home to the textile industry and the only centre in the country producing insulation bricks. Mining is another major sector for large scale mining of sandstone, soap stone feldspar, quartz, mica China clay and granite. Also, Iron Ore, Led, and Zinc are mined and processed in Bhilwara.

growth of Rajasthan has been comparable to the national average economic growth. Rajasthan is rich in natural resources and benefits from its strategic geographic location in India. The state is pre-eminent in quarrying, mining in India and has been a leader in crude oil extraction over the past the few years. Moreover, Rajasthan is also a relevant tourism attractor in India. Considering the scenario, it may be assumed that the traffic growth on the project highway would remain high and there are minimal risks in terms of growth.

Table 5-11 : GDP of India, UP and other important states

Year	India (GDP)	Bihar	Haryana	Madhya Pradesh	Maharashtra	Odisha	Punjab	Rajasthan	Uttar Pradesh	Uttarakhand	West Bengal	Delhi

5.6.1 Industrial Units along Project Corridor

There are a number of medium and big size industrial establishments along the project corridor. The following figure shows the spread of these industries along project road.

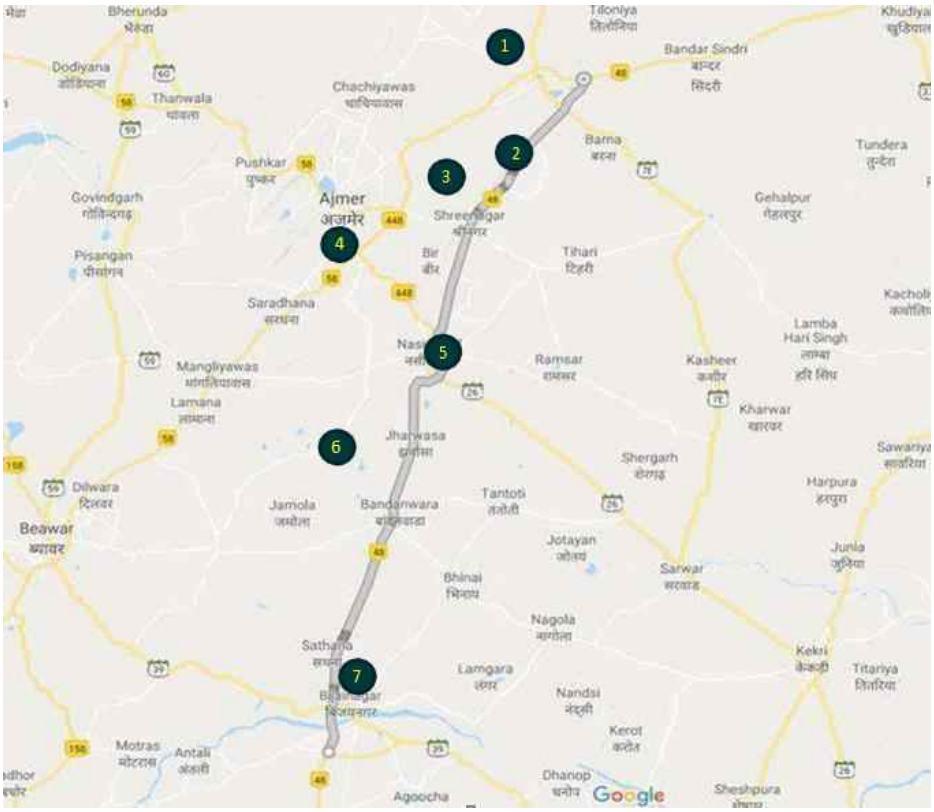

Figure 5-10 : Industrial Units along project corridor.

1. RIICO Industrial Area **Kishangarh** (Marbel & Cement Manufacturing Industries)
2. RIICO **Silora** (Wire Product, Ice Factory)
3. Welding Wire & Plastic Manufacturing Industries
4. Industrial Process Measurement & Control Instruments
5. FMCG & Quartz Manufacturers
6. Brick Manufacturers
7. **Bijainnagar** (Cattle Feed Products Manufacturer – Kapila)

The presence of these units promotes sustainable traffic in the project corridor.

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The rate of growth is moderate in light of overall regional trends. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to

developed, the rate of growth diminishes. The same growth rate is not sustainable for long. Traffic growth is suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Project Stretch

Table 5-12 : Recommended Growth Rates Optimistic

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046	2046-2051

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza Chainage KM 61.02

(Optimistic Growth Scenario)

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Gulabpura - Chittorgarh project, the Target Date and Target Traffic are defined as under:

Target Date - 1st May 2026

Target Traffic - 76236 in PCU

It was observed that as per traffic projections, average traffic volume falls short of target traffic in all scenarios. The probable extension of the concession period is estimated according to article 29 of the concession agreement which comes to about three years. Traffic forecast and revenue projections are done for probable extended period accordingly.

Most Likely

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	76236	52056	-32%	48%	20%	20	4.0

Optimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	76236	52311	-31%	47%	20%	20	4.0

Pessimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	76236	51804	-32%	48%	20%	20	4.0

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

The fee schedule in the CA of Kishangarh- Gulabpura section of NH-79 is based on the old toll policy. As per the Toll Notification (Schedule - G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued for 50 trips in month at 2/3d rate.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van I - Rs. 275 per
    b) Local Commercial Vehicles at 50% rate for single journey

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

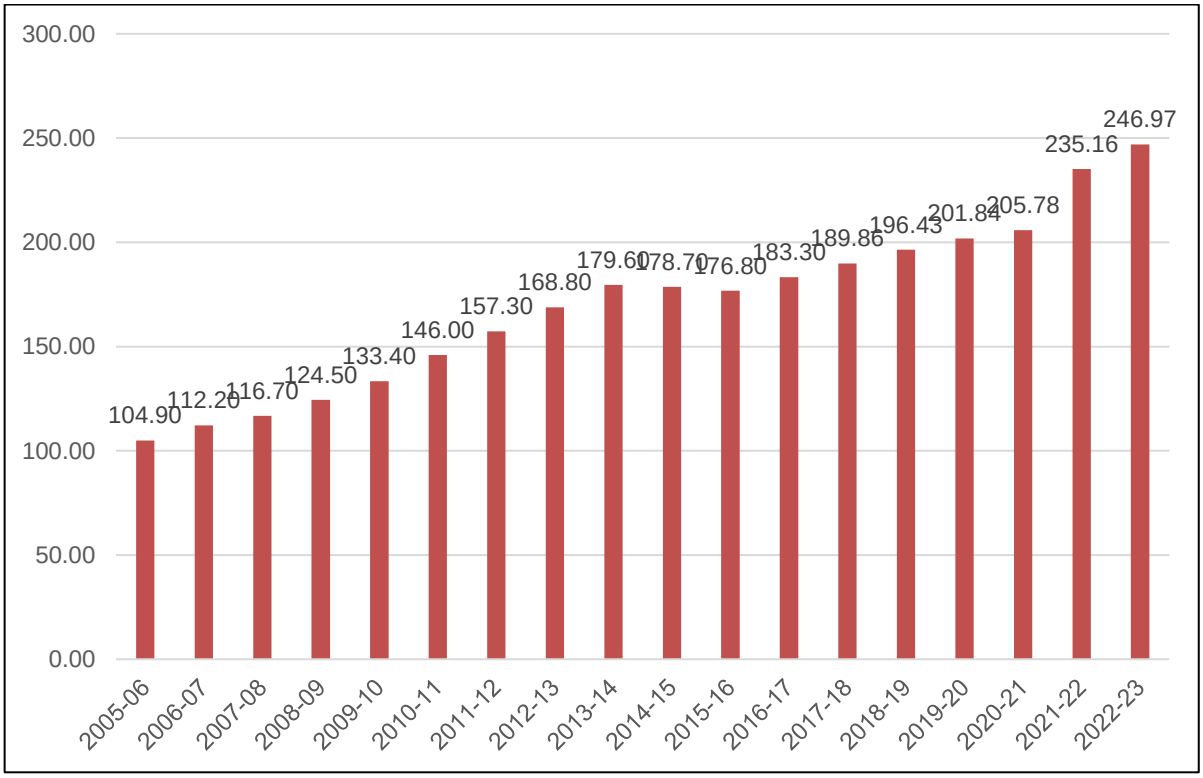

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45
Oversized Vehicles (7 or more Axles)	4.20

There is no bypass or structure to be factored in for rates calculations.

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given as under

Table 7-2 : Toll Rates for Single Journey @ Chainage KM 61.02

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles
2024-25	145	230	485	485	530	760	925

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2042-43 starting from the year 2023-24 are shown in tables below.

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Kishangarh to Gulabpura section of NH-79 in state of Rajasthan is nearing completion of six laning. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the busy and prominent national highway NH-79 which connects Kishangarh to Udaipur via Bhiwala and Chittorgarh. There are large number of townships, industrial corridors and other business establishments coming up along the project corridor. As discussed, the dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give a positive impact to traffic flow on the project. The following can be considered as major outcomes of the study.

a) There is a good amount of tollable traffic running on the project.

b) Project corridor has potential to witness traffic growth @ 7-8% annually in near future due to various development in area and overall development of economy.

c) The Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.

Based on the above it can be considered a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under various NHDP Phases.

The project under consideration, Four Laning of **Kaithal** to **Rajasthan** section of NH-152/65 from km 33.250 to km 241.580 in the state of Haryana is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. *M/s Kaithal Tollway Ltd*. (Concessionaire) has been awarded the Project for a concession period of 27 years starting from appointed date of 15th July 2015. COD was achieved for part length of project in September 2017 and Tolling Operation on Project started. Final COD for full length was achieved on 29th March-2019

Project road section from Kaithal to Rajasthan border is part of important corridor which connects part of Haryana, Punjab, Himachal Pradesh, J&K and certain part of Uttarakhand to Rajasthan, Gujarat and Costal parts of Maharashtra and then to down to south.

Project road section form Kaithal to Rajasthan border passes through three districts of Haryana namely Kaithal, Hisar and Bhiwani. Project road also passes through important towns and development areas of Narwana, Hisar and Siwani in addition to Kaithal.

Following figure shows the project road alignment.

Figure 1-1 : Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged *GMD Consultants* to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.

This report named as **"Traffic Study & *Toll Revenue Projection Report*"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

The project road forms part of important connectivity between Northern states like Haryana,Punjab,Himachal Pradesh,J&K and states like Maharashtra,Gujarat (Kandla and Mundra),and parts of Rajasthan. It is the shortest route between Punjab / J&K, Gujarat, Rajasthan, Maharashtra, Goa, Kerala and becomes good alternate route to NH-1 and NH-8 for Gujarat, Rajasthan, Maharashtra Goa and Kerala bound traffic from Haryana, Punjab, J&K Himachal Pradesh.

Project road also caters to local intrastate traffic between districts of Ambala, Chandigarh, Kaithal, Jind, Hisar, Bhiwani in Haryana and Churu, Sikar, Nagaur and Jodhpur in Rajasthan.

2.2 Project Stretch Description

The Project highway from Kaithal to Rajasthan border from Km 33.250 to km 241.580 has been widened to four lanes as per schedules. The project has following bypasses which are part of project road.

Table 2-1 : Bypass Details

4	Barwala	7.850	171.580
5	Hisar+Talwandi Rana		
6	Barwa	3.300	212.400
7	Siwani	6.150	

Full COD for project is achieved on 29th March 2019.

Project road forms part of very important transportation corridor which connects Northern states like Haryana, Punjab, J&K, Himachal etc to Southern states and development centres especially on west coastline of India. In previous years project road from Ambala to onwards was in bad shape. There were large number of congestion points along the route in form of narrow roads inside towns, level crossings and bad riding quality. Project road from Kaithal to Rajasthan Border is almost complete which has taken up bypasses and ROBs. Also, the road from Ambala to Kaithal is under four laning construction as of now. The project is awarded to M/s Sadbhav Engineering Limited and is expected to complete in current year. This would improve the flow of traffic on project corridor to great extent.

Following figure show project alignment and toll plaza locations.

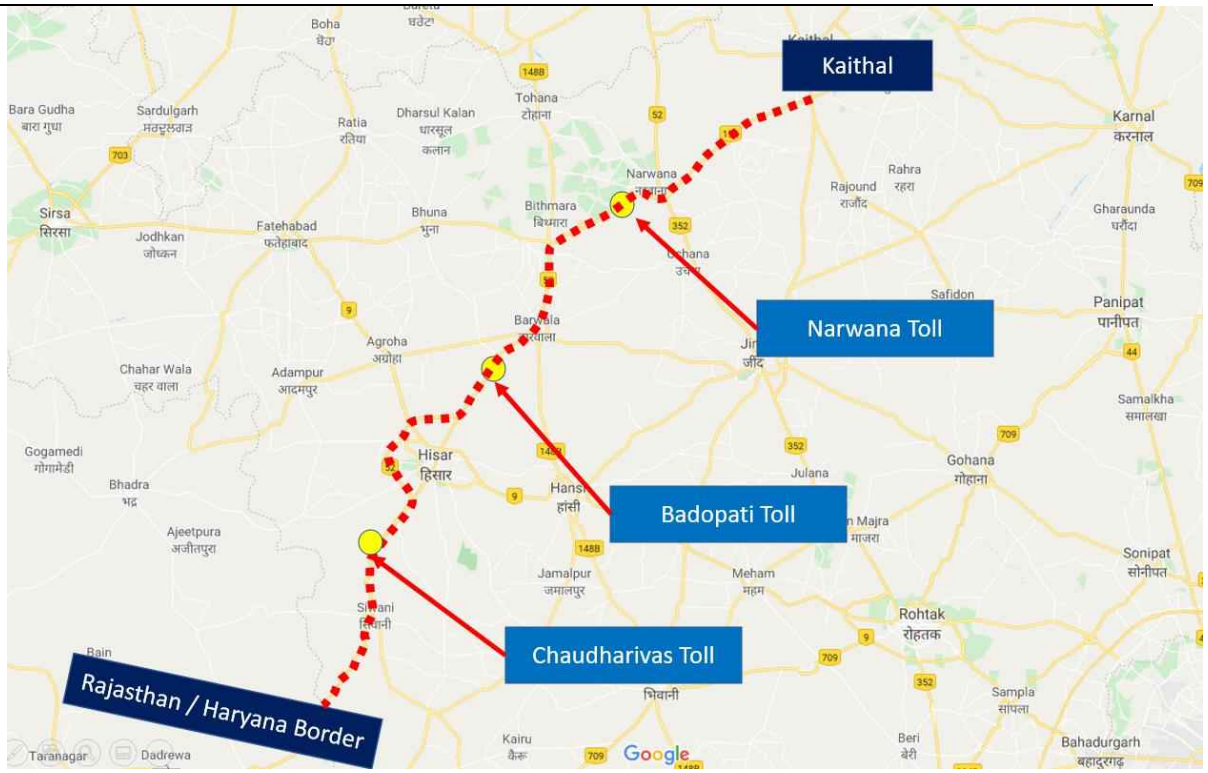

Figure 2-1 : Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

Six laning of project stretch is complete. Following photographs illustrate project section along the corridor.

Figure 2-2 : Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from client for project.

- Classified traffic volume counts at three toll plaza locations on Kaithal- Rajasthan Border section of NH-152/65 for year 2017-18, 2018-19, 2019-20, 2020-21 ,2021-22,2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 125 Toll Plaza at Narwana	AADT for Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		2023 & Four month from April 2024 to July 2024	2023 & Four month from April 2024 to July 2024	2023 & Four month from April 2024 to July 2024	2023 & Four month from April 2024 to July 2024	2023 & Four month from April 2024 to July 2024
2	Km 171 Toll Plaza at Badopatti	AADT for Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024
3	Km 212 Toll Plaza at Chaudhariwas	AADT for Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024

3.2 Classified traffic volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since project highway is currently under toll operation, the data collected is corresponding to category of tollable vehicles. Following is the type of vehicles as per concession agreement.

- Car / Jeep / van
- Min Bus /LCV
- Truck / Bus
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.

Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base

year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Narwana Toll Plaza at Km 125

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in ***Table 3-6.***

Table 3-6 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-7 : Traffic in PCU at Project Stretch Base Year 2023-24

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2019-20	Narwana Km 125.79	5305	10226	1.93
	Badopatti Km 171.58	8077	13901	1.72
	Chaudhariwas Km 212.400	5939	13136	2.21
2020-21	Narwana Km 125.79	4774	9203	1.93
	Badopatti Km 171.58	7272	12516	1.72
	Chaudhariwas Km 212.400	5347	11832	2.21
2021-22	Narwana Km 125.79	7357	14849	2.02
	Badopatti Km 171.58	8303	16824	2.03
	Chaudhariwas Km 212.400	8295	18866	2.27

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2022-23	Narwana Km 125.79	6905	14124	2.05
	Badopatti Km 171.58	7581	15122	1.99
	Chaudhariwas Km 212.400	7506	16679	2.22
2023-24	Narwana Km 125.79	7215	14676	2.03
	Badopatti Km 171.58	6800	13455	1.98
	Chaudhariwas Km 212.400	7356	15782	2.15
2024-25	Narwana Km 125.79	7123	13530	1.90
	Badopatti Km 171.58	7331	14094	1.92
	Chaudhariwas Km 212.400	7721	16509	2.14

It can be observed from above that project traffic has PCU index ranging from 2.0 to 2.3 which is an indicator of good proportion of commercial traffic in traffic mix in project corridor. Following figure illustrates variation of PCU index at three toll plaza locations.

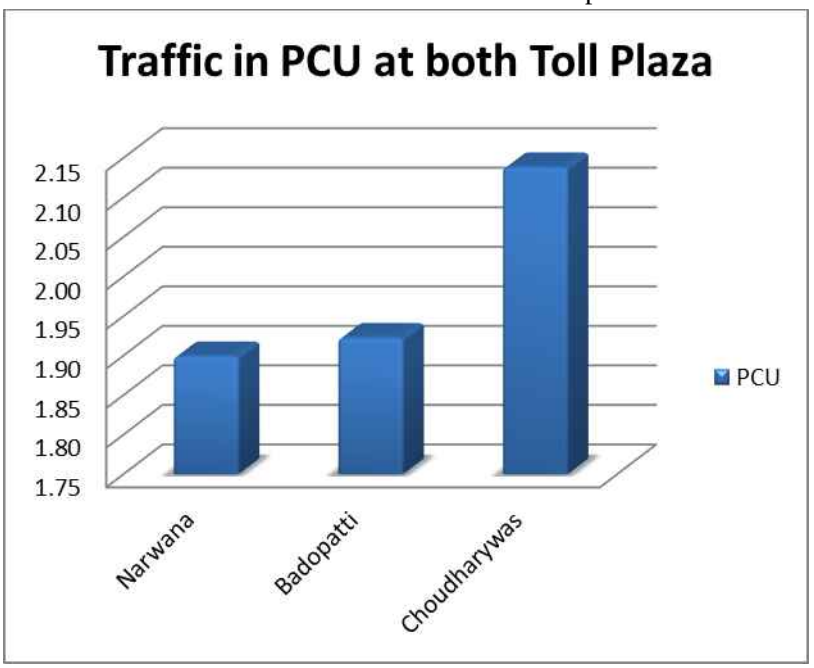

Figure 3-1 : Comparison of PCU Index

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds

to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

It is observed that car traffic forms about 50%-65% of total traffic at toll plaza locations while multi axle commercial vehicles are about 20%-30% of total traffic. Truck / Bus and LCV share about 10%-15% and 2%-5% of traffic volume respectively.

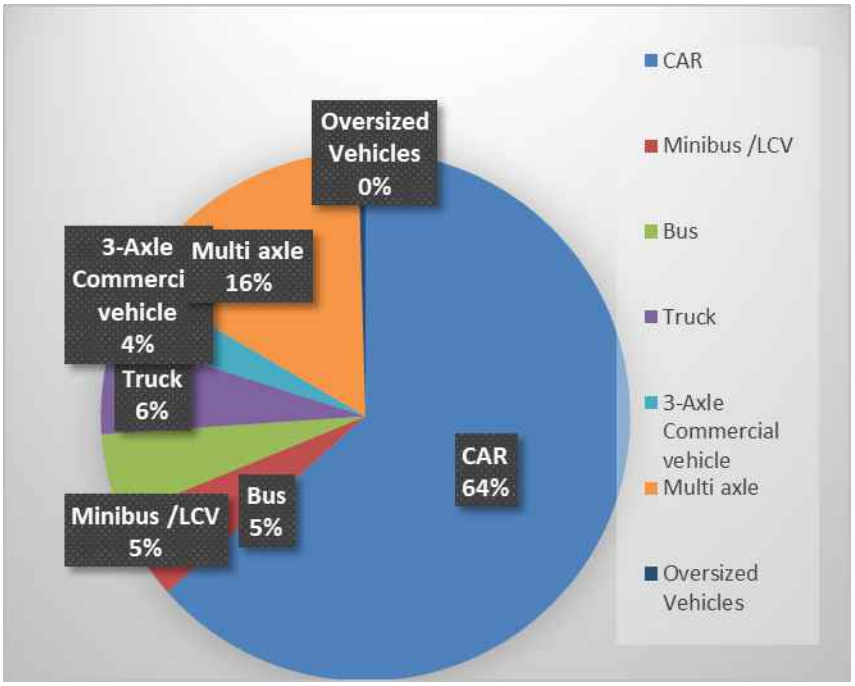

Figure 3-2 :Model Split of Tollable Vehicle-Km 125.790

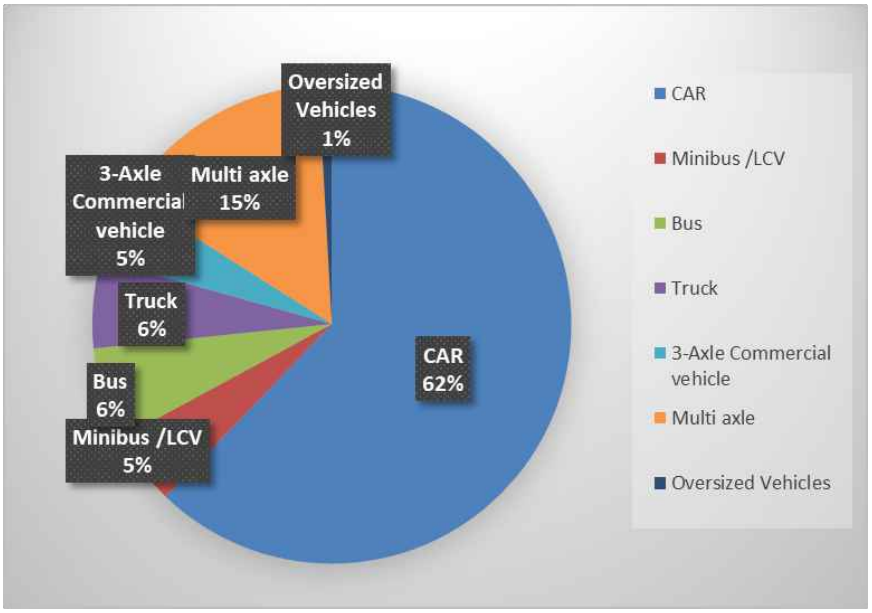

Figure 3-3 :Model Split of Tollable Vehicle-Km 171.58

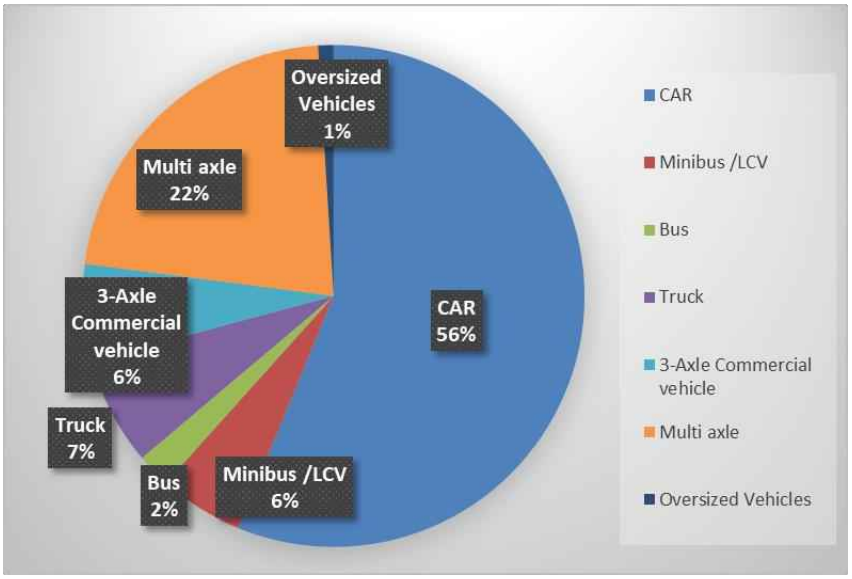

Figure 3-4 :Model Split of Tollable Vehicle-Km 212.400

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25.

Table 3-8 : Journey Type Bifurcation of Traffic at Narwana TP-1 KM 125

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	3952
2	Return Journey	3082
3	Local Commercial Single Journey	61
4	Monthly Pass Local	28
5	Monthly Pass	0

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is a high as 56%. Return journey component is 43%. The number of monthly pass local is 0% and local commercial single Journey also 1% at Narwana toll plaza.

Following tables give the detail of journey distribution at Badopatti and Chaudhariwas toll plaza.

Table 3-9 : Journey Type Bifurcation of Traffic at Badopatti TP KM 171

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	3876
2	Return Journey	3168
3	Local Commercial Single Journey	178
4	Monthly Pass Local	109
5	Monthly Pass	0

Table 3-10 : Journey Type Bifurcation of Traffic at Chaudhariwas TP KM 212

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	4538
2	Return Journey	3052
3	Local Commercial Single Journey	89
4	Monthly Pass Local	42
5	Monthly Pass	0

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic pattern and growth on any project corridor. Following is some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data

a) GDP
b) NSDP
c) Population Growth
d) Per Capita Income growth
e) Industrial Growth
f) Special Industry Potential
g) Regional and National development vision / plan
h) Any other relevant data

3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit network and more often than not every road is connected to various networks having different origin and destinations. Traffic running on these networks behave like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Though project road has started collecting toll form mid of year 2017-18 but it was for partial completion of project stretch. Some critical location bypasses and ROBs were pending at beginning of toll. Also stretch from Ambala to Kaithal which is just before project stretch is under four laning. In this case project traffic can be considered as under settlement. Shifting of traffic depends on factors such as road length, type, geometry, riding quality and capacity. Competing road analysis was done at two levels. First at regional level and second at local level. Project road forms an optimal route for the traffic between following zones.

Zone-1- J & K, Punjab (Ludhiana, Amritsar parts), Haryana, Himachal, Part of Uttarakhand
Zone-2 – Rajasthan, Gujarat (Kandla, Mundra), Maharashtra (Coastal), Southern States (Coastal).

As alternate routes converge at Ajmer, the Project Influence Area (PIA) is considered between Ambala and Ajmer only.

Following figures show the layout of competing routes between both these Zones.

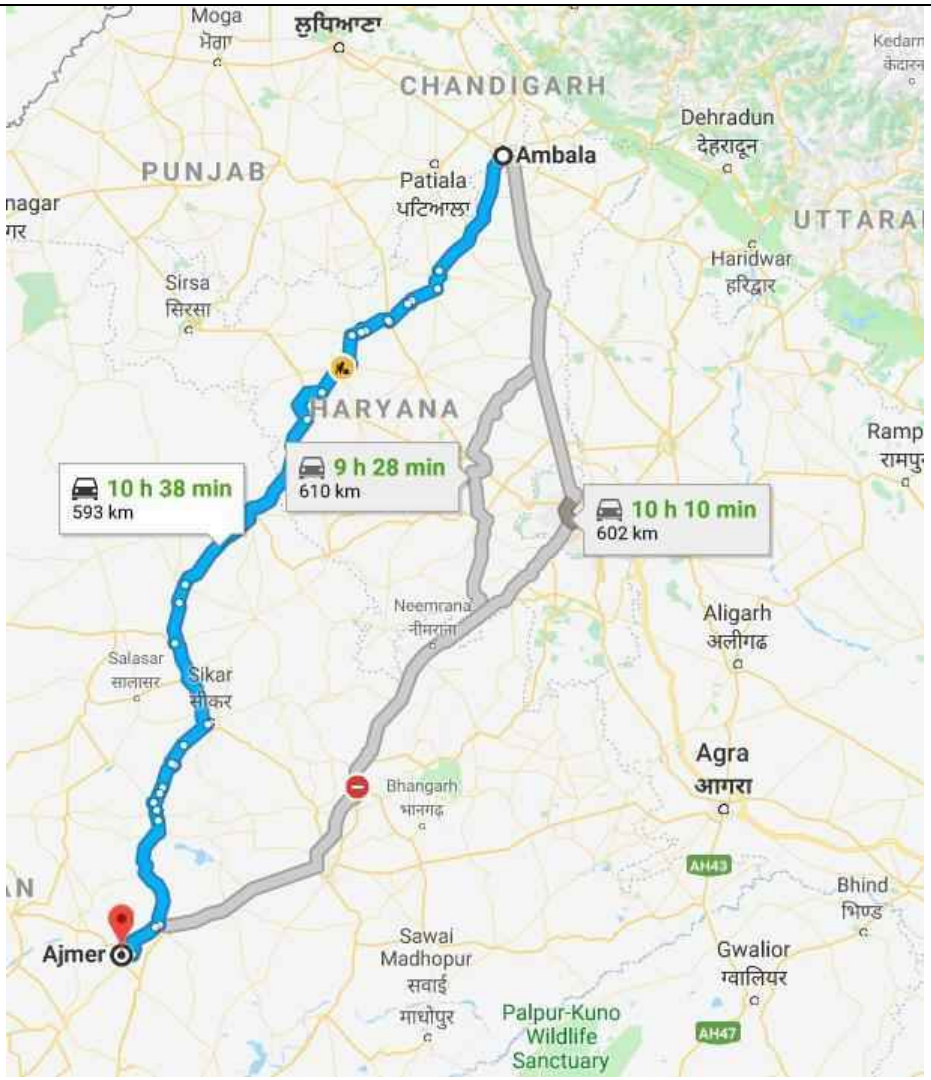

Figure 4-1 : Alternate route at regional level between Zones.

Above figure depicts alternate route between Ambala and Ajmer. Following figure shows alternate routes between Ludhiana and Ajmer

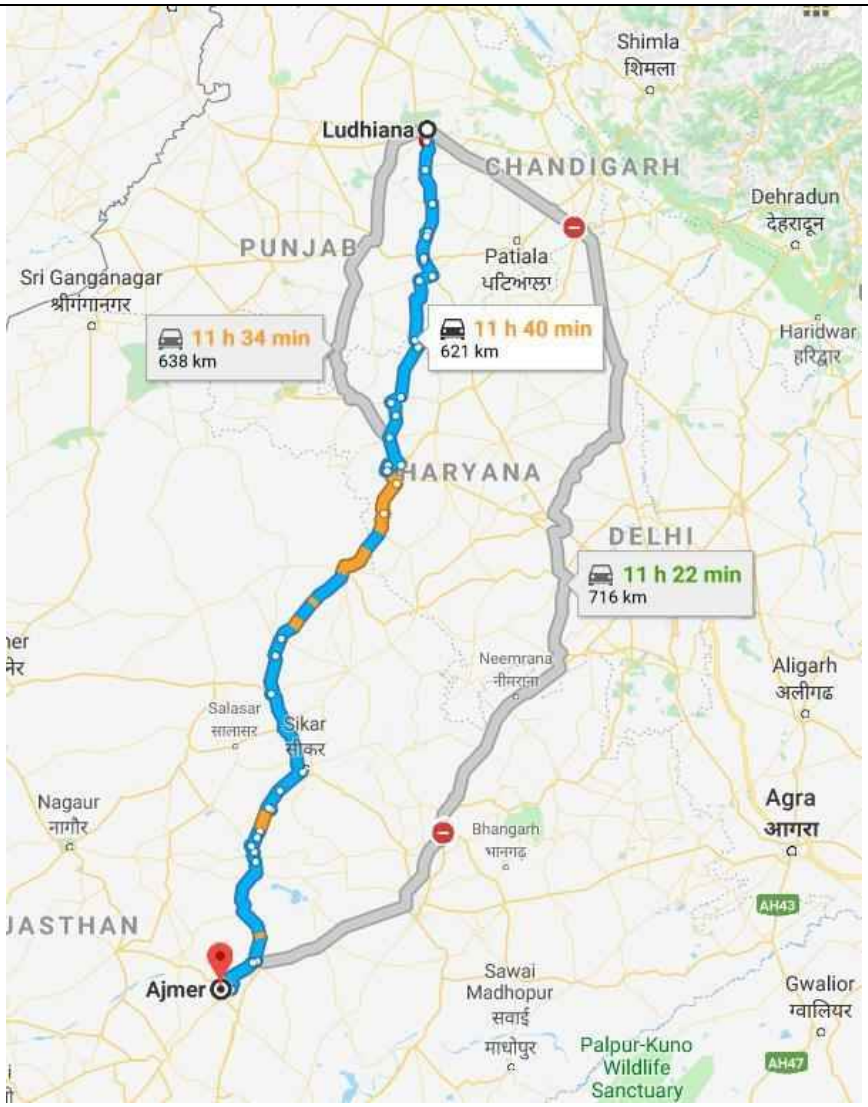

Figure 4-2 : Alternate route at regional level between Ludhiana & Ajmer

From above figures it can be seen that the route containing project alignment has least distance between these origin and destination zones.

Following facts improve probability of target traffic getting attracted to project road.

- Project corridor between Ambala to Rajasthan Border is expected to complete four laning with all bypasses and ROBs.
- Road from Ludhiana to Hisar is part of Bharatmala project and will be converted to four lanes. Currently road from Hisar to Fatehabad only in four lanes.

- Project Corridor is part of ambitious project of Bharatmala which will improve entire length of corridor in terms of capacity and traffic flow. The Government of India has identified the Ludhiana – Ajmer corridor as an optimal route which shall provide time and cost savings to traffic moving from western India to northern India. This will also allow traffic to avoid heavy traffic jams around New Delhi which it is facing on the present route.
- NH-1 and NH-8 which are currently major corridor for traffic between Zone1 and Zone2 will face capacity constraints in coming years. NH-1 for example is four lane road between Ambala and Panipat and runs about 80,000 PCU which is already above its capacity.

At local level it was observed that there is no formidable local alternate route to bypass toll plaza. There can a combination of village roads to form alternate loop around toll plazas, but these are too long as compared to project road between said nodes. Thus, no local diversion of traffic from project road is anticipated.

Following table provide summary of analysis of alternate route/ roads discussed above.

Table 4-1 : Summary Network analysis

Sr. No	Route Details	Designation	Length (Km)	Avg. Speed (KMPH)	Time Taken (Min)	Observations
Regional Level						
1	Ambala-Panipat-Karnal-Rohtak-Ajmer	Alternate Route	610	64	9 Hr 28 Min	Alternate route is longer but has shorter travel time. With completion of Ambala - Kaithal four laning of Road induced traffic is expected onto project stretch
	Ambala-Kaithal-Hisar-Ajmer	Project Road	593	55	10 Hr 38 Min	
2	Ludhiana-Chandigarh Panipat-Karnal-Ajmer	Alternate Route	716	63	11 Hr 22 Min	Alternate route is longer but has shorted travel time. With completion of Ambala - Kaithal four laning of Road induced traffic is expected onto project stretch
	Ludhiana - Ambala-Kaithal-Hisar-Ajmer	Project Road	621	53	11 Hr 40 Min	

Table 4-2 : Competing Roads Details

Under these circumstances it is not envisaged that commercial or passenger traffic would switch to alternate roads from the project road.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future pattern of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Kaithal – Rajasthan Border section of NH-152/65 has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable to projects of short durations say 5-10 years, however for long term projections it would-be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different type of vehicle. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modelling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

Log (P) = k x Log (EI) + A

Where,

P = Number of Vehicles (Mode wise)

EI = Economic Indicator

A = Regression constant

k = Elasticity coefficient (Regression coefficient)

The elasticity for car and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across state of Haryana. Toll plazas at Narwana, Badopatti and Choudhariwas are in the state of Haryana, but project stretch is under impact of Rajasthan state as well. In such circumstances for elasticity calculations, working data from above two states has been analysed.

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Haryana State.

Table 5-1 : Per Capita Income Vs Car Haryana

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	106085	989519	5.03	6.00		
2013	111780	1134616	5.05	6.05	5%	
2014	119791	1278272	5.08	6.11	7%	
2015	125032	1420621	5.10	6.15	4%	
2016	137818	1711692	5.14	6.23	10%	
2017	150241	1851788	5.18	6.27	9%	7.23%

Regression analysis of same is given in figure below.

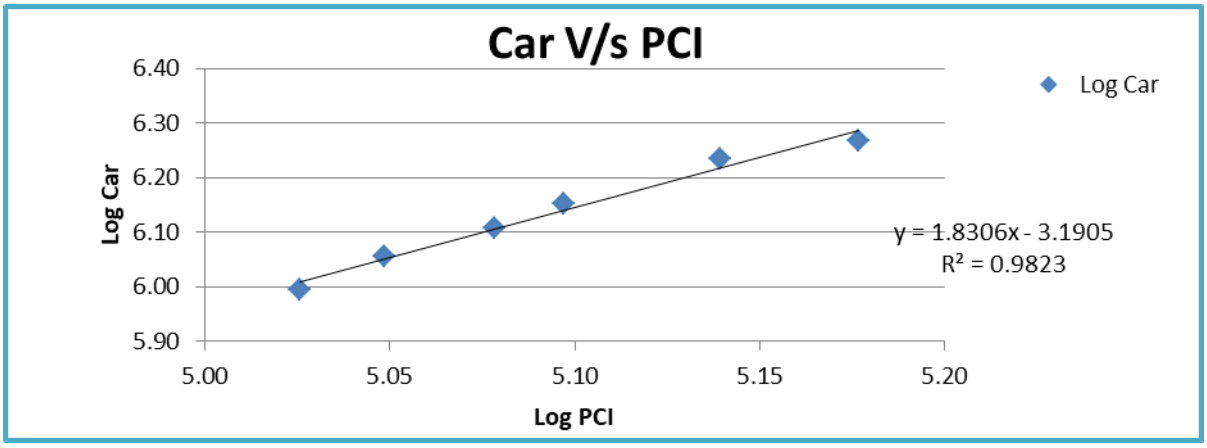

Figure 5-1 : Regression and Elasticity PCI vs. Car – Extrapolation Haryana

Table 5-2 : Population Vs Bus Haryana

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	25351462	39153	7.40	4.59		
2013	25751257	43456	7.41	4.64	2%	
2014	26149236	46558	7.42	4.67	2%	
2015	26545282	52640	7.42	4.72	2%	
2016	26939286	55781	7.43	4.75	1%	
2017	27331141	60129	7.44	4.78	1%	1.52%

Regression analysis of same is given in figure below.

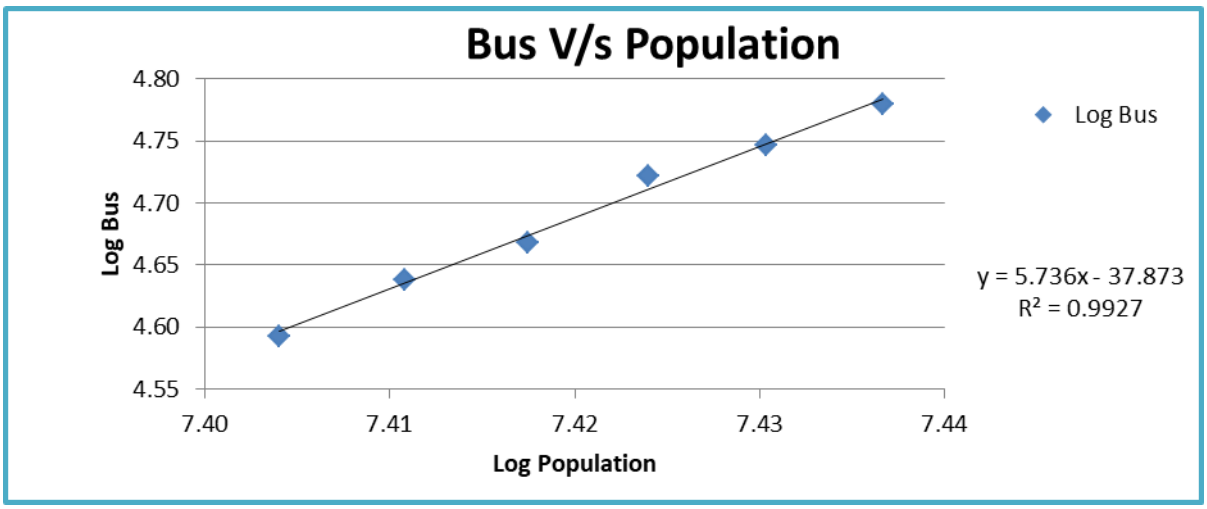

Figure 5-2 : Regression and Elasticity Population vs. Bus – Extrapolation Haryana

Elasticity of goods traffic has been worked out by regression analysis with NSDP. Following table represents the data and details.

Table 5-3 : LCV Traffic Vs NSDP Haryana

Year	NSDP	LCV	Log NSDP	Log LCV	NSDP Growth	Average Growth (5 Year)
2012	271152	124897	5.43	5.10		
2013	289756	137511	5.46	5.14	7%	
2014	314931	152069	5.50	5.18	9%	
2015	333359	167901	5.52	5.23	6%	
2016	372659	182776	5.57	5.26	12%	8.30%

Following figure depict regression analysis and extrapolation.

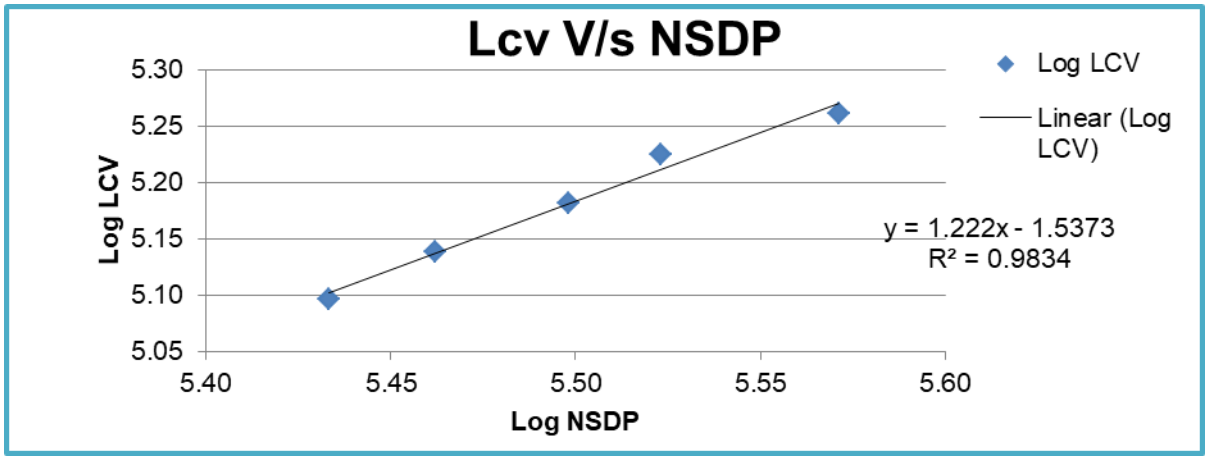

Figure 5-3 : Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Haryana.

Table 5-4 : Goods Traffic Vs NSDP Haryana

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	271152	292735	5.43	5.47		
2013	289756	307509	5.46	5.49	7%	
2014	314931	327882	5.50	5.52	9%	
2015	333359	348732	5.52	5.54	6%	
2016	372659	367730	5.57	5.57	12%	
2017	412006	390321	5.61	5.59	11%	8.75%

Following figure depict regression analysis and extrapolation.

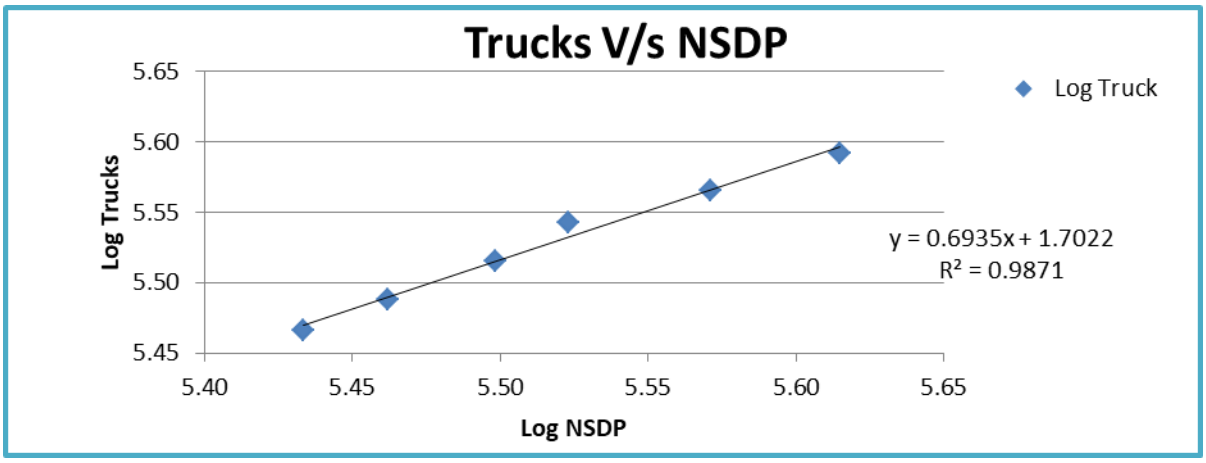

Figure 5-4 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Haryana.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-5 : Summary Regression Analysis Haryana

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Haryana	Car/Jeep	PCI	y = 1.8306x + -3.1905	R^2 = 0.9823	1.8306	7.23%	13.24%	Good Regression
	Bus	Population	y = 5.736x - -37.8732	R^2 = 0.9927	5.7360	1.52%	8.69%	Good Regression
	LCV	NSDP	y = 1.222x - -1.5373	R^2 = 0.9834	1.2220	8.30%	10.14%	Good Regression
	Truck	NSDP	y = 0.6935x - 1.7022	R^2 = 0.9871	0.6935	8.75%	6.07%	Good Regression

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-6 : Per Capita Income Vs Car Rajasthan

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	57192	591069	4.76	5.77		
2013	58441	659542	4.77	5.82	2%	
2014	61053	733916	4.79	5.87	4%	
2015	64496	814079	4.81	5.91	6%	
2016	68565	899307	4.84	5.95	6%	
2017	71394	988391	4.85	5.99	4%	4.55%

Regression analysis of same is given in figure below.

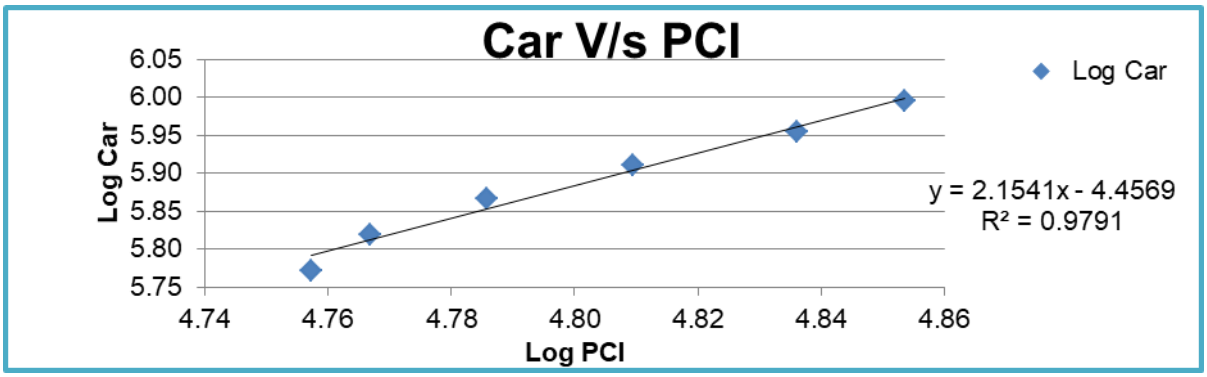

Figure 5-5 : Regression and Elasticity PCI vs. Car – Extrapolation Rajasthan

Table 5-7 : Population Vs Bus Rajasthan

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	68548437	83345	7.84	4.92		
2013	69783885	88616	7.84	4.95	2%	
2014	71016445	93892	7.85	4.97	2%	
2015	72245688	97650	7.86	4.99	2%	
2016	73471198	102818	7.87	5.01	2%	
2017	74692571	108680	7.87	5.04	2%	1.73%

Regression analysis of same is given in figure below.

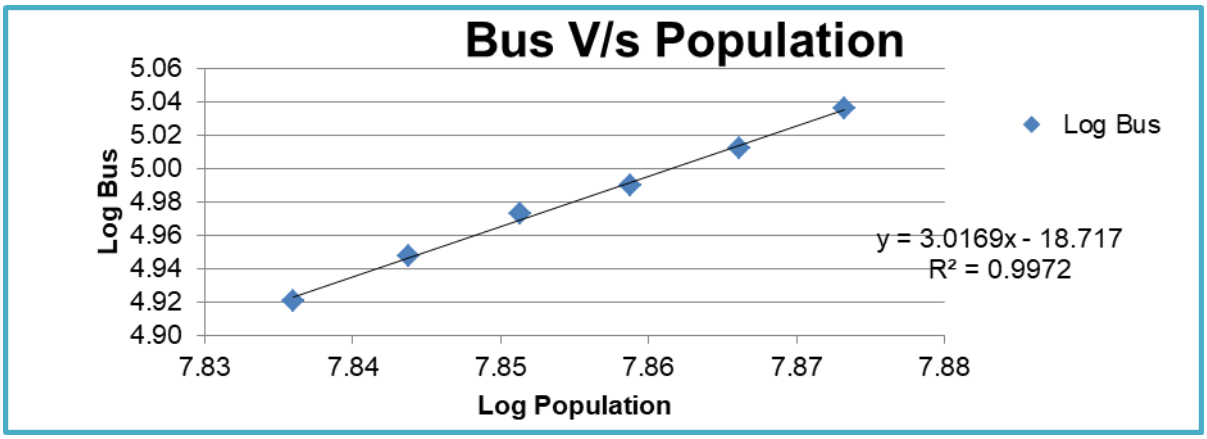

Figure 5-6 : Regression and Elasticity Population vs. Bus – Extrapolation Rajasthan

Elasticity of goods traffic has been worked out by regression analysis with NSDP. Following table represents the data and details.

Table 5-8 : LCV Traffic Vs NSDP Rajasthan

Year	NSDP	LCV	Log NSDP	Log LCV	NSDP Growth	Average Growth (5 Year)
2012	395331	69509	5.60	4.84		
2013	409802	76396	5.61	4.88	4%	
2014	434292	33379	5.64	4.52	6%	
2015	465408	91787	5.67	4.96	7%	
2016	501922	99763	5.70	5.00	8%	6.16%

Following figure depict regression analysis and extrapolation.

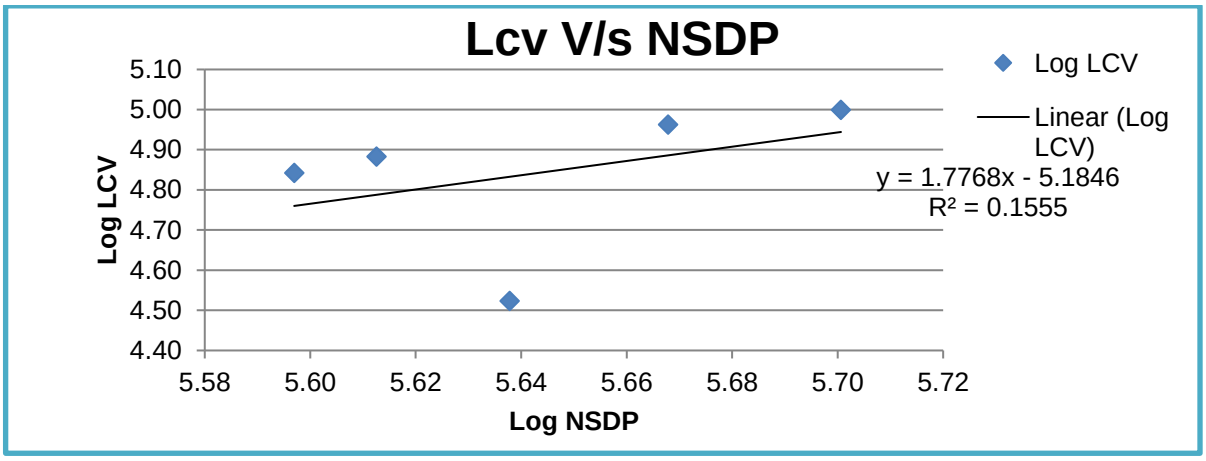

Figure 5-7 : Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Rajasthan.

Table 5-9 : Goods Traffic Vs NSDP Rajasthan

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	395331	362028	5.60	5.56		
2013	409802	401983	5.61	5.60	4%	
2014	434292	434379	5.64	5.64	6%	
2015	465408	472365	5.67	5.67	7%	
2016	501922	517604	5.70	5.71	8%	
2017	530172	561158	5.72	5.75	6%	6.06%

Following figure depict regression analysis and extrapolation.

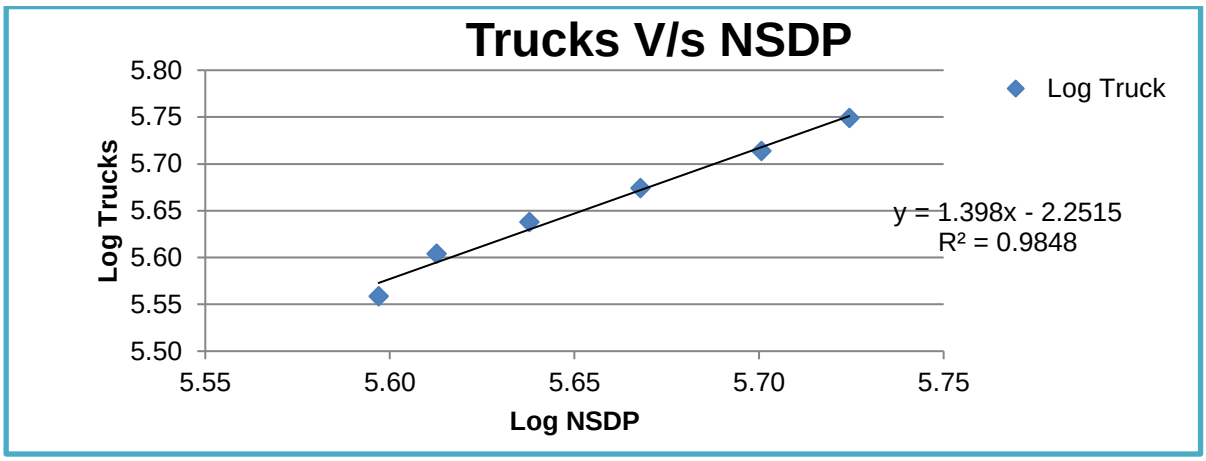

Figure 5-8 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Rajasthan.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-10 : Summary Regression Analysis Rajasthan

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Rajasthan	Car/Jeep	PCI	y = 2.1541x + -4.4569	R² = 0.9791	2.1541	4.55%	9.79%	Good Regression
	Bus	Population	y = 3.0169x - -18.7174	R² = 0.9972	3.0169	1.73%	5.22%	Good Regression
	LCV	NSDP	y = 1.7768x - -5.1846	R² = 0.1555	1.7768	6.16%	10.95 %	Good Regression

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
	Truck	NSDP	y = 1.398x - - 2.2515	R^2 = 0.9848	1.3980	6.06%	8.46%	Good Regression

Economical model for predicting growth is good tool, however other local, regional, national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trend of growth. Project stretch of Kaithal to Rajasthan Border is under tolling operation with current concessionaire and has only two years of tolling history from 2018-19. After that traffic was affected due to COVID-19 pandemic. Thus, sufficient data points to be able to establish a reliable past trend of traffic growth are not available. A minimum of about 5 -6 years' consistent traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

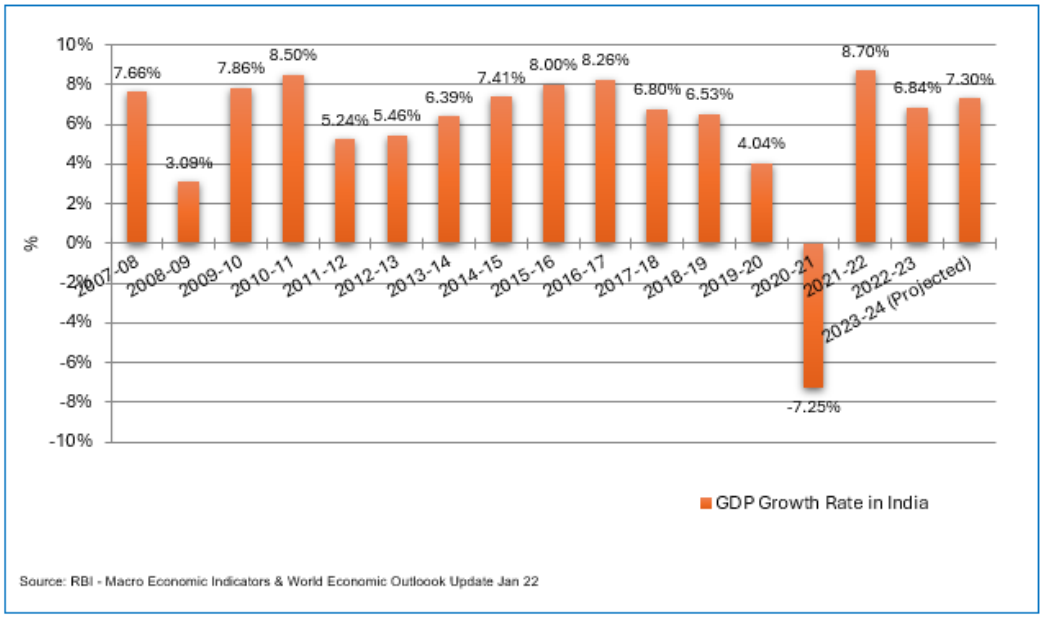

Figure 5-9 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honourable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. World Economic Outlook update also has predicted a growth rate of about 7.5 % in year 2022-23.

5.6 Developments along and around the Project Corridor & State

Project stretch falls in region of good development potential. The same is discussed as under.

Haryana is the largest recipient of investment per capita since 2000 in India, and among one of the wealthiest and most economically developed regions in South Asia. Haryana has the sixth highest per capita income among Indian states and union territories. Haryana is also boosted by 30 SEZs (mainly along DMIC, ADKIC and DWPE in NCR), 7% national agricultural exports, 60% of national Basmati rice export, 67% cars, 60% motorbikes, 50% tractors and 50% refrigerators produced in India. In services. Since Haryana surrounds the country's capital Delhi on three sides (north, west and south), consequently a large area of Haryana is included in the economically important National Capital Region for the purposes of planning and development.

Major Cities of Haryana state & their characteristics are as below.

Faridabad is one of the biggest industrial cities of Haryana as well as North India. Faridabad has been described as eighth fastest growing city in the world and third most in India by City Mayors Foundation survey. Faridabad is home to large-scale companies like Escorts Limited, India Yamaha Motor Pvt. Ltd., Havells India Limited, JCB India Limited, Indian Oil (R&D), Larsen & Toubro (L&T), Whirlpool India Ltd., ABB Group, Goodyear India Ltd., Bata India Ltd and Eicher Tractor Ltd. and Beebay Kidswear. Eyewear e-tailer Lenskart and healthcare startup Lybrate have their headquarters in Faridabad. More than
5,000 units of auto parts producers are based in Faridabad.

Many directorates of different union government ministries are headquartered in Faridabad including Central Ground Water Board, Department of Plant Quarantine and Central Insecticide Lab and Union Government Offices from Haryana including the Commissioner of Central Excise within Department of Revenue, Government of India, Department of Explosives, and Department of Labour. The Apex Central Training Institute of the Department of Revenue, Government of India, National Academy of Customs Excise & Narcotics is located at Sector 29. The National Power Training Institute, an autonomous body under Ministry of Power, Government of India has a corporate office in Faridabad. The city also hosts the National Institute of Financial Management,
which serves as training academy for accounting and financial services. Also

headquartered here is NHPC Limited which is a Central PSU under Ministry of

Power, Government of India and the largest Hydro-power Company in India.

Hisar, city has been identified as a counter-magnet city for the National Capital Region to attract migrants and develop as an alternative centre of growth to Delhi. With upcoming integrated industrial aerocity and aero MRO hub at Hisar Airport, it is a fast-developing city.

The city has a large steel industry and is known as the 'city of steel'. Hisar is India's largest manufacturer of galvanized iron. The Jindal Group is based in Hisar. Jindal Stainless Steel is also the world's largest producer of Stainless-Steel strips for razor blades and India's largest producer of coin blanks. Textile and automobile industry is also a major contributor to the economy of the city. It also has a large number of livestock farms with the Central Livestock Farm, established in 1809 being one of the Asia's largest cattle farms.

Panipat city is famous in India by the name of "City of Weavers" and "Textile City". It is also known as the "cast-off capital" due to being "the global centre for recycling textiles. It is known for its woven modhas or round stools. Panipat has heavy industry, including a refinery operated by the Indian Oil Corporation, a urea manufacturing plant operated by National Fertilizers Limited and a National Thermal Power Corporation power plant. The IOCL refinery in Panipat is one of the major Industry in area which contributes to growth.

Gurugram: Witnessing rapid urbanisation, Gurgaon has become a leading financial and industrial hub with the third-highest per capita income in India. Gurgaon ranks number 1 in India in IT growth rate and existing technology infrastructure, and number 2 in startup ecosystem, innovation and liability.

The city's economic growth story started when the leading Indian automobile manufacturer Maruti Suzuki India Limited established a manufacturing plant in Gurgaon in the 1970s. Today, Gurgaon has local offices for more than 250.
Fortune 500 companies. Various international companies, including Coca-Cola, Pepsi, BMW, Agilent Technologies, Hyundai have chosen Gurugram to be their Indian corporate headquarters.
IMT Minesar, Dundahera and Sohna are industrial and logistics hub, that also has National Security Guards, Indian Institute of Corporate Affairs, National
Brain Research Centre and National Bomb Data Centre. Retail is an important industry in Gurgaon, with the presence of 26 shopping malls.

Ambala is connected to all the other major cities of north India including Delhi, Panipat, Chandigarh, Ludhiana, Amritsar and Shimla. It is a big interchange for various commuters for all neighbouring states. The Ambala Cantt bus stand witnesses roughly 50,000 commuters daily.

National highway NH 1 popularly known as GT road passes through Ambala and connects it to National capital Delhi, Panipat, Ludhiana and Amritsar. NH 22 connects it to state capital Chandigarh and Shimla. National Highway 52 (new NH-165) connects it to Kaithal, Narwana and Hisar.

Being located in the Indo-Gangetic Plain, the land is generally fertile and conducive to agriculture.

Small scale industries form the bulk of the industrial landscape in the district. It is one of the largest producers of scientific and surgical instruments in the country and home to a large number of scientific instrument manufacturers. It produces microscopes and other instruments used in chemistry laboratories. Manufacture of submersible pumps and mixers and grinders is another industry that has traditionally flourished.

Ambala is also an important textile trading centre, besides Delhi and Ludhiana and has a well-known cloth market, which is famous in the region especially for those seeking bridal wear. It also produces rugs, known locally as Durries, and houses many suppliers to Indian defence forces.

Punjab state is one of the most fertile regions in India. The region is ideal for wheat-growing. Rice, sugar cane, fruits and vegetables are also grown. Punjab is called the "Granary of India" or "India's breadbasket". It produces 10.26% of India's cotton, 19.5% of India's wheat, and 11% of India's rice. The Firozpur and Fazilka Districts are the largest producers of wheat and rice in the state. In worldwide terms, Indian Punjab produces 2% of the world's cotton, 2% of its wheat and 1% of its rice. The largest cultivated crop is wheat. Other important crops are rice, cotton, sugarcane, pearl millet, maize, barley and fruit.

Ludhiana is one of the City in India with best business environment. The riches are brought mostly by small-scale industrial units, which produce industrial goods, machine parts, auto parts, household appliances, hosiery, apparel, and garments. Ludhiana is Asia's

largest hub for bicycle manufacturing and produces more than 50% of India's bicycle consumption of more than 10 million each.
year. Ludhiana produces 60% of India's tractor parts and a large portion of auto.
and two-wheeler parts. Many parts used in German cars are Mercedes and BMW exclusively produced in Ludhiana to satisfy the world requirement. It is one of the largest manufacturers of domestic sewing machines. Hand tools and industrial equipment are other specialties. The apparel industry of Ludhiana is famous all over India for its woollen sweaters and cotton T-shirts; most of the top Indian woollen apparel brands are based in Ludhiana. Ludhiana also has a growing IT sector with multiple software services and product companies having development centres in the city.

Chandigarh has been rated as one of the "Wealthiest Towns" of India. The Reserve Bank of India ranked Chandigarh as the Third largest deposit centre and seventh largest credit centre nationwide.

Chandigarh is ranked 4th in the top 50 cities identified globally as "emerging outsourcing and IT services destinations" ahead of cities like Beijing. Chandigarh IT Park (also known as Rajiv Gandhi Chandigarh Technology Park) is the city's attempt to break into the information technology world. Major Indian firms and multinational corporations like Quark, Infosys, EVRY, Dell, IBM, Tec Mahindra, Airtel, Amadeus IT Group, DLF have set up base in the city and its suburbs.

Additionally, the government is a major employer in Chandigarh with three governments having their base here i.e. Chandigarh Administration, Punjab government and Haryana government.

Ordnance Cable Factory of the Ordnance Factories Board has been set up by the Government of India. There are about 15 mediums to large industries including two in the public sector. In addition, Chandigarh has over 2500 units registered under small-scale sector. The important industries are paper manufacturing, basic metals and alloys and machinery. Other industries are relating to food products, sanitary ware, auto parts, machine tools, pharmaceuticals and electrical appliances.

Rajasthan state is a fast-developing state. Last year Rajasthan was the leading investment destination in India after Maharashtra and Gujarat because of peaceful environment, relatively better law and order situation, excellent infrastructure, and investment friendly climate. Rajasthan is pre-eminent in quarrying and mining in India. The state is the second largest source of cement. It has rich salt deposits at Sambhar, copper mines at Khetri and zinc mines at Dariba and Zawar. Jaipur is the capital and largest city of Rajasthan. It is also.
known as Pink City of India and a famous travel destination.
There is large amount of information available on open platform including internet regarding this. Relevant information is compiled as under.

Delhi Mumbai Industrial Corridor (DMIC)

Rajasthan is strategically located along the Delhi-Mumbai section of the Golden Quadrilateral highway project, the proposed Dedicated Freight Corridor (DFC) and the Delhi Mumbai Industrial Corridor (DMIC).

Rajasthan has access to 46% of DMIC. It falls within major districts of Jaipur, Alwar, Kota and Bhilwara. Over 58% area of the state falls within the influence area of DMIC. The DMIC will provide high quality environment with state-of-the-art infrastructure for new investors.

The state of Rajasthan has a rich agricultural and mineral base. Key industrial sectors in the state include Cement, Building Stones, Gypsum, Gems & Jewellery, Chemical, Food processing and Textiles. The emerging sectors include IT/ITES, Auto Component and Knowledge Hubs. Based on the strengths of specific regions across the state, five development nodes are identified in the influence area of DMIC. It includes two investment regions and three industrial areas.

Project road would act as feeder road for traffic destined for DMIC logistic hubs from northern states.

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as under. Rate of growth is moderated in light of overall regional trend. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry Favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, rate of growth diminishes. Same growth rate is not sustainable for long Traffic growth is suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Project Stretch

Table 5-11 : Recommended Growth Rates Optimistic

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046	2046-2051
Car/Jeep/Van	5.67%	5.45%	5.22%	5.00%	4.78%	4.56%
Bus	3.21%	3.09%	2.72%	2.61%	2.50%	2.40%
LCV	3.38%	3.17%	2.72%	2.53%	2.35%	2.17%
2- Axle	3.96%	3.74%	3.23%	3.04%	2.86%	2.67%
3 - Axle	3.96%	3.74%	3.23%	3.04%	2.86%	2.67%
4 to 6 Axle	3.96%	3.74%	3.53%	3.32%	3.12%	2.91%
7 and Above Axle	3.96%	3.74%	3.53%	3.32%	3.12%	2.91%

Table 5-12 : Recommended Growth Rates Pessimistic

Category / Year	2024-2026	2026-2031	2031-2036	2036-2040	2041-2046	2046-2051
Car/Jeep/Van	5.17%	4.95%	4.72%	4.50%	4.28%	4.06%
Bus	2.71%	2.59%	2.22%	2.11%	2.00%	1.90%
LCV	2.88%	2.67%	2.22%	2.03%	1.85%	1.67%
2- Axle	3.46%	3.24%	2.73%	2.54%	2.36%	2.17%
3 - Axle	3.46%	3.24%	2.73%	2.54%	2.36%	2.17%

Category / Year	2024-2026	2026-2031	2031-2036	2036-2040	2041-2046	2046-2051
4 to 6 Axle	3.46%	3.24%	3.03%	2.82%	2.62%	2.41%
7 and Above Axle	3.46%	3.24%	3.03%	2.82%	2.62%	2.41%

Table 5-13 : Recommended Growth Rates Most Likely

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046	2046-2051
Car/Jeep/Van	5.42%	5.20%	4.97%	4.75%	4.53%	4.31%
Bus	2.96%	2.84%	2.47%	2.36%	2.25%	2.15%
LCV	3.13%	2.92%	2.47%	2.28%	2.10%	1.92%
2- Axle	3.71%	3.49%	2.98%	2.79%	2.61%	2.42%
3 - Axle	3.71%	3.49%	2.98%	2.79%	2.61%	2.42%
4 to 6 Axle	3.71%	3.49%	3.28%	3.07%	2.87%	2.66%
7 and Above Axle	3.71%	3.49%	3.28%	3.07%	2.87%	2.66%

Traffic and revenue have been worked out on the basis of above growths and same is presented in subsequent chapter of report.

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in previous section of report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza 1- Narwana 125.00 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)
2024-25	4520	381	364	428	249	1149	32	7123	13530
2025-26	4765	393	375	444	259	1192	33	7461	14101

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Kaithal – Rajasthan Border project, the Target Date and Target Traffic are defined as under:

Target Date - 1st April 2023

Target Traffic - 21919 in PCU

Pessimistic Case

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2023	21919	14886	-32%	48%	20%	27	5.4

PCUs as per Pessimistic cases have been considered for arriving at the concession Period end date.

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

As per the Toll Notification (Schedule - R) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued at fee 50 time the single journey fee.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travellers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: Local Car Jeep Van - Rs. 275 per month (for locals residing within a radius of 20 kms from toll plaza) and local commercial and 50% rate of single trip.

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

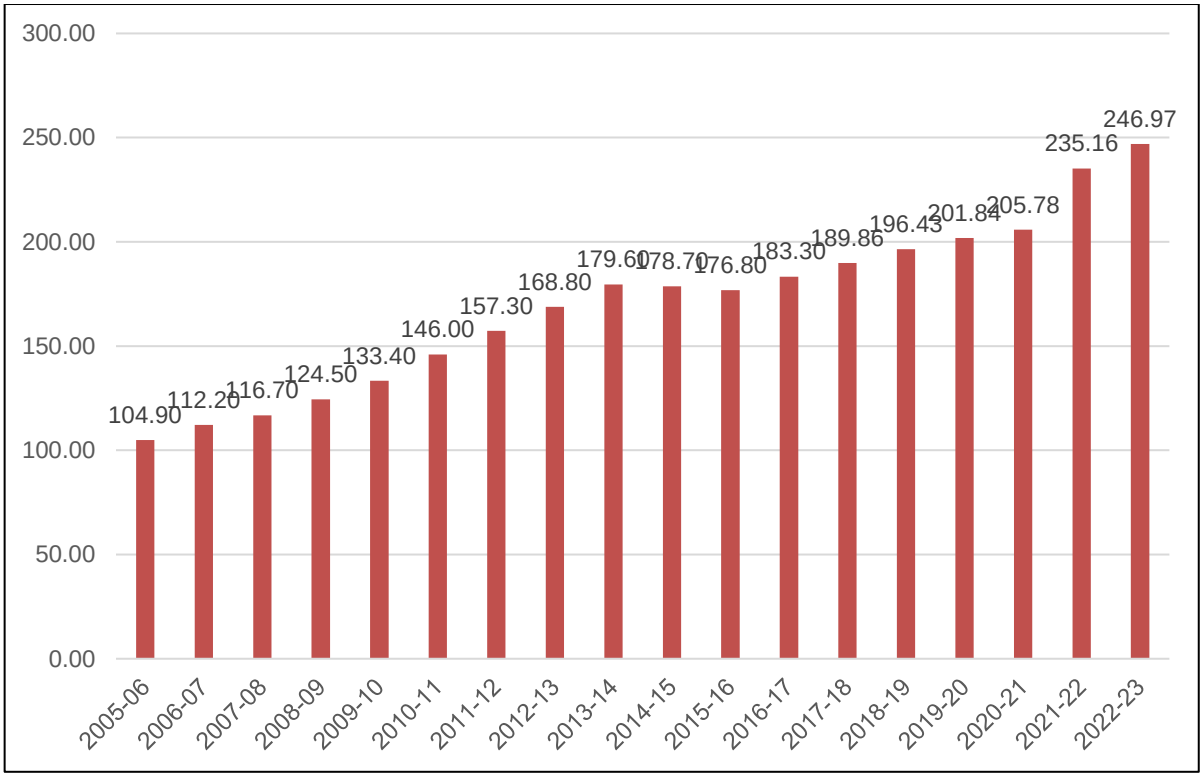

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in last few years is steadily growing. It grew in range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45
Oversized Vehicles (7 or more Axles)	4.20

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given as under

Table 7-2 : Toll Rates for Single Journey @ Km 125.000

Year	Car	Minibus /LCV	Bus	Truck	3 - Axle	Multi axle	Oversized Vehicles

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenario at each of the toll plaza up to 2048-49 starting from the year 2024-25 are shown in tables below.

Table 7-14 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Year	TP-1	TP-2	TP-3	Total
2024-25	44.68	62.79	44.69	**152.16**

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Kaithal to Rajasthan Border section of NH-152/65 in state of Haryana from km 33.250 to km 241.580 has been widened to four lanes. The road is in sound condition and serves healthy traffic volumes. Project corridor has potential to develop as main link for traffic from Punjab, Haryana, and parts of Himachal to Rajasthan and south. There are large number of townships, industrial corridors and other business establishment coming up along project corridor. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give positive impact to traffic flow on project. The following can be considered as major outcomes of the study.

a) There is good amount of tollable traffic running on project.

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy.

c) Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.

Based on above it can be considered a stable healthy project from traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under various NHDP Phases.

The project under consideration, Four Laning of **Solapur** to **Yedeshi** section of NH-211 from km 0.000 to km 100.000 in the state of Maharashtrais one such road project NHAI intended to implement on a BOT basis in the DBFOT format. *M/s Solapur Yedeshi Tollway Ltd*. (Concessionaire) has been awarded the Project for a concession period of 29 years starting from appointed date of 21st January2015.COD was achieved for part length of project on 15th October 2019 and Tolling Operation on Project started for full length.

Project road section from Solapur to Yedeshi is part of important north-south connectivity. It connects Karnataka, southern parts of Maharashtra and other southern states to Solapur, Aurangabad, Dhule and then northern parts of India.

The following figure shows the project road alignment.

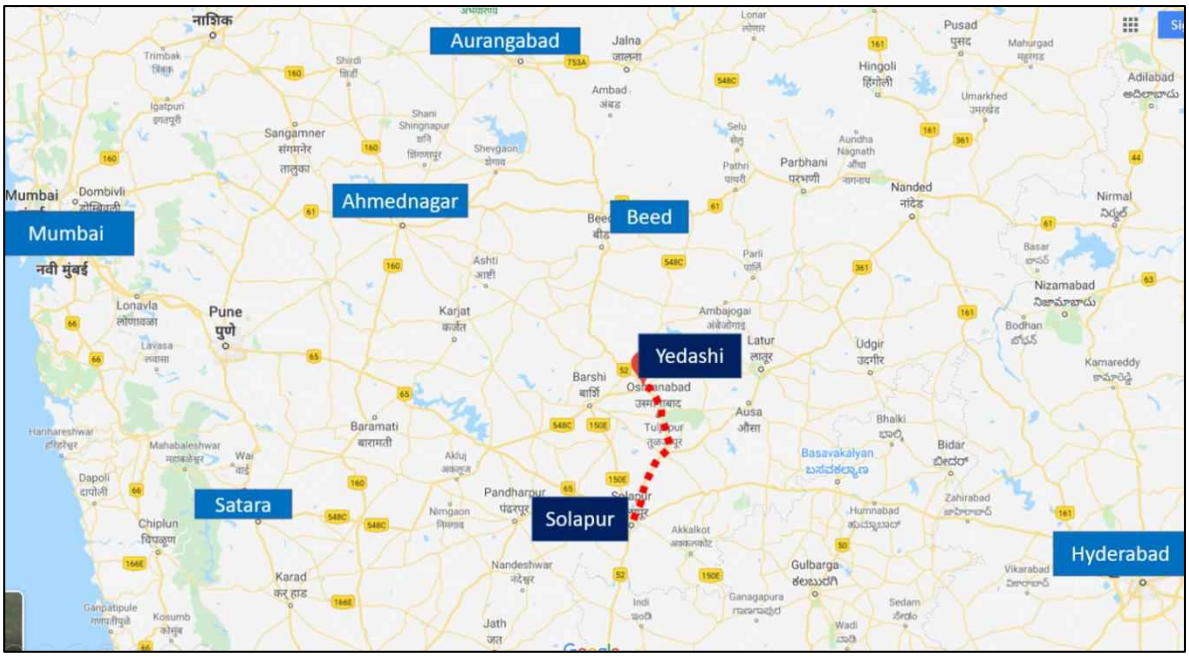

Figure 1-1: Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged *GMD Consultants* to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.

This report named as **"Traffic Study &*Toll Revenue Projection Report*"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

NH-211 is an important national highway of Maharashtra. It connects northern Karnataka to Marathwada region of Maharashtra.
Solapur, the textile and sugar belt of Maharashtra, Jalna, India's first dry port, Aurangabad fall in project corridor. Bidkin, Shendre areas which are coming up with mega green field Industrial smart city of 10000 acre at Bidkin and Shendra in Maharashtra also fall in influence zone of project corridor.

2.2 Project Stretch Description

The Project highway from Solapur to Yedeshi border from Km 0.000 to km 100.00 has been widened to four lanes as per schedules.

Project road forms part of very important transportation corridor which works as gateway to Karnataka and rest of south India for Marathwada region of Maharashtra. Though it connects Solapur – Dhule but forms important transportation link for traffic from Vijapur, Hubli and other parts of north Karnataka to Aurangabad, Jalna, Beed and other places in Marathwada region. Project has two toll plazas at Tamamwadi and Yedeshi.

The following figure shows project alignment and toll plaza locations.

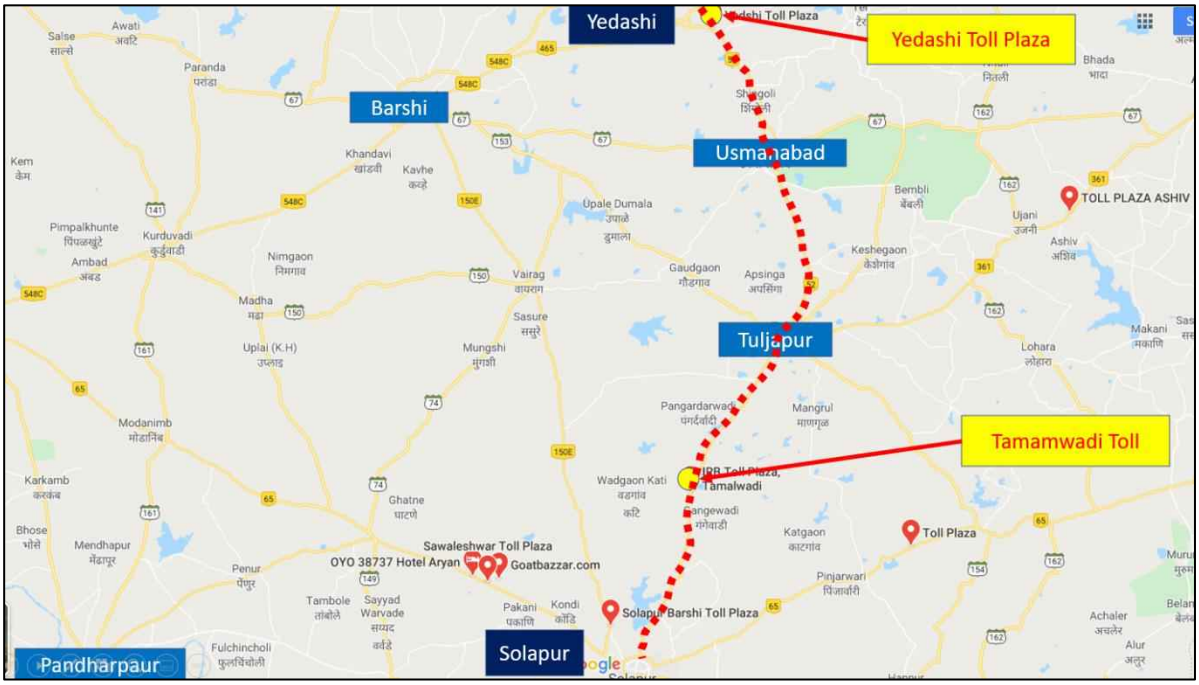

Figure 2-1: Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

Four laning of project stretch is complete. The following photographs illustrate the project section along the corridor.

Figure 2-2: Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at two toll plaza locations on Solapur- Yedeshi section of NH-211 for years 2017-18, 2018-19, 2019-20, 2020-21 ,2021-22,2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

2	Km 77.400 Toll Plaza at Yedeshi	AADT for Period for Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period for Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period for Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period for Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Period for Year 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Minibus /LCV
- Bus
- Truck
- 3-Axle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue

calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Tamalwadi Toll Plaza at Km 19.300

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25
1	Car	4964	3564	6308	7840	9084	10676
2	Minibus/LCV	1068	782	362	442	420	509

Total		**9413**	**7343**	**10070**	**12958**	**14326**	**16148**

Table 3-4 : Traffic Data at Yedeshi Toll Plaza at Km 77.400

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25
1	Car	2840	2132	3308	3647	4273	5394
2	Minibus/LCV	613	514	263	283	296	315
3	Bus	233	118	127	238	284	334
4	Truck	674	682	783	951	1042	1044
5	3-Axle	807	826	870	986	918	862

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25
6	Multi Axle	1101	1343	1615	2132	2026	1596
7	Oversized Vehicles	0	1	1	6	12	10
Total		**6269**	**5616**	**6967**	**8245**	**8850**	**9555**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in ***Table*** 3-5**.**

Table 3-5 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-6 : Traffic in PCU at Project Stretch Base Year 2024-25

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2019-20	Tamalwadi Km 19.300	9413	18116	1.92
	Yedeshi Km 77.400	6269	13859	2.21
2020-21	Tamalwadi Km 19.300	7343	15339	2.09
	Yedeshi Km 77.400	5616	13829	2.46
2021-22	Tamalwadi Km 19.300	10070	18981	1.88
	Yedeshi Km 77.400	6967	16316	2.34
2022-23	Tamalwadi Km 19.300	12958	25377	1.96
	Yedeshi Km 77.400	8245	20222	2.45
2023-24	Tamalwadi Km 19.300	14326	27001	1.88
	Yedeshi Km 77.400	8850	20619	2.33
2024-25	Tamalwadi Km 19.300	16148	28884	1.79
	Yedeshi Km 77.400	9555	19811	2.07

It can be observed from above that project traffic has PCU index more than 2 which is an indicator of high proportion of commercial traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at two toll plaza locations.

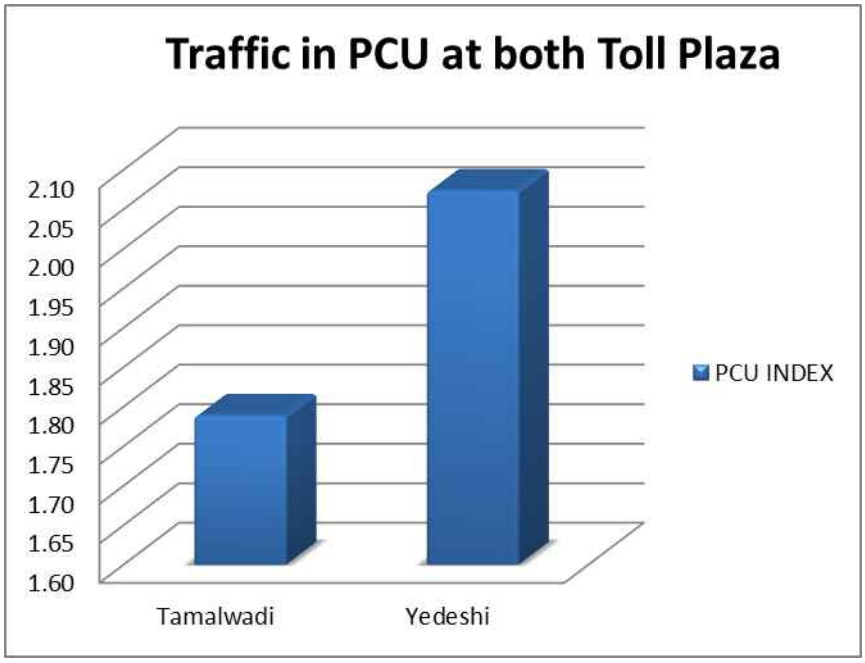

Figure 3-1: Comparison of PCU Index

It can be observed that PCU index is consistent at two toll plaza locations with commercial traffic slightly higher at Yedeshi toll plaza.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

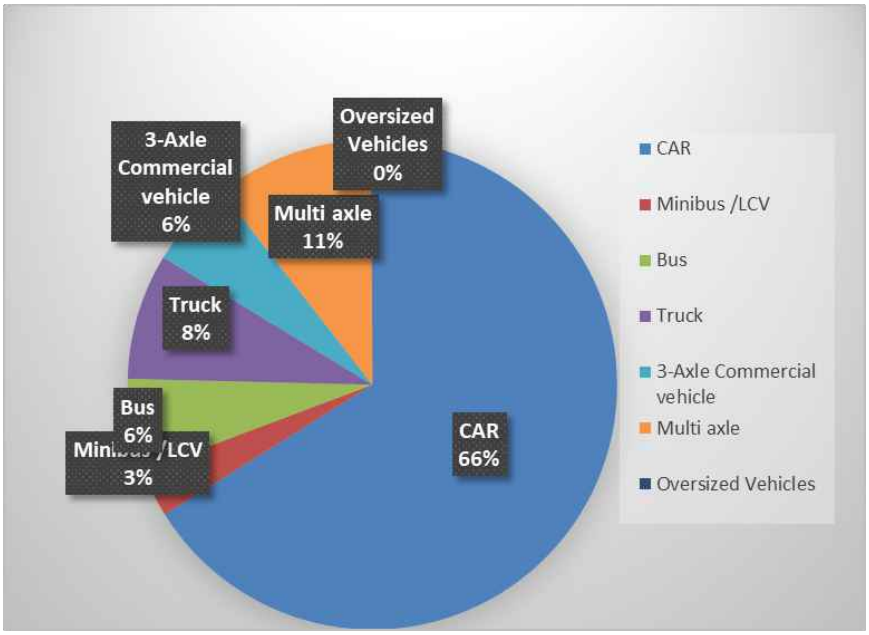

Figure 3-2: Model Split of Tollable Vehicle @TP-1

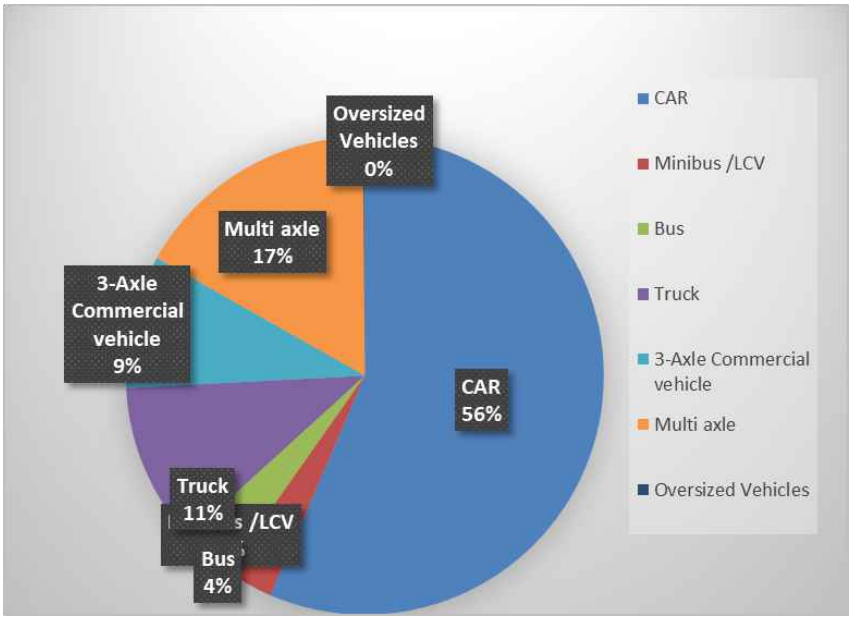

Figure 3-3: Model Split of Tollable Vehicle @TP-2

It is observed that car traffic forms about 50% - 65% of total traffic at toll plaza locations while multi axle commercial vehicles are about 17% -26% of total traffic. Truck / Bus and LCV share about 14%-15% and 3%-4% of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-7 : Journey Type Bifurcation of Traffic at Tamalwadi TP-1 KM 19.300

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	8136
2	Return Journey	7708
3	Local Commercial Single Journey	274
4	Monthly Pass Local	12
5	Monthly Pass	7
6	Local Monthly Pass Commercial	12

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 71%. Return journey component is 28%. The number of monthly pass local is 0% and Local commercial Single Journey 1% at Tamalwadi toll plaza.

The following tables give the details of journey distribution at Yedeshi toll plaza at Km 77.400.

Table 3-8 : Journey Type Bifurcation of Traffic at Yedashi TP-2 KM 77.400

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	6350
2	Return Journey	3038
3	Local Commercial Single Journey	130
4	Monthly Pass Local	22
5	Monthly Pass	8
6	Local Monthly Pass Commercial	7

It is observed that the project corridor demonstrates a similar pattern of single journey dominated mix of traffic across the entire stretch which is typical of major national highways.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data

a) GDP
b) NSDP
c) Population Growth
d) Per Capita Income growth
e) Industrial Growth
f) Special Industry Potential
g) Regional and National development vision / plan
h) Any other relevant data

3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Project road from Solapur to Yedashi is important transportation link between Solapur and Aurangabad. It can be observed that between Solapur and Yedashi all other roads cross or meet project road alignment radially. There is no important parallel road network which can be a competing link for project road traffic. At the local level there is no competing road. Moreover, after completion of four laning project road is under toll operation for last two years from 2018. In such a case local diversion, if any, would have settled by now.
At regional level also project road (NH-211) is preferred route for Solapur – Aurangabad traffic. Though there could be one alternate route via Ahmednager for Solapur-Aurangabad pair origin and destination.

The following figures show the layout of competing routes between both these Zones.

Figure 4-1: Alternate route at regional level.

For this alternate route also, traffic would have settled since project road is under toll operation for last two years under toll. With completion of Aurangabad – Yedashi stretch four laning last year project route has become more attractive for candidate traffic. The following table provides a summary of analysis of competing or alternate routes.

Sr. No	Route Details	Designation	Length (Km)	Avg. Speed (KMPH)	Time Taken (Min)	Observations
Regional Level						
1	Solapur-Ahmednagar-Aurangabad	Alternate Route	346	64	6 Hr 50 Min	Alternate route is longer and has higher travel time. Project road has clear advantage
	Solapur-Yedeshi-Aurangabad	Project Road	310	55	5 Hr 27 Min	

Table 4-1 : Competing Roads Details

Under these circumstances it is not envisaged that commercial or passenger traffic would switch to alternate roads from the project road.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Solapur–Yedeshi section of NH-211has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*
EI = *Economic Indicator*
A = *Regression constant*
k = *Elasticity coefficient (Regression coefficient)*

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor is entirely in the state of Maharashtra but being at the border of Karnataka there is certain of Karnataka on project traffic. In such circumstances for elasticity calculations, working data from above Maharashtra and Karnataka states has been analyzed.

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Maharashtra State.

Table 5-1 : Per Capita Income Vs Car Maharashtra

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	99564	2307841	5.00	6.36		
2013	103904	2592565	5.02	6.41	4%	
2014	109399	2834847	5.04	6.45	5%	
2015	114746	3113773	5.06	6.49	5%	
2016	122422	3406872	5.09	6.53	7%	
2017	132899	3715744	5.12	6.57	9%	5.96%

Regression analysis of same is given in figure below.

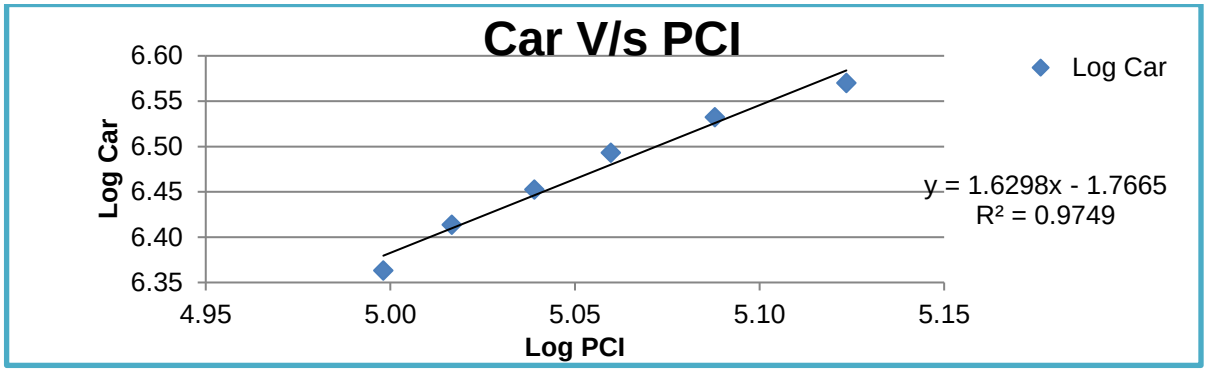

Figure 5-1: Regression and Elasticity PCI vs. Car–Extrapolation Maharashtra

Table 5-2 : Population Vs Bus Maharashtra

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	112374333	119298	8.05	5.08		
2013	113807248	129535	8.06	5.11	1%	
2014	115229410	140087	8.06	5.15	1%	
2015	116640546	140102	8.07	5.15	1%	
2016	118040394	150427	8.07	5.18	1%	
2017	119428710	160042	8.08	5.20	1%	1.23%

Regression analysis of same is given in figure below.

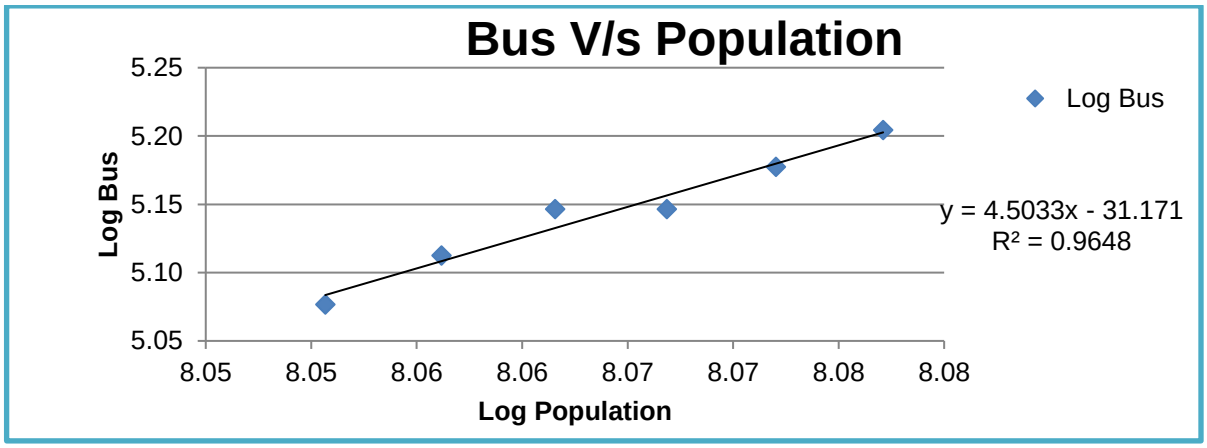

Figure 5-2: Regression and Elasticity Population vs. Bus – Extrapolation Maharashtra

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : LCV Traffic Vs NSDP Maharashtra

Year	NSDP	LCV	Log NDSP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	1126595	656407	6.05	5.82		
2013	1189711	739725	6.08	5.87	6%	
2014	1267551	803128	6.10	5.90	7%	
2015	1345341	868632	6.13	5.94	6%	
2016	1452439	927903	6.16	5.97	8%	6.56%

The following figure depicts regression analysis and extrapolation.

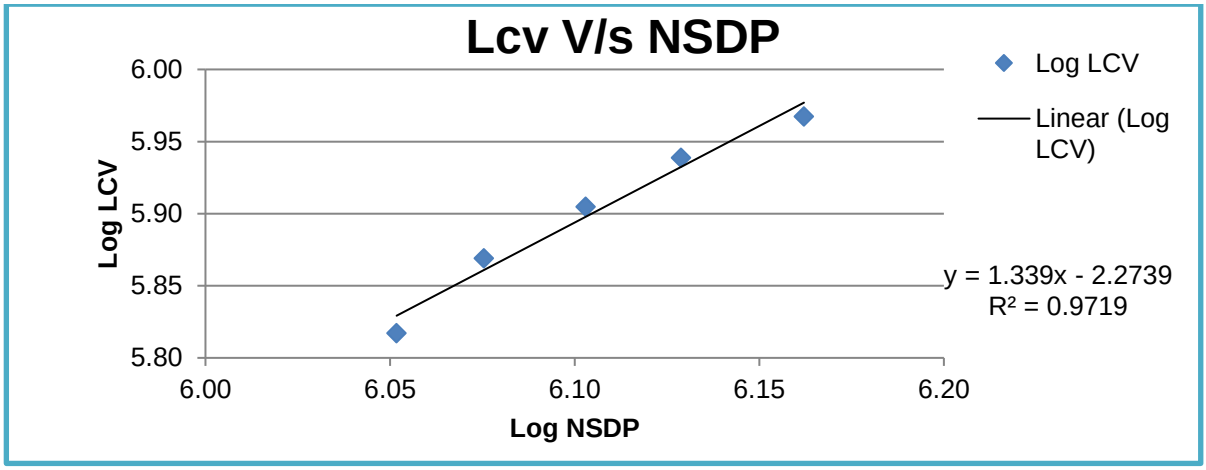

Table 5-4: Truck Traffic Vs NSDP Maharashtra

Year	NSDP	TRUCK	Log NDSP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	1126595	411418	6.05	5.61		
2013	1189711	402366	6.08	5.60	6%	
2014	1267551	470128	6.10	5.67	7%	
2015	1345341	491582	6.13	5.69	6%	
2016	1452439	468810	6.16	5.67	8%	
2017	1595514	496439	6.20	5.70	10%	7.22%

The following figure depicts regression analysis and extrapolation.

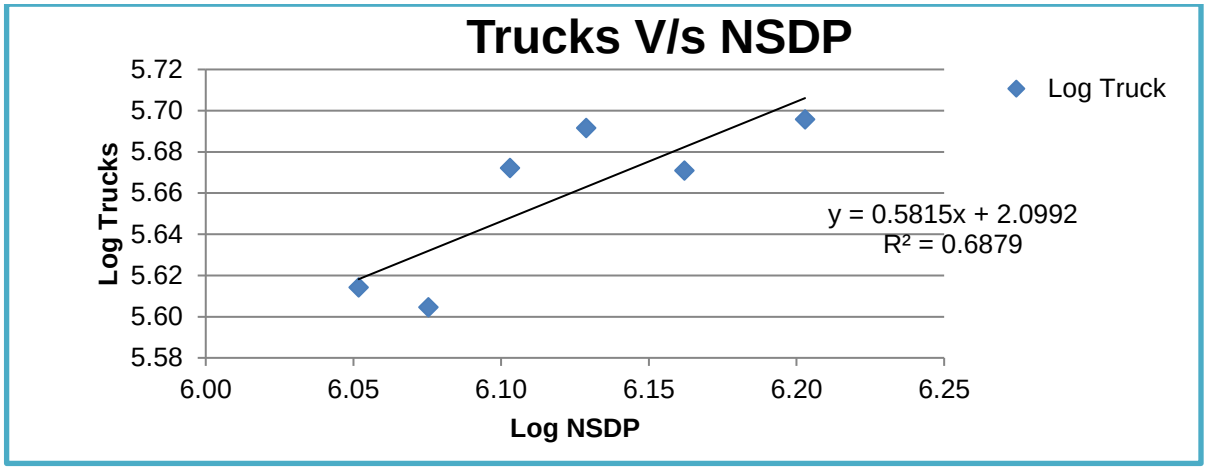

Figure 5-3: Regression and Elasticity NSDP vs. Goods Traffic – extrapolation Maharashtra.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-4 : Summary Regression Analysis Maharashtra

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth	Growth Elastic Model
Maharashtra	Car/Jeep	PCI	y = 1.6298x + -1.7665	R² = 0.9749	1.6298	5.96%	9.71%
	Bus	Population	y = 4.5033x - -31.1713	R² = 0.9648	4.5033	1.23%	5.52%
	LCV	NSDP	y = 1.339x - -2.2739	R² = 0.9719	1.3390	6.56%	8.78%
	Truck	NSDP	y = 0.5815x - 2.0992	R² = 0.6879	0.5815	7.22%	4.20%

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Karnataka State.

Table 5-5 : Per Capita Income Vs Car Karnataka

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	90269	1269430	4.96	6.10		
2013	94382	1420767	4.97	6.15	5%	
2014	101864	1572521	5.01	6.20	8%	
2015	105703	1741831	5.02	6.24	4%	
2016	116819	1916373	5.07	6.28	11%	
2017	131260	2110493	5.12	6.32	12%	7.83%

Regression analysis of same is given in figure below.

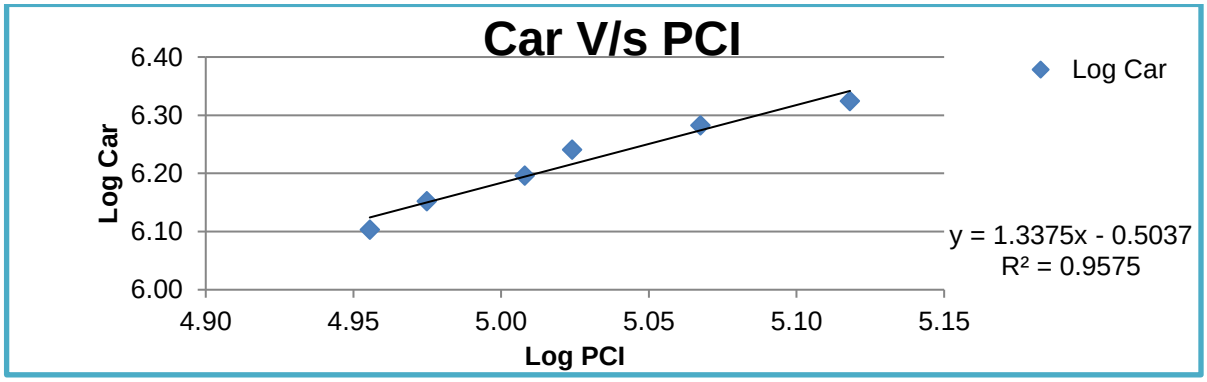

Figure 5-4: Regression and Elasticity PCI vs. Car–Extrapolation Karnataka

Table 5-6 : Population Vs Bus Karnataka

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	61095297	175705	7.79	5.24		
2013	62058777	186705	7.79	5.27	2%	
2014	63017877	195913	7.80	5.29	2%	
2015	63972322	204803	7.81	5.31	2%	
2016	64921845	213699	7.81	5.33	1%	

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2017	65866188	224580	7.82	5.35	1%	1.52%

Regression analysis of same is given in figure below.

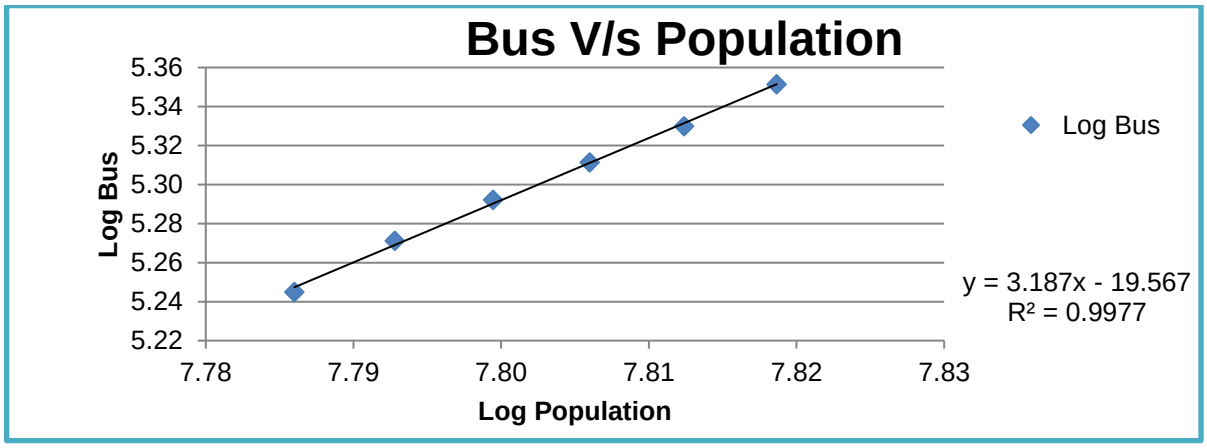

Figure 5-5: Regression and Elasticity Population vs. Bus – Extrapolation Karnataka

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-7 : LCV Traffic Vs NSDP Karnataka

Year	NSDP	LCV	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	554990	221160	5.74	5.34		
2013	586592	258701	5.77	5.41	6%	
2014	639981	294266	5.81	5.47	9%	
2015	671322	331381	5.83	5.52	5%	
2016	749990	367572	5.88	5.57	12%	7.85%

The following figure depicts regression analysis and extrapolation.

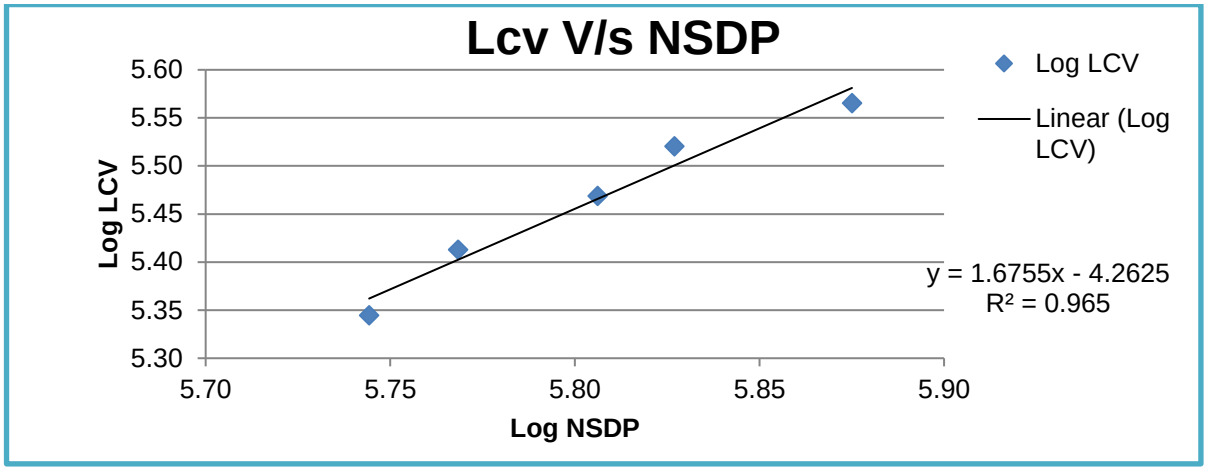

Table 5-4: Truck Traffic Vs NSDP Karnataka

Year	NSDP	TRUCK	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	554990	233422	5.74	5.37		
2013	586592	247639	5.77	5.39	6%	
2014	639981	260989	5.81	5.42	9%	
2015	671322	274971	5.83	5.44	5%	
2016	749990	290415	5.88	5.46	12%	
2017	851880	306290	5.93	5.49	14%	9.00%

The following figure depicts regression analysis and extrapolation.

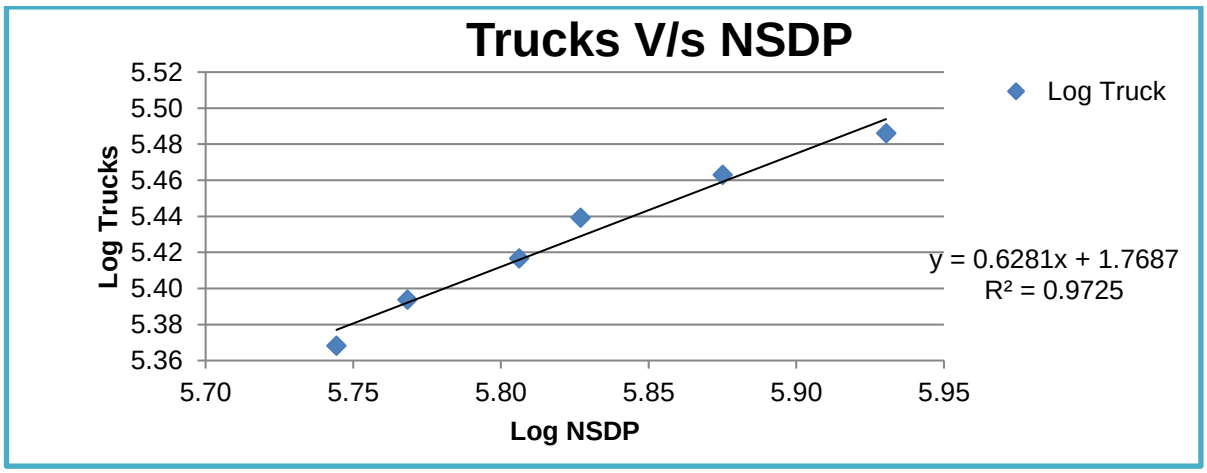

Figure 5-6: Regression and Elasticity NSDP vs. Goods Traffic – extrapolation Karnataka.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-8 : Summary Regression Analysis Karnataka

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth	Growth Elastic Model
Karnataka	Car/Jeep	PCI	y = 1.3375x + -0.5037	R² = 0.9575	1.3375	7.83%	10.47%
	Bus	Population	y = 3.187x - -19.567	R² = 0.9977	3.1870	1.52%	4.83%
	LCV	NSDP	y = 1.6755x - -4.2625	R² = 0.965	1.6755	7.85%	13.16%
	Truck	NSDP	y = 0.6281x - 1.7687	R² = 0.9725	0.6281	9.00%	5.65%

The economic model for predicting growth is a good tool, however other local, regional, and national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trends of growth. Project stretch of Kaithal to Rajasthan Border is under tolling operation with current concessionaire and has only two years of tolling history from 2018-19. As traffic data is available with the project concessionaires of just a year about, we do not have sufficient data points to be able to establish a reliable past trend of traffic growth. A minimum of about 5 -6 years' traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

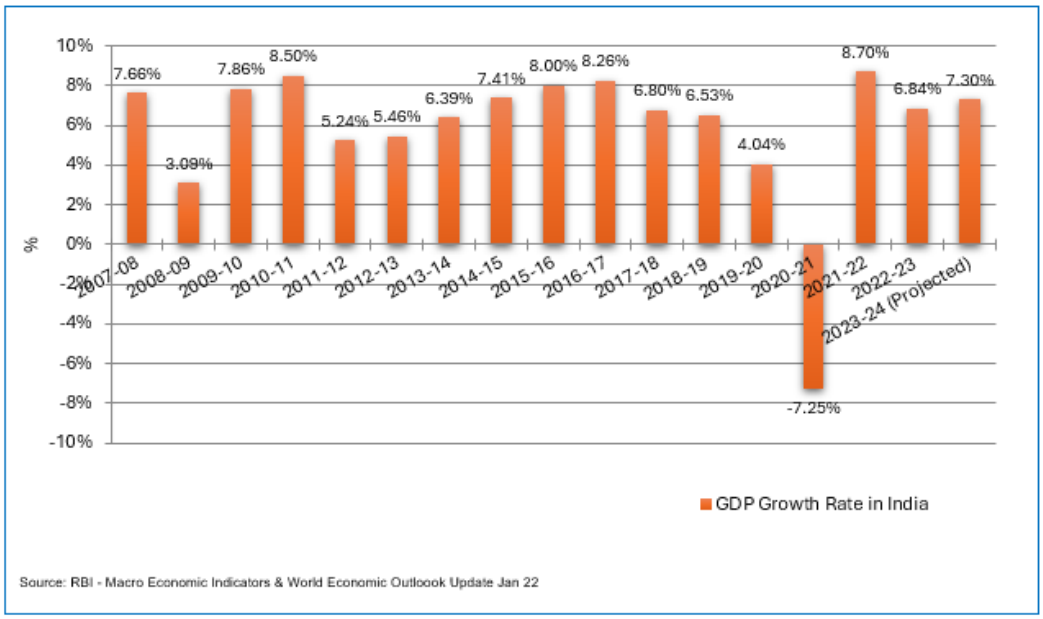

Figure 5-7 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. The World Economic Outlook update also has predicted a growth rate of about 7.5 % in the year 2022-23.

5.6 Developments along and around the Project Corridor & State

Project stretch falls in regions of good development potential. The same is discussed as under.

Solapur

Solapur is one of the major cities of Karnataka which shares boundary with Karnataka. Thus, it can be called the gateway to the south for this region. Solapur district has highest number of sugar factories in India.

Solapur leads Karnataka in production of Indian cigarettes or beedi.Solapuri Chadars and towels are famous in India and also at a global level, however, there has been a significant decline in their exports due to quality reasons. ***"SolapuriChadars"*** are the most famous and first product in Karnataka. It has been a leading centre for cotton mills and power looms in Karnataka. Solapur had the world's second largest and Asia's largest spinning mill. The National Research Centre on Pomegranate (NRCP) of India is located in Solapur and pomegranate farming is done on a large scale in Solapur District. MIDC (Karnataka Industrial Development Corporation) has been very successful in creating and promoting industrial hubs in various parts of Karnataka. It provides businesses with infrastructure such as land (open plot or built-up spaces), roads, water supply, drainage facilities and streetlights along with necessary clearances. In total MIDC has developed about 300 industrial centres which have attracted a large number of domestic and international industries to set up their business and production houses in Karnataka. Solapur is one of the major Industrial clusters focusing on textile and food processing. The following are major MIDCs spread over Solapur district.

- Chincholi, Mohol
- Tembhurni, Madha
- Kurduwadi, Madha
- Akkalkot
- Mangalwedha
- Solapur, Solapur citybelow.

Pandharpur

This is a holy place of Shri.Vitthal and Shri Rukmini. It is also known as the Southern Kashi of India and Kuldaivat of Karnataka State. It is located at a distance of 72 kms by road. from Solapur District headquarters. Large numbers of devotees from all over Karnataka and surrounding States gather at Pandharpur mainly to celebrate the Aashadhi and Kartiki Ekadashis (in the month of June and July) every year in addition to the regular rush of devotees every day. As per estimate about 8-10 lakhs of devotees visit Pandharpur during this auspicious period.

Jalna

The government of Karnataka and JNPT are developing dry ports at Jalna and Bidkin Shendra which is on Paithan road. Project road would work like feeder to these economic hubs for traffic from Karnataka and other southern states.

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The

rate of growth is moderate in light of overall regional trends. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, the rate of growth diminishes. The same growth rate is not sustainable for long. Traffic growth is suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Project Stretch

Table 5-9 : Recommended Growth Rates Optimistic

Category / Year	2024-2025	2026-2030	2031-2035	2036-2040	2041-2045
Car/Jeep/Van	9.53%	8.92%	8.77%	8.47%	8.11%
Bus	5.83%	5.50%	5.47%	5.41%	5.15%
LCV	4.31%	4.02%	3.88%	3.61%	3.32%
2- Axle	5.13%	4.56%	4.43%	4.15%	3.86%
3 - Axle	6.46%	5.72%	5.55%	5.20%	4.82%
4 to 6 Axle	7.12%	6.30%	6.11%	5.72%	5.30%
7 and Above Axle	7.12%	6.30%	6.11%	5.72%	5.30%

Table 5-10 : Recommended Growth Rates Pessimistic

Category / Year	2024-2025	2026-2030	2031-2035	2036-2040	2041-2045
Car/Jeep/Van	9.03%	8.42%	8.27%	7.97%	7.61%
Bus	5.33%	5.00%	4.97%	4.91%	4.65%
LCV	3.81%	3.52%	3.38%	3.11%	2.82%
2- Axle	4.63%	4.06%	3.93%	3.65%	3.36%
3 - Axle	5.96%	5.22%	5.05%	4.70%	4.32%
4 to 6 Axle	6.62%	5.80%	5.61%	5.22%	4.80%
7 and Above Axle	6.62%	5.80%	5.61%	5.22%	4.80%

Table 5-11 : Recommended Growth Rates Most Likely

Category / Year	2024-2025	2026-2030	2031-2035	2036-2040	2041-2045
Car/Jeep/Van	9.28%	8.67%	8.52%	8.22%	7.86%
Bus	5.58%	5.25%	5.22%	5.16%	4.90%
LCV	4.06%	3.77%	3.63%	3.36%	3.07%
2- Axle	4.88%	4.31%	4.18%	3.90%	3.61%
3 - Axle	6.21%	5.47%	5.30%	4.95%	4.57%
4 to 6 Axle	6.87%	6.05%	5.86%	5.47%	5.05%
7 and Above Axle	6.87%	6.05%	5.86%	5.47%	5.05%

It is observed that a PIL was filed at Hon'ble Bombay High Court (Aurangabad bench) to augment the Autram Ghat section (between Chalisgaon and Aurangabad). The Hon'ble High Court has passed an interim order in August 2023. It directed NHAI to submit a plan for augmentation of the road and till then movement of commercial vehicles is restricted on that section of the road. The matter is sub judice.
This has affected the traffic on stretch. It is assumed that the matter is temporary and should be resolved soon, in the near future and would result in increased traffic in the project corridor. Hence additional growth has been considered in the year 2025-26 to cater for the above.

Traffic and revenue have been worked out on the basis of the above growths and some are presented in subsequent chapters of the report.

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza 1- Tamalwadi19.300 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Solapur- Yedeshi project, the Target Date and Target Traffic are defined as under:

Target Date - 1st October 2023

Target Traffic - 22210 in PCU

Pessimistic Case

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2023	22210	23652	6%	-5%	-5%	29	-1.4

PCUs as per Pessimistic cases have been considered for arriving at the concession Period end date.

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

As per the Toll Notification (Schedule -R) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued for 50 trips at 2/3rd rate as per provision of fee notification.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car – Rs. 275 Per Month
    b) Local Commercial Traffic at 50% rate for single trip.

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A} - \text{WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

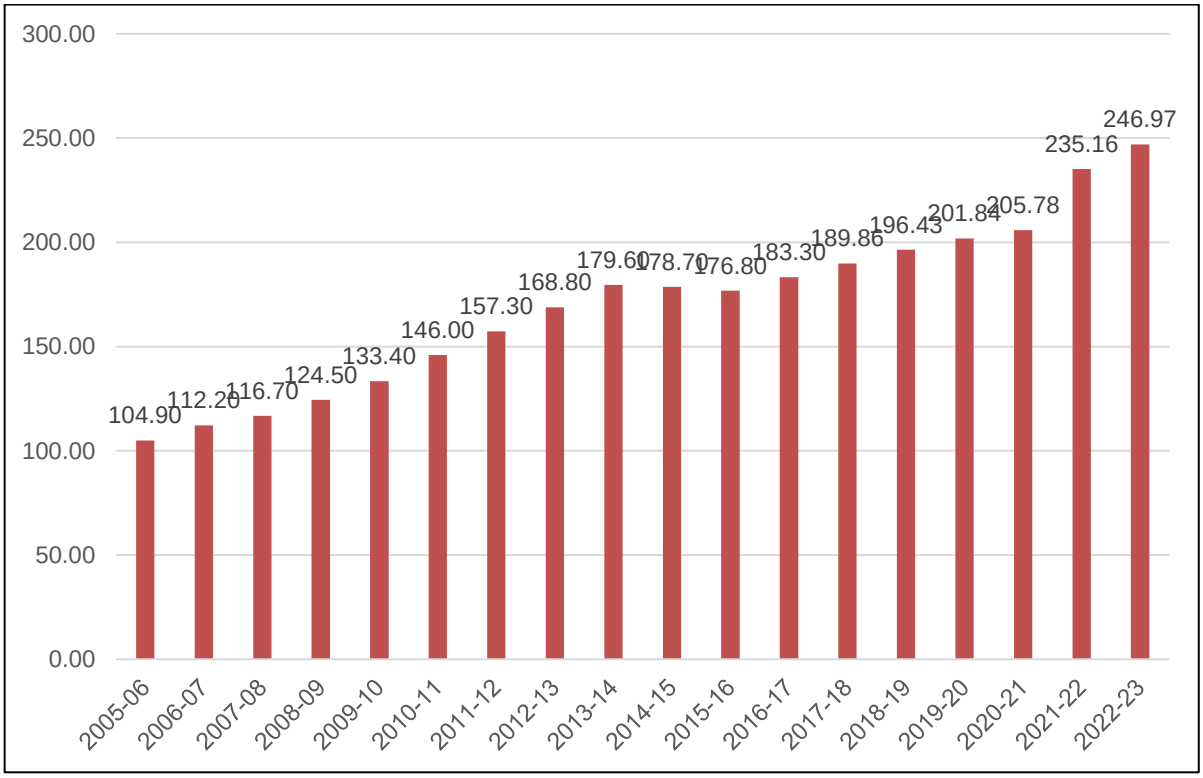

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Oversized Vehicles (7 or more Axles)	4.20

There is no bypass or structure to be factored in for rates calculations.

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given as under

Table 7-2 : Toll Rates for Single Journey@ Toll Plaza 1- Tamalwadi 19.300 KM

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2045-46 starting from the year 2024-25 are shown in tables below.

Table 7-10 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Year	Toll Plaza Km 19.300	Toll Plaza Km 77.400	Total
2024-25	76.94	56.85	**133.80**

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Solapur to Yedashi section of NH-211 in state of Karnataka from km 0.000 to km 100.000has been widened to four lane. The road is in sound condition and serves healthy traffic volumes. Project corridor is the main transport link for Karnataka-Marathwada traffic. There are large number of townships, industrial corridors and other business establishments coming up along the project corridor. As Indian economy is poised to grow at 6%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give a positive impact to traffic flow on the project. The following can be considered as major outcomes of the study.

a) There is a good amount of tollable traffic running on the project.

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy.

c) The Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.

Based on the above it can be considered a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under various NHDP Phases.

The project under consideration, four laning of **Yedeshi** to **Aurangabad** section of NH-211 from km 100.000 to km 290.200 is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. *M/s YA Tollway Ltd*. (Concessionaire) has been awarded the Project for a concession period of 26 years starting from 1st July 2015. Four laning of project has also been completed in September 2020.

Length of project road is 189.090 Kms. The project road is section of NH-211, is one of the important transportation link in Maharashtra which connects Solapur to Dhule and then at Dhule it can join other important highway like NH-3 (Mumbai – Agra Road) and NH-6 (east-west highway). The project road passes through the important places like Chausala, Beed, Adul, Chitegaon and then Aurangabad. The Project Road passes through the districts of Beed and Aurangabad.

The following figure shows alignment of project road section from Yedeshi to Aurangabad.

Figure 1-1 : Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged *GMD Consultants* to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.

This report named as **"Traffic Study & *Toll Revenue Projection Report*"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

National Highway 211 which is now part of NH-52. The national highway 52 was numbered after amalgamating many existing national highways of India.

It connects the important places like Chausala, Beed, Adul, Chitegaon and then Aurangabad. The Project Road passes through the districts of Beed and Aurangabad. Following are the major centres of development around project road.

Project Stretch Description

Like other parts of India rapid ribbon development is happening around these cities on project highway. This also contributes to sustainable traffic growth.

There are three operative toll plazas at project stretch. The first is at Yedeshi at Km 134.000, second at Padalshingi at Km 194.000 and third at Bhokarwadi at Km 254.000. The following figure show project alignment and toll plaza locations.

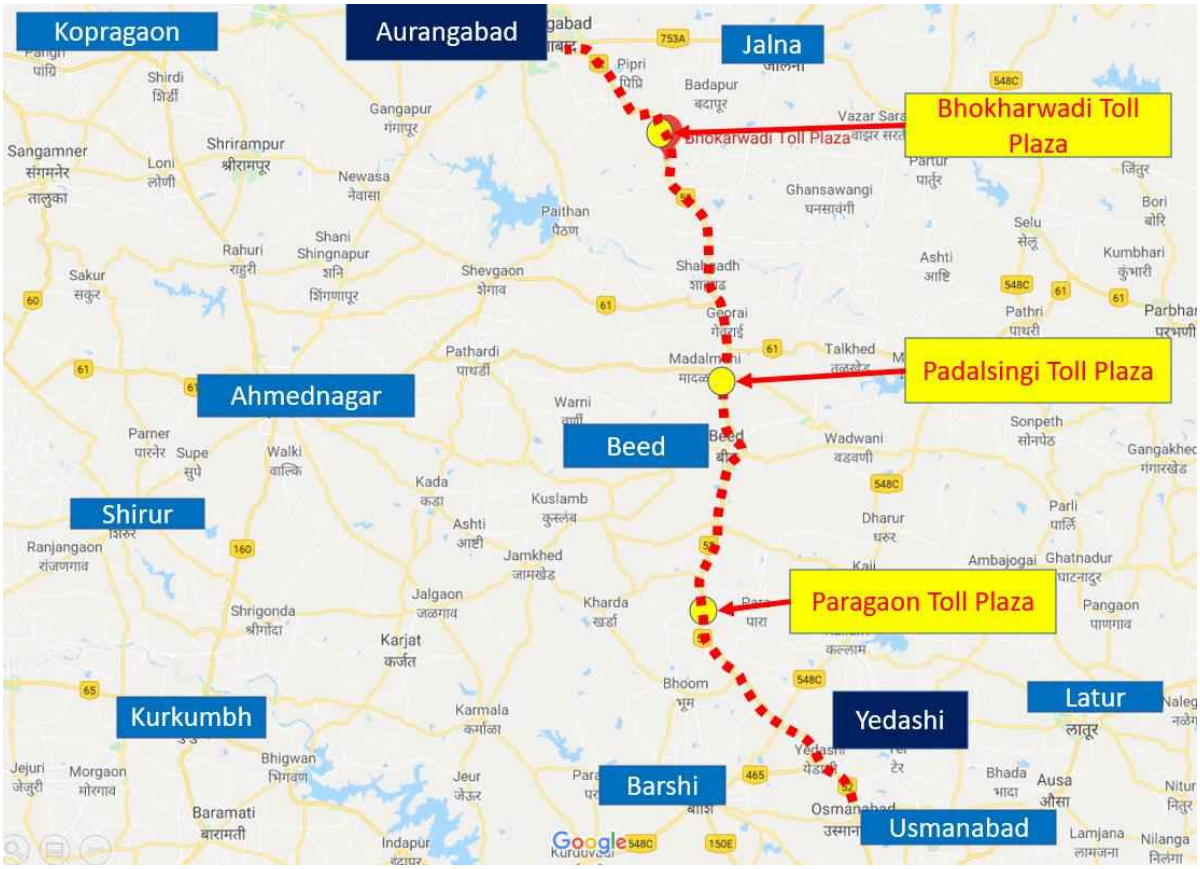

Figure 2-1 : Project Alignment with Toll Plaza

2.2 Project Corridor Illustration

Four laning of project stretch is complete. The following photographs illustrate the project section along the corridor.

Figure 2-2 : Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza locations on Yedeshi - Aurangabad section of NH-211 for years 2017-18, 2018-19, 2019-20, 2020-21 ,2021-22,2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project
- Establish base year traffic
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

Sr. No	Location	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 134.000 Toll Plaza at Pargaon	AADT for Year 2019-20, 2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024
2	Km 194.000 Toll Plaza at Padalshingi	AADT for Year 2019-20, 2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024
3	Km 254.000 Toll Plaza at Maliwadi	AADT for Year 2019-20, 2020-2021, 2021-22, 2022-2023, Eight month from April 2023 to	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month	For Year 2019-20 ,2020-2021, 2021-22, 2022-2023, Eight month

Sr. No	Location	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		November 2023 & Four month from April 2024 to July 2024	from April 2023 to November 2023 & Four month from April 2024 to July 2024	from April 2023 to November 2023 & Four month from April 2024 to July 2024	from April 2023 to November 2023 & Four month from April 2024 to July 2024	from April 2023 to November 2023 & Four month from April 2024 to July 2024

All toll plazas are located in Maharashtra.

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in table below .

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Minibus /LCV
- Bus
- Truck /
- 3 Axle commercial vehicle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Pargaon Toll Plaza at Km 134.000

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25
1	Car	1641	1439	2426	2863	3388	4123
2	Minibus /LCV	658	482	257	317	332	376
3	Bus	199	109	110	215	244	284

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in Table 3-6.

Table 3-6 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0

Vehicle Type	PCUs
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-7 : Traffic in PCU at Project Stretch

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2019-2020	Km 134.000 Toll Plaza at Pargaon	5007	12373	2.47
	Km 194.000 Toll Plaza at Padalshingi	8549	17479	2.04
	Km 254.000 Toll Plaza at Maliwadi	6216	12740	2.05
2020-2021	Km 134.000 Toll Plaza at Pargaon	4913	13136	2.67
	Km 194.000 Toll Plaza at Padalshingi	7620	17339	2.28
	Km 254.000 Toll Plaza at Maliwadi	5623	12706	2.26
2021-2022	Km 134.000 Toll Plaza at	6096	15511	2.54

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
	Pargaon			
	Km 194.000 Toll Plaza at Padalshingi	9299	19945	2.14
	Km 254.000 Toll Plaza at Maliwadi	6862	14138	2.06
2022-2023	Km 134.000 Toll Plaza at Pargaon	7544	19724	2.61
	Km 194.000 Toll Plaza at Padalshingi	10985	24840	2.26
	Km 254.000 Toll Plaza at Maliwadi	9023	20097	2.23
2023-2024	Km 134.000 Toll Plaza at Pargaon	8084	20153	2.49
	Km 194.000 Toll Plaza at Padalshingi	12357	26677	2.16
	Km 254.000 Toll Plaza at Maliwadi	10484	22233	2.12
2024-2025	Km 134.000 Toll Plaza at Pargaon	8417	18946	2.25
	Km 194.000 Toll Plaza at Padalshingi	14344	28015	1.95
	Km 254.000	11189	20746	1.85

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
	Toll Plaza at Maliwadi			

It can be observed from above that project traffic has PCU index 2 to 2.6 which is an indicator of high proportion of commercial traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at three toll plaza locations.

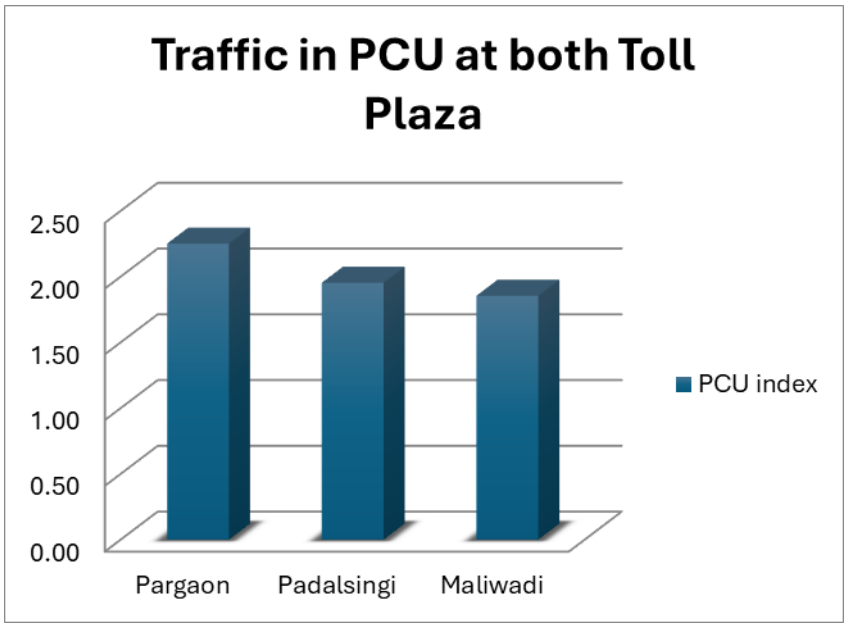

Figure 3-1 : Comparison of PCU Index

It can be observed that PCU index is consistent at all three toll plaza locations.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

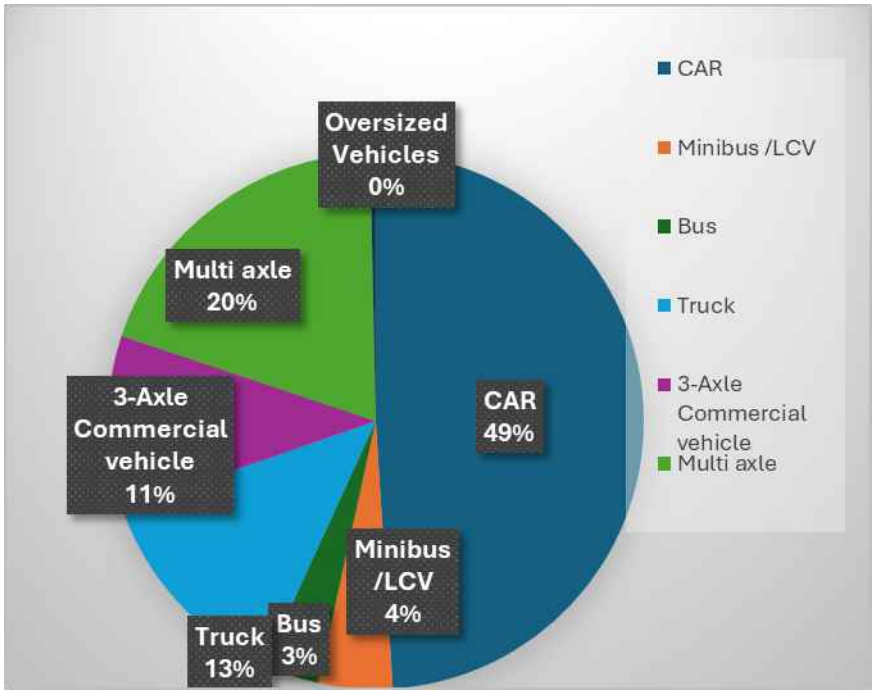

Figure 3-2: Model split of tollable vehicle @ Km 134.000

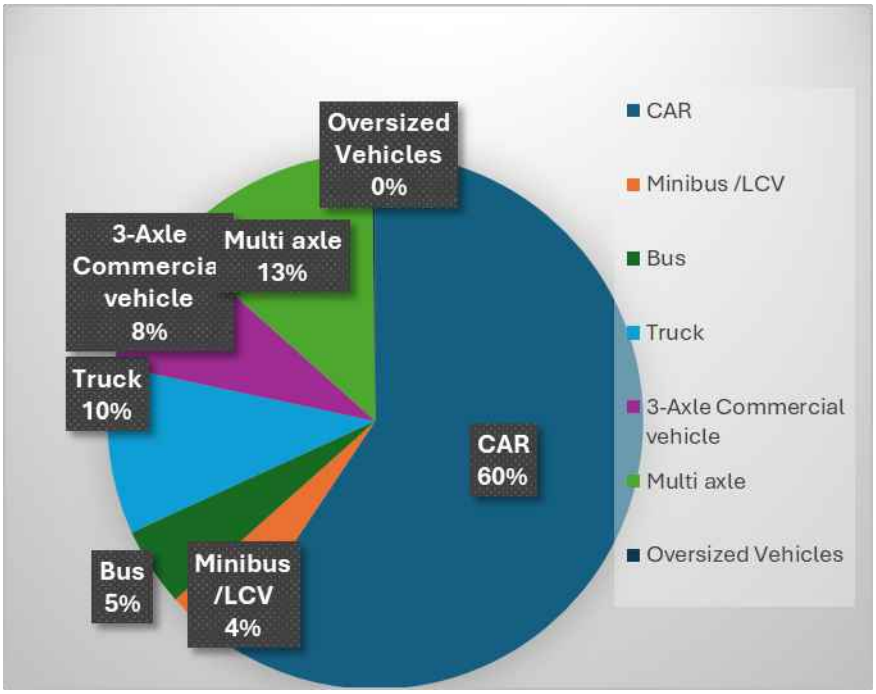

Figure 3-3: Model split of tollable vehicle @ Km 194.000

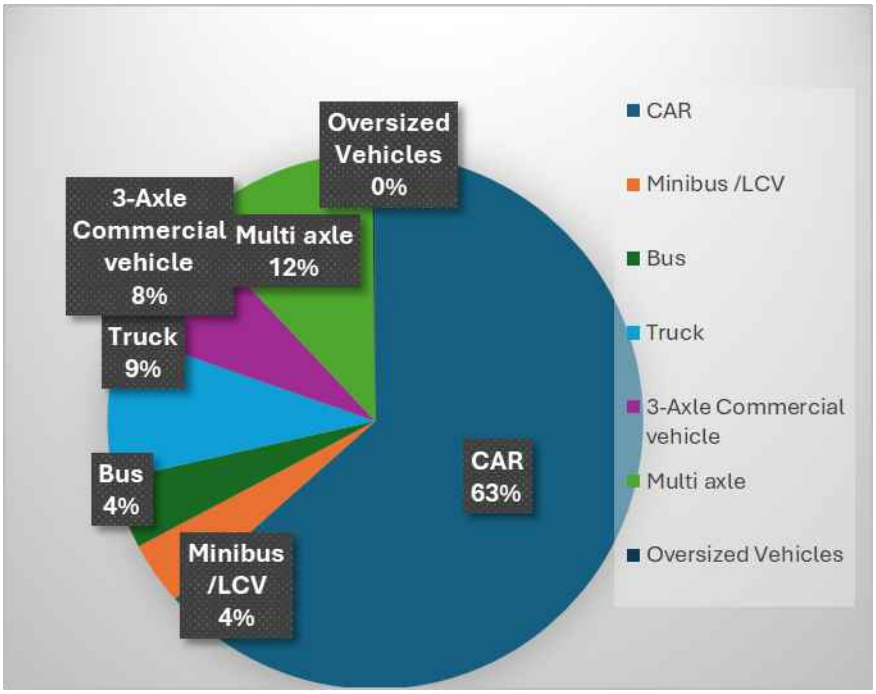

Figure 3-3: Model split of tollable vehicle @ Km 254.000

It is observed that car traffic forms about 49% of total traffic at toll plaza location KM 134.000 while multi axle commercial vehicles are about 31% of total traffic. Truck / Bus and LCV share about 16% and 4% of traffic volume respectively.

It is observed that car traffic forms about 60% of total traffic at toll plaza location KM 194.000 while multi axle commercial vehicles are about 21% of total traffic. Truck / Bus and LCV share about 15% and 4% of traffic volume respectively.

It is observed that car traffic forms about 63% of total traffic at toll plaza location KM 254.000 while multi axle commercial vehicles are about 20% of total traffic. Truck / Bus and LCV share about 13% and 4% of traffic volume respectively.

At second & third toll plaza passenger traffic component is higher due to urban settlement around.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-8 : Journey Type Bifurcation of Traffic at Pargaon Toll Plaza KM 134.000

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	5882
2	Return Journey	2464
3	Local Commercial Single Journey	61
4	Monthly Pass Local	10
5	Monthly Pass	0

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 70%. Return journey component is 29%. The number of monthly pass Local is 0% and Local Commercial single Journey 1% at Pargaon toll plaza.

The following tables give the details of journey distribution at Padalshingi toll plaza at Km 194.000 and Km 254.000.

Table 3-9 : Journey Type Bifurcation of Traffic at Padalshingi Toll Plaza KM 194.000

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	7894
2	Return Journey	5784
3	Local Commercial Single Journey	545
4	Monthly Pass Local	120
5	Monthly Pass	1

Table 3-10 : Journey Type Bifurcation of Traffic at Maliwadi Toll Plaza KM 254.000

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	6286
2	Return Journey	4824
3	Local Commercial Single Journey	32
4	Monthly Pass Local	42
5	Monthly Pass	5

It is observed that the project corridor demonstrates a similar pattern of single journey dominated mix of traffic across the entire stretch which is typical of major national highways.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

In BOT projects there is always a risk factor of traffic shifting on competing roads after imposition of toll. Shifting of traffic depends on factors such as road length, type, geometry, riding quality and capacity. Competing road networks were identified around section and a speed delay analysis was conducted. In this detail of competing roads are provided and a comparison with project road is made. There can be some alternate route between Yedashi and Aurangabad. The following figure provides alignment of competing road network between Yedashi and Aurangabad.

Figure 4-1 : Alternate routes – Yedashi- Aurangabad

It can be observed that alternate routes are quite long and take more time to travel. Hence project road remains the most preferred option for travel between Yedashi and Aurangabad.

Similarly, at regional level there can be alternate via Ahmednagar for travel between Solapur and Aurangabad. The following figure shows competing networks in the area.

Figure 4-2 : Alternate route Between Solapur and Aurangabad

For travel between Solapur and Aurangabad as well project road is the most preferred option due to shorter length and less travel time. Completion of four laning of Solapur Yedashi section has complemented travel on this route.

The following table provides summary of analysis of alternate route/ roads discussed above.

Table 4-1 : Competing Roads Details

Sr. No	Route Details	Designation	Length (Km)	Avg. Speed (KMPH)	Time Taken (Min)	Observations
Regional Level						
1	Solapur-Ahmednagar-Aurangabad	Alternate Route	346	50	6 Hr 50 Min	Project road has minimum travel time and shortest road
	Solapur- Yedashi-Aurangabad	Project Road	310	60	5 Hr 10 Min	
2	Yedashi- Kalam-Madalmoni-Aurangabad (SH-61)	Alternate Route	270	50	5 Hr 24 Min	Project road has minimum travel time and shortest road
	Yedashi-Ahmednagar-Aurangabad	Alternate Route	289	50	5 Hr 49 Min	
	Yedashi- Beed-Aurangabad	Project Road	223	57	3 Hr 54 Min	

It light of the above discussion project road remains most preferred route for the traffic of influence area. Moreover, project stretch is under toll operation for last one year. Hence any shifting of traffic, if any, would have settled by now and any further shifting of traffic is not envisaged from project road.

Regional Network

Project corridor is an important transportation link for the traffic between Karnataka and Rajasthan / Delhi and other northern states. Part of this traffic uses the Bijapur- Solapur- Ahmednagar- Shirdi route to join back at Dhule and proceed towards northern parts of country. The length of route between Bijapur via project road and route via Ahmednagar is almost equal. Thus, it is expected that some part traffic will come back on the project road as the four laning is complete. The following figures show the route between Bijapur and Dhule via Project Road and via Ahmednagar for better understanding.

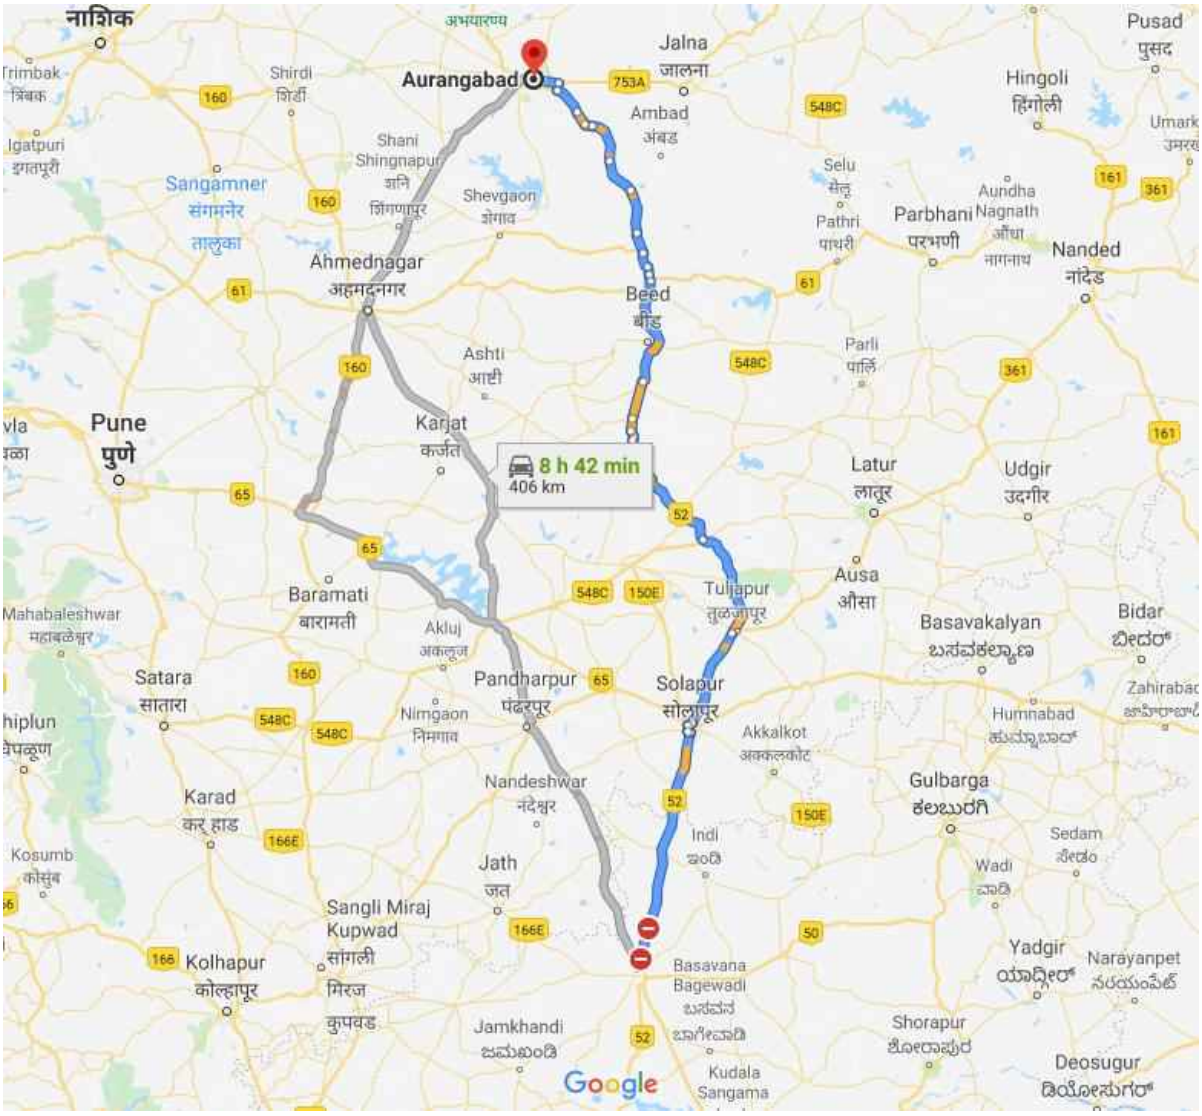

Figure 4-3 : Project Road in regional network.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Yedeshi - Aurangabad section of NH-8 has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable to projects of short durations say 5-10 years, however for long term projections it would-be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-12015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income

- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, In order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*
EI = *Economic Indicator*
A = *Regression constant*
k = *Elasticity coefficient (Regression coefficient)*

The elasticity for car and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across state of Maharashtra. Toll plazas at Paragaon, Padalsingi and Bhokharwadi are in the state of Maharashtra. Project traffic share of many states like Karnataka, Gujarat & Haryana also. For elasticity calculations, working data from these states also has been analyzed.

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Maharashtra State.

Table 5-1 : Per Capita Income Vs Car Maharashtra

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	99564	2307841	5.00	6.36		
2013	103904	2592565	5.02	6.41	4%	
2014	109399	2834847	5.04	6.45	5%	
2015	114746	3113773	5.06	6.49	5%	
2016	122422	3406872	5.09	6.53	7%

2014	1267551	470128	6.10	5.67	7%	
2015	1345341	491582	6.13	5.69	6%	
2016	1452439	468810	6.16	5.67	8%	
2017	1595514	496439	6.20	5.70	10%	7.22%

Following figure depict regression analysis and extrapolation

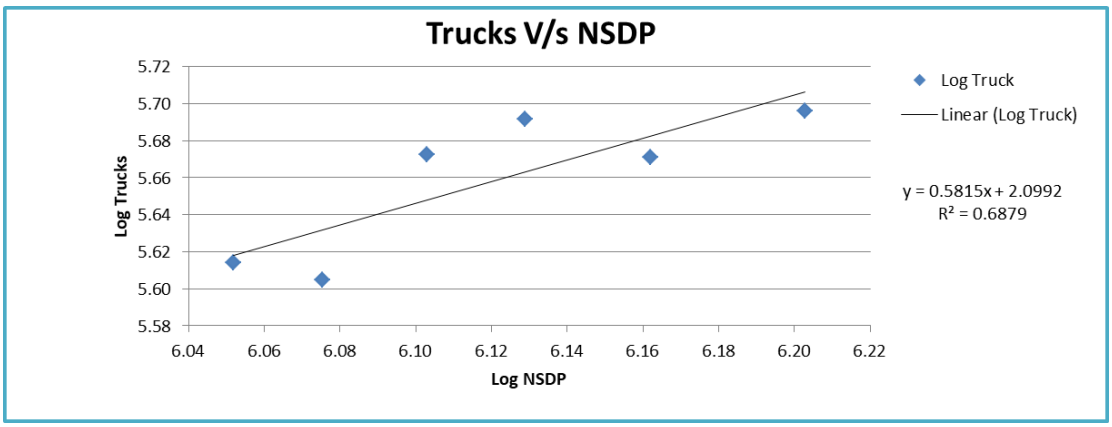

Figure 5-3 : Regression and Elasticity NSDP vs. Truck Traffic - extrapolation Maharashtra.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-5 : Summary Regression Analysis Maharashtra

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth	Growth Elastic Model
Maharashtra	Car/Jeep	PCI	y = 1.6298x + -1.7665	R² = 0.9749	1.6298	5.96%	9.71%
	Bus	Population	y = 4.5033x - -31.1713	R² = 0.9648	4.5033	1.23%	5.52%
	LCV	NSDP	y = 1.339x - -2.2739	R² = 0.9719	1.3390	6.56%	8.78%
	Truck	NSDP	y = 0.5815x - 2.0992	R² = 0.6879	0.5815	7.22%	4.20%

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Gujrat State.

Table 5-6 : Per Capita Income Vs Car Gujarat

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth

Following figure depict regression analysis and extrapolation

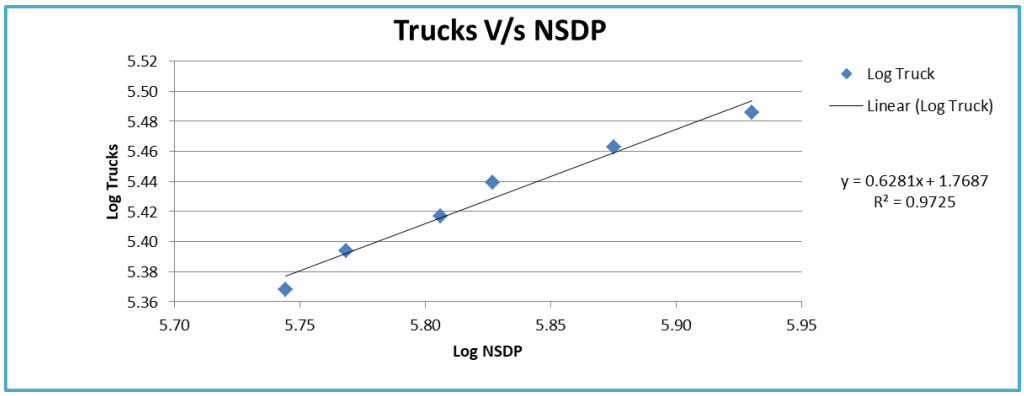

Figure 5-14 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Karnataka.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-20 : Summary Regression Analysis Karnataka

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth	Growth Elastic Model
Karnataka	Car/Jeep	PCI	y = 1.1366x - 0.5581	R^2 = 0.8706	1.1366	7.83%	8.90%
	Bus	Population	y = 3.187x - -19.567	R^2 = 0.9977	3.1870	1.52%	4.83%
	LCV	NSDP	y = 1.6755x - -4.2625	R^2 = 0.965	1.6755	7.85%	13.16%
	Truck	NSDP	y = 0.6281x - 1.7687	R^2 = 0.9725	0.6281	9.00%	5.65%

Economical model for predicting growth is good tool, however other local, regional, national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trend of growth. Project stretch of Yedashi to Aurangabad has recently been commissioned and is under tolling operation since March 2019. As traffic data available for last two years was affected due to COVID-19 the same cannot be taken as representative. A minimum of about 5 -6 years' consistent traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

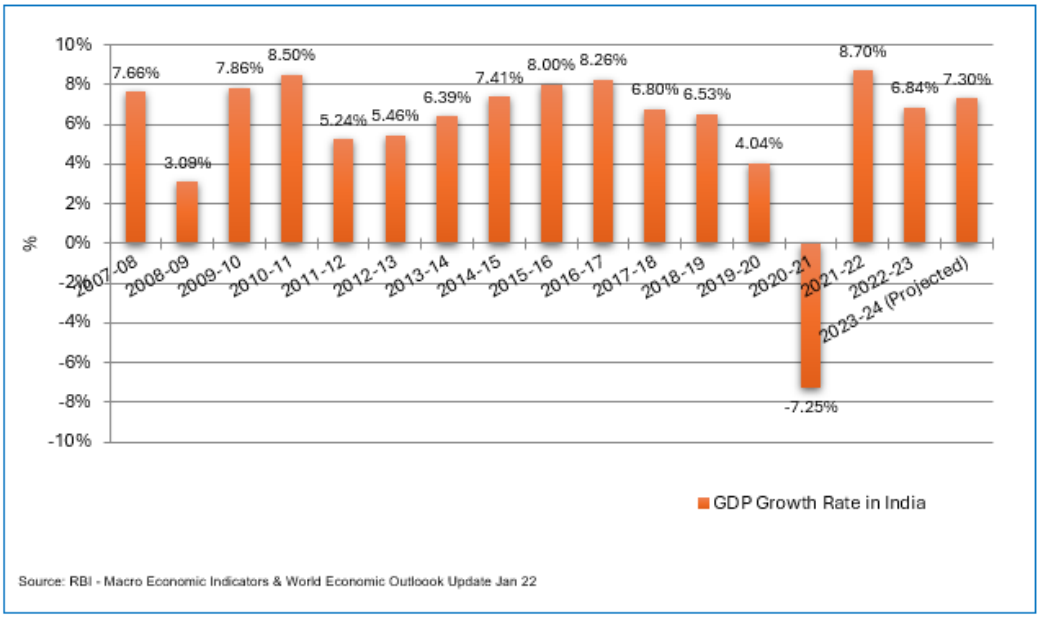

Figure 5-15 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. The World Economic Outlook update also has predicted a growth rate of about 7.5 % in the year 2022-23.

5.6 Developments along and around the Project Corridor & State

Aurangabad: is the fifth largest city in Maharashtra. It lies on a major trade route that used to connect north-west India's sea and land ports to the Deccan region. Aurangabad is administrative headquarters of the Aurangabad Division or Marathwada region.

Beed: Agriculture is the main business in Beed, and it is largely dependent on monsoon rain. Beed also is a district which provides a large number of laborers in India specially in the form of sugarcane cutters.

Jalna: is connected to major towns of the state-by-state highways. Road connectivity is excellent, roads connecting to Aurangabad, Pune, Ahmednagar, Nagpur, Beed, Mumbai having been upgraded to four-lane highways. A New Nagpur-Aurangabad-Mumbai highway,

passing through Jalna, is being developed. There are various cotton-ginning & oil-pressing factories in Jalna.

Until 1960 Aurangabad was a undeveloped city and industrially backward area. After 1960 Growth began when the Maharashtra Industrial Development Corporation (MIDC) began acquiring land and setting up industrial estates. Aurangabad is a now classic example of efforts of a state government towards the balanced industrialisation of the state. Major Industrial areas of Aurangabad are Chikhalthana MIDC, Shendra MIDC and Waluj MIDC. Many of the large India and multinational firms have established themselves in Industrial areas of Shendra, Waluj, Paithan.

Some of the big names include Audi, Skoda, Videocon, Siemens, Bajaj, Forbes, Goodyear, Wockhardt, Johnson & Johnson, Kenstar which have set up their production houses in Industrial areas of Aurangabad.

DMIC

Delhi Mumbai Industrial Corridor (DMIC) which is passing close to PIA envisaged to influence the pattern of development and industrialization of the region. To tap the development potential of the proposed freight corridor, an area spanning 150 kilometers wide on both sides of the freight corridor has been identified as Influence Region and is proposed to be developed as Delhi-Mumbai Industrial Corridor (DMIC). One of the Nashik Sinnar Igatpuri Investment Region's identified early bird projects is an industrial area comprising of total 40 sq. km to be developed into two parts one of 8 sq. km in Shendra and other with an area of 32 sq. km at Bidkin some 24 km from Aurangabad on the Paithan road.

The Aurangabad Industrial City (AURIC) Bidkin Industrial Area (BIA) is strategically positioned and directly connected to the major state highways which are Paithan Road, NH-211 and SH-178 (Jalna Road). The nearest major city is Aurangabad which is served by NH-211, Major State Highway (MSH) 6 and MSH-8, and SH-16, SH-60 and SH-148.

Considering the scenario, it may be assumed that the traffic growth on the project highway would remain high and there are minimal risks in terms of growth.

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as under. Rate of growth is moderated in light of overall regional trend. Growth of Multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, rate of growth diminishes. Same growth rate is not sustainable for long. Traffic growth has been suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.25% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Maharashtra Part of Stretch

Table 5-21 : Recommended Growth Rates Optimistic

Category / Year	2024-2025	2025-2030	2031-2035	2036-2040	2041-2045
Car/Jeep/Van	9.46%	7.71%	7.08%	6.77%	6.72%
Bus	6.00%	4.79%	4.27%	4.01%	4.01%

LCV	5.48%	3.60%	2.91%	2.57%	2.50%
2- Axle	4.42%	3.19%	2.67%	2.41%	2.36%
3 - Axle	5.69%	4.25%	3.55%	3.21%	3.15%
4 to6 Axle	6.32%	4.25%	3.55%	3.21%	3.15%
7 and Above Axle	6.32%	4.25%	3.55%	3.21%	3.15%

Table 5-23 : Recommended Growth Rates Most Likely

Category / Year	2024-2025	2025-2030	2031-2035	2036-2040	2041-2045
Car/Jeep/Van	9.21%	7.46%	6.83%	6.52%	6.47%
Bus	5.75%	4.54%	4.02%	3.76%	3.76%
Minibus	5.75%	4.54%	4.02%	3.76%	3.76%
LCV	5.73%	3.85%	3.16%	2.82%	2.75%
2- Axle	4.67%	3.44%	2.92%	2.66%	2.61%
3 - Axle	5.94%	4.50%	3.80%	3.46%	3.40%
4 to6 Axle	6.57%	4.50%	3.80%	3.46%	3.40%
7 and Above Axle	6.57%	4.50%	3.80%	3.46%	3.40%

It is observed that a PIL was filed at Hon'ble Bombay High Court (Aurangabad bench) to augment the Autram Ghat section (between Chalisgaon and Aurangabad). The Hon'ble High Court has passed an interim order in August 2023. It directed NHAI to submit a plan for augmentation of the road and till then movement of commercial vehicles is restricted on that section of the road. The matter is sub judice.
This has affected the traffic on stretch. It is assumed that the matter is temporary and should be resolved soon, in the near future and would result in increased traffic in the project corridor. Hence additional growth has been considered in the year 2025-26 to cater for the above.

Traffic and revenue have been worked out on the basis of the above growths and some are presented in subsequent chapters of the report.

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza 1- Chainage 134.000 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Yedeshi – Aurangabad project, the Target Date and Target Traffic are defined as under:

Target Date - 1st October 2023

Target Traffic -24407 in PCU

Pessimistic Case

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2023	24407	22381	-8%	12%	12%	26	3.2

PCUs as per Pessimistic cases have been considered for arriving at the concession Period end date.

CHAPTER 7

FORECAST OF TOLL REVENUE

1.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

1.2 Discount Categories

The fee schedule in the CA of Surat- Dahisar section of NH-8 is based on the old toll policy. As per the Toll Notification (Schedule - G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent users monthly pass would be issued at fee at 2/3rd rate for 50 single journey trips.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travellers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van - Rs. 275 per month (for locals residing within a radius of 20 kms from toll plaza)

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

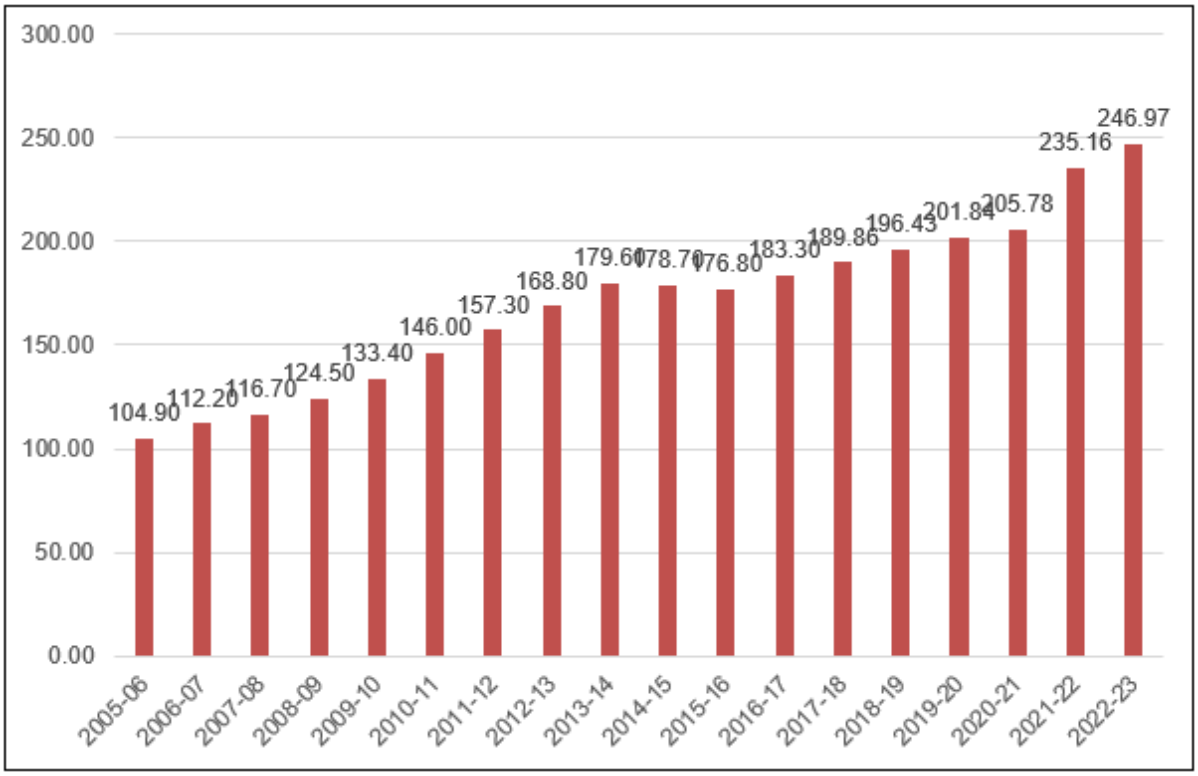

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

1.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Oversized Vehicles (7 or more Axles)	4.20

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs. five) for the concession period and are given below. Since applicable length of highway length is equal for both plazas, applicable toll rates are also same

Thus, worked out rates for various categories of vehicle and discounts are given as under.

Table 7-2 : Toll Rates for Single Journey @ Km 134.000

1.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under

Optimistic, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

1.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2044-45 years starting from the year 2024-25 are shown in tables below.

Table 7-12 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Year	TP-1	TP-2	TP-3	Total
2024-25	59.74	114.13	83.70	**257.56**

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Yedeshi to Aurangabad section of NH-211 in state of Maharashtra from km 100.000 to km 290.200 is currently four lane road. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the important regional network connecting Maharashtra with Karnataka and other southern states. There are large number of townships, industrial corridors and other business establishment coming up along project corridor. As discussed, dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give positive impact to traffic flow on project. The following can be considered as major outcomes of the study

a) There is good amount of tollable traffic running on project

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy

c) Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road

Based on above it can be considered a stable healthy project from traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under NHDP Phase V. Under Phase V NHAI has planned to convert 6,500 km of existing 4-lane National Highways into 6-lane National Highway. Sections envisaged under 6-laning comprise the Golden Quadrilateral section (5,700 km) and some other sections which are 800 km in length.

The project under consideration, **Palsit** to **Dankuni** section of NH-19 from km 588.870 to km 652.700 is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. *M/s Palsit Dankuni Tollway. Ltd*. (Concessionaire) has been awarded the Project for a concession period of 17 years starting from 2nd April 2022. The Project has been commissioned and is currently under construction for six laning. Six laning of project is underway and expected to complete soon.

Project stretch from Palsit to Dankuni is part of new NH-19 Which was previously referred as Delhi -Kolkata. During renumbering of National Highway, Delhi to Agra route was numbered as NH-44 and Agra to Kolkata has been assigned as NH-19. From a transportation point of view, it is Delhi – Kolkata corridor.

New NH-19 connects industrial cities like Agra, Kanpur, Allahabad, Varanasi, Dhanbad, Durgapur, Bardhman and terminates at Dankuni near Kolkata. Close proximity to Kolkata and Howrah has given impetus to industrial development around project highway at various locations.

Old Delhi Road (GT Road) lies east of project highway from Palsit onwards. Project stretch is developed at new alignment between Palsit and Dankuni and is known as Durgapur Expressway. The following figure shows the alignment of project stretch.

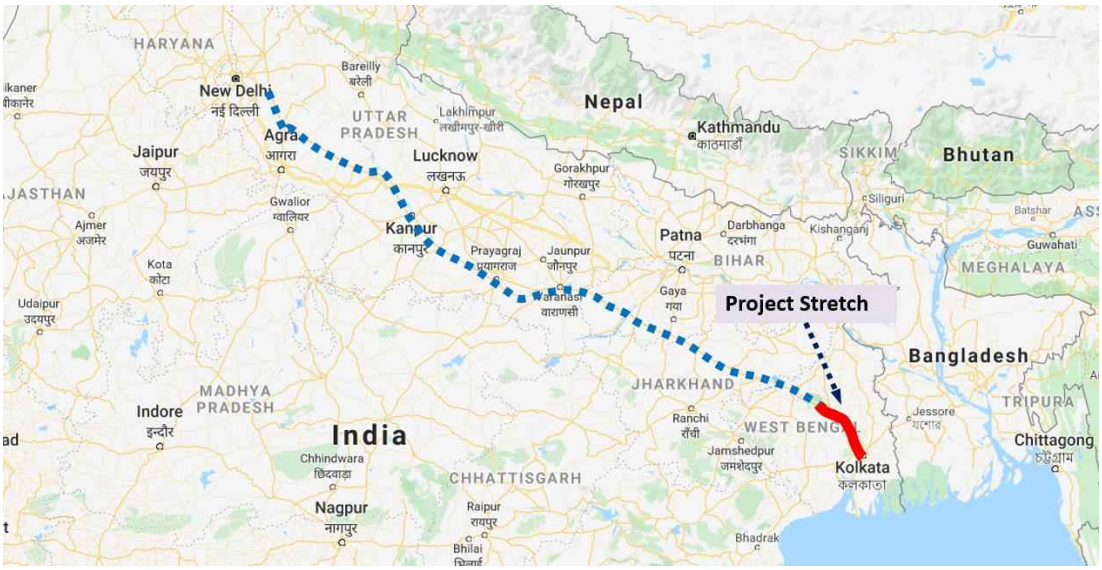

Figure 1-1: Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged *GMD Consultants* to assess the future traffic and toll potential of project stretch.
This report named as **"Traffic Study &*Toll Revenue Projection Report*"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

National Highway 2 (NH 2) which is now renumbered as NH-19 is oldest highway in India and connects state of Delhi, Haryana, Uttar Pradesh, Bihar, Jharkhand and West Bengal. It constitutes a major portion of the historical grand truck road.

It connects the national capital Delhi to Kolkata, as well as important cities Mathura, Agra, Kanpur, Allahabad, Varanasi, Dhanbad, Asansol, Durgapur and Bardhman. The highway is part of the Golden Quadrilateral project undertaken by National Highways Authority of India (NHAI).

The project road is the final link on Kolkata side between Palsit and Dankuni in the state of West Bengal. Dankuni is just out the outskirts of Kolkata on the northern side. The main project influence area of the project road consists of Dhanbad, Durgapur and Kolkata.

2.2 Project Stretch Description

Section of NH-19 from Palsit to Dankuni is part of the major transportation link in the area connecting industrial cities of Dhanbad, Asansol, Durgapur and Kolkata. Project stretch is basically and gateway link to Kolkata from northern India. Being just on the outskirts of the major metro city Kolkata, a large number of warehouses and logistic hubs are established on project road. This also contributes to sustainable traffic and growth on project highway.

There is one operative toll plaza at project stretch which is at Dankuni at km 646.005. The following figure shows project alignment and toll plaza location.

Figure 2-1: Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

Four lane project is under operation. Six laning has commenced on corridor. The following photographs illustrate the project section along the corridor.

Figure 2-2: Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza location on Palsit - Dankuni section of NH-19 for Yr. 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Toll Plaza Dankuni at km 646.005	AADT for Yr. 2022-23, Eight month from April 2023 to November 2023 & Four month from April 2024 to	AADT for Yr. 2022-23, Eight month from April 2023 to November 2023 & Four	AADT for Yr. 2022-23, Eight month from April 2023 to November 2023 & Four	AADT for Yr. 2022-23, Eight month from April 2023 to November 2023 & Four	AADT for Yr. 2022-23, Eight month from April 2023 to November 2023 & Four month

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		July 2024	month from April 2024 to July 2024	month from April 2024 to July 2024	month from April 2024 to July 2024	from April 2024 to July 2024

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van

- Min Bus /LCV
- Bus
- Truck
- 3-Axle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Dankuni Toll Plaza at Km 646.005

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25
1	Car	10514	10935	10898
2	LCV	1398	1031	983
3	Bus	789	788	700
4	Truck	3707	2542	2259
5	3-Axle	3061	2018	1637
6	Multi Axle	8974	8799	8551
7	Oversize Vehicle	8	9	9
	Total	**28451**	**26121**	**25037**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in ***Table*** 3-4**.**

Table 3-4 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-5 : Traffic in PCU at Project Stretch Base Year 2022-23

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2022-2023	Dankuni Km 646.005	28451	75699	2.66
2023-2024	Dankuni Km 646.005	26121	68159	2.61
2024-2025	Dankuni Km 646.005	25037	64680	2.58

It can be observed from above that project traffic has PCU index More than 2.5 at Dankuni which is an indicator of high proportion of commercial traffic in traffic mix.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

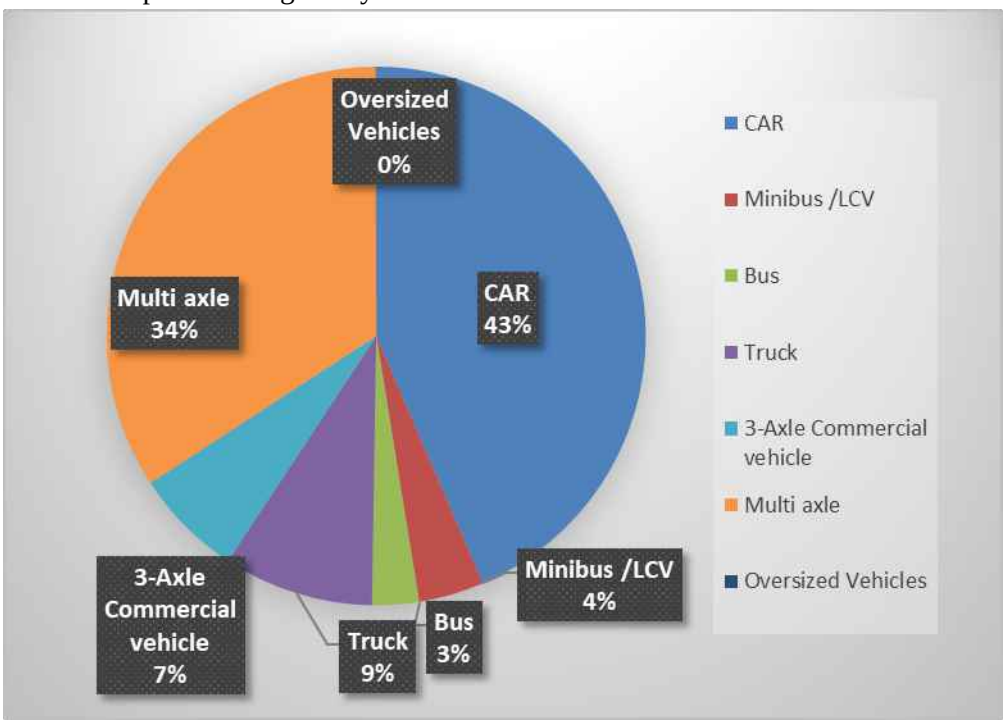

Figure 3-1 :Model Split of Tollable Vehicle-Dankuni Km 646.005

It is observed that car traffic forms about 47% of total traffic at Dankuni toll plaza location while multi axle commercial vehicles and trucks are about 53% of total traffic.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-6 : Journey Type Bifurcation of Traffic at Dankuni Toll Plaza KM 646.005

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	11824

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
2	Return Journey	13198
3	Local Commercial Single Journey	0
4	Monthly Pass Local	12
5	Monthly Pass	3

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 47%. Return journey component is 53%. The number of monthly passes is 0% at Dankuni toll plaza. This indicates a higher share of long traffic.

It is observed that the project corridor demonstrates a similar pattern of single journey dominated mix of traffic across the entire stretch which is typical of major national highways.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Project stretch from Palsit to Dankuni is part of Golden Quadrilateral connecting four metros of India which has been widened to four lanes in year 2005. Part of the stretch, from Palsit to Dankuni, known as Durgapur Expressway, was constructed at different alignment to the east of old NH-2. Old NH-2, still known as GT road passes through congested built-up areas like Memari, Boinchi, Saptagram etc. It has a number of level rail crossings as well. Thus, traffic at project stretch is settled and as such has not much scope of diversion.
There are few alternate routes to project stretch. These are discussed in subsequent sections including their potential impact on project traffic.

Old NH-2 (GT Road)

Between Palsit and Dankuni old NH-2 is an available alternate route to project stretch (Durgapur Expressway). The following figure shows both Durgapur Expressway and GT road.

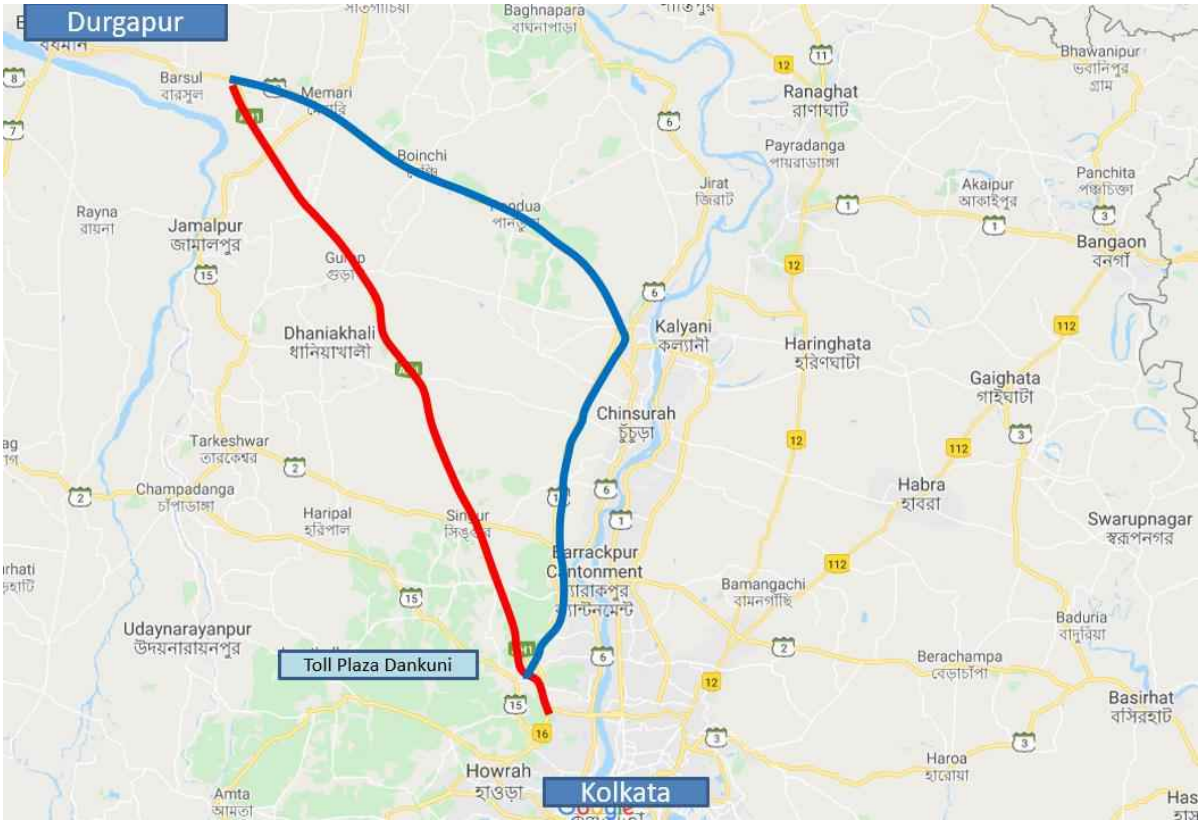

Figure 4-1 Project stretch and alternate GT Road

GT road passes through congested locations and is two lanes currently in most of the stretch.

The following figure shows the typical condition of GT road as compared to project stretch.

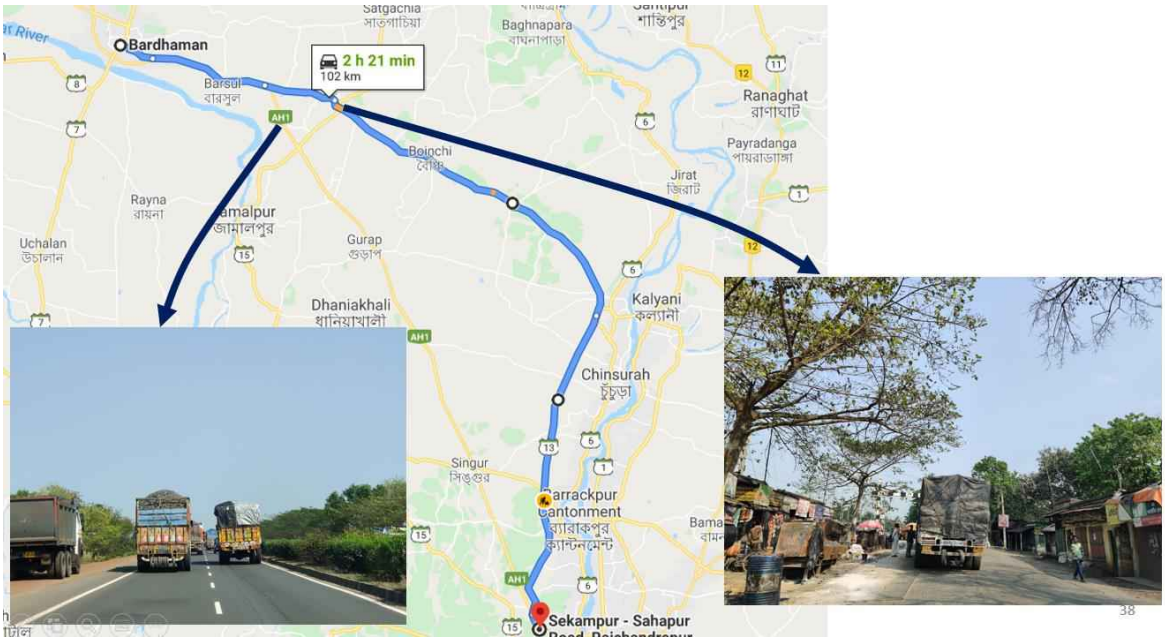

Figure 4-2 Project stretch and alternate GT Road Condition

There are as many as 5 level crossings on GT road which cause traffic congestion. The following figure shows one such typical crossing.

Figure 4-3 Railway level crossing at GT road.

The following table shows comparison of length and travel time via both project stretch and old GT road between Bardhman and Dankuni.

Table 4-1 Project Road and GT road comparison

Route	Distance (Km)	Time (Min)	Remarks
Bardhman -Kolkata Via Old NH-2 GT Road	102	141	Road is two lanes in most places and passes through congested built-up areas (Alikhoja, Memari, Boinchi, Saptagram) and 7 level crossings.
Bardhman -Kolkata Via Project Road	**84**	**79**	**Preferred Route**

Project road is quite short and saves lot of time. It such case any material shift of traffic from project stretch to old GT road is not envisaged.

B. Toll Plaza Local Leakage Roads

As such leakage roads are not there at toll plazas but there can be a longer detour to avoid toll plazas. The following figure shows the location and alignment of these roads at Dankuni Toll plaza.

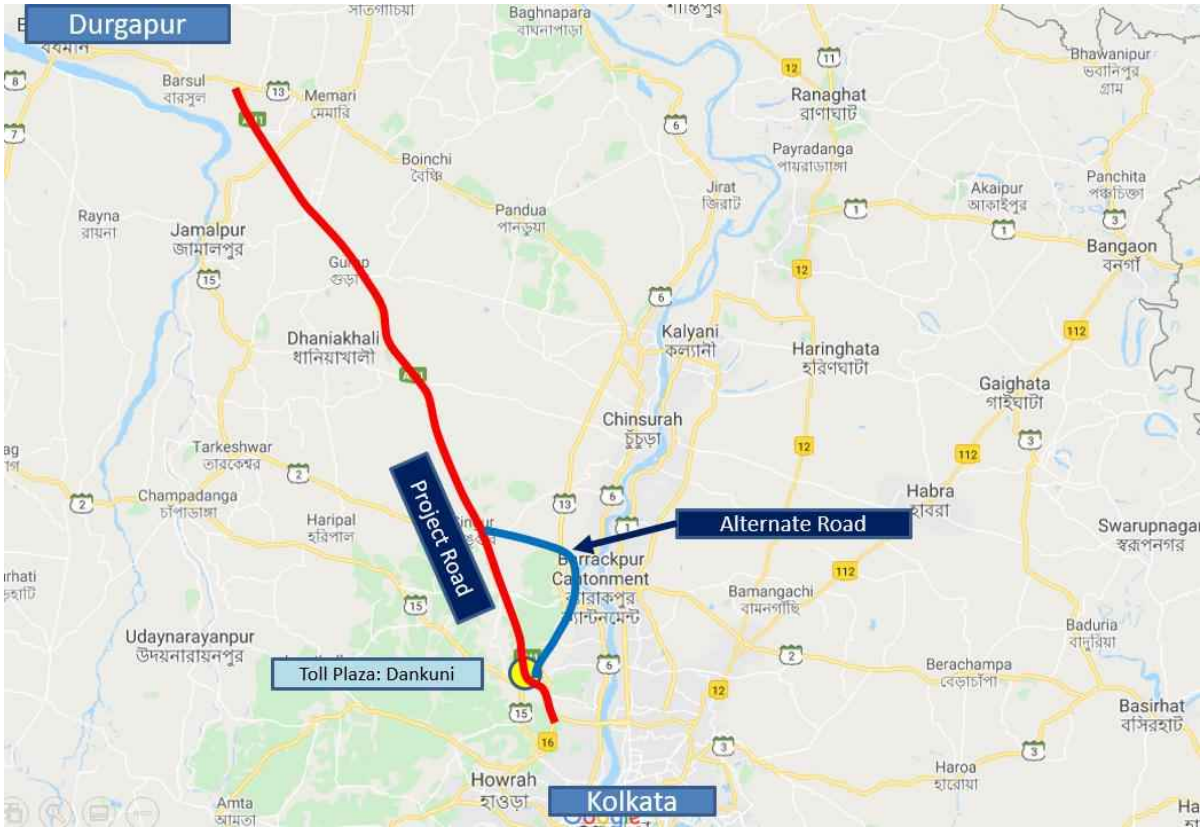

Figure 4-4 Local roads bypassing toll plaza.

At **Dankuni Toll Plaza,** there can be one alternate route via Singur- Baidyavati (Tarkeshwar) – Dankuni. The link from Singur to old Delhi Road is intermediate/ two lane. It's quite congested and geometrically very poor. Moreover, this road is used by pilgrims to reach the famous Tarkeshwar temple of Lord Shiva. Almost all through the year people walk in large groups on the way to Tarkeshwar. The major concentration of this Yatra is in the months of February to March and July- August. The following figure shows the typical condition of this link.

Old GT Road from Tarkeshwar to Dankuni is under widening to four lanes. There is one ROB under construction. Toll plaza is also under construction at GT Road. The following figures show under construction ROB and Toll Plaza at GT Road.

Figure 4-5 ROB & Toll Plaza under construction.

The following table provides comparison between project road and this alternate route around Dankuni toll plaza.

Table 4-2 Length time comparison of alternate route at Dankuni Toll

Route	Distance (Km)	Time (Min)	Remarks
Via Singur - Delhi Road (Old NH02)	27	41	From Singur to NH-2 road is intermediate lane and congested. Delhi road under four laning. Toll plaza under construction
Via Project Road (Dankuni)	**21.4**	**24**	**Preferred Route**

Between Singur and Kolkata- Road from Singur to Old NH-2 is two lane and quite congested. Currently part of NH-2 is under 4 laning and there is no toll as of now. Already passenger vehicles are using. Heavy commercial traffic is not allowed on existing bridge. Hence when ROB will be opened to traffic, certain amount of commercial traffic may divert to alternate route of Singur- NH-2.

Part of alternate route is congested and there is habitation on both sides. Progress on ROB at GT road has been very slow which is further impacted by pandemic COVI-19. As the route is existing since long and traffic is settled on both project stretch and GT road, it is unlikely that any further diversion of passenger traffic would take place. After completion of six laning of project stretch some passenger traffic may also divert to project stretch due to better traffic conditions at project stretch. However same is ignored for current analysis and projections.

At present heavy commercial traffic is not allowed on existing ROB on NH-2 however light commercial traffic is using the same. Hence some part of above diversion has already taken place.

Geometrics and condition of road from Singur to GT road is not good but still some amount of commercial traffic may divert to old GT road after ROB at GT road is competed. Following table shows potential diversion of traffic commercial traffic is taken into consideration for projection of traffic. Considering the above facts following diversion of commercial traffic has been assumed for traffic projections in 2025-26.

- Optimistic Case- 5%
- Most Likely Case- 10%
- Pessimistic Case- 15%

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Surat- Dahisar section of NH-8has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would-be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*
EI = *Economic Indicator*
A = *Regression constant*
k = *Elasticity coefficient (Regression coefficient)*

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

As observed in OD analysis, the project stretch has a share of traffic from mainly three states of West Bengal, Jharkhand and Bihar and some traffic from Uttar Pradesh and Delhi. Hence regression of dependent variable and traffic has been done for these three states. The following tables and graphs present a summary of elasticity model of growth for project corridor.

Table 5-1 : Per Capita Income Vs. Car- West Bengal

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2011	31314	610218	4.50	5.79		
2012	32164	695463	4.51	5.84	3%	
2013	34177	791069	4.53	5.90	6%	
2014	36293	829478	4.56	5.92	6%	
2015	38624	916475	4.59	5.96	6%	5.40%

Regression analysis of above is given in following figure.

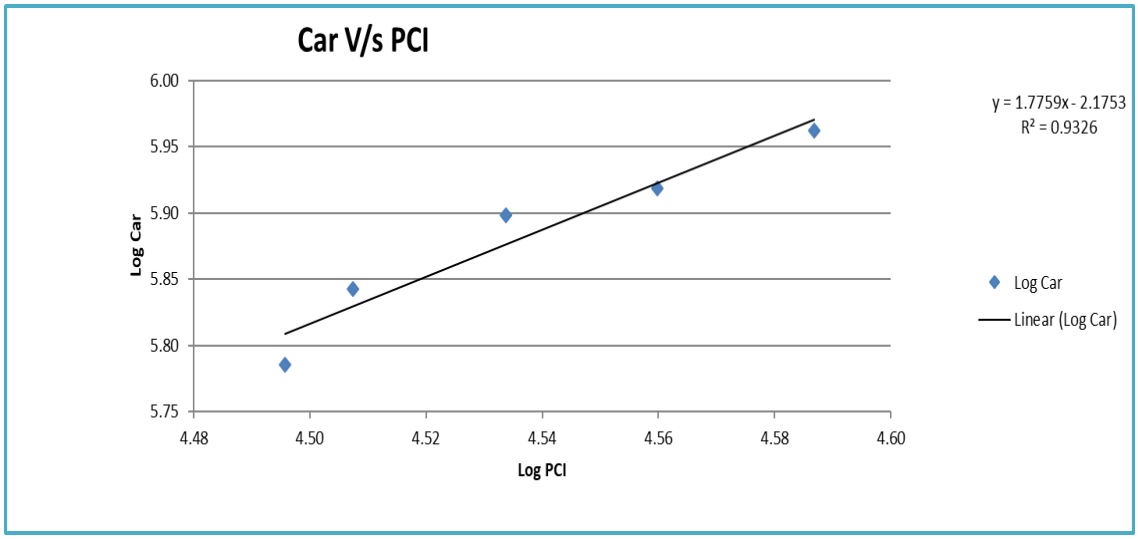

Figure 5-1 : Regression Analysis Car Vs. PCI West Bengal

Table 5-2 : NSDP Vs. Truck- West Bengal

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2011	27919100	285733	7.45	5.46		
2012	28943200	318573	7.46	5.50	4%	
2013	31033800	344816	7.49	5.54	7%	
2014	33242500	350565	7.52	5.54	7%	
2015	35684500	377636	7.55	5.58	7%	6.34%

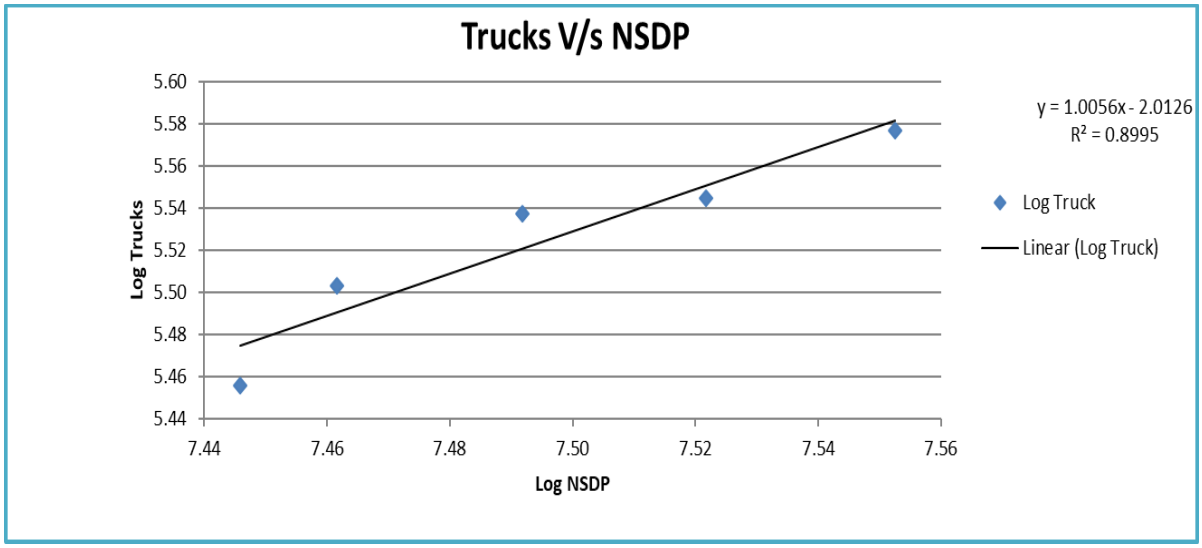

Figure 5-2 : Regression Analysis NSDP Vs. Truck West Bengal

Summary of regression analysis for elasticity and growth estimation for West Bengal are given in following table.

Table 5-3 : Summary Regression Analysis- West Bengal

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
West Bengal	Car/Jeep	PCI	y = 1.7759x - -2.1753	R^2 = 0.9326	1.7759	5.40%	9.58%	Good Regression
	Bus	Population	y = 0.5092x - 0.5636	R^2 = 0.0364	0.5092	0.89%	0.46%	Poor Regression
	Truck	NSDP	y = 1.0056x - -2.0126	R^2 = 0.8995	1.0056	6.34%	6.37%	Good Regression

Similarly, regression tables and graphs of economic model for Jharkhand are given as below.

Table 5-4 : Per Capita Income Vs. Car- Jharkhand

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2011	24330	317931	4.39	5.50		
2012	25265	360662	4.40	5.56	4%	
2013	27010	408016	4.43	5.61	7%	
2014	28882	461587	4.46	5.66	7%	
2015	30950	522192	4.49	5.72	7%	6.2%

Regression analysis of above is given in following figure.

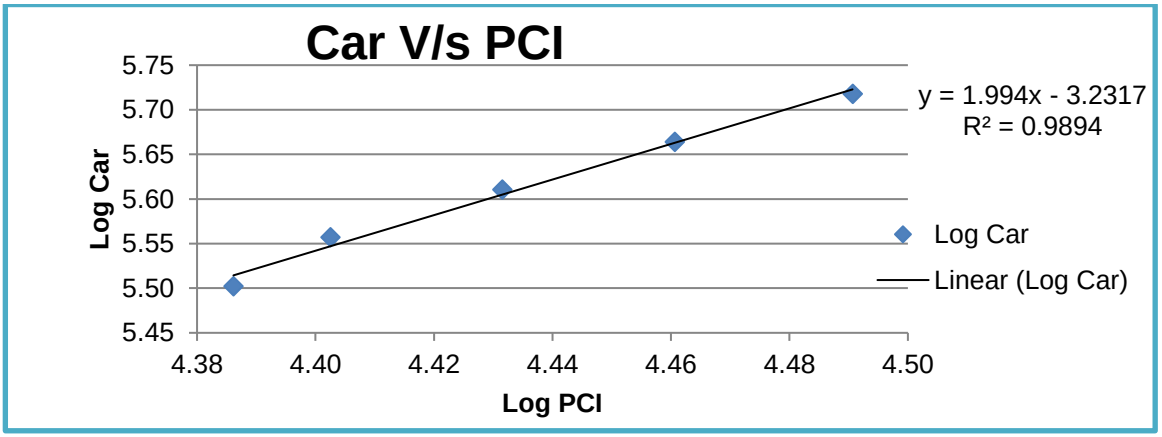

Figure 5-3 : Regression Analysis Car Vs. PCI Jharkhand

Table 5-5 : Population Vs. Bus- Jharkhand

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2011	31292000	12847	7.50	4.11		
2012	31726000	13561	7.50	4.13	1%	

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2013	32159000	14189	7.51	4.15	1%	
2014	32588000	14846	7.51	4.17	1%	
2015	33020000	15534	7.52	4.19	1%	1.35%

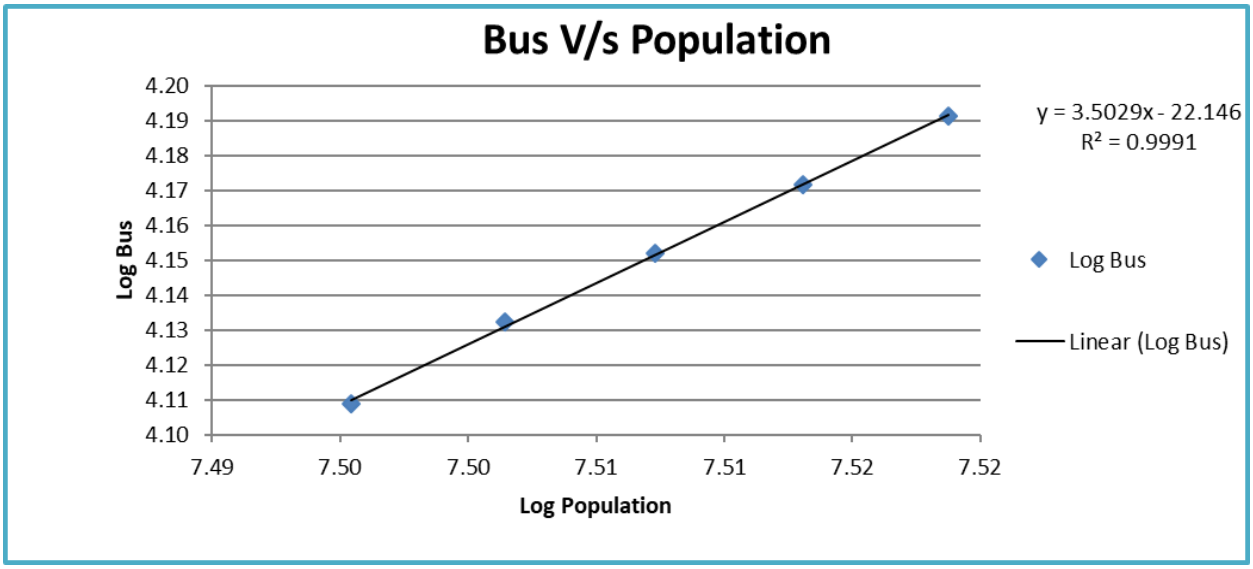

Figure 5-4 : Regression Analysis Population Vs. Bus Jharkhand

Table 5-6 : NSDP Vs. Truck- Jharkhand

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2011	76134	100257	4.88	5.00		
2012	80157	107769	4.90	5.03	5%	
2013	86861	114903	4.94	5.06	8%	
2014	94121	121031	4.97	5.08	8%	
2015	102196	127374	5.01	5.11	9%	7.65%

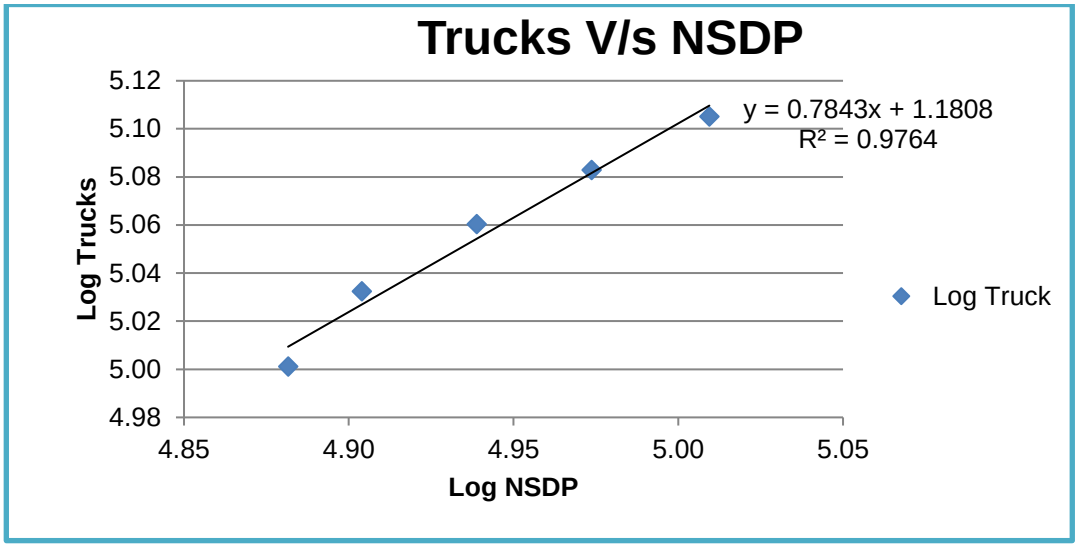

Figure 5-5 : Regression Analysis NSDP Vs. Jharkhand

Summary of regression analysis for elasticity and growth estimation for Jharkhand are given in following table.

Table 5-7 : Summary Regression Analysis- Jharkhand

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
JHARKHAND	Car/Jeep	PCI	y = 1.994x - -3.2317	R^2 = 0.9894	1.9940	6.21%	12.38%	Good Regression
	Bus	Population	y = 3.5029x - -22.1461	R^2 = 0.9991	3.5029	1.35%	4.74%	Good Regression
	Truck	NSDP	y = 0.7843x - 1.1808	R^2 = 0.9764	0.7843	7.65%	6.00%	Good Regression

Similar analysis for the state of Bihar is presented in the table and regression graphs given below.

Table 5-8 : Per Capita Income Vs. Car- Bihar

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2011	12090	136845	4.08	5.14		
2012	13149	160340	4.12	5.21	9%	
2013	14356	184792	4.16	5.27	9%	
2014	15506	208205	4.19	5.32	8%	
2015	16801	235762	4.23	5.37	8%	8.6%

Regression analysis of above is given in following figure.

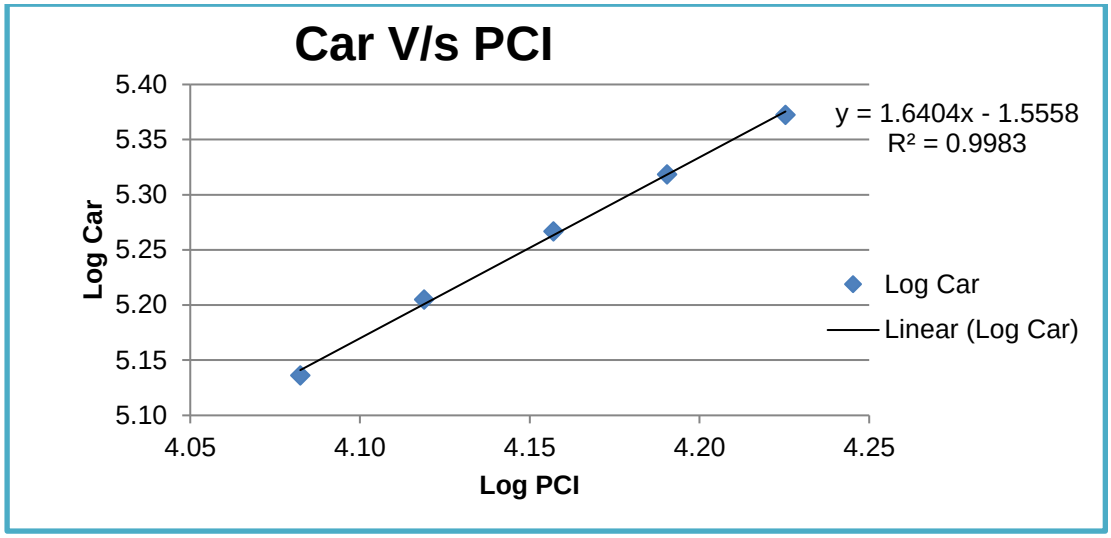

Figure 5-6 : Regression Analysis Car Vs. PCI Bihar

Table 5-9 : Population Vs. Bus- Bihar

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2011	104099452	22703	8.02	4.36		
2012	106763632	24097	8.03	4.38	3%	
2013	109441349	25992	8.04	4.41	3%

2012	18072223	87166	7.26	4.94	5%	
2013	19414032	88031	7.29	4.94	7%	
2014	20836819	88896	7.32	4.95	7%	
2015	22562961	89761	7.35	4.95	8%	7%

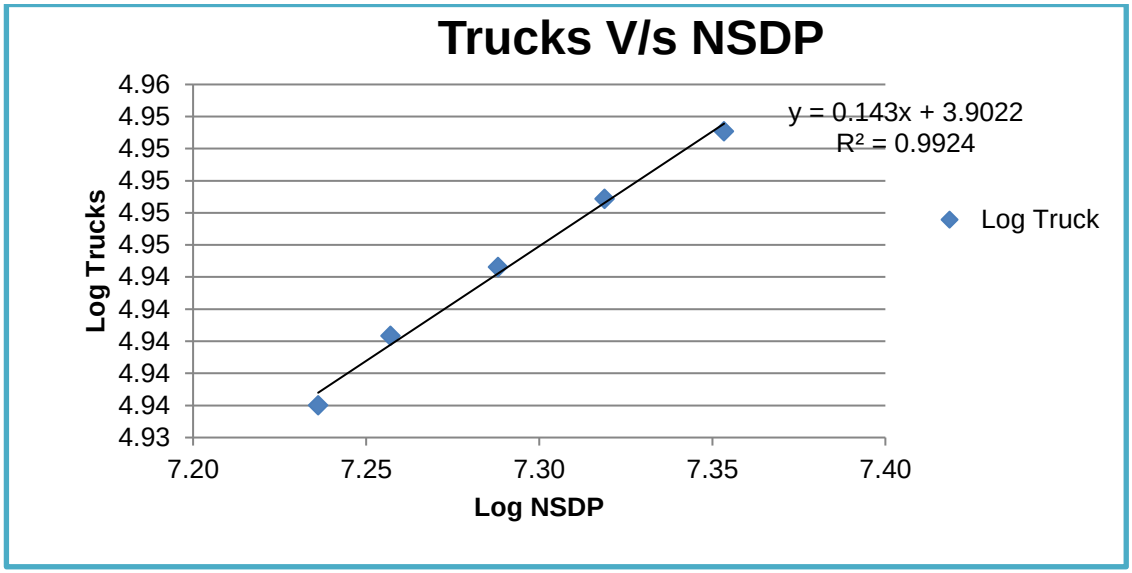

Figure 5-14 : Regression Analysis NSDP Vs. Truck Delhi

Summary of regression analysis for elasticity and growth estimation for Delhi are given in following table.

Table 5-19 : Summary Regression Analysis- Delhi

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Delhi	Car/Jeep	PCI	y = 1.33x - -0.3201	R^2 = 0.9944	1.3300	4.74%	6.31%	Good Regression
	Bus	Population	y = 0.8249x - -0.8257	R^2 = 0.9999	0.8249	1.92%	1.58%	Good Regression
	Truck	NSDP	y = 0.143x - 3.9022	R^2 = 0.9924	0.1430	6.99%	1.00%	Good Regression

Since most of the passenger traffic is from West Bengal and Jharkhand only, growth from economical model is considered only from these states. For commercial traffic weighted impact of these states in ratio of their respective share is considered

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trends of growth. Project stretch of Agra to Etawah has recently been commissioned and is under tolling operation since 2022 with concessionaire. Hence, we do not have sufficient data points to be able to establish a reliable past trend of traffic growth. Moreover, the part two years traffic is affected by COVID-19 impact. A minimum of about 5 -6 years' traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economic, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

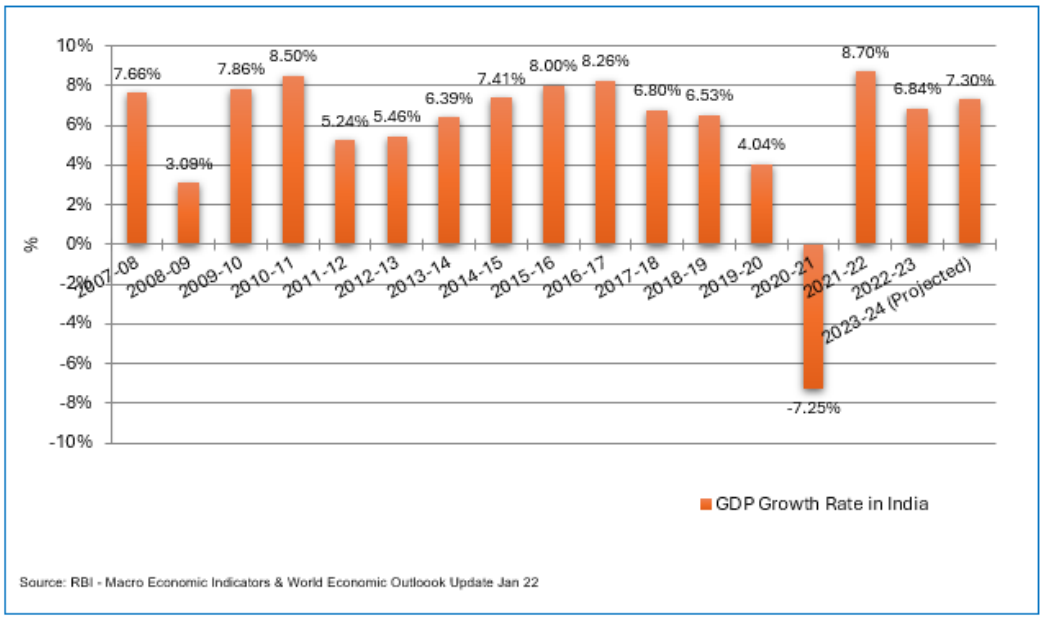

Figure 5-15 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. World Economic Outlook update also has predicted a growth rate of about 7.5 % in next year 2022-23

5.6 Developments along and around the Project Corridor & State

Project stretch falls in one of the most mineral rich areas of India. Major Industries are developed for extraction of minerals and related manufacturing. The following are some major industrial establishments and areas in PIA.

Howrah - Often termed as Sheffield of the East, Howrah is known as an engineering hub, mainly in the area of light engineering industry. In 1823, Bishop Reginald Heber described Howrah as the place "chiefly inhabited by shipbuilders". There are small engineering firms

all over Howrah, particularly around Belilios Road area near Howrah station. There are many foundries in Liluah area.

Burn Standard Company, a major company in the heavy engineering industry, has its oldest manufacturing unit located in Howrah. The Howrah plant of Shalimar Paints (established in 1902) was the first large-scale paint manufacturing plant to be set up not only in India but in entire Southeast Asia. The jute industry suffered during the Partition of Bengal (1947), when the larger jute production area became part of East Pakistan (now Bangladesh). The foundry industry saw a decline in demand due to growth in the steel industry. Still Howrah is a major industrial hub in area and Howrah being major terminal on Delhi – Kolkata rail attracts lot of goods movement.

Bardhman - Burdwan was one of the premier districts in India in terms of minerals. The Raniganj coalfield was the birthplace of the Indian coal industry. Besides coal, important minerals found in the district are iron ores, calcium carbonate, abrasives, silica bricks and molding sands, glass sands, building materials, manganese, bauxite, laterite etc. Chittaranjan Locomotives, Bengal Iron Works, IISCO- India Iron and Steel Co are some of major industrial establishments in district.

Dhanbad - Dhanbad has one of the oldest markets of the region and is also a hotbed of large-scale industries. It is famous for its coal mines and industrial establishments; the city is surrounded by about 112 coal mines with a total production of 27.5 million tonnes and an annual income of 7000 million rupees through the coal business. There are a number of coals washeries present there. BCCL, have it headquartered in Dhanbad and SAIL, Tata Steel and Eastern Coalfields (at Mugma) also operates their mines. Om Besco Rail Products.Ltd, a public limited rail wagon manufacturing company at Mugma, Hindustan Zinc Ltd (now Vendanta Resources) had a lead smelting pilot plant at Tundu, MaithonPower.Ltda J.V of Tata Power & DVC (first PPP project of India), HindusthanMalleables& Forgings Ltd, etc. are also operational in and around Dhanbad. Fertilizers Corporation of India (closed), Projects & Development IndiaLtd and ACC.Ltd at Sindri are also available and being one of the 5 divisions of Southeastern Railway zone, Indian Railways is also a big employer in Dhanbad. Also, Kandra Industrial Area at Gobindpur houses some small & middle scale industries

Durgapur- Durgapur is one of the biggest industrial hubs of India and was planned as an integrated industrial town. It lays on the banks of DamodarRiver and coalfields of Raniganj. Durgapur was a dream of former prime minister of India, Jawaharlal Nehru and chief minister of West Bengal, Bidhan Chandra Roy. The first project in Durgapur was Damodar Valley Corporation's Durgapur Barrage which attracted many public sector units. Durgapur Steel Plant was the first PSU established in the region in 1955 with the help of U.K which was later undertook by SAIL.

Durgapur Steel plant

Durgapur Steel Plant set up in late fifties is a leading producer of long products &only producer of Forged Railway Wheels & Axles in the country. Plant started production with an initial crude steel capacity of 1 MPTA (million ton per annum) in 1959, which has been progressively increased to 1.8 MTPA during the modernization in nineties and further to 2.2 MTPA during recently completed Modernization & Expansion Plan (MEP). The present Plant capacity is about 2.12 MTPA saleable steel.

Durgapur is also an emerging I.T and real estate hub has many proposed residential areas like DLF's Durgapur Township.

Kolkata - is the capital of the Indian state of West Bengal. According to the 2011 Indian census, it is the seventh most populous city in India; the city had a population of 4.5 million, while the suburb population brought the total to 14.1 million, making it the third-most populous metropolitan area in India. Kolkata Megalopolis is the area surrounding Kolkata Metropolitan city with additional population. Located on the east bank of the Hooghly River approximately 80 kilometres west of the border with Bangladesh, it is the principal commercial, cultural, and educational centre of East India, while the Port of Kolkata is India's oldest operating port and its sole major riverine port. The city nicknamed the "City of Joy" is widely regarded as the "cultural capital" of India and as of 2019, six Nobel Laureates have been associated with the city. Recent estimates of Kolkata Metropolitan Area's economy have ranged from $60 to $150 billion (GDP adjusted for purchasing power parity) making it the third most-productive metropolitan area in India, after Mumbai and Delhi. One end of project stretch at Dankuni is major gate to city from northern part of India.

Logistics and Warehousing–It is observed that as project stretch is the main connectivity between Kolkata and rest of India (especially north), there are large number of logistic and warehousing establishments on project stretch between Dankuni and Bardhman. Most computer companies have warehouses in Dankuni. As per a recent report an investment of Rs.4300 cr is expected in West Bengal by 2020 (May be delayed now due to COVID-19.)

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The rate of growth is moderated in light of overall regional trends. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, the rate of growth diminishes. The same growth rate is not sustainable for long. Traffic growth is suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Project Stretch

Table 5-20 : Recommended Growth Rates Optimistic

Category / Year	2024-2025	2025-2030	2030-2035	2035-2040	2039-2044	2044-2049

Minibus	5.44%	5.01%	4.56%	4.28%	3.96%	3.68%
LCV	2.07%	1.86%	1.46%	1.07%	0.68%	0.30%

Category / Year	2024-2025	2025-2030	2030-2035	2035-2040	2039-2044	2044-2049
2- Axle	3.44%	3.09%	2.43%	1.78%	1.13%	0.50%
3 - Axle	5.16%	4.64%	3.64%	2.66%	1.70%	0.74%
4 to 6 Axle	6.20%	5.57%	4.37%	3.20%	2.04%	0.89%
7 and Above Axle	6.20%	5.57%	4.37%	3.20%	2.04%	0.89%

Traffic and revenue have been worked out on the basis of the above growths and some is presented in subsequent chapter of report.

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza Dankuni- Chainage 646.005 KM (Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)
2024-25	10898	983	700	2259	1637	8551	9	25037	64680

2032-33	19220	1125	1020	2827	2286	12747	9	39234	96709
2033-34	20323	1141	1067	2896	2370	13305	9	41111	100947
2034-35	21489	1157	1116	2967	2457	13887	9	43082	105377
2035-36	22799	1169	1164	3020	2522	14331	9	45014	109201
2036-37	24190	1181	1213	3073	2589	14789	9	47044	113178
2037-38	25665	1193	1265	3128	2658	15262	9	49180	117327
2038-39	27231	1205	1319	3184	2729	15750	9	51427	121650

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Palsit - Dankuni project three target traffic have been defined in Article 29.

Target Date - 1st May 2026 Target Traffic 65830

Target Date - 1st May 2031 Target Traffic 100822

Target Date - 1st May 2036 Target Traffic 130452

It was observed that as per traffic projections, average traffic volume exceeds target traffic in the first two target points. Probable shortening of concession period is estimated according to Article 29 of concession agreement for all cases which comes to about 3 years.

Pessimistic

Sr. No	Target Date	Target Traffic	Actual Traffic	Variation in CP as per CA %	Change in CP (Days	Total Variation in CP Years
1	01-May-26	65830	71802	-4.07%	-192	**-0.5**
2	01-May-31	84018	91144	0.00%	0	
3	01-May-36	107270	109983	0.00%	0	

Optimistic

2	01-May-31	84018	92666	-0.47%	-14	
3	01-May-36	108008	113178	0.00%	0	

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories, and toll revenue of the project.

7.2 Discount Categories

The fee schedule in the CA of Surat-Dahisar section of NH-8 is based on the old toll policy. As per the Toll Notification (Schedule -G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued at fee 50 time the single journey fee at 2/3rd Rate.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: Local Car Jeep Van -Rs. 275 per month (for locals residing within a radius of 20 kms from toll plaza). Additionally, local commercial vehicles are charged at 50% rate of single journey.

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2021-22. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. Following graph provides projection of rate of inflation (WPI) in India. Data has been taken from Office of Economic Advisor web site (www.eaindustry.nic.in). WPI for years 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

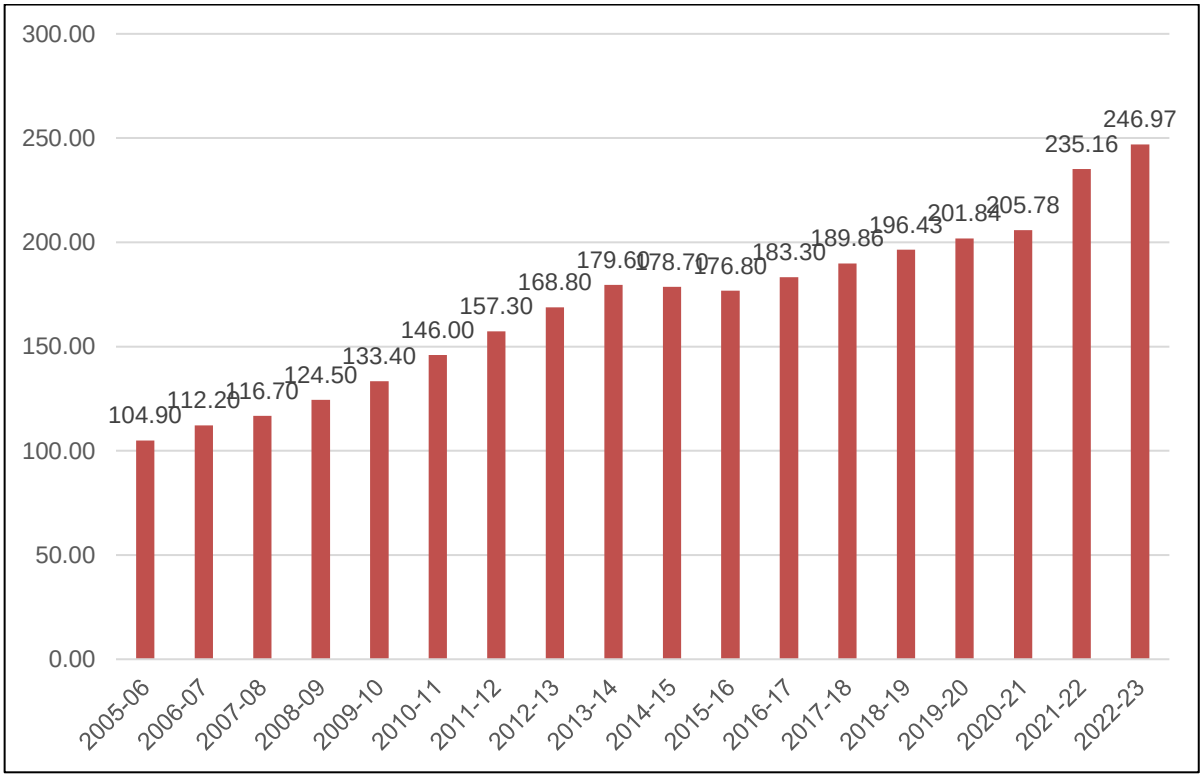

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45
Oversized Vehicles (7 or more Axles)	4.20

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given as under

Table 7-2 : Toll Rates for Single Journey Dankuni @ Km 646.005

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial Vehicle	Multi Axle	Oversized Vehicle

7.3 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.4 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza starting from the year 2024-25 are shown in tables below.

Table 7-3 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Year	TP-1	Total
2024-25	198.65	**198.65**
2025-26	295.82	**295.82**

CHAPTER 8

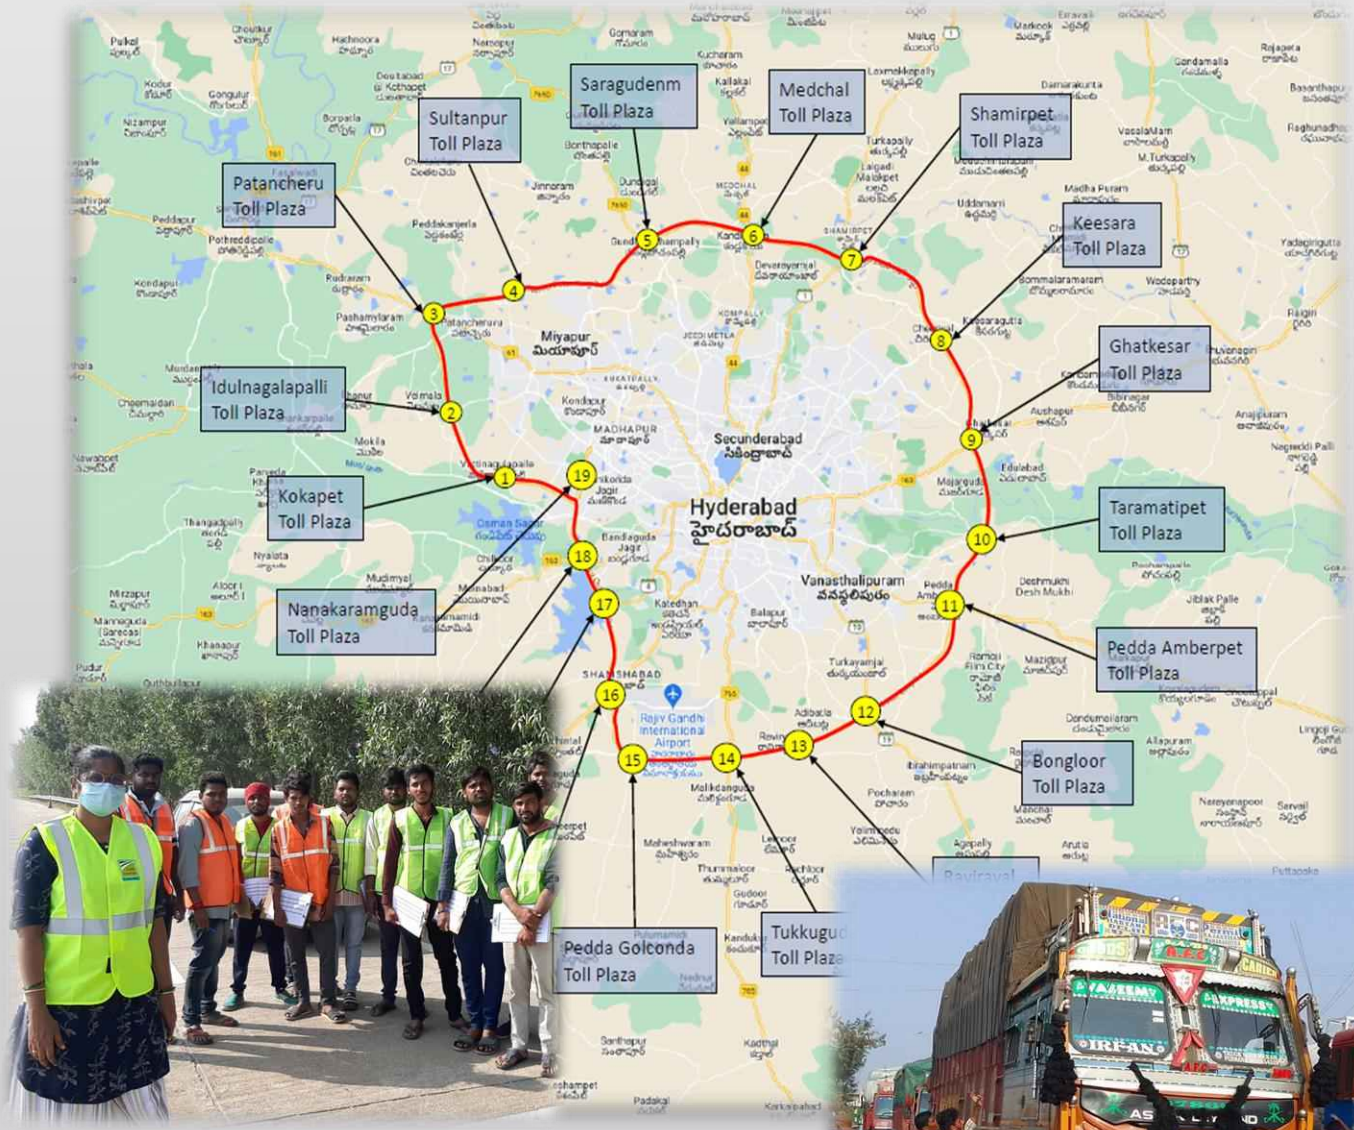
CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Palsit to Dankuni section of NH-19 from km 588.870 to km 652.700 in state of West Bengal is currently four lane road and being upgraded to six lanes. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the most busy and prominent national highway NH-19 which connects political and cultural capitals of India. This is one of the most important trunk roads which spreads across many states. There are large number of townships, industrial corridors and other business establishments coming up along the project corridor. As discussed, the dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give a positive impact to traffic flow on the project. The following can be considered as major outcomes of the study.

a) There is a good amount of tollable traffic running on the project.

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy.



c) The Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.

Based on the above it can be considered a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Outer Ring Road, officially as, Jawaharlal Nehru Outer Ring Road and abbreviated as, O.R.R., is a 158 kilometer, 8-lanes ring road expressway encircling Hyderabad, capital of the Indian state of Telangana. The expressway is designed for speeds up to 100 km/h. A large part, 124 km (covering urban nodes viz., Hi- Tech city, Nanakramguda Financial District, Rajiv Gandhi International Airport, IKP Knowledge park, Hardware Park, Telangana State Police Academy, Singapore Financial District, and Games village) of the 158-km was opened by December 2012. Rest of the length of Outer Ring Road was opened to traffic in year 2015-16. Hence onward, for ease of reference, Nehru Outer Ring Road will be referred as NORR or ORR.

ORR is one of the most important infrastructural developments which has complimented growth of Hyderabad as major metro of India. On Eastern side it has provided express connectivity to major commercial and upscale residential centres of Gachibowli, Banjara Hills, Jublee Hills, Hitec- City, Manikonda, Nanakramguda. As a result, large number of residential and commercial projects have come up on this north-east part of ORR. Tellapur, Mokila, Kollur, Narsingi can be named as few of these. On north and western side ORR connects to Shamirpet and Genome Valley.

ORR also provides fast connectivity to various radial state and national highways connecting to Mumbai, Nagpur, Karimnagar, Warangal, Suryapet, Vijayawada, Bengaluru. Regional traffic now does not need to go into congested network of Hyderabad.

The Outer Ring Road also helps in reducing the travel time from Rajiv Gandhi International Airport to cities like Nizamabad & Adilabad as it connects to NH44. The expressway is fenced, and 33 radial roads connect it with the Inner Ring Road.

ORR is fully accessing controlled road, and traffic can enter or exit from designated locations only. There is total 19 locations from where ORR can be entered or exited. Toll plaza and or booths have been placed at all such entry / exit points.

ORR has been developed by Hyderabad Metropolitan Development Authority (HMDA). It's maintained by HMDA and special purpose vehicle Hyderabad Growth Corridor Limited (HGCL). The bid for Operation, Maintenance of ORR for a longer concession period of 30 years on TOT model is invited by HMDA and HGCL.

Following figure show alignment of Hyderabad Outer Ring Road in regional context.

.

Figure 1-1: Location & Alignment of ORR in Regional Context

M/s IRB Infrastructure Developers Limited (IRB) intends to participate in bidding for Nehru Outer Ring Road (NORR) on TOT basis.

GMD Consultants have been assigned by M/s IRB for the wok of conducting traffic study and developing revenue model based on traffic projections and forecast.

For making the proper assessment of traffic volume on project stretch, base year traffic and its projection.

CHAPTER 2

PROJECT DETAILS

2.1 Brief Description of the Project Influence Area (PIA)

Nehru Outer Ring Road is a 158 km access-controlled transportation ring around city of Hyderabad and Secundrabad Average radial distance of ORR from city centre is about 20-25 km. Hyderabad is fourth most populous city of India. It is capital of one of the fastest growing states of India, Telangana. Hyderabad if merging and the major global hum in field of IT, IT&ES, Pharmaceutical & Biotechnical Research. As discussed previously it provides fast connectivity to Airport (near Shamsabad) from various parts of city. Following figure show positioning of ORR in city context.

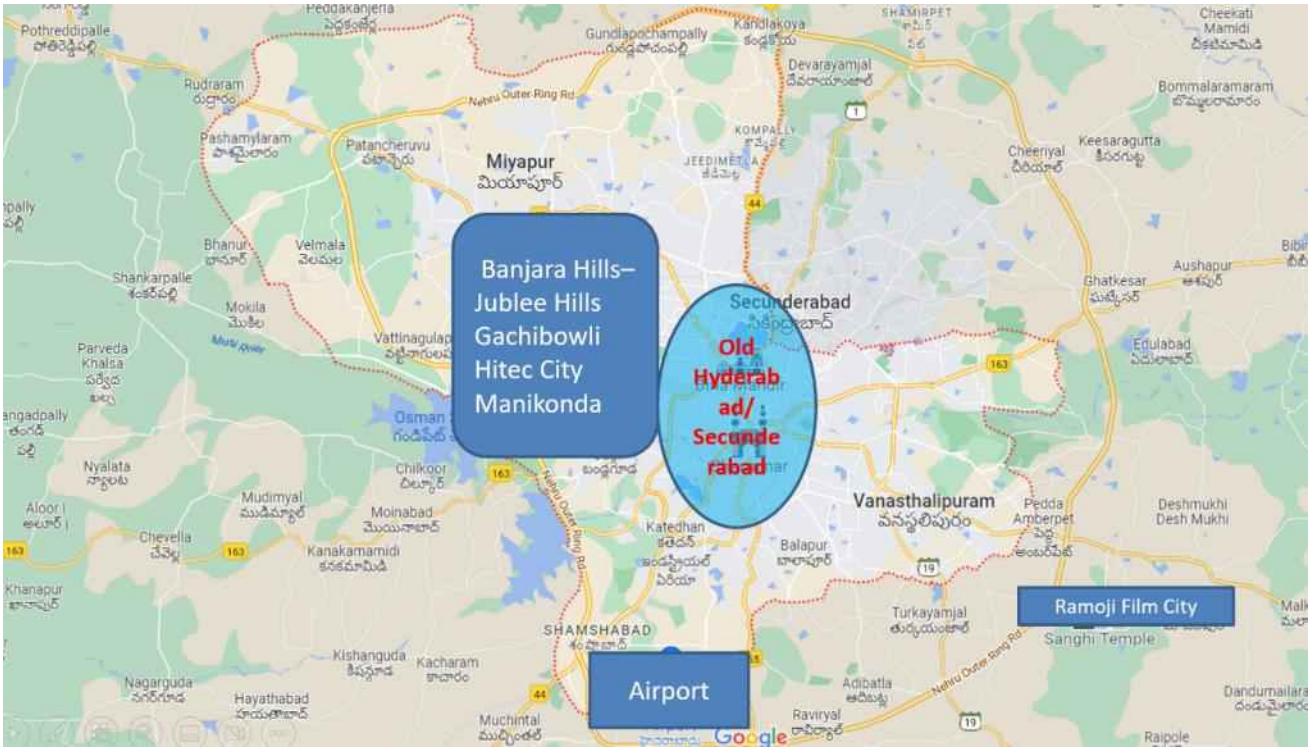

Figure 2-1: Positioning of ORR in city context.

NORR makes a complete circle around city of Hyderabad and Secunderabad. It provides fast connectivity to all part of Hyderabad Metropolitan Area (HMA). Hyderabad Metropolitan Area includes part of following districts.

- **Hyderabad** - Hyderabad district is a most populous district in the state of Telangana in India that contains a part of the metropolitan area of Hyderabad.
- **Rangareddy –** This is basically rural Hyderabad area. It has head quarter in Lakdi ka Pul which is basically part of Hyderabad City only. Ranga Reddy has maximum per capita income in entire state.

- **Nalgonda** – Nalgonda is another district which is part of HMA. This touches southeastern boundary of Hyderabad
- **Mahboob Nagar -** Mahabubnagar district is a district in **Telangana**. Mahabubnagar is the district headquarters which is popularly known as Palamoor. The district shares boundaries with Narayanapet, Vikarabad, Rangareddy, Nagarkurnool, Wanaparthy and Jogulamba Gadwal districts. It is famous for its milk production. It is on southwestern boundary of Hyderabad.
- **Medak –** It was one of the most backward districts of Andhra Pradesh. Now part of this district is in HMA. Geographically it on northwest side of Hyderabad. This is the most developing part of HMA now.

Hence all of HMA fall in immediate influence zone of ORR. In addition to Hyderabad city centre large number of suburban areas which are either developed on are upcoming, are part of PIA. Following figure shows major urban and commercial hubs in relation to ORR.

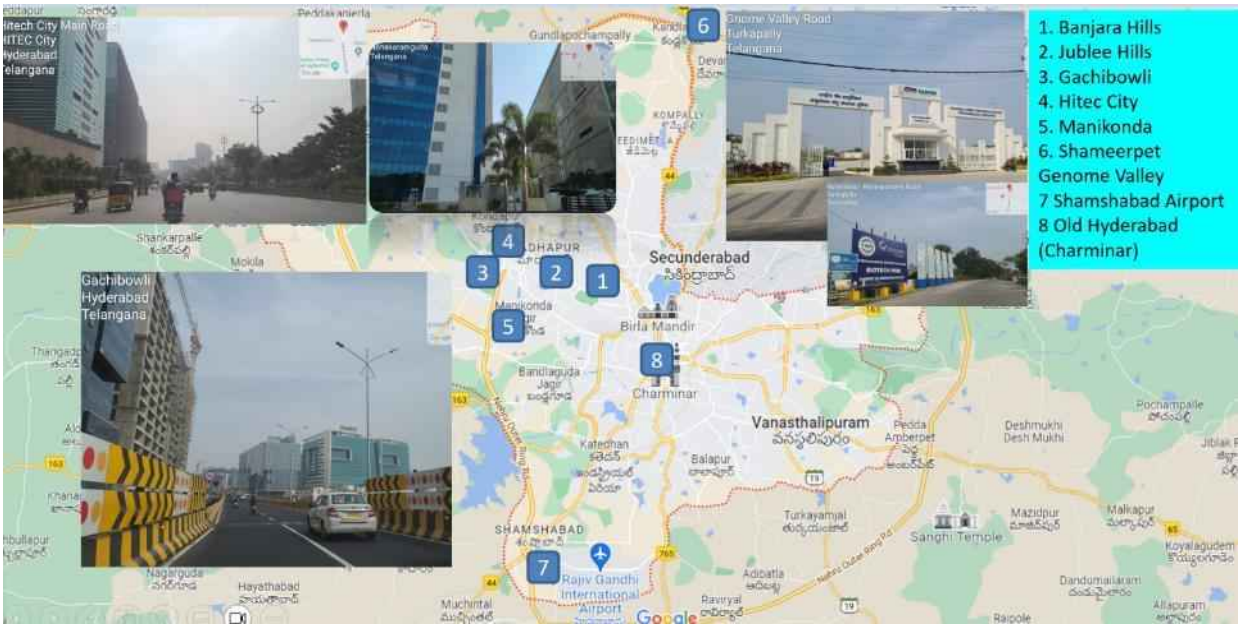

Figure 2-2: Major urban & commercial hubs.

Additionally large number of new commercial and urban centres are in various phase of development around ORR. In fact, ORR has been one of the reasons for developing of these centres. Most of these centres are coming up in northwest corner of Hyderabad in which major commercial and residential centres like Gachibowli. Manikonda, Banjara Hills, Jublee Hills etc have already developed along with Financial District and Hitec City. Following figure shows these locations in context of ORR.

Figure 2-3: Upcoming Development Locations in context of ORR.

Prominent of above are discussed as under.

Tellapur

Being in close proximity to Gachibowli, Kondapur, and Madhapur, Tellapur is an ideal settlement place for IT Professionals. Since it is around 15 km from Hitech city and 9-10 km from Gachibowli, the new investment options in the area are relatively better and easier to settle as well. Tellapur comes in the Medak district.

Narsingi

The western outskirts are home to Narsingi. This area is attracting many potential investors due to the presence of multiple residential options like villas, gated communities, community apartments, and so on. It is the best option for people who are family oriented and would want to settle down there. Housing investment options are available in Narsingi. If you're a modern home buyer, Narsingi is an ideal option.

Adibatla

Adibatla is an area located in Ranga Reddy district and is a fast-upcoming residential area that offers budget-friendly properties starting from 20 lakhs only. The main attraction of the area is ITIR (Information Technology Investment Region) as it is said that there will be many IT Parks as it's SEZ (Special Economic Zone). As a result of IT and aviation companies setting up offices in the area, Adibatla has already transformed into a modern infrastructural hub.

Mokila

Located approximately 35 kilometres away from Hyderabad city, Mokila's biggest advantage is its proximity to HiTech City, IT hubs like Kokapet, and prime neighbourhoods like Gachibowli. Well-connected via the Outer Ring Road (ORR), Mokila has witnessed a consistent increase in prices in recent years. The airport is around 40 kilometres away but takes just under an hour to reach via the ORR while Nagulapalli and Shankarpalli railway stations, and Miyapur metro station are both within a 10-kilometre radius.

Pocharam

The demand for residential real estate in Pocharam soared incredibly after the AP Housing Board set up the Singapore Township in 2005-06, which was a fully integrated and well-planned township comprising 2000 houses. Later, Infosys set up a 440-acre campus and with other IT companies following suit the area has seen increased commercial real estate activity, as well.

In addition to above ORR connects following radial arterial roads which connect Hyderabad to various important parts of state and country. Following figure shows such radial roads in context of ORR.

Figure 2-4: Regional context of ORR.

1. **NH-165 –** This is major highway which connects to Maharashtra / Pune / Solapur on western side and Suryapet, Vijayawada and Machilipatnam on eastern side. Interchange and toll plaza is constructed at Patancheru and Pedda Amberpet at crossing locations of ORR and NH-165
2. **NH-44 –** This north south connecting NH connects Hyderabad with Nagpur on north side and Bengaluru on south side. Medchal and Shamshabad interchange and Toll plazas are built at crossing of NH-44 on north and south side respectively.
3. **SH-163** – This connects Hyderabad to Warangal. Ghatshekar toll plaza and interchange is constructed at crossing of SH-163 with ORR
4. **Karimnagar Road** – This road connects city of Karmnagar and Siddipet to Hyderabad. Shamirpet Toll plaza and interchange are entry and exit point for this road.
5. **NH- 765** – It's a new national highway connects Hyderabad to Tokapelle. This highway crosses from very near to Airport. There are some residential and commercial projects coming up on either side of this road in influence zone area of Hyderabad Airport.

2.2 Project Appreciation

Nehru Outer Ring Road of Hyderabad was built in phases and the complete ring was thrown open to public in year 2016. ORR is 8 lane expressway kind of specification. Pavement is flexible except that at toll plazas where rigid pavement is provided. Condition of pavement is good in general in

entire stretch of 158 Km. ORR is fully access controlled road. There is no leakage point and entry / exit can happen from toll plaza location only. Safety items like crash barriers, lighting, delineators, signage and markings etc are well placed and are in good condition. Following photographs show general condition of road.

ORR has 19 locations at which currently toll is in operation. Toll plaza configuration and arrangement of movement is not same at all such locations. Depending on availability of land and other constraints. Following table presents location of toll plaza and type of interchange at such locations.

Table 2-1: Details of Toll plazas locations

Hyderabad Ring Road				
Sr. No	**Name of Interchange**	**Chainage in Km**	**Type of Interchange**	**Number of Toll booths**
1	Kokapet	2+000	Rotary	4
1A	Neopolis	3+700	Single Trumpet (Under Construction)	
2	Idulnagalapalli	13+900	Rotary	4

19	Nanakramguda	154+350	Toll Plaza	1

Configuration and movement pattern of above types of toll plaza is shown in following figures.

1. **Rotary Type interchange – with 4 toll booths**

Kokapet, Idulnagalpalli, Sultanpur, Keesara, Taramatipet, Shamsabad, have such type of arrangement. Following image shows typical location (Kokapet) of toll booths and movement pattern for such type of arrangements. All above locations have similar arrangements.

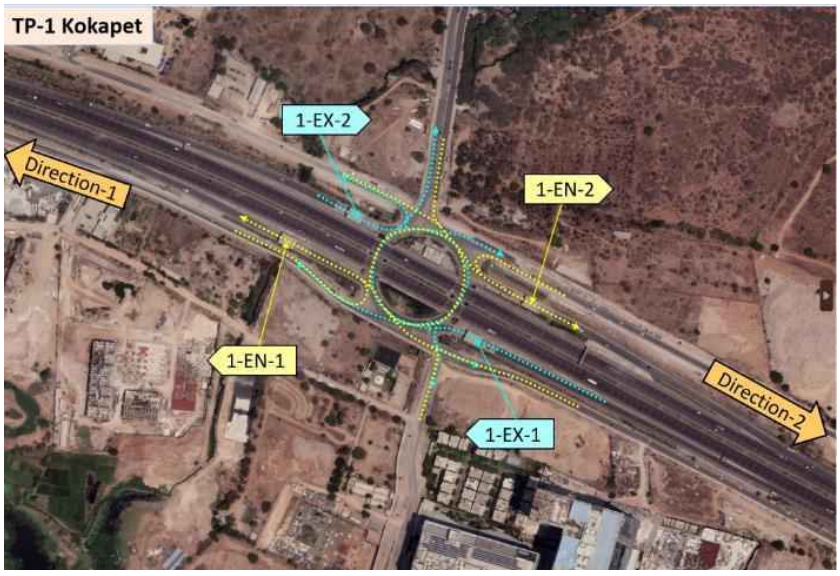

Figure 2-5 : Rotary Type Interchange with 4 toll booths.

2. Diamond Type interchange – with 4 toll booths

Ravirayal, Tukkuguda and TSPA have diamond type interchange with four booth arrangement. Following image shows the general arrangement and movement pattern.

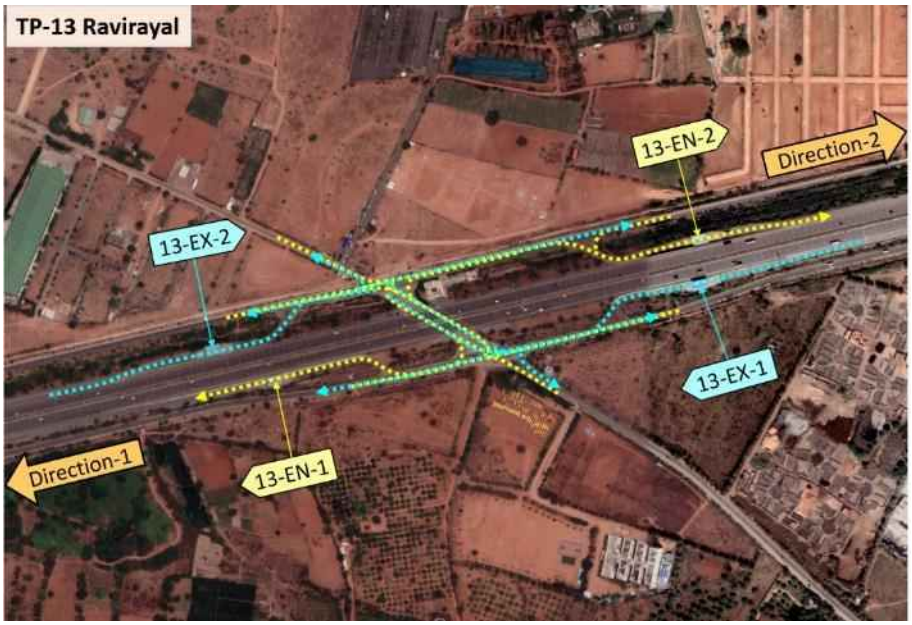

Figure 2-6 : Diamond Type Interchange with 4 toll booths.

3. Double Trumpet Type Interchange with Single Toll Plaza

Patancheru, Saragudam, Medchal, Shamirpet, Ghatkesar, Pedda Amberpet, Bongolor and Nanakramguda locations have double trumpet interchange in which all the movements are brough to one location for toll payment.

Figure 2-7 : Double Trumpet Type Interchange

4. Partial Cloverleaf with directional ramps

Shamshabad interchange is partial cloverleaf type with directional ramps. It also has four tool booths.

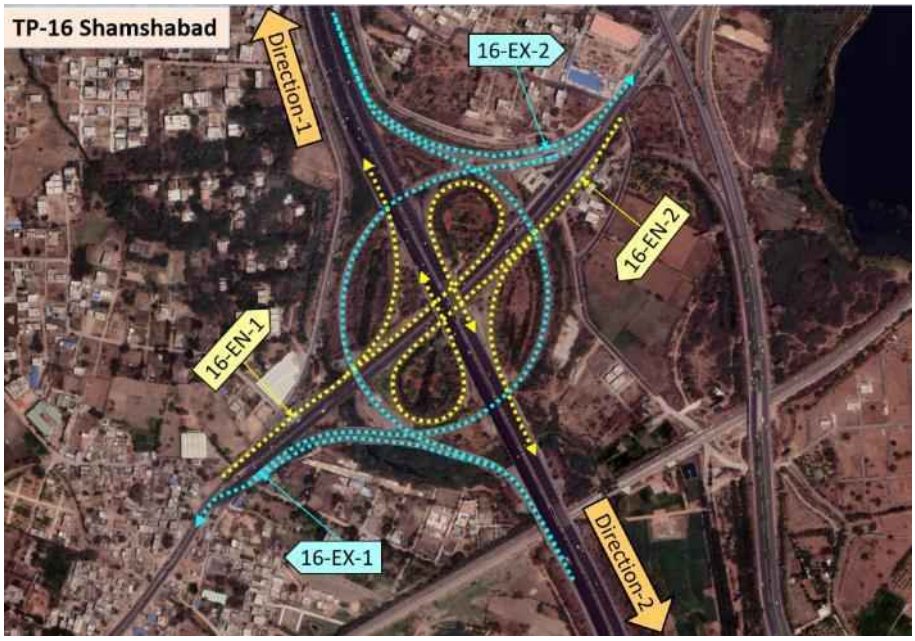

Figure 2-8 : Shamashabad Interchange and Ramps

5. Single Toll Plaza at Nanakramguda

Nanakram Guda has special arrangement. At this location all movement which enter or exit at this location are brough to one side road on which toll plaza is constructed.

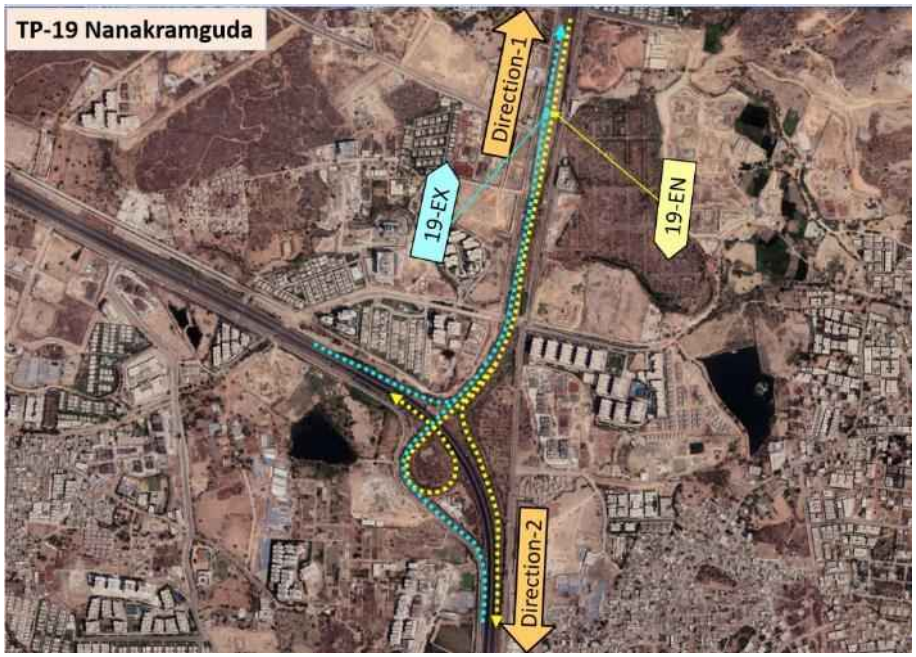

Figure 2-9 : Toll Plaza Nanakramguda and movements.

In addition to above 19 toll plaza locations two are under construction at following locations.

- Neopolis- Single Trumpet
- Narsingi – One Entry and one Exit Ramp

2.3 Project Corridor Illustration

The following photographs illustrate the project section along the corridor.

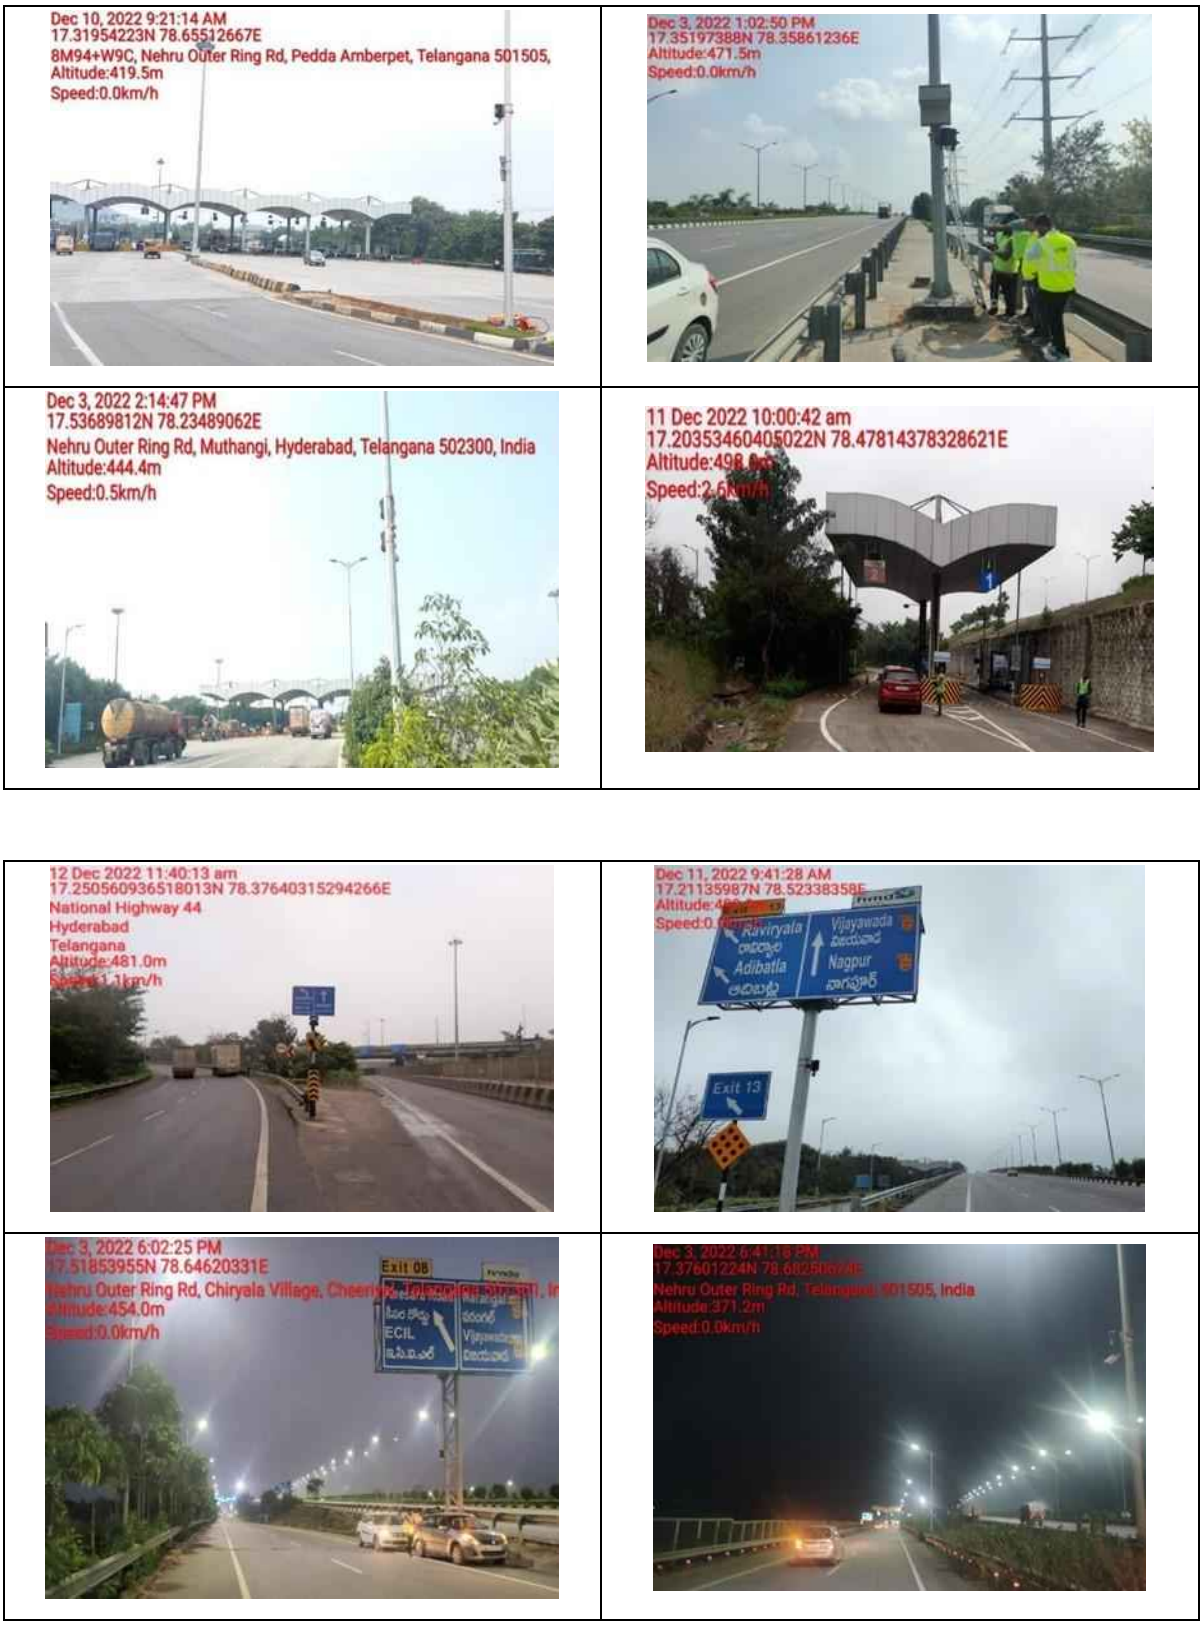

Figure 2-10 : Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have carried out a reconnaissance survey of the project corridor to understand the general traffic and travel characteristics on the corridor.

Traffic data forecast is one of the important inputs required for a TOT/BOT/DBFO highway/roadway project. In order to arrive at a fair estimate of traffic forecast it is necessary to collect data, analyse, model, validate and then forecast. The Consultants have carried out a reconnaissance survey of the project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic studies have been carried out for the project.

- Classified traffic volume counts at toll plaza location on 8-lanes ring road expressway encircling Hyderabad for August 2023 to November 2023 and traffic data from April 2023 to July 2023.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. No	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 158.000 22 Toll Plaza Nehru Outer Ring Road at Hyderabad	AADT for Four months from August 2023 to November	For Four months from August 2023 to November	For Four months from August 2023 to November	For Four months from August 2023 to November	For Four months from August 2023 to November

SR. No	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		2023 & Four month from April 2024 to July 2024	2023 & Four month from April 2024 to July 2024	2023 & Four month from April 2024 to July 2024	2023 & Four month from April 2024 to July 2024	2023 & Four month from April 2024 to July 2024

3.2 Classified Traffic Volume

The objective of conducting Classified Traffic Volume Count is to understand the traffic flow pattern on a roadway. The Classified Traffic Volume has been provided by the concessionaire of project road actual traffic data gathered at toll plaza locations.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicles classification system

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer, Two-Wheeler, Three-Wheeler

Source - IRC: 64 – 1990

However, since project highway is currently under toll operation, the data collected corresponds to category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Min Bus /LCV
- Truck / Bus
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years April 2023 to November 2023 and traffic data from April 2024 to July 2024.

Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Following tables show base traffic matrix of each category of vehicles for each pair of traffic Base year 2024-25

Table 3-3 : Tollable Annual Average Daily Traffic (AADT) Matrix for Car/Jeep/Van

3.4 Traffic Characteristic

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in ***Table 3-1515.***

Table 3-15 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-16 : Traffic in PCU at Project Stretch for Base Year 2024-25

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2023-24	Hyderabad ORR at all TP	205075	283848	1.38
2024-25	Hyderabad ORR at all TP	224656	312413	1.39

It can be observed from above that project traffic has PCU index less than 1.5 which is an indicator of high proportion of Passenger traffic.

3.4.2 Components of Traffic

As discussed previously, components of total traffic volume play an important role in determining project revenue. Modal spit of total traffic on project corridor is given in table below.

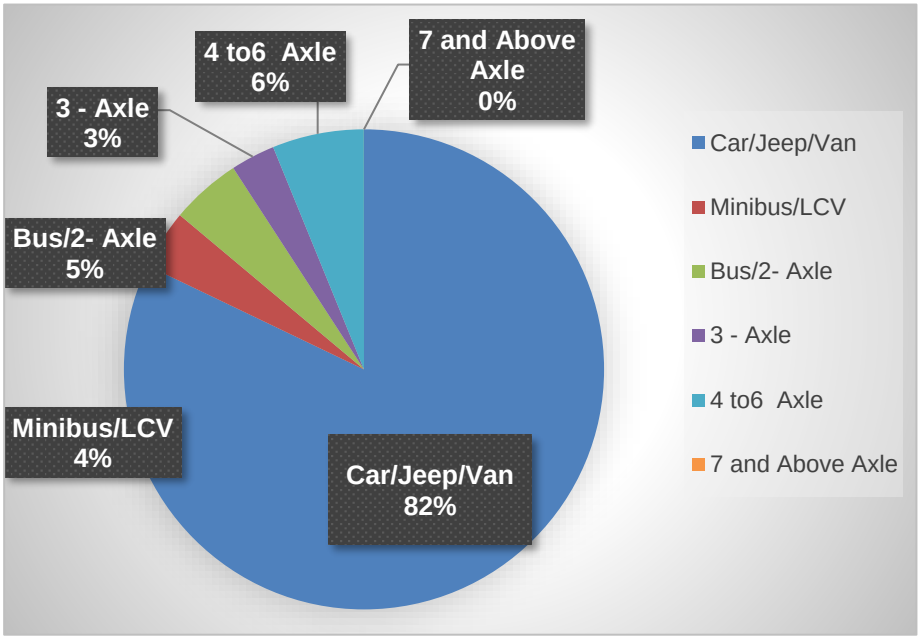

Figure 3-1 : Model Split of Tollable Vehicle

It is observed that car traffic forms about 83% of total traffic at toll plaza locations while multi axle commercial vehicles are about 9% of total traffic. Truck / Bus and LCV share about 4% and 4% of traffic volume respectively.

CHAPTER 4

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

4.1 Introduction

Traffic is generated and grows as a result of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. Further these factors have uncertainties associated with them. Forecasts of traffic have, therefore, to be dependent on the forecasts of factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future pattern of change in these factors can be estimated with only a limited degree of accuracy and hence the forecasting of future traffic levels cannot be precise. The success of any road project with private sector participation hinges on the accuracy and robustness with which the future traffic and revenues are estimated.

Further, future traffic forms the basis of the design of the transportation infrastructure facility and also determines the viability of the project. The following section deals with different methods, techniques, and considerations used in traffic forecast for the project under study.

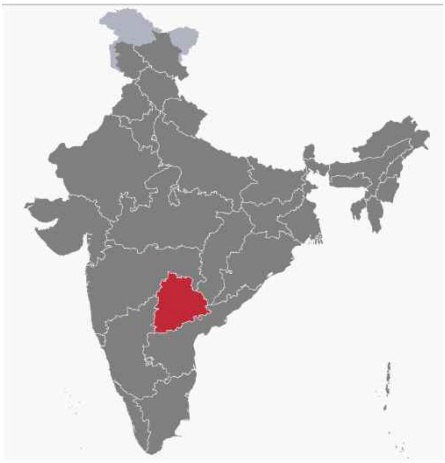
4.2 Secondary Data Collection

In addition to the above-mentioned traffic surveys, secondary data was also collected from the sources wherever the data available. This data is effectively used to determine and estimate past trends of growth and future pattern. Following secondary data was collected for study:

1. Vehicle registration data of Andhra Pradesh, Telangana, Karnataka and Maharashtra as these are the state which make most of the influence om traffic.
2. Data of Indian national GDP (Gross Domestic Product), NSDP (Net State Domestic Product) of Andhra Pradesh, Telangana, Karnataka and Maharashtra.
3. Estimated population data of Andhra Pradesh, Telangana, Karnataka and Maharashtra.

This data is utilized in the study to estimate the growth factors along the project corridor. Relevant part of secondary data is placed at Annexure.

4.3 Development in the Project Influence Area



The **Outer Ring Road**, officially as, **Jawaharlal Nehru Outer Ring Road** and abbreviated as, **O.R.R.**, is a 158 kilometre, 8-lanes ring road expressway encircling Hyderabad, capital of the Indian state of Telangana. The expressway is designed for speeds up to 100 km/h. A large part, 124 km (covering urban nodes viz., Hi- Tech city, Nanakramguda Financial District, Rajiv Gandhi International Airport, IKP Knowledge park, Hardware Park, Telangana State Police Academy, Singapore Financial District, and Games village) of the 158-km was opened by December 2012. Rest of the stretch was opened by 2016. Thus from 2016 onwards ORR is under operation and has contributed to great extent not only to ease out traffic flow but also has influenced the development of Hyderabad around ORR. Most of the development which are happening on periphery of Hyderabad take positioning with respect to NORR into account. It

gives an easy connectivity between NH 44, NH 65, NH 161, NH 765 and NH 163 from Hyderabad to Vijayawada and Warangal as well as state highways leading to Vikarabad Nagarjuna Sagar and Karimnagar /Mancherial. The Outer Ring Road also helps in reducing the travel time from Rajiv Gandhi International Airport to cities like Nizamabad & Adilabad as it connects to NH44. The expressway is fenced, and 33 radial roads connect it with the Inner Ring Road.

Telangana State

Telangana is one of the fastest-growing states in India posing average annual growth rate of 13.90% over the last five years. Telangana's nominal gross state domestic product for the year 2020-21 stands at ₹12.05 lakh crore (US$170 billion).

Service sector is the largest contributor to the Telangana's economy with a share of about 65% in the year 2018-19. Growth in services has largely been fuelled by IT services with the State holding leading position in IT & ITeS in the country in terms of production and exports.

Traffic growth on NORR would be synonym with growth of Hyderabad. Hence various aspects of Growth of Hyderabad are relevant and discussed as under.

Hyderabad.

Hyderabad is among the top 10 fastest growing cities in the world, according to the World Economic Forum (WEF). Interestingly, all 10 of the fastest-growing cities in the world are in India. And, going by Gross Domestic Product (GDP) growth, this is likely to be the case till 2035, says research institute Oxford Economics. Hyderabad, with an 8.47% GDP growth, holds the second place among metropolitan cities in India.

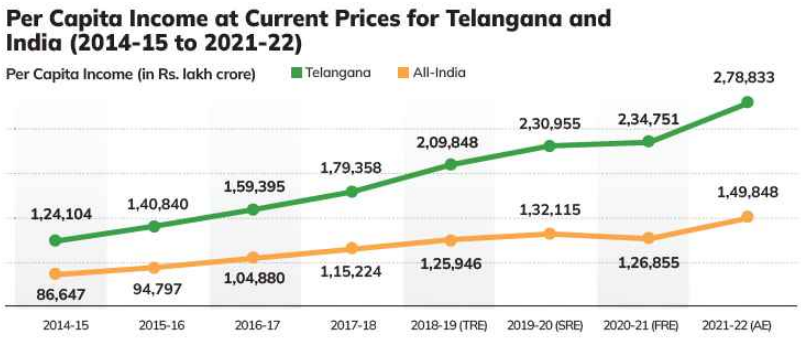
By some estimates Hyderabad will be the second-fastest growing city in the world. It is just marginally behind Bengaluru, and should become number one (in India), since the projections are on a time-series trajectory, and Hyderabad's actual growth has been geometrically exponential.

A city with rich history and magnificent olden structures is slowly became host to some of the most modern buildings, a blend of both the bygone kingdoms and the new corporate revolution. To boost Hyderabad's development, the then Chief Minister of Andhra Pradesh Chandrababu Naidu successfully bid for the National Games in 2002 and the Afro Asian games in 2003, along with a strong bid to create a Formula One circuit in the state. These endeavours led to the

development of efficient sports infrastructure in Hyderabad. The Indian School of Business (ISB) and IIT were also established in a similar endeavour to boost modern education.
The resulting urban agglomeration now has an area of over eight hundred square kilometres and consists of Hyderabad and other municipal entities surrounding it. The city population is expected to exceed one hundred and thirty-six lakhs in 2021.

As development picked up pace at the end of the nineties, the old city has declined, and the newer peripheral regions started to gain prominence. By 2001, the city was the sixth largest urban agglomeration in India; and during the last decade it registered a growth of 32%.

Developed land on the outskirts of Hyderabad has been utilised for large scale development just outside the Cybercity. The city itself is on its way to become the leader in e-governance. It has been predicted about Hyderabad that it would become a leading information-based society in the next two decades.



Rapid industrialisation has led to the increase in land prices while simultaneously driving the demand for infrastructure development. Commercial growth, therefore, has been concentrated in the Municipal Corporation of Hyderabad area while the metropolis has experienced pressure in residential growth. As workers prefer proximity to the workplace, their daily commute has resulted in the improvement of the road networks as well.

Growth of IT Sector

Ever since the 1990s, Andhra Pradesh had been promoting itself as a world class IT location and Hyderabad City, as a result, has managed to attract investment from companies such as IBM, Oracle, and Microsoft. The Hyderabad Technology Park has seen hundreds of IT companies registering themselves as soon as spaces are available. The objective of this elaborate promotional program has been to attract the right number of companies which

together would form a critical mass for the city to develop as a high-tech city which would rub shoulders with Silicon Valley and Malaysia's Multimedia Super Corridor. During the nineties, several initiatives were taken up by the state government towards promotion of IT sector. These included setting up of IT training institutes, initiatives in e-governance, development of a Hi-Tech city and promoting the Software Technology Park as a preferred destination for private sector companies. Steps were then taken even further to allow the development of a Hardware Park, creation of a knowledge Park, and establishment of a financial district. The state government started tapping resources to invest in the biotechnology sector and, as a first step towards making the region specialized, a Biotech Park was introduced.

The result of these efforts can be seen in the form of various parks. One called Gnome Valley has been set up to focus on research and training in biomedicine for industrial production. Within this valley are also established the IKP Knowledge Park and Alexandria Knowledge Park with areas of two hundred acres and three hundred acres respectively. These parks cover Ameerpet, Medchal, Uppal, and a number of other parts of the Hyderabad Metropolitan region. The thrust areas of research here include vaccines, bioinformatics, seeds etc. Some of the biggest global pharmaceutical and research firms have setup their offices here. Similarly, a Hardware Park of one thousand seven hundred acres in area is also being developed.

The economic activities particularly related to manufacturing and associated activities, are concentrated in Ramachandrapuram, Patancheru, Balanagar, Uppal, Cherlapalli, Jeedimetla, and Moula Ali. These developments, on one hand, contributed to the economic growth of the city and, on the other hand, are responsible for the spatial growth, particularly the growth of the surrounding areas.

Development of Relevant Infrastructure

With expansion in infrastructure capabilities and progressive state policy framework, Hyderabad is not only providing strong impetus to its leading industries: IT/ITES, pharmaceuticals but also laying strong foundation for its growth sectors: aerospace, automotive and electric vehicle, textiles and emerging technologies. I strongly believe that the metropolis is on an ambitious journey to become one of the most diverse business hubs of the world by 2035.

The city's infrastructure is providing for evolving needs of massive commercial growth. Hyderabad's metro rail is India's second longest operational metro network after the Delhi Metro. In phase 1, 67 kilometers (kms) are operational of planned 72 kms. The route covers three major traffic corridors through 60 stations. The next phase aims to connect airport at Shamshabad with major economic zones of the greater Hyderabad region. Another groundwork

capability worth mentioning is logistics parks. The Hyderabad Metropolitan Development Authority has developed 6 logistics parks in last 5 years and 8 more to come by 2025. The facilities are catering to over 340 logistics companies and 100 major manufacturing firms, making Hyderabad one of the largest logistics hubs of the country. In addition to the above, the metropolitan offers second cheapest office rentals amongst the major cities of India, adding to cost effectiveness of doing business in the city. In 2021, Hyderabad accounted for 36% country's share of office spaces.

It also holds the badge of most liveable city in the country for last five consecutive years as per Mercer's quality of living index. The city attracts talent pool from across the nation as well as from other world economies due to its notable social infrastructure: healthcare, education, housing, recreation, and personal freedom.

Telangana is a state known for its robust economic initiatives and trade friendly policies since its inception in 2014. A key example is state's TS I-pass industrial policy that is best in the country. It provides single window application clearance process capped at 15 days for all capital investment projects. This policy enabled Amazon to get clearance in just 11 days for its largest campus in the world to be built in Hyderabad. The state is poised to keep pace with technological advancements and thus first in India to launch actionable framework for AI and other emerging technologies. It has partnered with NASSCOM to formulate and execute the strategy. Telangana has taken many sectors specific initiatives that has improved ease of doing business and garnered foreign direct investments in the metro. Telangana's Electric vehicle and energy storage policy has aided Fiat Chrysler to set up global digital hub in Hyderabad. With availability of largest commercial land bank in the country, Telangana offers 1.45 lakhs acres of land to investors. This has enabled aerospace companies to set up production facilities in the city. Boeing and Safran have announced new manufacturing lines in Hyderabad. Airbus is setting up helicopter manufacturing plant in Shamshabad and committed to investment of INR 2500 Crores. The city ranked first in the Aerospace cities of the future in 2020-21.

The city's primary sectors, IT and pharma, continue to grow and bring in public and private investments. Google is investing INR 1000 Crores in its biggest facility outside US. This commercial space is set to be functional in Hyderabad by early 2023 and will be home to 13000 employees. The metro's Genome Valley is witnessing Biopharma scale-up facility, a public-private partnership between the state and Cytiva life sciences. The state is also developing 800-acre new pharma park in Rangareddy district.

Though Hyderabad faced the heat in 2020, the pandemic and subsequent lockdown compelled considerable layoffs in IT and SME sectors. Office space absorption rate declined, strongly

indicating many firms shutting shops or reducing operations in the city. Few economic experts questioned Hyderabad's potential as a growing business hub. However, I find the argument short sighted and reactive. The city strongly stood the test of time, India's first ICMR approved RT-PCR kits and first indigenously developed vaccine for COVID-19 came from Hyderabad. In 2021, the city's economy started showing green shoots. It contributed to 30% of the pharmaceutical production of the country. It also gained momentum as the "Vaccine capital of the world" with 4 out of 5 leading vaccine manufacturers in India already present in Genome Valley. The same year, the city also had the highest net office absorption rate (of existing stock) at 20% and highest office completion rate in the country. It also witnessed lowest office space vacancies: 7.1% in comparison to its other metro counterparts.

Hyderabad's strong economic fundamentals with respect to infrastructure, social capital and economic policies, equip it to meet future challenges of global economies. It is poised for long-term growth and on a progressive path to become world's prominent commercial hub. With current GDP of $74 billion, it is projected to move forward with 8.47% CAGR and set to deliver as $201.4 billion economy by 2035.

IT INCUBATION CENTERS – HYDERABAD

Hyderabad has witnessed a very growth of IT incubation centers. Some are summarized below.

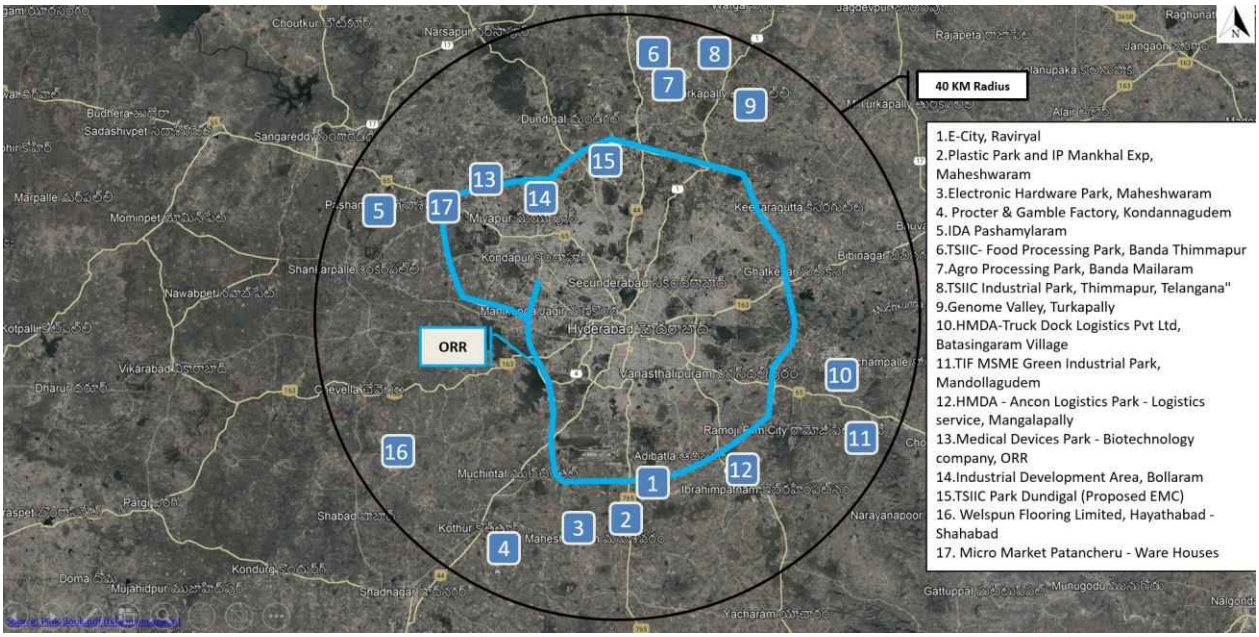
- Hyderabad is recognised as the leading IT hubs globally; the city houses more than 1500 IT and ITES companies.
- IT SEZs -53
- State contributes 11.6% of India's IT exports in 2019-20
- Accounts for 23.5% of India's IT export growth 2019-20
- T-HUB Phase-II, Hyderabad Built-up Area: 3.72 L sft; India's Largest start-up Incubator
- Plug & play facility in E city Built-up Area: 1.8 lakh sft with an integrated testing & training facility.
- T-Works, Hyderabad Built-up Area: 78,000 sft – Phase 1; India's largest prototyping facility
- Image Tower, Hyderabad Built-up Area: 460,000 sft A one of its kind plugs & Play Facility for Animation and Gaming companies. Expected completion: March 2023
- Incubation Centre, Warangal(U) Built-up Area: 15000 sft Plug & Play Facility for startups.

LIFE SCIENCES - HYDERABAD

Life Sciences sector continues to continue to consolidate the position of the State as one of the most important life sciences hubs in the world.

International Companies including **Sandoz Research and Development Laboratories**, **Chemo India Formulations**, **Jamp India Pharmaceutical**, **Ferring Laboratories** and **Tokyo Chemical Industry**, among others have established their footprint in the State.

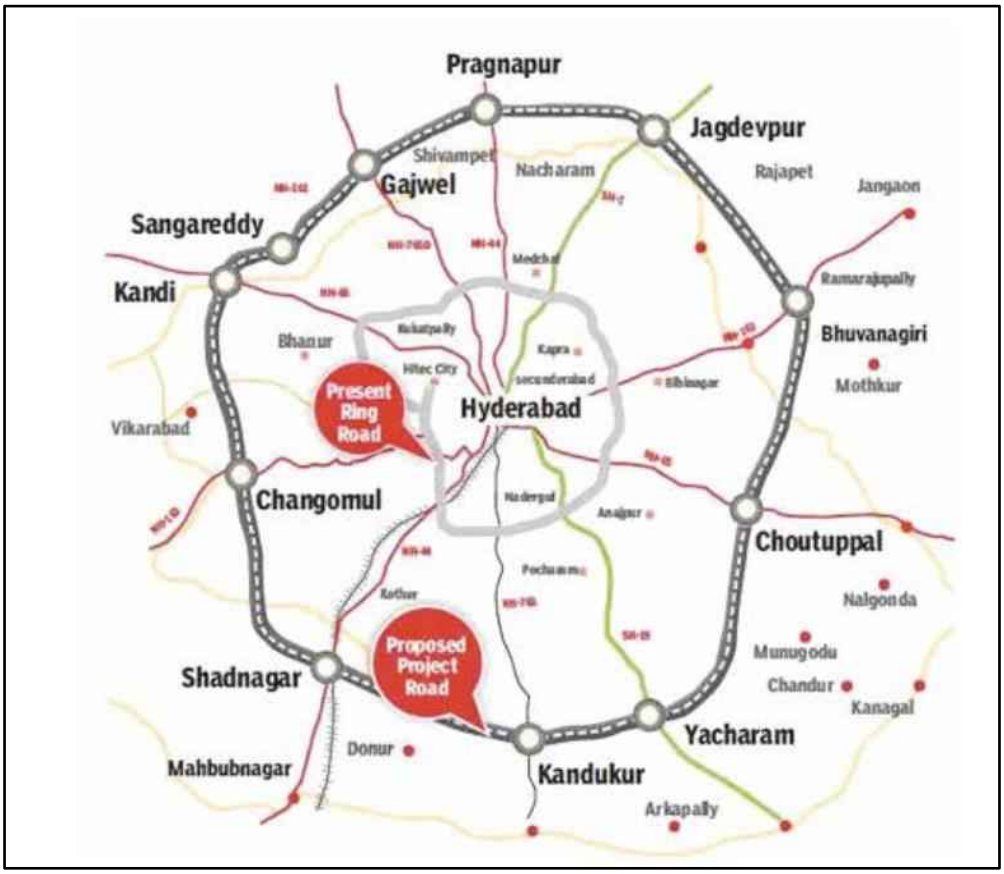
Telangana is the leading contributor of Pharma Exports from the Country since 2015-16 (28% share in FY 2020-21)



Hyderabad Pharma City: world's largest integrated pharma cluster spread over approx 19,333 acres. The cluster has been recognized as National Investment and Manufacturing Zone (NIMZ) by Government of India, given its national and international importance.

Genome Valley: Built over 1200 acres in three phases, more land is being added to the cluster along with more ready built labspace (more than 2 million square foot) Genome Valley houses more than 200 companies with a scientific workforce of about 15,000 professionals.

Medical Devices Park: Spread across 302 acres, 105 acres have already been allotted (more than 60 percent of the allottable land) to 40 companies. The park will house Asia's largest Stent manufacturing facility established by Sahajanand Medical Technologies



There is considerable industrial development on peripheries of Hyderabad as well. ORR being a fast connectivity has provided boost to such development. Following figure marks such developments on periphery of Hyderabad.

All above discussion indicates that Hyderabad is going to witness a good growth in near decade and would sustain on that.

Proposed Regional Ring Road (RRR)- Hyderabad

- An 8-lane expressway stretched over 340 km of length with a project cost Rs 17,000 crore is proposed to strengthen the existing roads connecting major national highways passing through Telangana, easing the regional road connectivity.
- The road will be developed at par with international standards over a stretch from Sangareddy to Kandi via Narsapur, Toopran, Gajwel, Jagdevpur, Bhongir, Choutuppal, Ibrahimpatnam, Chevella and Shankarapalli
- The RRR will have amenities such as parking, food courts, toilets, parks, children play area, malls, and drinking water facilities.
- The RRR will connect the surrounding districts with Hyderabad and to the Industrial Clusters, covering 40 of the region's population and will link 20 towns with National Highways.

Source: Pink-Book.pdf (telangana.gov.in)

As Proposed Regional Ring Road (RRR) would have faster connectivity to all important urban/commercial establishment, development of RRR has potential to alter focus of growth around Hyderabad Metropolitan Region.

4.4 Trend Analysis

Time series data of vehicle Registered in state of concerned states is taken from respective authorized websites and the same is used as the base data for analysis of growth.

Growth of vehicle traffic depends on type of vehicle. Traffic growth on any highway typically depends on number of economic parameters like

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. Same is recommended in IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways.

Following can be pair of vehicle type and independent variable for elasticity modelling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

Same is used in analysis below.

Vehicle Registered at the end of financial year in the state of Delhi, Haryana and Uttar Pradesh is given in tables below and also compared with the growth rate achieved in terms of vehicle registered on all India bases.

4.5 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish the relationship between the growth in number of given categories of vehicle with one of the economic variables considered, such as NSDP, per capita income and population growth.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is as given below:

$$Log\ (P) = k \times Log\ (EI) + A$$

Where,

P = *Number of Vehicles (Mode wise)*

EI = *Economic Indicator*

A = *Regression constant*

k = *Elasticity coefficient (Regression coefficient)*

The elasticity for car and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP). The graphical presentation of the elasticity is presented in figures below:

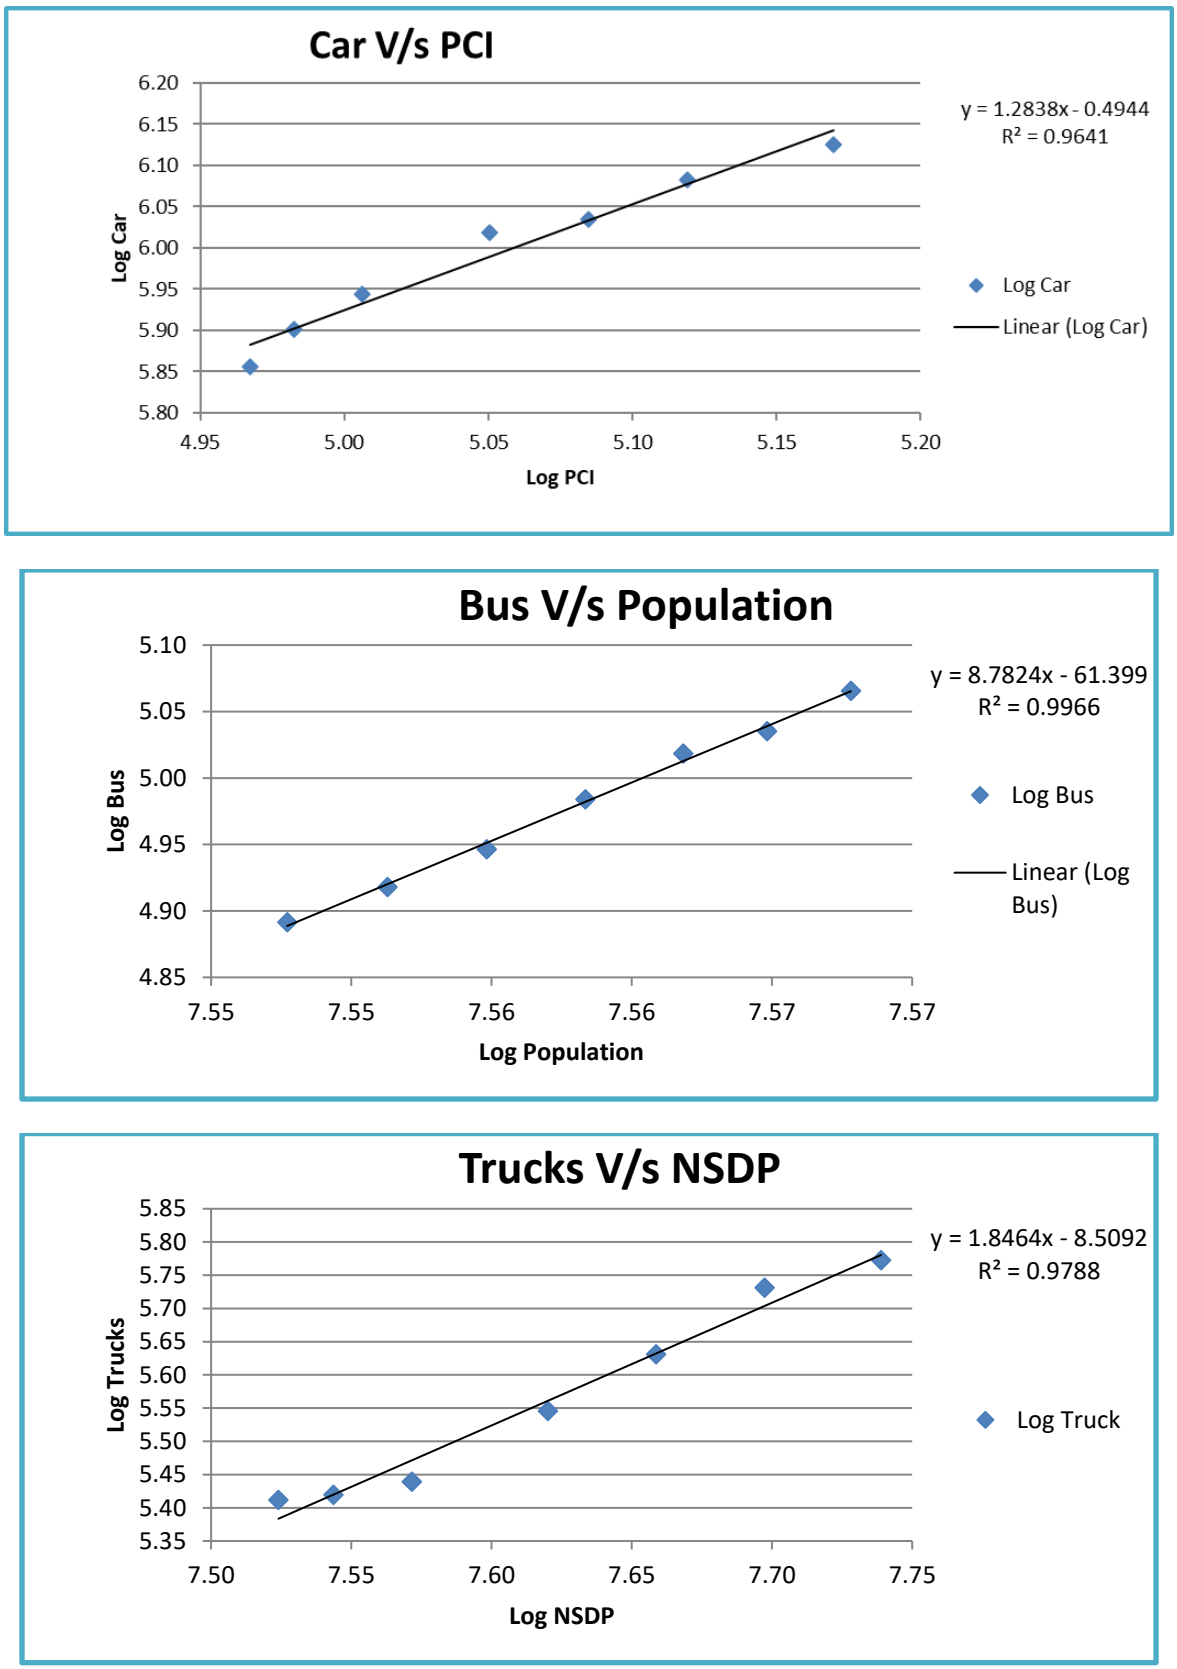


Figure 4-1: Elasticity by Graphical Extrapolation for Telangana

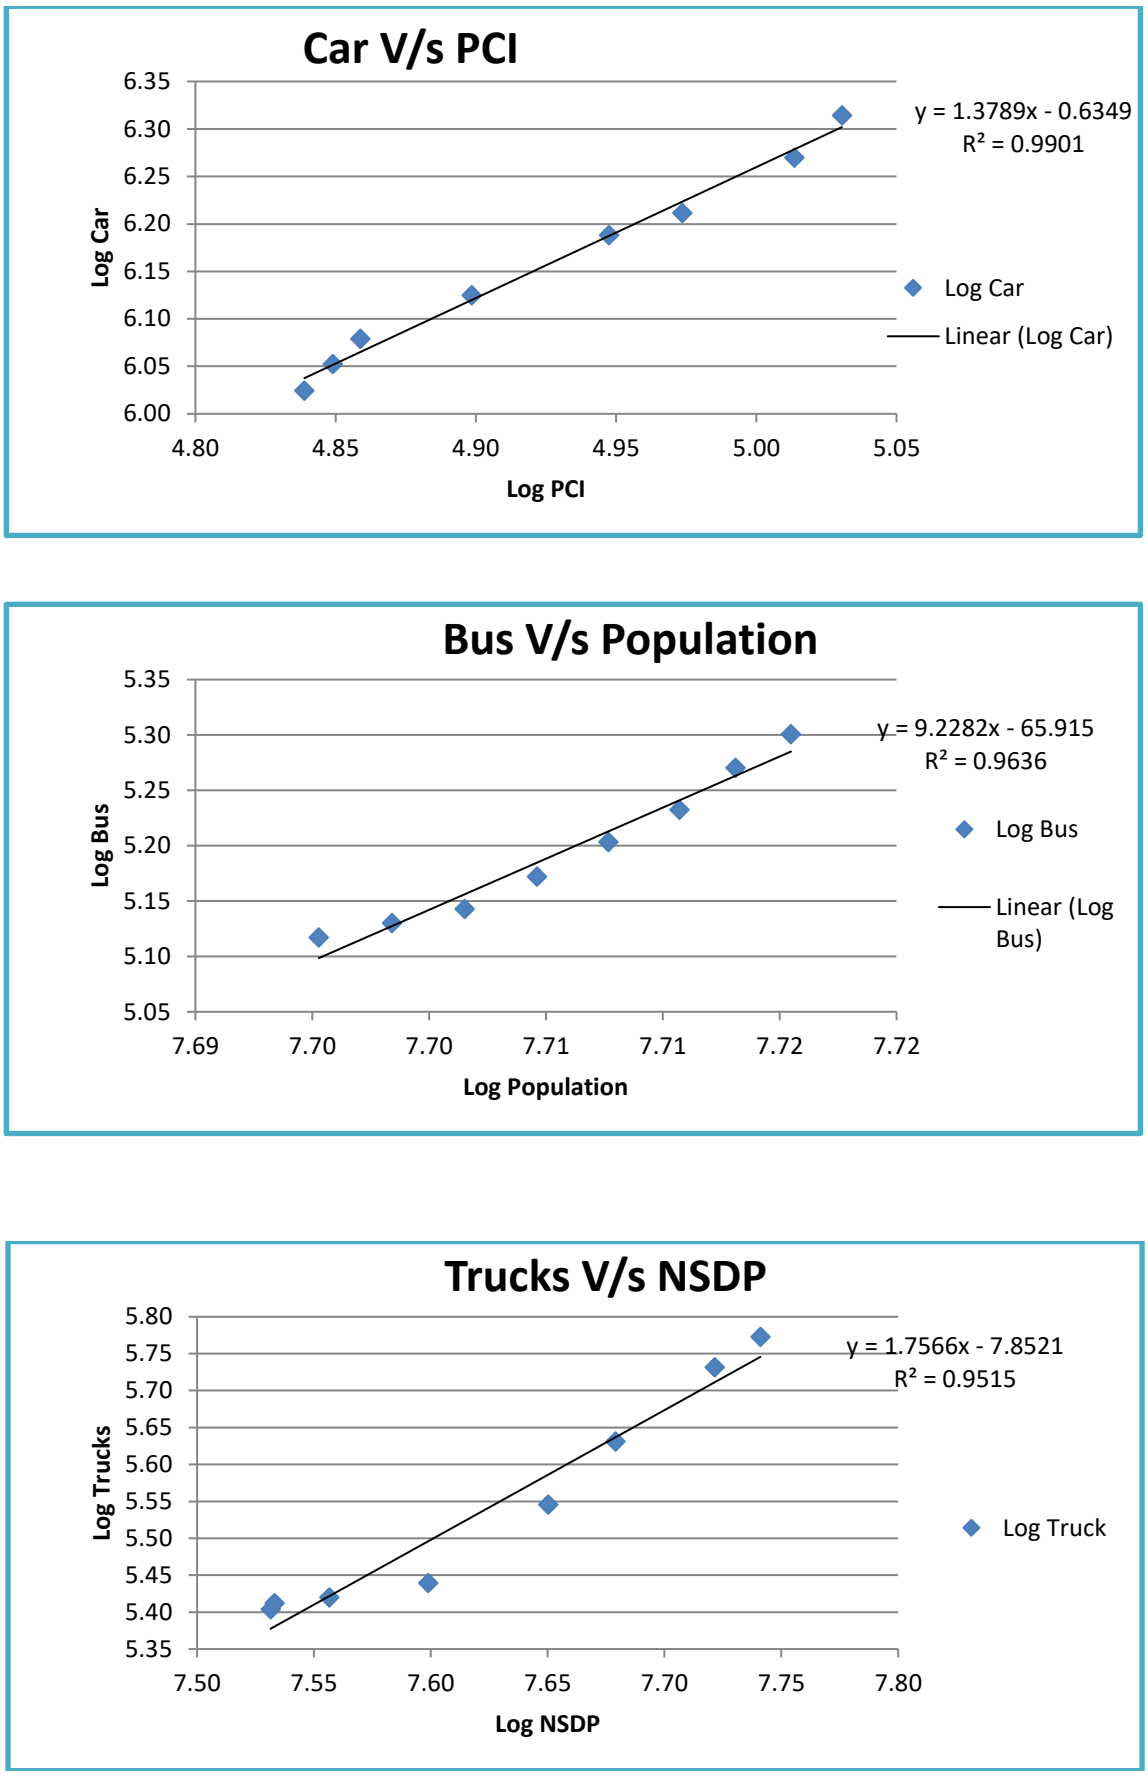

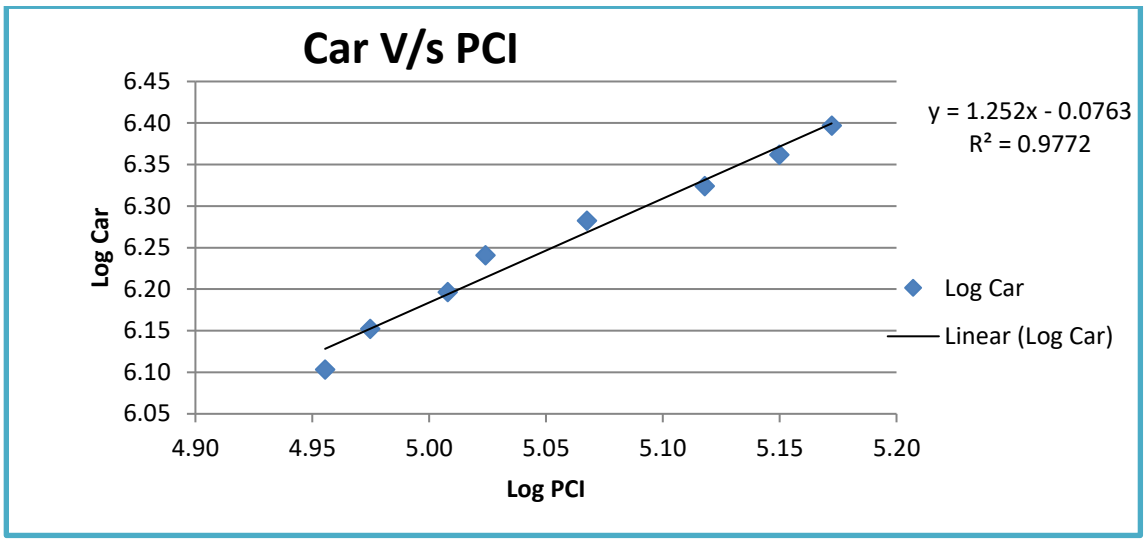

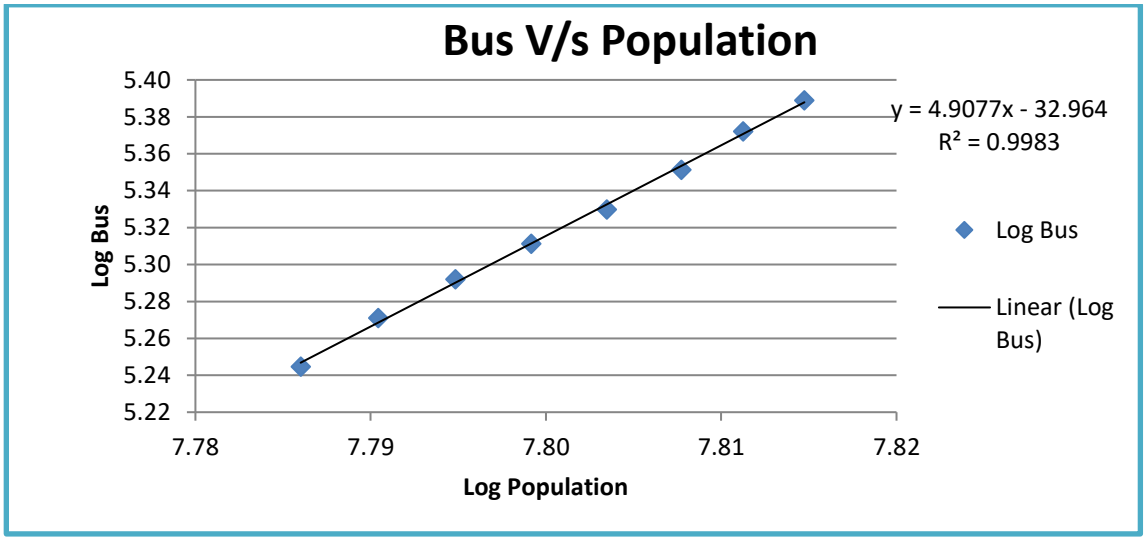

Figure 4-2: Elasticity by Graphical Extrapolation for Andra Pradesh

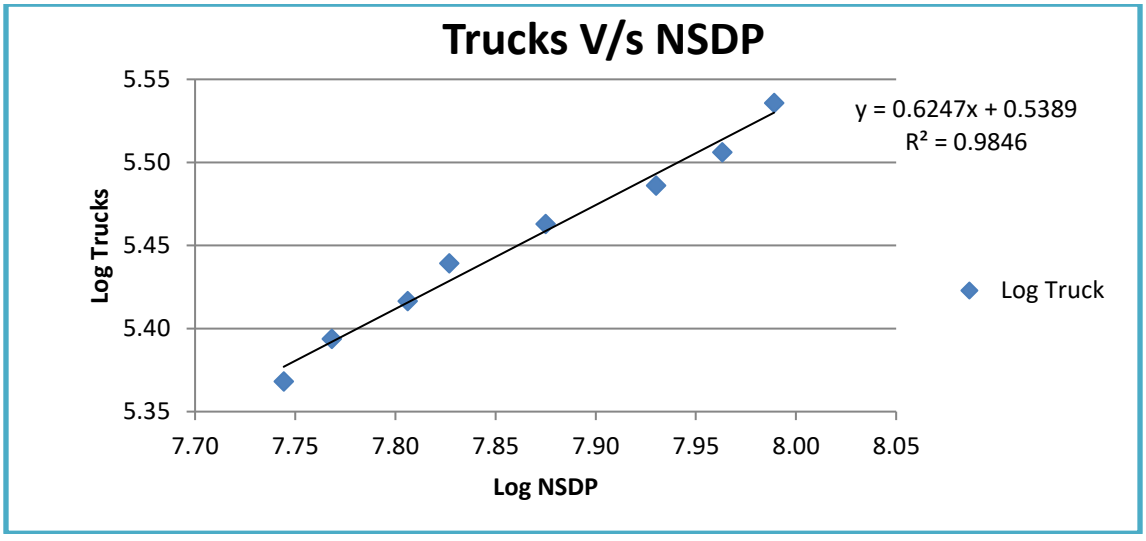

Figure 4-3: Elasticity by Graphical Extrapolation for Karnataka

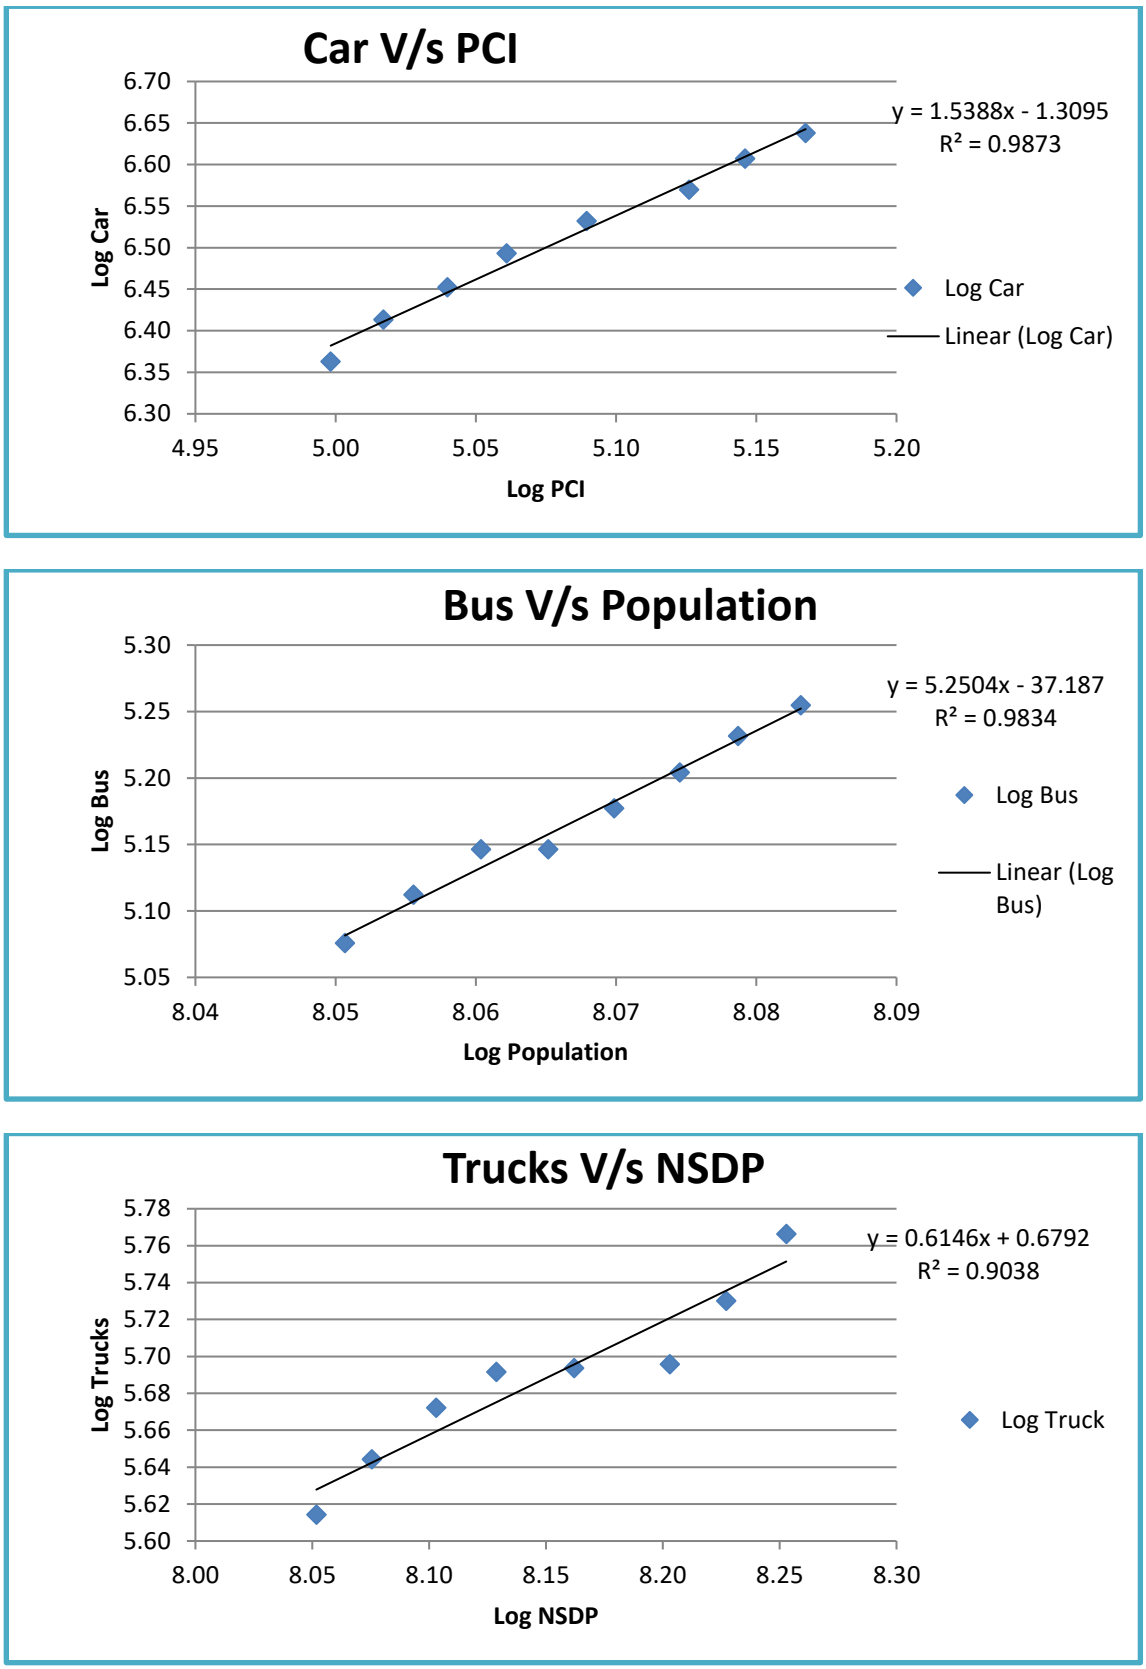

Figure 4-4: Elasticity by Graphical Extrapolation for Maharashtra

It shall be noted that the growth rates for various modes are not same as they are influenced by different parameters. In other words, whilst the growth of the passenger vehicles (cars, Jeeps, two wheelers and even buses) could be attributed to the growth in the per capita income,

population growth and vehicle registration growth, the growth of the LCV, Trucks, Multi Axle Trucks are found to be influenced with factors including the industrial production and growth of the National or state Domestic products.

For establishing the elasticity equations, details regarding NSDP/GDP, per capita income, population growth and registered vehicles in the state have been collected for the past few years and are presented in the Annexure. Based on this data, Log-Log regression curve fits have been developed for each type of vehicle with the most suitable parameters and the elasticity values obtained.

The results of these analyses for the good fit as reflected by R^2 values are presented in the table below.

Table 4-1 : Results of Regression analysis

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient
TELANGANA	Car/Jeep	PCI	y = 1.2838x - - 0.4944	R² = 0.9641	1.2838
	Bus	Population	y = 8.7824x - - 61.3985	R² = 0.9966	8.7824
	Truck	NSDP	y = 1.8464x - - 8.5092	R² = 0.9788	1.8464
ANDRAPRADESH	Car/Jeep	PCI	y = 1.3789x - - 0.6349	R² = 0.9901	1.3789
	Bus	Population	y = 9.2282x - - 65.9151	R² = 0.9636	9.2282
	Truck	NSDP	y = 1.7566x - - 7.8521	R² = 0.9515	1.7566
KARNATAKA	Car/Jeep	PCI	y = 1.252x - - 0.0763	R² = 0.9772	1.252
	Bus	Population	y = 4.9077x - - 32.9642	R² = 0.9983	4.9077
	Truck	NSDP	y = 0.6247x - 0.5389	R² = 0.9846	0.6247
MAHARASHTRA	Car/Jeep	PCI	y = 1.5388x - - 1.3095	R² = 0.9873	1.5388
	Bus	Population	y = 5.2504x - - 37.1874	R² = 0.9834	5.2504
	Truck	NSDP	y = 0.6146x - 0.6792	R² = 0.9038	0.6146

However, considering factors such as proposed developments and other influencing economic factors moderated growth factors as listed below are considered. Change all tables.

4.6 Basis for arriving at growth rates.

Arriving at growth rates for each mode on particular road stretch is always a complex issue. Transportation planners before arriving at such growth rates have to have a comprehensive understanding of the various disciplines such as land use, economy, automobile industry, anticipated changes in the region, traffic, and other related issues.

Giving due consideration to all the factors elaborated in the previous sections, three growth scenarios are suggested with a wide range of growth rates which are resilient and ready to respond to the changes in socio-economic conditions which are likely to influence the project corridor.

4.7 Growth of Economy and Projection of GDP in India and States

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

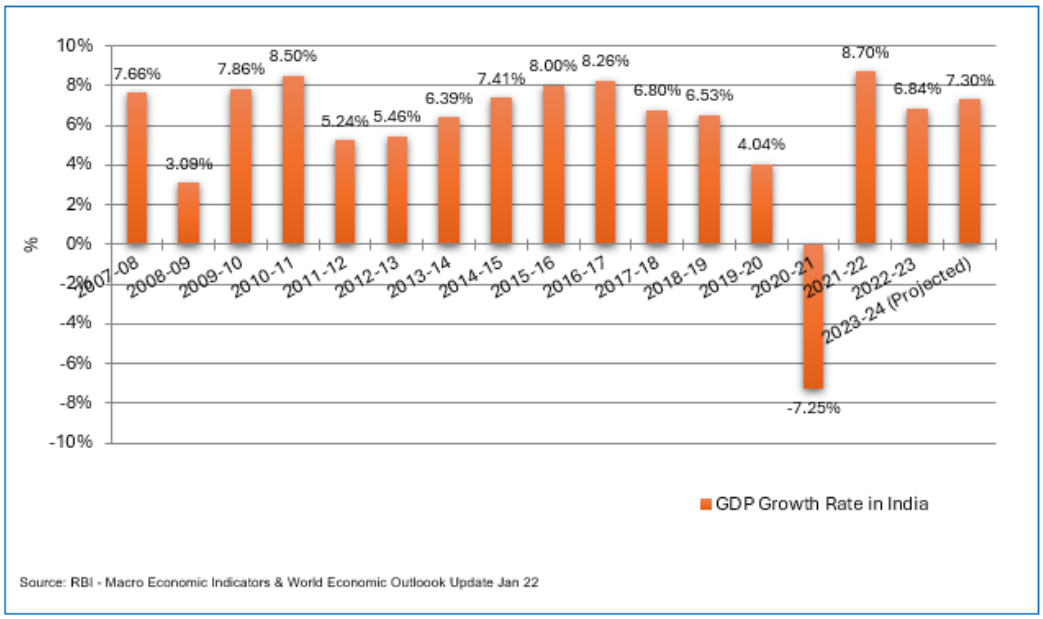

Figure 4-5 : Growth of GDP in India

After witnessing a slowdown during previous years, the economy is expected to firm up further in coming years. The growth outlook for the Indian economy in the medium and long term remains upbeat and positive. Therefore, in this study, in base case scenario, it is assumed that a GDP growth rate of around 8% will be sustained up to the year 2028 and thereafter for every five-year period the GDP growth rate is reduced. Similarly other independent variables of Per Capita Income (PCI) and Population is growth is assumed. Following table shows summary of such assumption.

Table 4-2 : Growth of Independent Variables

Assumed Growth Rate of Independent Indicators							
Indicator	**2024-2028**	**2028-2033**	**2033-2038**	**2038-2043**	**2043-2048**	**2048-2053**	**2053-2058**
PCI	7.71%	6.71%	5.00%	4.50%	4.00%	3.50%	3.50%
Population	0.76%	0.71%	0.66%	0.61%	0.56%	0.51%	0.51%
NSDP	8.15%	6.15%	4.15%	3.15%	2.15%	1.15%	1.15%

4.7.1 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle are as under.

Table 4-3: Recommended Growth Rates Pessimistic case

Category / Year	2024-2028	2028-2033	2033-2038	2038-2043	2043-2048	2048-2053	2053-2058
Car/Jeep/Van	6.81%	5.43%	3.63%	2.77%	2.01%	1.36%	1.36%
Bus	4.67%	4.26%	3.87%	3.49%	3.12%	2.76%	2.76%
Minibus	4.67%	4.26%	3.87%	3.49%	3.12%	2.76%	2.76%
LCV	3.02%	2.03%	1.16%	0.73%	0.35%	0.04%	0.04%

CHAPTER 5

FORECAST OF TOLL REVENUE

5.1 General

This chapter presents the estimates of traffic forecast, tolling categories, tolling rate calculations and toll revenue of the project.

5.2 Toll Rate Guidelines

Toll rates at NORR are governed by "Nehru Outer Ring Road Hyderabad (Toll) Rules -2012 issued by Municipal Administration and Urban Development Department / Hyderabad Metropolitan Area Development Authority and Hyderabad Growth Corridor Limited. This policy was recently amended by circular dated 12th January 2023.

The policy is similar to NHAI toll rate policy. Basic rate and rate revision policy same as NHAI Policy. The basic per km rate however have been enhanced for categories as under.

Sl. No.	Vehicle types	Enhancement factor
1.	Cars/ Jeep/ Van/ LMV/ SUV/ MPV	50%
2.	LCV/ Mini Bus	50%
3.	Bus/ 2-axle Truck	27%
4.	3-axle commercial vehicles	50%
5.	Heavy Construction Machinery/ Earth Moving Equipment/ 4/5/6 axle trucks	50%
6.	Oversized vehicles (7 or more axles)	50%

Figure 5-1: Base Rate (Per Km) enhancement as per NORR amendment Policy.

In amendment of policy provision of penalty for entering to fast tag lane without having valid fast tag and also for overloading of vehicles has been added. Penalty for fast tag lane violation is double the normal fee and overloaded vehicles would have to pay 10 times the toll rate for category. These are similar to NHAI policy.

5.4 Discounts

As per the Fee Notification (Schedule-R) fee discounts shall be provided to project users as under

- Local discount for non-commercial vehicle owner with in 20 km of toll plaza is not included in schedule M.

5.4 Travel Passes

As per the Fee Notification (Schedule-R) fee discounts shall be provided to project users as under

1. Monthly Pass: For frequent user's monthly pass would have not more than 50 trips per month at 2/3rd rate
2. Daily Pass (for Return Trip): A 75% discount will be offered on the return trip.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travellers or whose frequency does not yield any discount from the above categories.

5.2 Segmentation of traffic

Journet type traffic segmentation has been provided by Concessionaire for all toll plazas. Same has been used for future revenue working as well.

5.2 Estimation of Toll Rates

As per the notification issued for toll policy the following Base rate of fee for the categories mentioned are applicable as base rate.

Table 5-1 : Base Toll Rates 2007 - 08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (2 Axle)	2.2
Three Axle commercial vehicles	2.4
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4-6 axles)	3.45
Oversized Vehicle (seven or more axles)	4.2

These rates are then modified for as per procedure provided in guidelines of notification taking into account factors listed below.

- These base rates have been enhanced by factors as mentioned in amendment to NORR Toll Policy dated 12th January 2023.

- Annual revision of fee rate - @3%
- Application of WPI
- a growth rate of 5% is assumed for WPI of future years.
- As fee for structures is included in equivalent length at each toll plaza same shall not be considered separately

Applicable length for journey type at each toll plaza as per schedule M is given as under

Above rates are applicable for year 2025-26. Toll rates for future years have been worked out as per applicable rate revision policy. These rates have been used for calculating revenue of future years.

5.2 Traffic Forecast

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Traffic of horizon years has been worked out on the basis of growth as discussed previously. Traffic forecast of total volume (all category) is given in tables below.

Table 5-27: Total Tollable Traffic (Pessimistic Growth Scenario)

Year/ Types of vehicles	Car/Jeep/Van	Minibus /LCV	Bus/ 2- Axle	3 - Axle	4 to 6 Axle	7 and Above Axle	Total Tollable Traffic (No.)	PCU (Including Exempted)

5.2 Toll Revenue at all toll plazas

Toll revenue has been worked out for concession period as per projected traffic and worked out rates.

5.4 Revenue Forecast

Revenue forecast with traffic numbers as per above analysis and rates worked out is given in following table.

Table 5-30: Total Toll Revenue – Rs. Cr (Pessimistic)

5.4 Modification in concession period.

Modification in concession period is analysed as per provisions of DCA and same is summarised in table below for all scenarios.

Pessimistic Case

Target Point 1- April 2033									
Target Month - March 2029	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or shortfall**	**Change in Concession period %**	**Original Concession Period**	**Change in Concession period**	**Modified Concession Period**
NORR	173.18	164.50	-5.01%	No	-	0.00%	30.00	0.00	

Target Point 2- April 2043											
Target Month - March 2036	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or shortfall**	**Change in Concession period %**	**Original Concession Period**	**Change in Concession period**	**Total Change in Concession period**	**Calculated Modified Concession Period**	**Final Concession Period subject to Cap**
NORR	448.25	394.35	-12.02%	No	-	0.00%	30.00	0.00	0.00	30.00	

Most Likely Case

Target Point 1- April 2033									
Target Month - March 2029	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or shortfall**	**Change in Concession period %**	**Original Concession Period**	**Change in Concession period**	**Modified Concession Period**
NORR	173.18	168.28	-2.83%	No	-	0.00%	30.00	0.00	

Target Point 2- April 2043											
Target Month - March 2036	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or shortfall**	**Change in Concession period %**	**Original Concession Period**	**Change in Concession period**	**Total Change in Concession period**	**Calculated Modified Concession Period**	**Final Concession Period subject to Cap**
NORR	448.25	413.47	-7.76%	No	-	0.00%	30.00	0.00	0.00	30.00	

Optimistic Case

Target Point 1- April 2033									
Target Month - March 2029	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or shortfall**	**Change in Concession period %**	**Original Concession Period**	**Change in Concession period**	**Modified Concession Period**
NORR	173.18	172.09	-0.63%	No	-	0.00%	30.00	0.00	

Target Point 2- April 2043											
Target Month - March 2036	Target Revenue (Rs. Crores)	Calculated Revenue (Rs. Crores)	Difference %	If qualifies for Modification in Concession Period	Qualifying increment or shortfall	Change in Concession period %	Original Concession Period	Change in Concession period	Total Change in Concession period	Calculated Modified Concession Period	Final Concession Period subject to Cap
NORR	448.25	420.80	-6.12%	No	-	0.00%	30.00	0.00	0.00	30.00	

Hyderabad NORR-Modification in Concession Period						
Types of Scenarios	Pessimistic Case		Most likely Case		Optimistic Case	
Target Month	April 2033	April 2043	April 2033	April 2043	April 2033	April 2043
Target Revenue (Rs. Crores)	173.18	448.25	173.18	448.25	173.18	448.25
Calculated Revenue (Rs. Crores)	164.50	394.35	168.28	413.47	172.09	420.80
Difference %	-5.01%	-12.02%	-2.83%	-7.76%	-0.63%	-6.12%
If qualifies for Modification in Concession Period	No	No	No	No	No	No
Qualifying Increment or shortfall	-	-	-	-	-	-
Change in Concession period %	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%
Original Concession Period	30.00	30.00	30.00	30.00	30.00	30.00
Change in Concession period	0.00	0.00	0.00	0.00	0.00	0.00
Total Change in Concession period	0.00		0.00		0.00	
Calculated Modified Concession Period	30.00		30.00		30.00	
Final Concession Period subject to Cap	0.00		0.00		0.00	

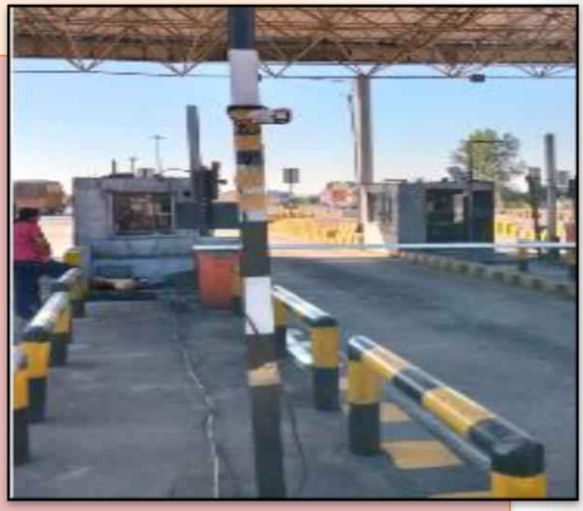
Thus, there is no modification expected in concession period due to variation in revenue as per above estimates in all scenarios.

CHAPTER 6

CONCLUSION & RECOMMENDATIONS

6.1 Conclusion & Recommendations

The Outer Ring Road, officially as, Jawaharlal Nehru Outer Ring Road and abbreviated as, O.R.R., is a 158 kilometer, 8-lanes ring road expressway encircling Hyderabad, capital of the Indian state of Telangana. ORR is one of the most important infrastructural developments which has complimented growth of Hyderabad as major metro of India. On Eastern side it has provided express connectivity to major commercial and upscale residential centres of Gachibowli, Banjara Hills, Jublee Hills, Hitec- City, Manikonda, Nanakramguda. As a result, large number of residential and commercial projects have come up on this north-east part of ORR. Tellapur, Mokila, Kollur, Narsingi can be named as few of these. On north and western side ORR connects to Shamirpet and Genome Valley.



ORR also provides fast connectivity to various radial state and national highways connecting to Mumbai, Nagpur, Karimnagar, Warangal, Suryapet, Vijayawada, Bengaluru. Regional traffic now does not need to go into congested network of Hyderabad.
All above indicates that Hyderabad Ring Road or Nehru Outer Ring Road (NORR) has potential of good traffic growth on sustainable basis, and it can be considered as a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The National Highways Authority of India (NHAI) introduced the Toll, Operate and Transfer (TOT) model for partnership with private developers in the road sector. Under this model, NHAI passes on the toll collection rights and operation and maintenance obligations for 20 years to the private developer against payment of upfront, one-time, lump sum concession fees quoted by the private developer as part of the comprehensive bidding process. Projects under this model are awarded as a bundle of operational national highways, which allows the investor to offset the risks of one project against another. Since existing and operational roads are auctioned under the TOT model.

Under the Toll Operate and Transfer (ToT) 12 bundle, NHAI had invited tenders for selection of concessionaire for maintenance of the National Highway stretch Lalitpur-Sagar-Lakhnadon from Km 99.00 to Km 415.089 section of NH-44 (old NH26).

M/s. IRB Infrastructure Developers Limited., has been declared as the selected bidder for the project. This report is for ToT bundle 12 "Lalitpur-Sagar- Lakhnadon from Km 99.00 to Km 415.089 section of NH-44 spanning in the states of Uttar Pradesh and Madhya Pradesh. Project Highway alignment is depicted in the following figure.

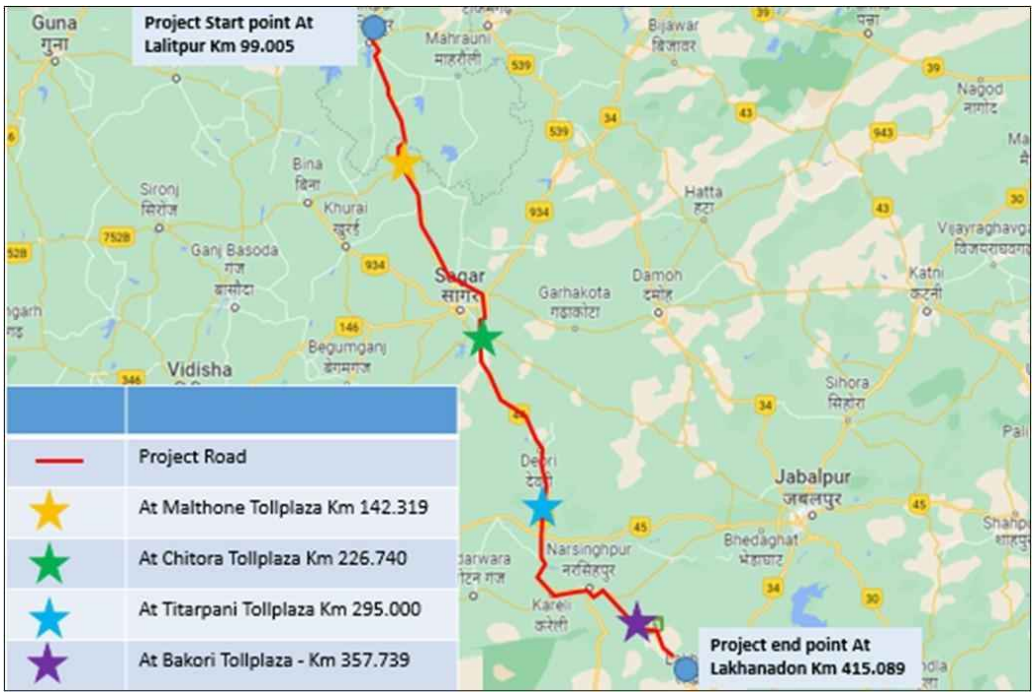

Figure 1-1: Project Stretch of TOT Bundle 12

1.2 Objective of the Study

M/s IRB Infrastructure Developers Limited (IRB) intends to develop a traffic study report for Four Laning of Lalitpur-Sagar- Lakhnadon from Km 99.00 to Km 415.089 section of NH-44 on BOT basis. GMD Consultants have been assigned the work of conducting traffic study and developing revenue model based on traffic projections and forecast.

The year 2024-25 has been taken as the base year for projections and forecasting of traffic in the horizon year. This report fulfils part of the requirement of the assignment.

1.3 Scope of Services

The following may be referred to as broad scope of Traffic Study of Four Laning of Lalitpur-Sagar- Lakhnadon from Km 99.00 to Km 415.089 section of NH-44.

- Classified Traffic Volume Count at main toll plaza location at Toll Plaza locations. This data was supplied by the Concessionaire.
- Establishment of traffic pattern
- Working our traffic demand elasticity and growth
- Traffic forecast up to concession period.
- Preparation of revenue model up to concession period
- Any other analysis relevant to scope

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

The project stretch is a section of NH-44, which is the longest National Highway in the country, running through North, Central and South India. It starts from Jammu & Kashmir and passes through the states of Punjab, Haryana, Delhi, Uttar Pradesh, Rajasthan, Madhya Pradesh, Maharashtra, Telangana, Andhra Pradesh, Karnataka and Tamil Nadu.

Project Stretch Description

The project stretch under this study starts from km 99.005 of NH-44 at Lalitpur in the state of Uttar Pradesh and ends at km 415.089 of NH-44 at Lakhnadon in the state of Madhya Pradesh. The length of project stretch is 316.084 km and has 4-lane configuration with four number of Toll Plazas (Malthone at ch.142+319, Chitora at Ch. 226+740, Titarpani at 295+000 and Bakori (Bachai at ch.357+739).

The following figure shows this the alignment of the project highway in the above context.

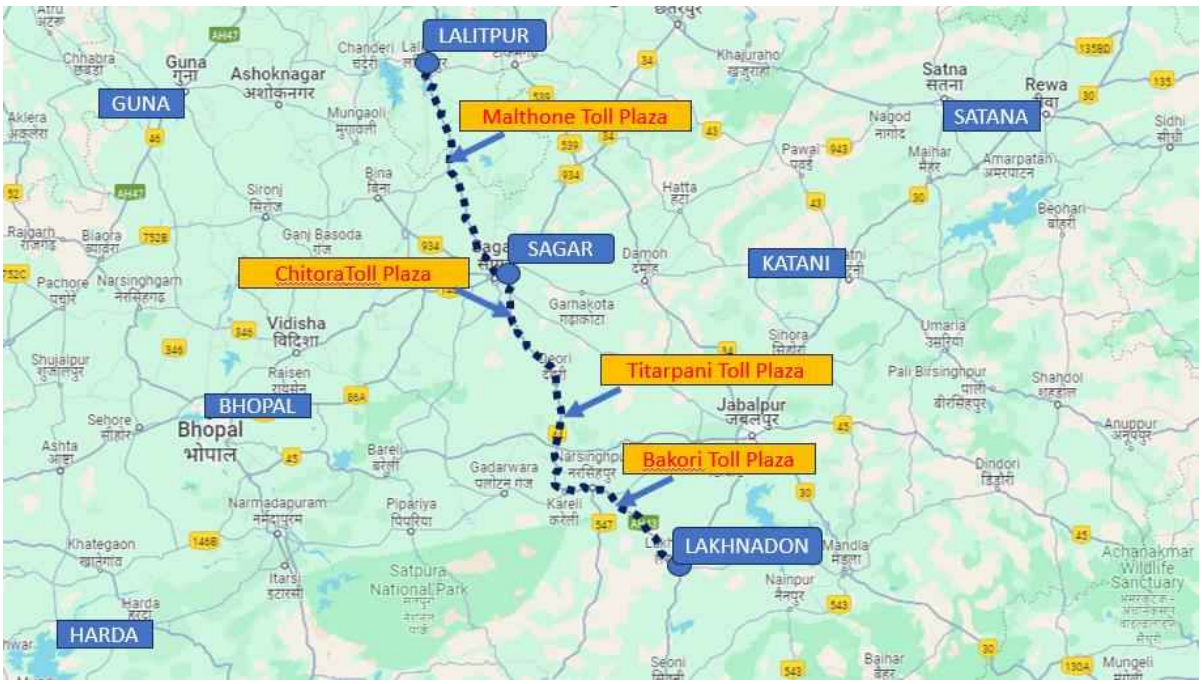

Figure 2-1 : Project Alignment with Toll Plaza

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza locations on Lalitpur – Sagar - Lakhnadon section of NH-44- Provided by Concessionaire for base year 2024-25 (traffic data from April 2024 to July 2024).
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project
- Establish base year traffic
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	**Km 142.319 Toll Plaza at Malthone**	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)
2	**Km 226.740 Toll Plaza at Chitora**	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)
3	**Km 295.000 Toll Plaza at Titarpani**	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)	AADT from previous traffic study report for year 2024-25 (Four month from April 2024 to July 2024)
4	**Km 357.739 Toll Plaza at Bakori**	AADT from previous traffic study report for year 2024-25	AADT from previous traffic study report for year	AADT from previous traffic study report for	AADT from previous traffic study report for year	AADT from previous traffic study report for year

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		(Four month from April 2024 to July 2024)	2024-25 (Four month from April 2024 to July 2024)	year 2024-25 (Four month from April 2024 to July 2024)	2024-25 (Four month from April 2024 to July 2024)	2024-25 (Four month from April 2024 to July 2024)

All toll plazas are located in Madhya Pradesh.

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations-based traffic survey done at project stretch.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in table below .

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Minibus /LCV
- Bus
- Truck /
- 3 Axle commercial vehicle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data as per traffic survey conducted at toll plaza locations. It may not represent the whole year traffic as this pertains to specific period only. Hence a seasonality factor has been applied to average traffic of current period to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations.
Following table shows Annual Average Daily Traffic (AADT) for Base year 2024-25 as considered.

Table 3-3 : Traffic Data at Malthone Toll Plaza at Km 142.319

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.) 2024-25
1	Car	1439
2	Minibus /LCV	266
3	Bus	115
4	Truck	1262
5	3-Axle Commercial vehicle	1322
6	Multi axle	1573

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.) 2024-25
7	Oversize Vehicle	4
	Total	**5981**

Table 3-4 : Traffic Data at Chitora Toll Plaza at Km 226.740

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.) 2024-25
1	Car	1631
2	Minibus /LCV	426
3	Bus	100
4	Truck	1456
5	3-Axle Commercial vehicle	1433
6	Multi axle	1867
7	Oversize Vehicle	5
	Total	**6918**

Table 3-5 : Traffic Data at Titarpani Toll Plaza at Km 295.000

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.) 2024-25
1	Car	1715
2	Minibus /LCV	384
3	Bus	104

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.) 2024-25
4	Truck	1503
5	3-Axle Commercial vehicle	1532
6	Multi axle	2293
7	Oversize Vehicle	6
	Total	**7537**

Table 3-6 : Traffic Data at Bakori Toll Plaza at Km 357.739

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.) 2024-25
1	Car	973
2	Minibus /LCV	331
3	Bus	87
4	Truck	1302
5	3-Axle Commercial vehicle	1284
6	Multi axle	1649
7	Oversize Vehicle	5
	Total	**5631**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in Table 3-7.

Table 3-7 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-8 : Traffic in PCU at Project Stretch

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
	Km 142.319 Toll Plaza at Malthone	5981	17032	2.85

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2024 – 2025 (Base Year)	Km 226.740 Toll Plaza at Chitora	6918	19661	2.84
	Km 295.000 Toll Plaza at Titarpani	7537	22054	2.93
	Km 357.739 Toll Plaza at Bakori	5631	16932	3.01

It can be observed from above that project traffic has PCU index 2.5 to 3.5 which is an indicator of high proportion of commercial traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at four toll plaza locations.

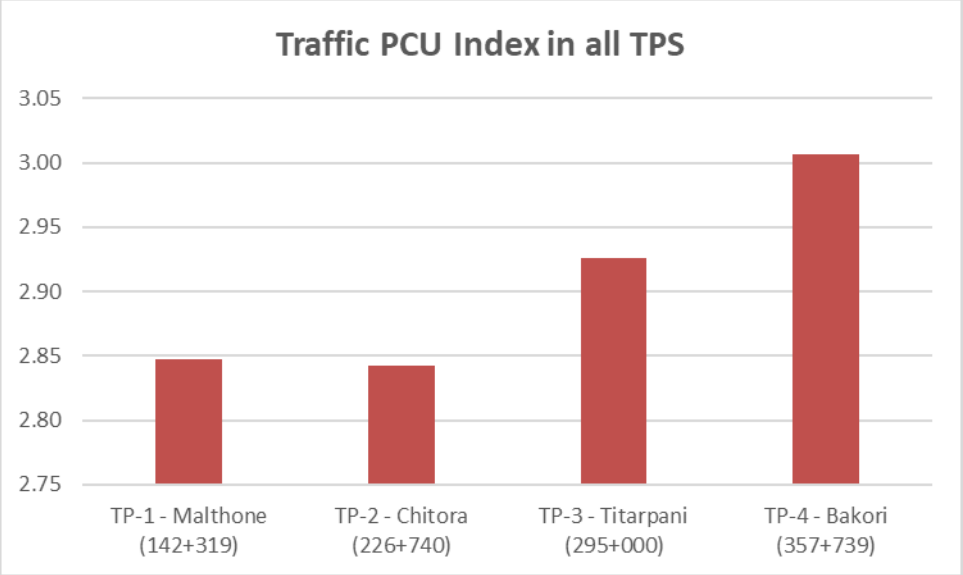

Figure 3-1 : Comparison of PCU Index

It can be observed that PCU index is consistent at all four toll plaza locations.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds

to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

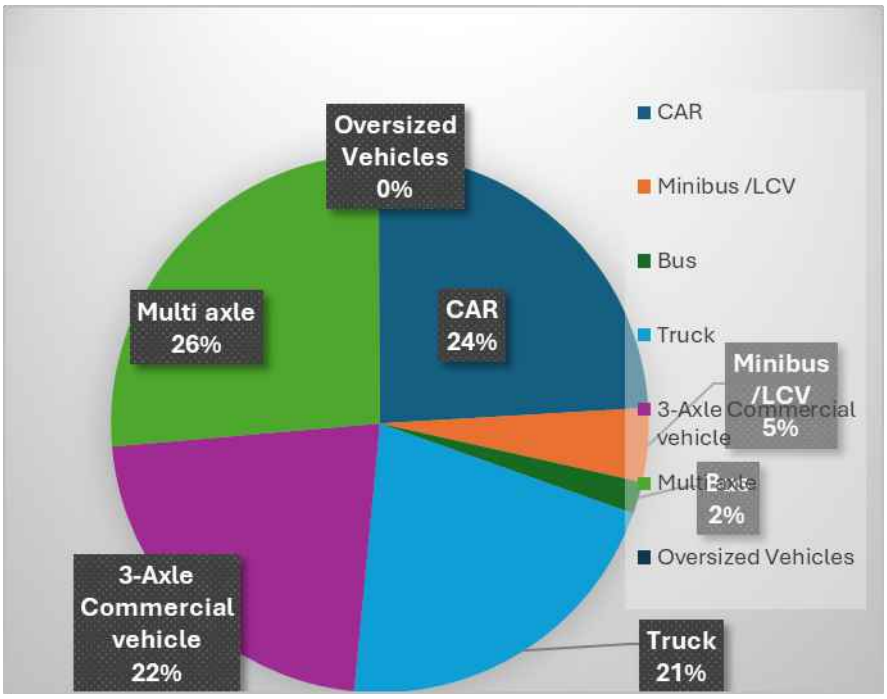

Figure 3-2: Model split of tollable vehicle @ Km 142.319

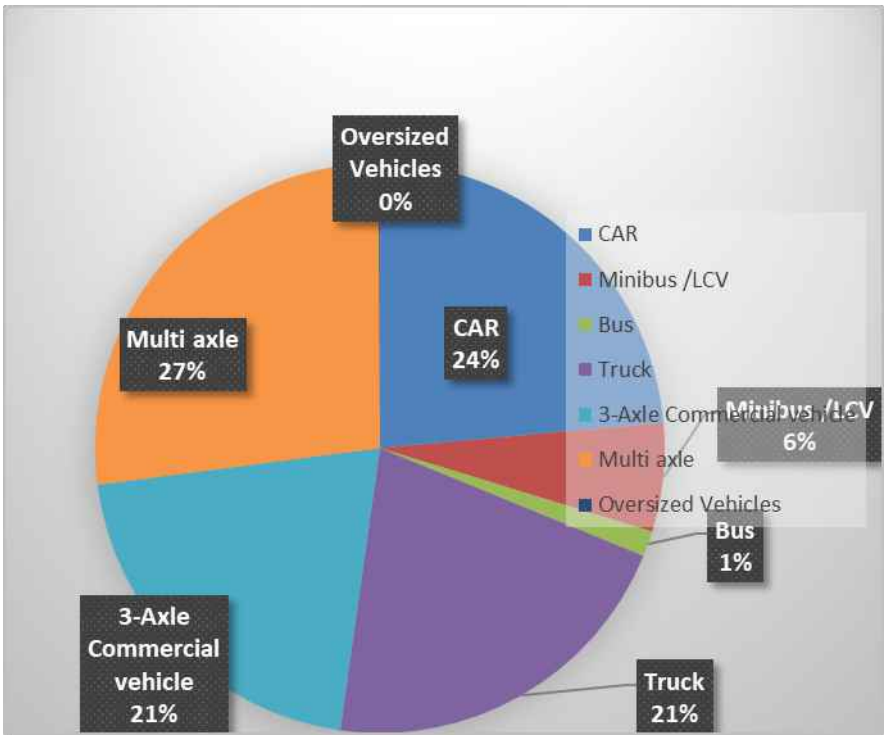

Figure 3-3: Model split of tollable vehicle @ Km 226.740

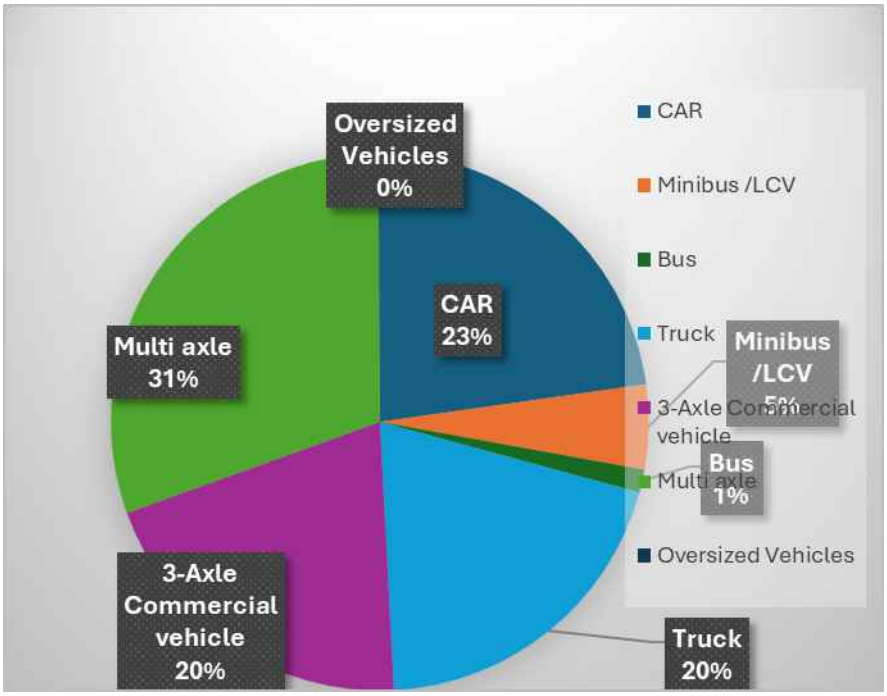

Figure 3-4: Model split of tollable vehicle @ Km 295.000

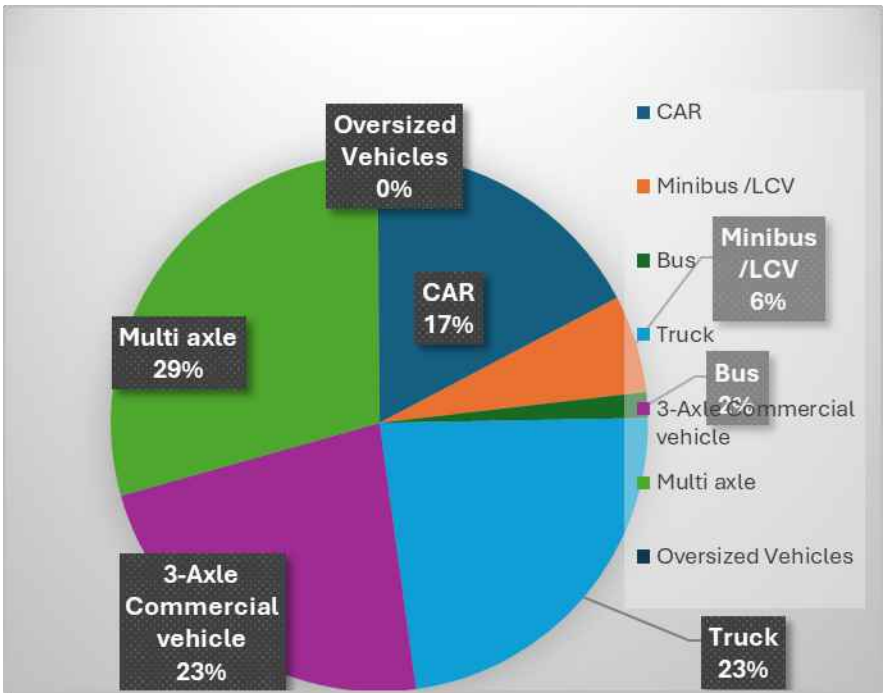

Figure 3-5: Model split of tollable vehicle @ Km 357+739

It is observed that car traffic forms about 24% of total traffic at toll plaza location KM 142.319 while multi axle commercial vehicles are about 48% of total traffic. Truck / Bus and LCV share about 23% and 5% of traffic volume respectively.

It is observed that car traffic forms about 24% of total traffic at toll plaza location KM 226.740 while multi axle commercial vehicles are about 48% of total traffic. Truck / Bus and LCV share about 22% and 6% of traffic volume respectively.

It is observed that car traffic forms about 23% of total traffic at toll plaza location KM 295.000 while multi axle commercial vehicles are about 51% of total traffic. Truck / Bus and LCV share about 21% and 5% of traffic volume respectively.

It is observed that car traffic forms about 17% of total traffic at toll plaza location KM 357.739 while multi axle commercial vehicles are about 52% of total traffic. Truck / Bus and LCV share about 25% and 6% of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-9 : Journey Type Bifurcation of Traffic at Malthone Toll Plaza KM 142.319

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	5325
2	Return Journey	630
3	Local Commercial Single Journey	23
4	Monthly Pass Local	3
5	Monthly Pass	0

Table 3-10 : Journey Type Bifurcation of Traffic at Chitora Toll Plaza KM 226.740

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	5738
2	Return Journey	962
3	Local Commercial Single Journey	198
4	Monthly Pass Local	20
5	Monthly Pass	0

Table 3-11 : Journey Type Bifurcation of Traffic at Titarpani Toll Plaza KM 295.000

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	6199
2	Return Journey	1158
3	Local Commercial Single Journey	175
4	Monthly Pass Local	5
5	Monthly Pass	0

Table 3-12 : Journey Type Bifurcation of Traffic at Bakori Toll Plaza KM 357.739

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	5114
2	Return Journey	440

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
3	Local Commercial Single Journey	69
4	Monthly Pass Local	8
5	Monthly Pass	0

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

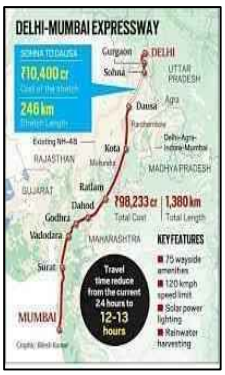
Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor. Same is discussed in subsequent chapter.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS



4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Regional Network

Project road is in existence for long and traffic is almost settled. However, there are a few upcoming corridors which may have interest in project road catchments. These are discussed below.

Delhi – Mumbai Expressway - The access controlled greenfield expressway connects Delhi and Mumbai (up to Jawaharlal Nehru Port Trust) and passes through states of Haryana, Rajasthan, Madhya Pradesh, Gujarat and Maharashtra. DME alignment will largely cater to traffic between North of India and Gujarat/Western Maharashtra and is not likely to affect traffic on the project road which caters to traffic on NH-44 which is north south highway. Hence it is not likely to impact project road traffic.

Surat – Chennai Expressway - The alignment will largely cater to traffic between states of Gujarat and Central Maharashtra /Andhra Pradesh/ Telangana/Karnataka/Tamilnadu and is not parallel to Project Road. Therefore, it is not likely to affect traffic on the project road.

Pune – **Bangalore Expressway** – Entire catchment of this proposed expressway falls south of project road. It is not likely to affect the project road traffic.

All other major highways in the region exist and traffic is settled in the region. On the local level also, there is no formidable competing route network. Hence it is not envisaged that there

will be any major impact on project road traffic in the near future due to regional or local network developments.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor of Lalitpur-Sagar- Lakhnadon from Km 99.00 to Km 415.089 section of NH-44 has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-12015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, In order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*

EI = *Economic Indicator*

A = *Regression constant*

k = *Elasticity coefficient (Regression coefficient)*

The elasticity for car and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across state of Madhya Pradesh & Uttar Pradesh. Toll plazas at Malthone, Chitora, Titarpani and Bakori are in the state of Madhya Pradesh. Project traffic has share of majorly states like Madhya Pradesh, Uttar Pradesh and Rajasthan. For elasticity calculations, working data from these states also has been analysed.

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Maharashtra State.

Table 5-1 : Per Capita Income Vs Car Madhya Pradesh

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	38497	424644	4.59	5.63		
2012	41142	493412	4.61	5.69	7%	
2013	42548	555461	4.63	5.74	3%	
2014	44027	637626	4.64	5.80	3%	
2015	47351	820391	4.68	5.91	8%	
2016	52782	869777	4.72	5.94	11%	
2017	54829	982124	4.74	5.99	4%	
2018	57401	1087124	4.76	6.04	5%	5.9%

Regression analysis of same is given in figure below

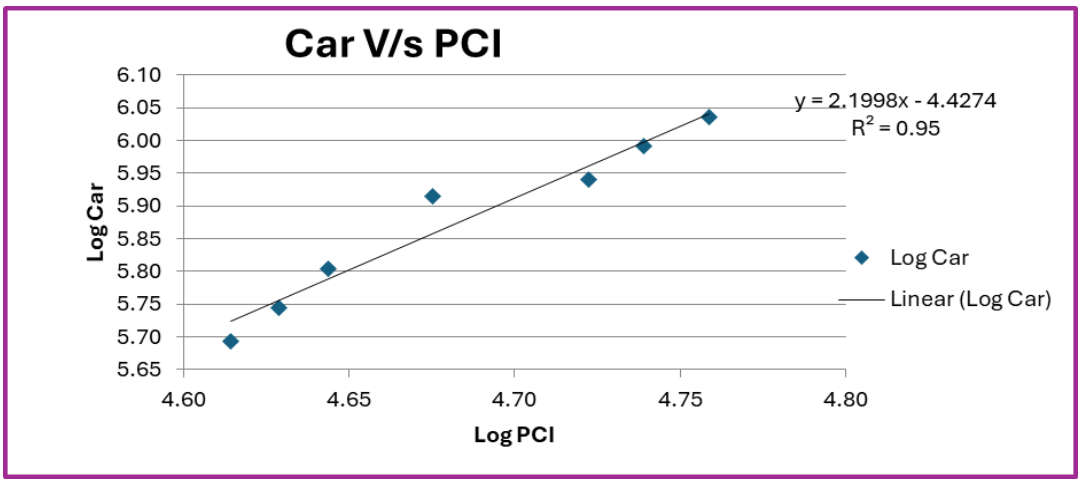


Figure 5-1 : Regression and Elasticity PCI vs. Car – Extrapolation Madhya Pradesh

Table 5-2 : Population Vs Bus Madhya Pradesh

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	72627000	181770	7.86	5.26		
2012	73863000	208530	7.87	5.32	2%	
2013	75099000	233569	7.88	5.37	2%	
2014	76334000	277898	7.88	5.44	2%	
2015	77570000	322227	7.89	5.51	2%	
2016	78806000	347227	7.90	5.54	2%	
2017	79948000	382227	7.90	5.58	1%	
2018	81090000	402227	7.91	5.60	1%	1.6%

Regression analysis of same is given in figure below

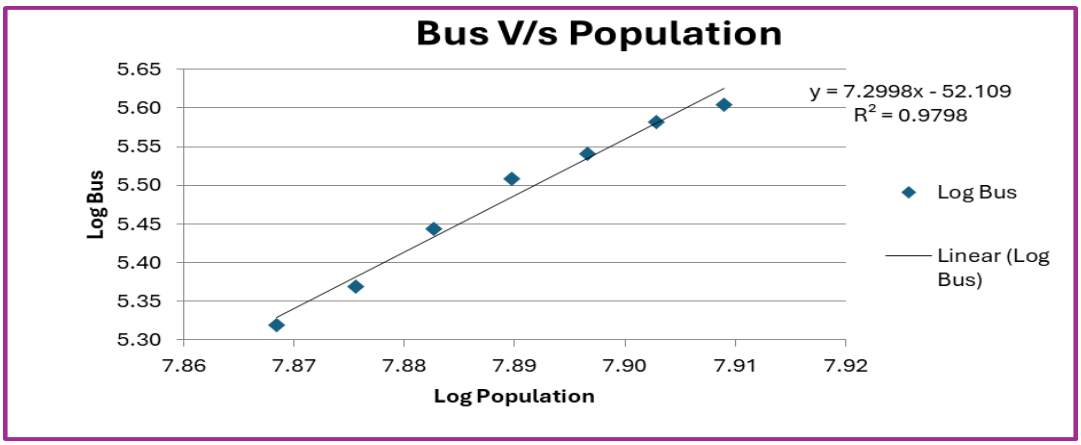

Figure 5-2 : Regression and Elasticity Population vs. Bus – Extrapolation Madhya Pradesh

Elasticity of goods traffic has been worked out by regression analysis with NSDP. Following table represents the data and details.

Table 5-3 : Trucks Traffic Vs NSDP Madhya Pradesh

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2011	28237104	121916	7.45	5.09		
2012	30685334	131098	7.49	5.12	9%	
2013	32259760	137815	7.51	5.14	5%	
2014	33924690	150921	7.53	5.18	5%	
2015	37071567	177352	7.57	5.25	9%	
2016	41946525	233553	7.62	5.37	13%	
2017	44200243	289754	7.65	5.46	5%	
2018	46928896	326291	7.67	5.51	6%	7.6%

Following figure depict regression analysis and extrapolation.

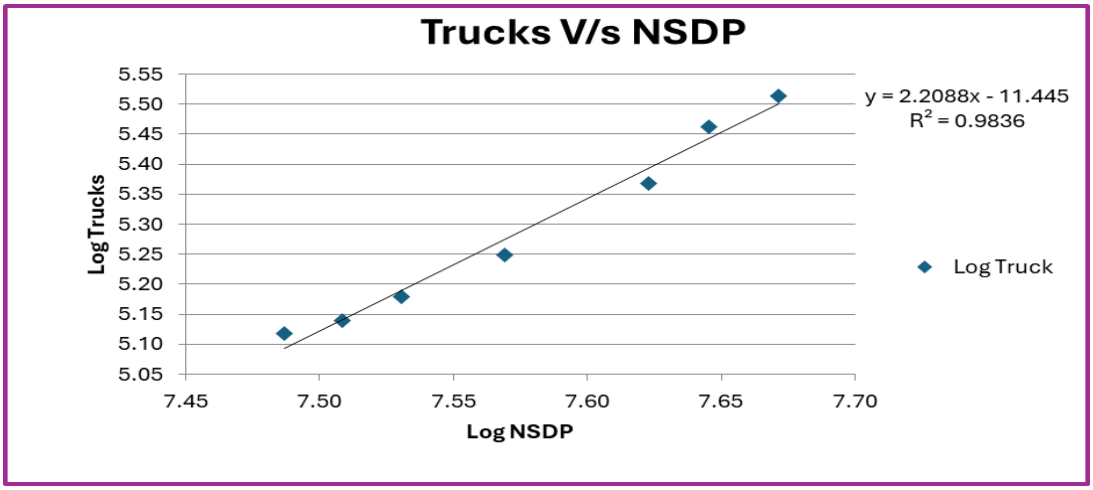

Figure 5-3 : Regression and Elasticity Trucks vs. NSDP – Extrapolation Madhya Pradesh

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-4 : Summary Regression Analysis Madhya Pradesh

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
MADHYA PRADESH	**Car/Jeep**	PCI	y = 2.2965x - - 4.8829	R^2 = 0.9634	2.3	6%	13.57%	Good Regression
	Bus	Population	y = 7.4978x - - 53.6722	R^2 = 0.9862	7.5	2%	11.90%	Good Regression
	Truck	NSDP	y = 2.2088x - - 11.4451	R^2 = 0.9694	2.2	8%	16.70%	Good Regression

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Uttar Pradesh State.

Table 5-5 : Per Capita Income Vs Car Uttar Pradesh

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	32002	1108100	4.51	6.04		
2012	32908	1205374	4.52	6.08	3%	
2013	34044	1423020	4.53	6.15	3%	
2014	34583	1572217	4.54	6.20	2%	
2015	36973	1746117	4.57	6.24	7%	
2016	40847	2027972	4.61	6.31	10%	
2017	41832	2195783	4.62	6.34	2%	
2018	43670	2439845	4.64	6.39	4%	4.6%

Regression analysis of same is given in figure below

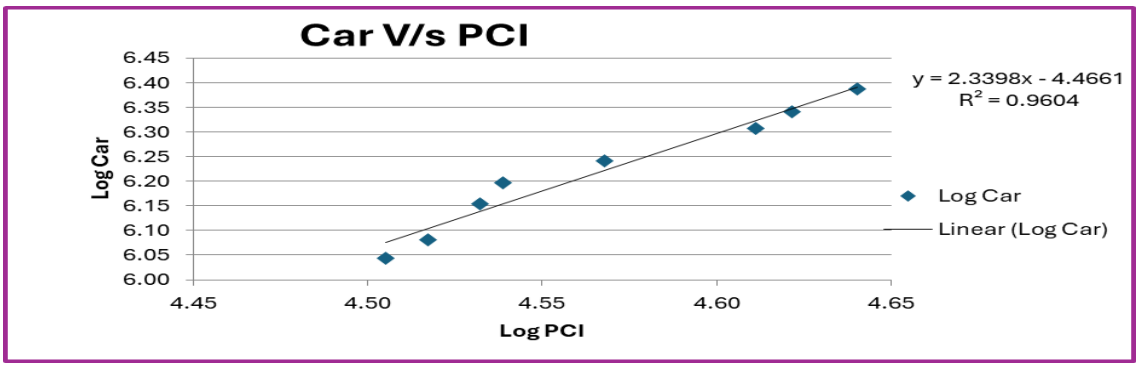

Figure 5-4 : Regression and Elasticity PCI vs. Car – Extrapolation Uttar Pradesh

Table 5-6 : Population Vs Bus Uttar Pradesh

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	199812000	57901	8.30	4.76		
2012	203670000	64147	8.31	4.81	2%	
2013	206322000	74389	8.31	4.87	1%	
2014	209577000	80460	8.32	4.91	2%	
2015	212832000	89127	8.33	4.95	2%	
2016	216870000	112020	8.34	5.05	2%

Regression analysis of same is given in figure below

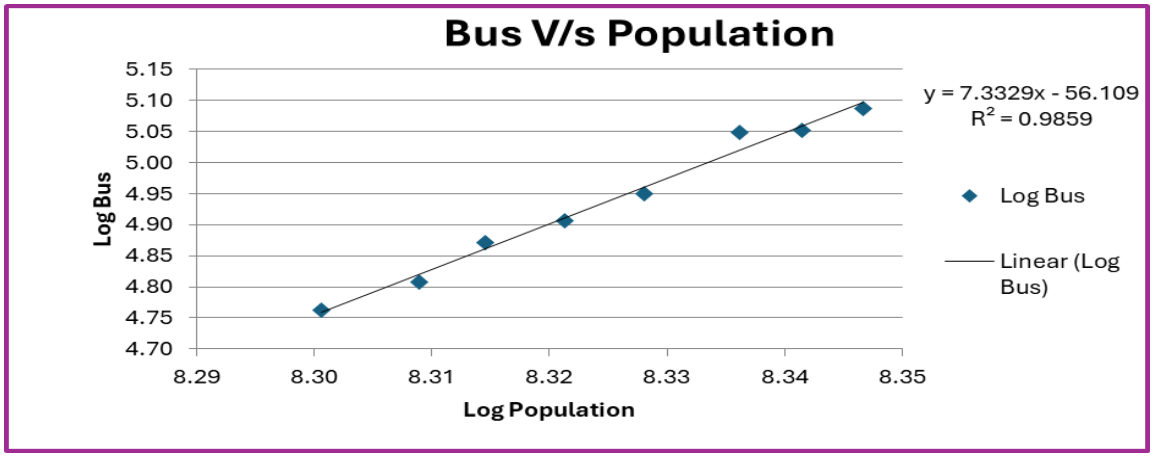

Figure 5-5 : Regression and Elasticity Population vs. Bus – Extrapolation Uttar Pradesh

Elasticity of goods traffic has been worked out by regression analysis with NSDP. Following table represents the data and details.

Table 5-7 : Trucks Traffic Vs NSDP Uttar Pradesh

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2011	64513155	162813	7.81	5.21		
2012	67355218	186404	7.83	5.27	4%	
2013	70746910	202761	7.85	5.31	5%	
2014	72968630	217609	7.86	5.34	3%	
2015	79204874	245688	7.90	5.39	9%	
2016	88845325	265167	7.95	5.42	12%	

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2017	92380571	307096	7.97	5.49	4%	
2018	97915937	356828	7.99	5.55	6%	6.2%

Following figure depict regression analysis and extrapolation.

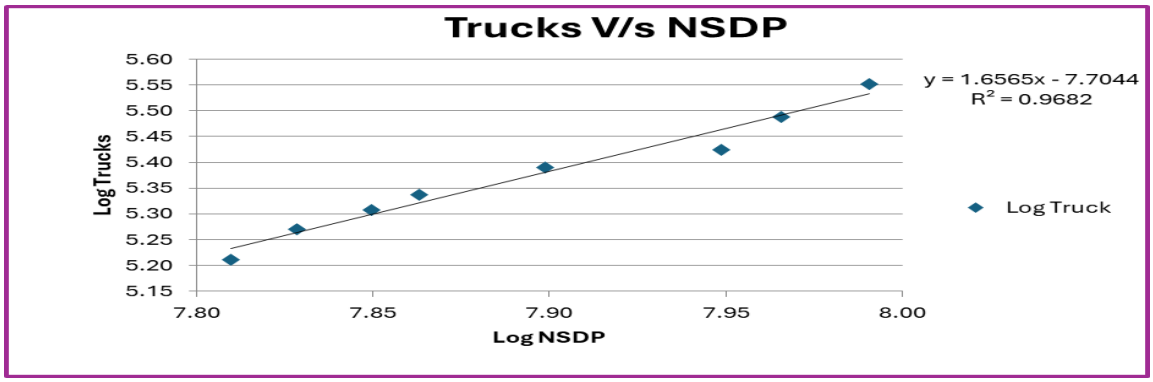

Figure 5-6 : Regression and Elasticity NSDP vs. Truck Traffic - extrapolation Uttar Pradesh.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below

Table 5-8 : Summary Regression Analysis Uttar Pradesh

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
UTTAR PRADESH	**Car/Jeep**	PCI	y = 2.3398x - -4.4661	R² = 0.9604	2.3398	4.58%	10.72%	Good Regression
	Bus	Population	y = 7.3329x - -56.1092	R² = 0.9859	7.3329	1.53%	11.19%	Good Regression
	Truck	NSDP	y = 1.6565x - -7.7044	R² = 0.9682	1.6565	6.18%	10.24%	Good Regression

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-9 : Per Capita Income Vs Car Rajasthan

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	57192	591069	4.76	5.77		
2012	58441	659542	4.77	5.82	2%	
2013	61053	733916	4.79	5.87	4%	
2014	64496	814079	4.81	5.91	6%	
2015	68565	899307	4.84	5.95	6%	
2016	71324	988391	4.85	5.99	4%	
2017	73109	1095526	4.86	6.04	3%	
2018	75555	1204005	4.88	6.08	3%	4.1%

Regression analysis of same is given in figure below

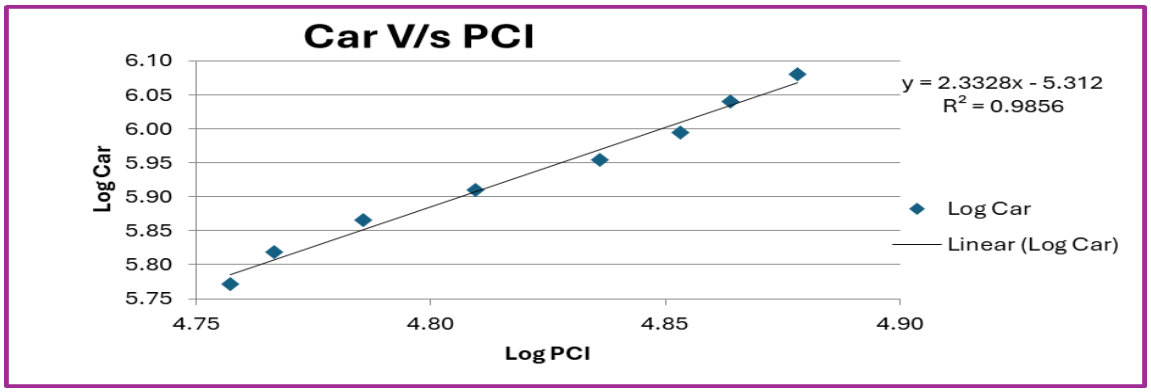

Figure 5-7 : Regression and Elasticity PCI vs. Car – Extrapolation Rajasthan

Table 5-10 : Population Vs Bus Rajasthan

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	68548000	83345	7.84	4.92		
2012	69687000	88616	7.84	4.95	2%	
2013	70825000	93892	7.85	4.97	2%	
2014	71963000	97650	7.86	4.99	2%	
2015	73102000	102818	7.86	5.01	2%	
2016	74240000	108680	7.87	5.04	2%	
2017	75248000	113964	7.88	5.06	1%	
2018	76256000	118301	7.88	5.07	1%	1.5%

Regression analysis of same is given in figure below

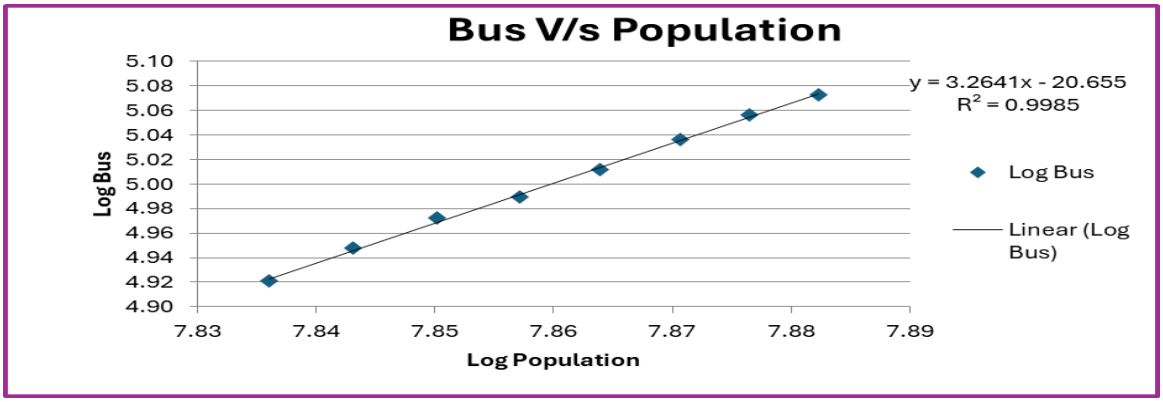

Figure 5-8 : Regression and Elasticity Population vs. Bus – Extrapolation Rajasthan

Elasticity of goods traffic has been worked out by regression analysis with NSDP. Following table represents the data and details.

Table 5-11 : Trucks Traffic Vs NSDP Rajasthan

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2011	39533093	362028	7.60	5.56		
2012	40980249	401983	7.61	5.60	4%	
2013	43429222	434379	7.64	5.64	6%	
2014	46540773	472365	7.67	5.67	7%	
2015	50192151	517604	7.70	5.71	8%	
2016	52965038	561158	7.72	5.75	6%	
2017	55442912	613055	7.74	5.79	5%	
2018	58059438	665926	7.76	5.82	5%	5.7%

Following figure depict regression analysis and extrapolation.

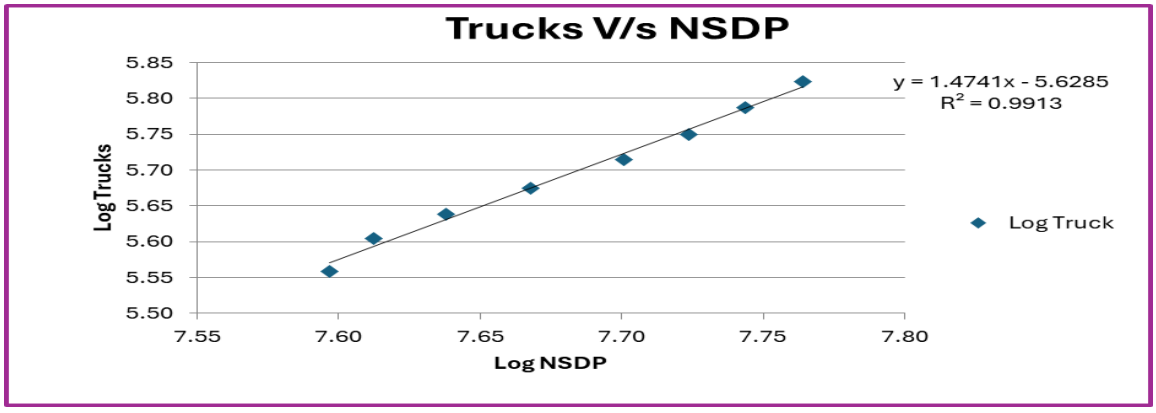

Figure 5-9 : Regression and Elasticity NSDP vs. Trucks – Extrapolation Rajasthan

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. Higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below

Table 5-12 : Summary Regression Analysis Rajasthan

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
RAJASTHAN	**Car/Jeep**	PCI	y = 2.3328x - -5.312	R^2 = 0.9856	2.3328	4.07%	9.49%	Good Regression
	Bus	Population	y = 3.2641x - -20.6548	R^2 = 0.9985	3.2641	1.53%	5.01%	Good Regression
	Truck	NSDP	y = 1.4741x - -5.6285	R^2 = 0.9913	1.4741	5.65%	8.33%	Good Regression

Economical model for predicting growth is good tool, however other local, regional, national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

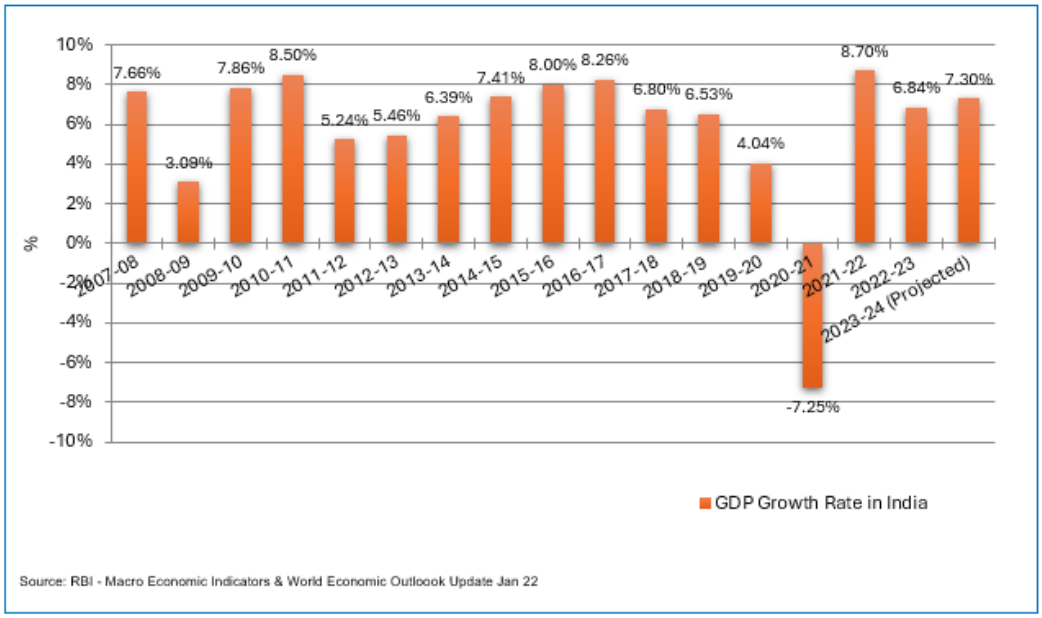

Figure 5-10 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. Leading banking and financial institutions have estimated that India would keep on registering good growth in coming years and the growth in year 2023-24 is expected to be around 7.3%.

5.5 Developments along and around the Project Corridor & State

MADHYA PRADESH: Madhya Pradesh state, which is located in central India is bound on the north by Uttar Pradesh, on the east by Chhattisgarh, on the south by Maharashtra, and on the west by Gujarat and Rajasthan. It is the second largest Indian state and one of the fastest growing states in the country. At current prices, the Gross State Domestic Product (GSDP) of Madhya Pradesh is estimated at Rs.1,151,049 crore trillion (US$ 150.74 billion) in 2022-23, registering an annual growth of 10% over FY21. Between 2015-16 and 2021-22, The GSDP increased at a CAGR (in Rs.) of 13.09% from 2015-16 to 2021-22. Net State Domestic Product (NSDP) of Madhya Pradesh was about Rs. 8.27 trillion (US$ 113.94 billion) in 2020-21. Between 2015-16 and 2020-21, state's NSDP grew at a CAGR of around 11.22%

UTTAR PRADESH: The state has an area of 240,928 sq kms and is the most populous state in India, with population of 199.8 million as per 2011 census with an average population density of 828 persons per sq. km. The economy of Uttar Pradesh is the third largest of all the states in India. Nominal GDP of the state for the year 2022-23 is Rs. 21.74 trillion.

It is reported that the economy of Uttar Pradesh is growing at a faster rate than the national economy at about 9%. In terms of traffic and transportation as well Uttar Pradesh is one of the leader states in India now.

- Air Connectivity: Major national & international airports connecting the rest of India, Middle East & Southeast Asian countries; Only state to have 05 International Airports (03 existing & 02 upcoming at Jewar (G. Noida & Ayodhya)
- Railway Network: Largest railway network in the country spanning over 8,949 km; 05 Railway Zones
- Inland Waterway: India's 1st Inland Waterway is operational in UP (1100 km Haldia - Varanasi tract
- Expressways: Uttar Pradesh boasts state of art expressways ensuring seamless connectivity; 13 Expressways (existing & upcoming)
- Road Network: Largest Road Network in India; 4 Lakh Km Total Road Length 11,737 Km Total National Highway

Logistics hubs emerging across UP: MMLH Dadri, MMTH Boraki, MMT Varanasi etc.

From the above it can be expected that the project corridor would serve as one of the important transportation links in the area and would contribute to the growth of the region.

5.6 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as under. Rate of growth is moderated in light of overall regional trend. Growth of Multi-Axle is kept slightly higher as trend of technological advances in logistic industry Favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, rate of growth diminishes. Same growth rate is not sustainable for long. Traffic growth has been suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.25% from Most Likely case for corridor in both states.

5.6.1 Recommended Growth Rates of Traffic for Madhya Pradesh Part of Stretch

Table 5-13 : Recommended Growth Rates Optimistic

Category / Year	FY 25-29	FY 30-34	FY 35-39	FY 40-44	FY 45-49
Car/Jeep/Van	6.64%	5.57%	5.25%	5.03%	4.41%
LCV	4.92%	4.05%	2.38%	2.01%	2.86%
Minibus	4.18%	3.53%	2.95%	2.68%	2.43%
Bus	4.18%	3.53%	2.95%	2.68%	2.43%
2- Axle	4.92%	4.64%	3.27%	2.75%	2.47%
3 - Axle	4.92%	4.64%	3.27%	2.75%	2.47%
4 to 6 Axle	4.53%	4.34%	3.09%	2.60%	2.34%
7 and Above Axle	4.53%	4.34%	3.09%	2.60%	2.34%

Table 5-14 : Recommended Growth Rates Pessimistic

Category / Year	FY 25-29	FY 30-34	FY 35-39	FY 40-44	FY 45-49
Car/Jeep/Van	6.14%	5.07%	4.75%	4.53%	3.91%
LCV	4.42%	3.55%	1.88%	1.51%	2.36%
Minibus	3.68%	3.03%	2.45%	2.18%	1.93%
Bus	3.68%	3.03%	2.45%	2.18%	1.93%
2- Axle	4.42%	4.14%	2.77%	2.25%	1.97%
3 - Axle	4.42%	4.14%	2.77%	2.25%	1.97%
4 to 6 Axle	4.03%	3.84%	2.59%	2.10%	1.84%
7 and Above Axle	4.03%	3.84%	2.59%	2.10%	1.84%

Table 5-15 : Recommended Growth Rates Most Likely

Category / Year	FY 25-29	FY 30-34	FY 35-39	FY 40-44	FY 45-49
Car/Jeep/Van	6.39%	5.32%	5.00%	4.78%	4.16%
LCV	4.67%	3.80%	2.13%	1.76%	2.61%
Minibus	3.93%	3.28%	2.70%	2.43%	2.18%
Bus	3.93%	3.28%	2.70%	2.43%	2.18%
2- Axle	4.67%	4.39%	3.02%	2.50%	2.22%
3 - Axle	4.67%	4.39%	3.02%	2.50%	2.22%
4 to 6 Axle	4.28%	4.09%	2.84%	2.35%	2.09%
7 and Above Axle	4.28%	4.09%	2.84%	2.35%	2.09%

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza 1- Chainage 142.319 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)
2024-25	1439	266	115	1262	1322	1573	4	5981	17032
2025-26	1535	279	120	1324	1387	1644	4	6293	17863

CHAPTER 7
FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

As per the Toll Notification (Schedule - G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent users monthly pass would be issued at fee at 2/3rd rate for 50 single journey trips.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travellers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van - Rs. 275 per month (for locals residing within a radius of 20 kms from toll plaza)

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2022-23. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

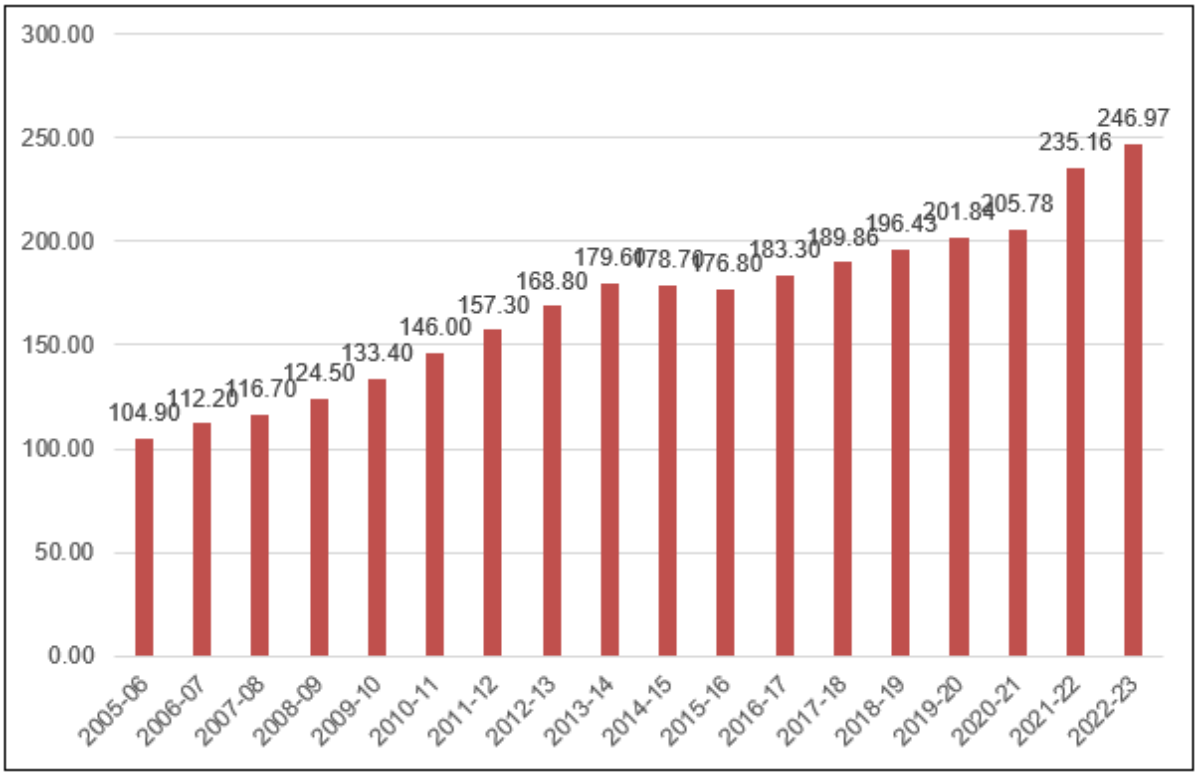

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Oversized Vehicles (7 or more Axles)	4.20

These rates are then modified for as per procedure provided in guidelines of notification considering factors listed below.

- Annual revision of fee rate - @3%
- Application of WPI

Base rates have been worked out to map the current rates.

Table 7-2 : Toll Rates for Forecasting Year Single Journey @ Km 142.319

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2043-44 years starting from the year 2024-25 are shown in tables below.

Table 7-18 : Toll Revenue Optimistic Scenario

7.6 Modification in Concession Period

Modification of the concession period shall be done on the basis of Revenue targets given in the contract for milestones 1 & 2.

Modification in concession period as per provisions of DCA and same is summarized in table for all scenarios.

Pessimistic Case

Target Point 1- March 2031									
Target Month - March 2029	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or shortfall**	**Change in Concession period %**	**Original Concession Period**	**Change in Concession period**	**Modified Concession Period**
TOT-12	70	63.58	-9.17%	No	-	0.00%	20.00	0.00	

Target Point 2- March 2038											
Target Month - March 2036	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or short fall**	**Change in Concession period %**	**Original Concession Period**	**Change in Concession period**	**Total Change in Concession period**	**Calculated Modified Concession Period**	**Final Concession Period subject to Cap**
TOT-12	123	114.04	-7.28%	No	-	0.00%	20.00	0.00	0.00	20.00	

Most likely Case

Target Point 1- March 2031									
Target Month - March 2029	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or shortfall**	**Change in Concession period %**	**Original Concession Period**	**Change in Concession period**	**Modified Concession Period**
TOT-12	70	64.51	-7.85%	No	-	0.00%	20.00	0.00	

Target Point 2- March 2038											
Target Month - March 2036	Target Revenue (Rs. Crores)	Calculated Revenue (Rs. Target Point 2- March 2038											
Target Month - March 2036	Target Revenue (Rs. Crores)	Calculated Revenue (Rs. Crores)	Difference %	If qualifies for Modification in Concession Period	Qualifying increment or short fall	Change in Concession period %	Original Concession Period	Change in Concession period	Total Change in Concession period	Calculated Modified Concession Period	Final Concession Period subject to Cap
TOT-12	123	121.35	-1.34%	No	-	0.00%	20.00	0.00	0.00	20.00	

TOT-12 (Lalitpur to Lakhadon)-Modification in Concession Period						
Types of Scenarios	**Pessimistic Case**		**Most likely Case**		**Optimistic Case**	
Target Month	**Mar-31**	**Mar-38**	**Mar-31**	**Mar-38**	**Mar-31**	**Mar-38**
Target Revenue (Rs. Crores)	70	123.00	70	123	70.00	123.00
Calculated Revenue (Rs. Crores)	63.58	114.04	64.51	117.69	65.42	121.35
Differences %	-9.17%	-7.28%	-7.85%	-4.32%	-6.54%	-1.34%
If qualifies for Modification in Concession Period	No	No	No	No	No	No
Qualifying Increment or shortfall	-	-	-	-	-	-
Change in Concession period %	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%
Original Concession Period	20.00	20.00	20.00	20.00	20.00	20.00
Change in Concession period	0.00	0.00	0.00	0.00	0.00	0.00
Total Change in Concession period	0.00		0.00		0.00	
Calculated Modified Concession Period	20.00		20.00		20.00	
Final Concession Period subject to Cap	0.00		0.00		0.00	

Thus, there is no modification expected in concession period due to variation in revenue as per above estimates in all scenarios.

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

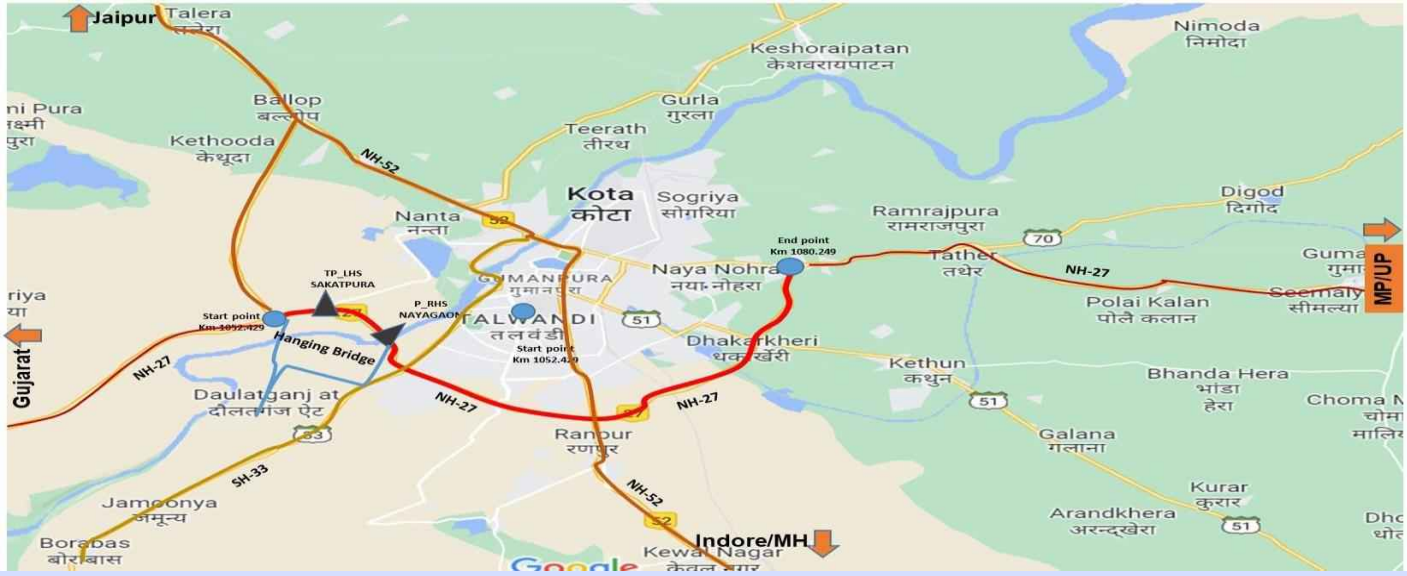
8.1 Conclusion & Recommendations

Project stretch of Lalitpur-Sagar- Lakhnadon from Km 99.00 to Km 415.089 section of NH-44 in state of Madhya Pradesh and Uttar Pradesh is currently four lane road. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the important regional network connecting Uttar Pradesh, Madhya Pradesh to Southern States and vice-versa. There are large number of townships, industrial corridors and other business establishment coming up along project corridor. As discussed, dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give positive impact to traffic flow on project. The following can be considered as major outcomes of the study

a) There is good amount of tollable traffic running on project

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy

c) Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road



Based on above it can be considered a stable healthy project from traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The National Highways Authority of India (NHAI) introduced the Toll, Operate and Transfer (TOT) model for partnership with private developers in the road sector. Under this model, NHAI passes on the toll collection rights and operation and maintenance obligations for 20 years to the private developer against payment of upfront, one-time, lump sum concession fees quoted by the private developer as part of the comprehensive bidding process. Projects under this model are awarded as a bundle of operational national highways, which allows the investor to offset the risks of one project against another. Since existing and operational roads are auctioned under the TOT model.

Under the Toll Operate and Transfer (ToT) 13 bundle, NHAI had invited tenders for selection of concessionaire for maintenance of the National Highway stretch Kota Bypass section NH-27 in the state of Rajasthan.

M/s. IRB Infrastructure Developers Limited., has been declared as the selected bidder for the project. This report is for Part Section ToT bundle 13 "Kota Bypass section NH-27 spanning in the state of Rajasthan. Project Highway alignment is depicted in the following figure.

Figure 1-1: Project Stretch of ToT Bundle 13 (Part)

1.2 Objective of the Study

M/s IRB Infrastructure Developers Limited (IRB) intends to develop a traffic study report for Four Laning of Kota Bypass section NH-27 on BOT basis. GMD Consultants have been assigned the work of conducting traffic study and developing revenue model based on traffic projections and forecast.

The year 2024-25 has been taken as the base year for projections and forecasting of traffic in the horizon year. This report fulfils part of the requirement of the assignment.

1.3 Scope of Services

Following may be referred to as broad scope of Traffic Study of Four Laning of Kota Bypass section NH-27

Classified Traffic Volume Count at main toll plaza location at Toll Plaza locations. This data was supplied by the Concessionaire.

- Establishment of traffic pattern
- Working our traffic demand elasticity and growth
- Traffic forecast up to concession period.
- Preparation of revenue model up to concession period
- Any other analysis relevant to scope

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

The project stretch is a section of NH-44, which is the longest National Highway in the country, running through North, Central and South India. The Kota Bypass section is located along the Project Stretch starting from Km 1052+429 of NH-27 and ends at Km 1080+249 of NH-27 including a Cable-Stayed Bridge on the Chambal River in the State of Rajasthan.

Project Stretch Description

The project stretch under this study starts from Km 1052+429 of NH-27 and ends at Km 1080+249 of NH-27 at Jhansi in the state of Rajasthan. The length of project stretch is 27.820 km and has 4-lane configuration with single staggered of Toll Plaza (Sakatpura (LHS) at ch.1055+217 KM and Nayagaon (RHS) at ch.1058+837 KM).

The following figure shows this the alignment of the project highway in the above context.

Figure 2-1 : Project Alignment with Toll Plaza

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza locations on Kota Bypass section of NH-27- Provided by Concessionaire for year 2023-24 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project
- Establish base year traffic
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 1055+217 Toll Plaza at Sakatpura (LHS Carriageway), Km 1058+837 Toll Plaza at Nayagaon (RHS Carriageway)	AADT from previous traffic study report for Year 2023-24 & Four month from April 2024 to July 2024	AADT from previous traffic study report for Year 2023-24 & Four month from April 2024 to July 2024	AADT from previous traffic study report for Year 2023-24 & Four month from April 2024 to July 2024	AADT from previous traffic study report for Year 2023-24 & Four month from April 2024 to July 2024	AADT from previous traffic study report for Year 2023-24 & Four month from April 2024 to July 2024

Toll plaza is located in Rajasthan.

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations-based traffic survey done at project stretch.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in table below .

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck

Vehicle Type	
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Minibus /LCV
- Bus
- Truck /
- 3 Axle commercial vehicle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data as per traffic survey conducted at toll plaza locations. It may not represent the whole year traffic as this pertains to specific period only. Hence a seasonality factor has been applied to average traffic of current period to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Toll Plaza Sakatpura (Km 1055+217) / Nayagaon (Km 1058+837)

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.) - 2023-24	Annual Average Daily Traffic (Nos.) - 2024-25
1	Car	3733	2420
2	Minibus /LCV	68	582

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.) - 2023-24	Annual Average Daily Traffic (Nos.) - 2024-25
3	Bus	513	84
4	Truck	538	1253
5	3-Axle Commercial vehicle	745	1013
6	Multi axle	2493	2898
7	Oversized Vehicles	0	5
	Total	**8090**	**8255**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in Table 3-4.

Table 3-4 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0

Vehicle Type	PCUs
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-5 : Traffic in PCU at Project Stretch

Year	Toll Plaza Location (Km)	Traffic No.	PCU	PCU Index
2023-2024	Km 1055+217 Toll Plaza at Sakatpura Km 1058+837 Toll Plaza at Nayagaon	8090	19753	2.44
2024-2025	Km 1055+217 Toll Plaza at Sakatpura Km 1058+837 Toll Plaza at Nayagaon	8255	23406	2.84

It can be observed from above that project traffic has PCU index 2 to 2.6 which is an indicator of high proportion of commercial traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at four toll plaza locations.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

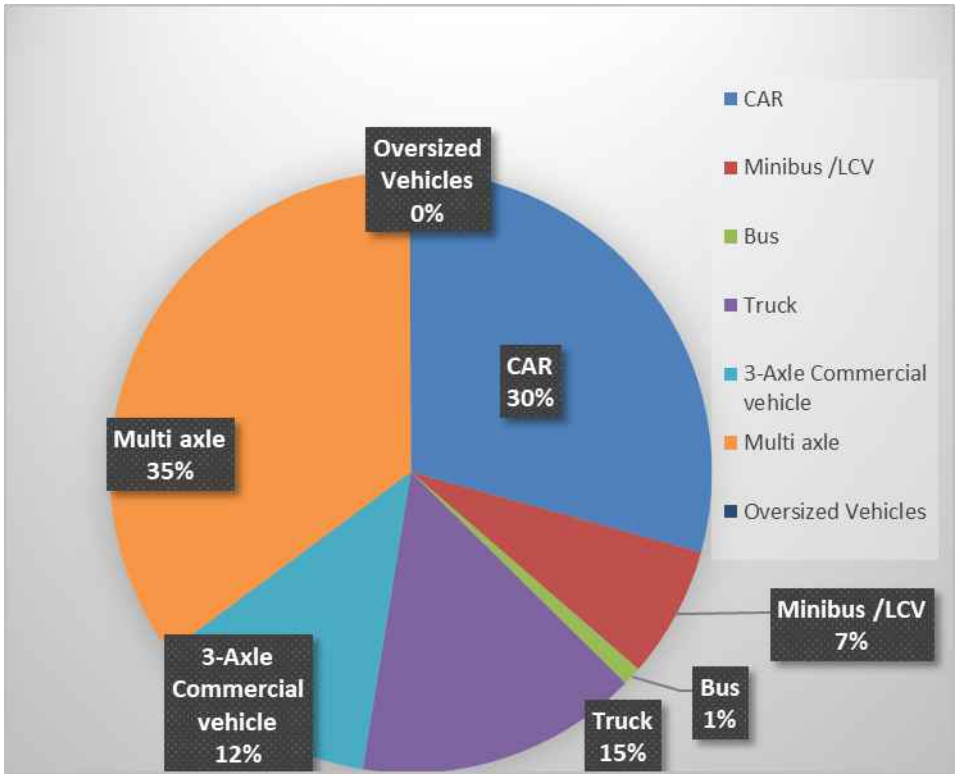

Figure 3-2: Model split of tollable vehicle @ Km 1055+217/ Km 1058+837

It is observed that car traffic forms about 30% of total traffic at toll plaza location KM 1055+217/ Km 1058+837 while multi axle commercial vehicles are about 67% of total traffic. Truck / Bus and LCV share about 16% and 7% of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like,

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-6 : Journey Type Bifurcation of Traffic at Sakatpura/Nayagaon Toll Plaza KM 1055+217/ Km 1058+837

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	6094
2	Return Journey	2110

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
3	Local Commercial Single Journey	49
4	Monthly Pass Local	2
5	Monthly Pass	0

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

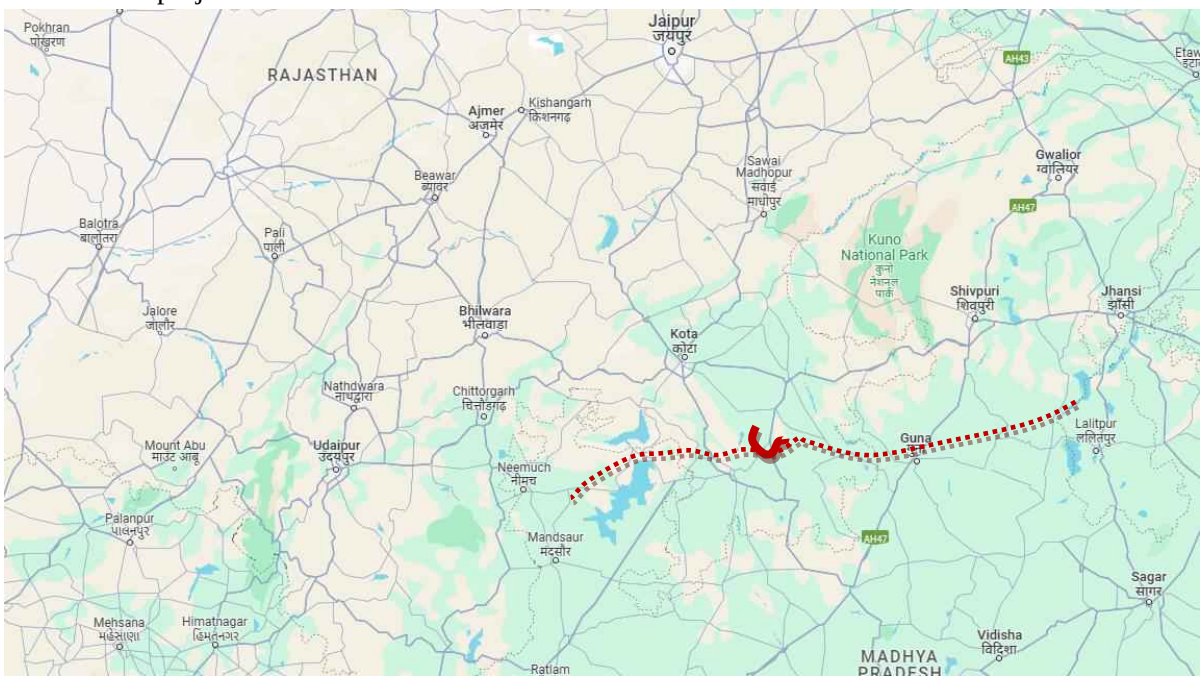
1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor. Same is discussed in subsequent chapter.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction



Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Regional Network

Kota Bypass is part of NH-27 which is major East – West connectivity in India. As can be seen from the data made available that most of the traffic on Kota Bypass is either local in nature or is part of the East – West connectivity corridor. Gwalior, Chittorgarh, Jhalawar, Bhilwara areas have major influence on project traffic.

In such a case upcoming corridors like Delhi Mumbai Expressway or Mumbai Vadodara Expressway or DFCC which basically cater for North -South connectivity, are not expected to have any substantial impact on project road traffic.

Delhi – Mumbai Expressway - The access controlled greenfield expressway connects Delhi and Mumbai (up to Jawaharlal Nehru Port Trust) and passes through states of Haryana, Rajasthan, Madhya Pradesh, Gujarat and Maharashtra. DME alignment will largely cater to traffic between North of India and Gujarat/Western Maharashtra and is not likely to affect traffic on the project road which caters to traffic on East – West connectivity and local traffic.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor of Kota Bypass from Km 1052+429 to Km 1080+249 section of NH-27 has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-12015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, In order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

Log (P) = k x Log (EI) + A

Where,

P = Number of Vehicles (Mode wise)

EI = Economic Indicator

A = Regression constant

k = Elasticity coefficient (Regression coefficient)

The elasticity for car and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across state of Rajasthan. Toll plazas at Sakatpura and Nayagaon in the state of Rajasthan. Project traffic has share of majorly states like Rajasthan, Madhya Pradesh, Uttar Pradesh, Gujrat and Delhi. For elasticity calculations, working data from these states also has been analysed.

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-1 : Per Capita Income Vs Car Rajasthan

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	57192	591069	4.76	5.77		
2012	58441	659542	4.77	5.82	2%	
2013	61053	733916	4.79	5.87	4%	
2014	64496	814079	4.81	5.91	6%	
2015	68565	899307	4.84	5.95	6%	
2016	71324	988391	4.85	5.99	4%	
2017	73109	1095526	4.86	6.04	3%	
2018	75555	1204005	4.88	6.08	3%	4.1%

Regression analysis of same is given in figure below.

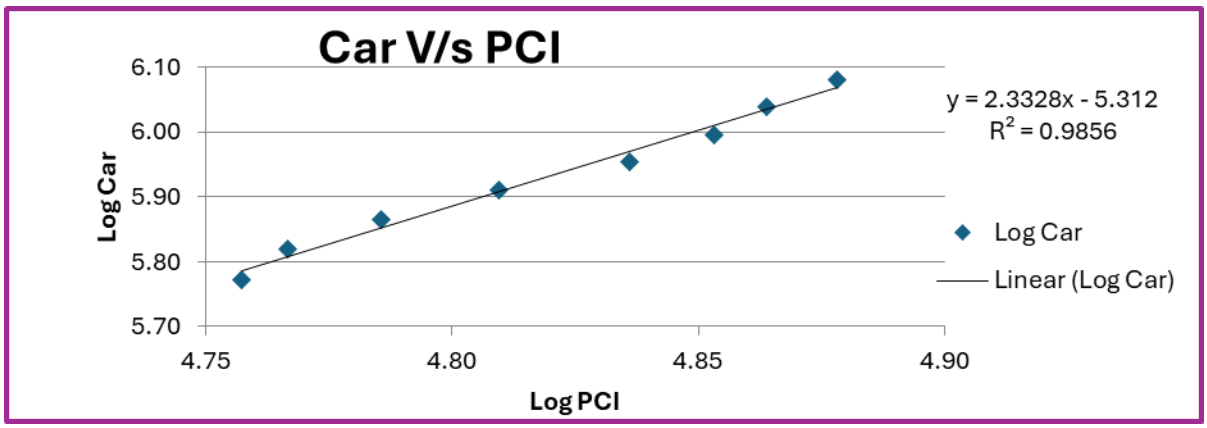


Figure 5-1 : Regression and Elasticity PCI vs. Car – Extrapolation Rajasthan

Table 5-2 : Population Vs Bus Rajasthan

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	68548000	83345	7.84	4.92		
2012	69687000	88616	7.84	4.95	2%	
2013	70825000	93892	7.85	4.97	2%	
2014	71963000	97650	7.86	4.99	2%	
2015	73102000	102818	7.86	5.01	2%	
2016	74240000	108680	7.87	5.04	2%	
2017	75248000	113964	7.88	5.06	1%	
2018	76256000	118301	7.88	5.07	1%	1.5%

Regression analysis of same is given in figure below.

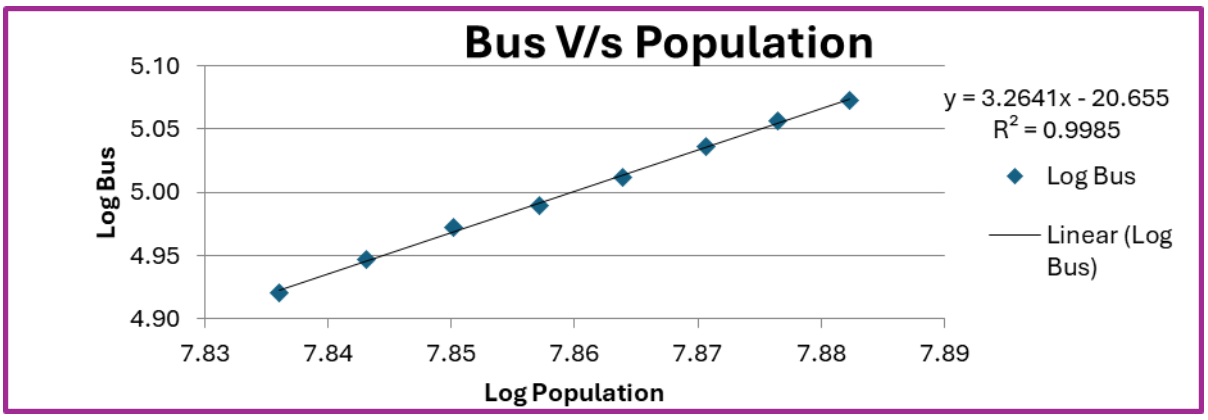

Figure 5-2 : Regression and Elasticity Population vs. Bus – Extrapolation Rajasthan

Elasticity of Trucks has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : Trucks Vs NSDP Rajasthan

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2011	39533093	362028	7.60	5.56		
2012	40980249	401983	7.61	5.60	4%	
2013	43429222	434379	7.64	5.64	6%	
2014	46540773	472365	7.67	5.67	7%	
2015	50192151	517604	7.70	5.71	8%	
2016	52965038	561158	7.72	5.75	6%	
2017	55442912	613055	7.74	5.79	5%	
2018	58059438	665926	7.76	5.82	5%	5.7%

The following figure depicts regression analysis and extrapolation.

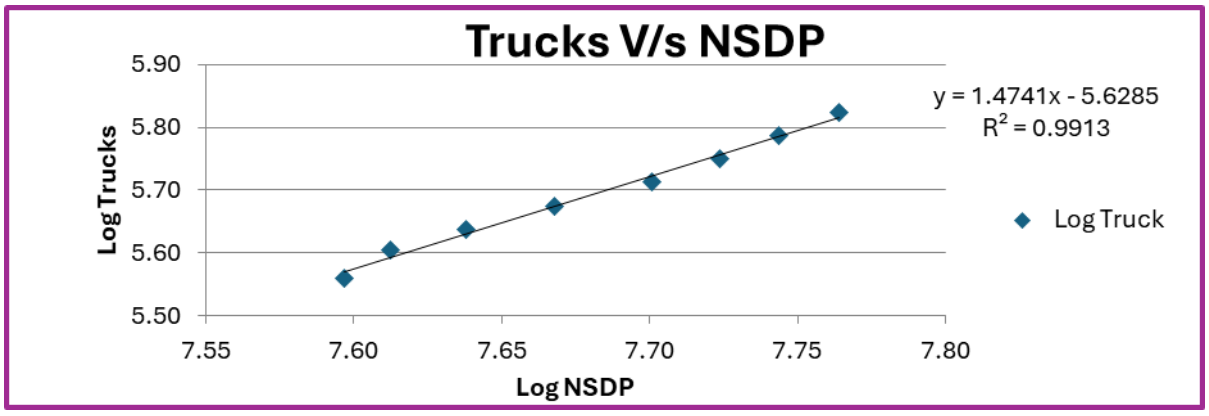

Figure 5-3 : Regression and Elasticity NSDP vs. Trucks Traffic - extrapolation Rajasthan.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-4 : Summary Regression Analysis Rajasthan

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
RAJASTHAN	**Car/Jeep**	PCI	y = 2.3328x - - 5.312	R^2 = 0.9856	2.3328	4.07%	9.49%	Good Regression
	Bus	Population	y = 3.2641x - - 20.6548	R^2 = 0.9985	3.2641	1.53%	5.01%	Good Regression
	Truck	NSDP	y = 1.4741x - - 5.6285	R^2 = 0.9913	1.4741	5.65%	8.33%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Madhya Pradesh State.

Table 5-5 : Per Capita Income Vs Car Madhya Pradesh

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	38497	424644	4.59	5.63		
2012	41142	493412	4.61	5.69	7%	
2013	42548	555461	4.63	5.74	3%	
2014	44027	637626	4.64	5.80	3%	
2015	47351	820391	4.68	5.91	8%	
2016	52782	869777	4.72	5.94	11%	
2017	54829	982124	4.74	5.99	4%	
2018	57401	1087124	4.76	6.04	5%	5.9%

Regression analysis of same is given in figure below.

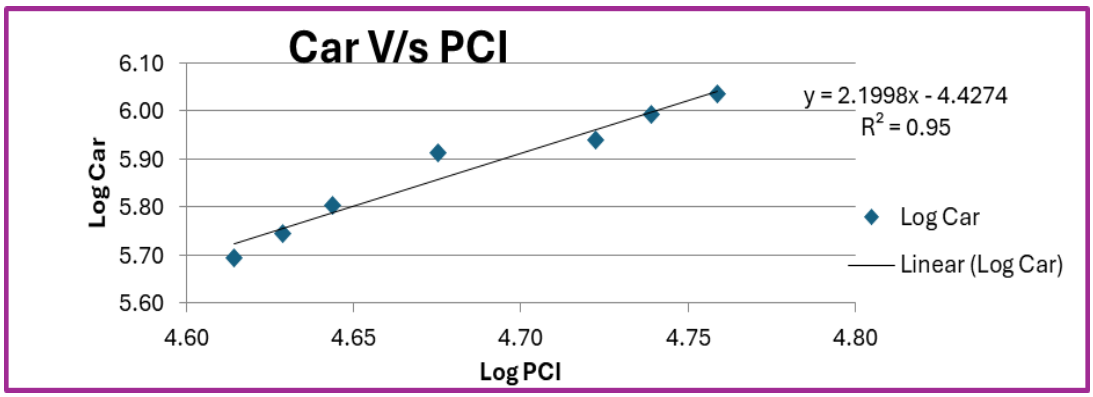

Figure 5-4 : Regression and Elasticity PCI vs. Car – Extrapolation Madhya Pradesh

Table 5-6 : Population Vs Bus Madhya Pradesh

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	72627000	181770	7.86	5.26		
2012	73863000	208530	7.87	5.32	2%	
2013	75099000	233569	7.88	5.37	2%	
2014	76334000	277898	7.88	5.44	2%

2016	88845325	265167	7.95	5.42	12%	
2017	92380571	307096	7.97	5.49	4%	
2018	97915937	356828	7.99	5.55	6%	6.2%

The following figure depicts regression analysis and extrapolation.

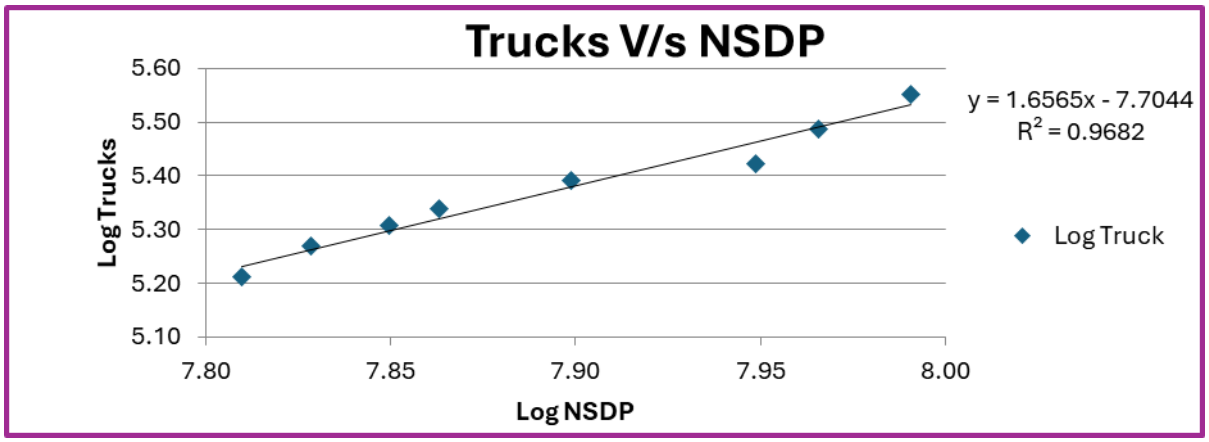

Figure 5-9 : Regression and Elasticity NSDP vs. Trucks Traffic - extrapolation Uttar Pradesh.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-12 : Summary Regression Analysis Uttar Pradesh

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
UTTAR PRADESH	**Car/Jeep**	PCI	y = 2.3398x - - 4.4661	R^2 = 0.9604	2.3398	4.58%	10.72%	Good Regression
	Bus	Population	y = 7.3329x - - 56.1092	R^2 = 0.9859	7.3329	1.53%	11.19%	Good Regression
	Truck	NSDP	y = 1.6565x - - 7.7044	R^2 = 0.9682	1.6565	6.18%	10.24%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Gujrat State.

Table 5-13 : Per Capita Income Vs Car Gujrat

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	87481	1411898	4.94	6.15		
2012	96683	1602129	4.99	6.20	11%	
2013	102589	1771298	5.01	6.25	6%	
2014	111370	2008748	5.05	6.30	9%	
2015	120683	2260084	5.08	6.35	8%	
2016	129738	2527537	5.11	6.40	8%	
2017	143604	2794957	5.16	6.45	11%	
2018	154887	3011656	5.19	6.48	8%	8.5%

Regression analysis of same is given in figure below.

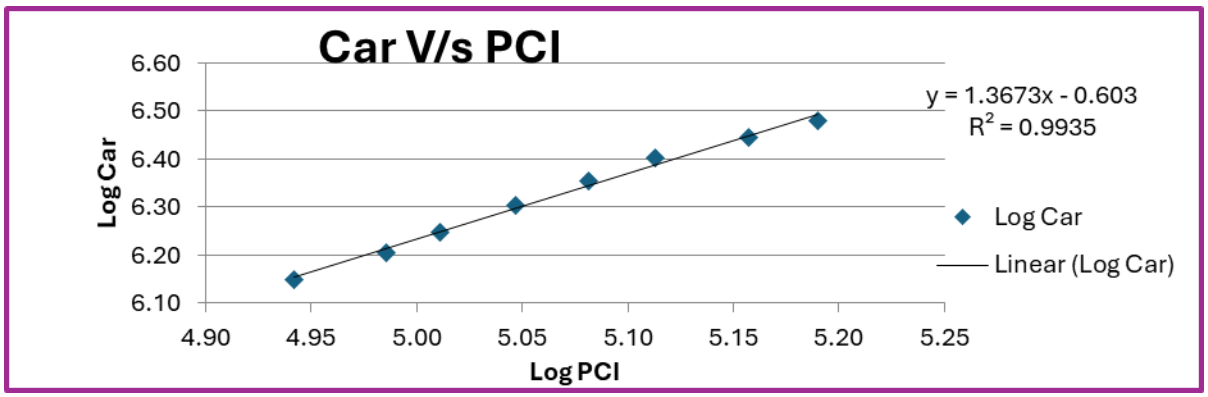

Figure 5-10 : Regression and Elasticity PCI vs. Car – Extrapolation Gujrat

Table 5-14 : Population Vs Bus Gujrat

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	60440000	67546	7.78	4.83		
2012	61383000	70615	7.79	4.85	2%	
2013	62327000	72998	7.79	4.86	2%	
2014	63271000	76435	7.80	4.88	2%	
2015	64214000	82734	7.81	4.92	1%	
2016	65158000	81911	7.81	4.91	1%	
2017	66084000	81087	7.82	4.91	1%	
2018	67010000	86156	7.83	4.94	1%	1.5%

Regression analysis of same is given in figure below.

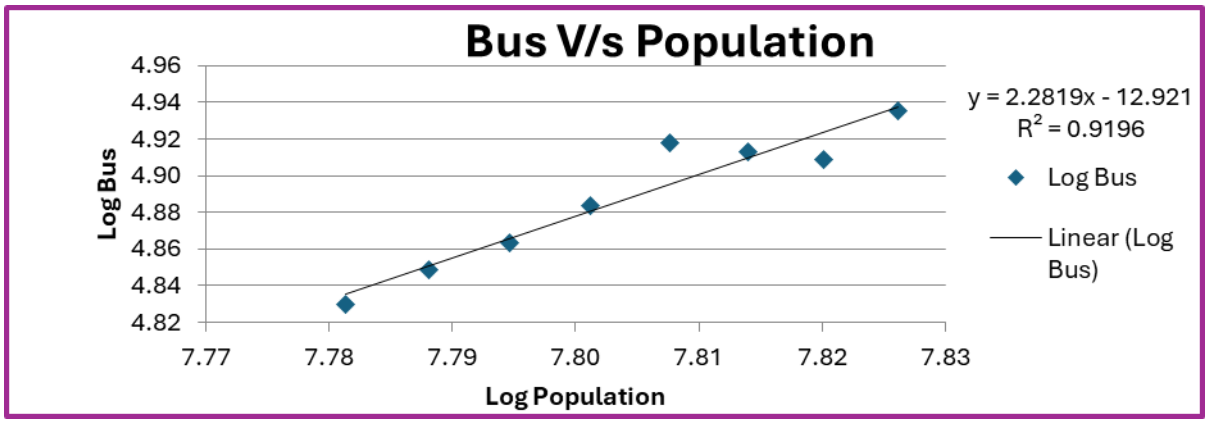

Figure 5-11 : Regression and Elasticity Population vs. Bus – Extrapolation Gujrat

Elasticity of Trucks has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-15 : Trucks Vs NSDP Gujrat

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2011	53280946	301533	7.73	5.48		
2012	59665883	319207	7.78	5.50	12%	
2013	64148881	332185	7.81	5.52	8%	
2014	70562884	352225	7.85	5.55	10%	
2015	77477522	375265	7.89	5.57	10%	
2016	84393034	396061	7.93	5.60	9%	

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2017	94651119	425799	7.98	5.63	12%	
2018	103439901	457299	8.01	5.66	9%	10.0%

The following figure depicts regression analysis and extrapolation.

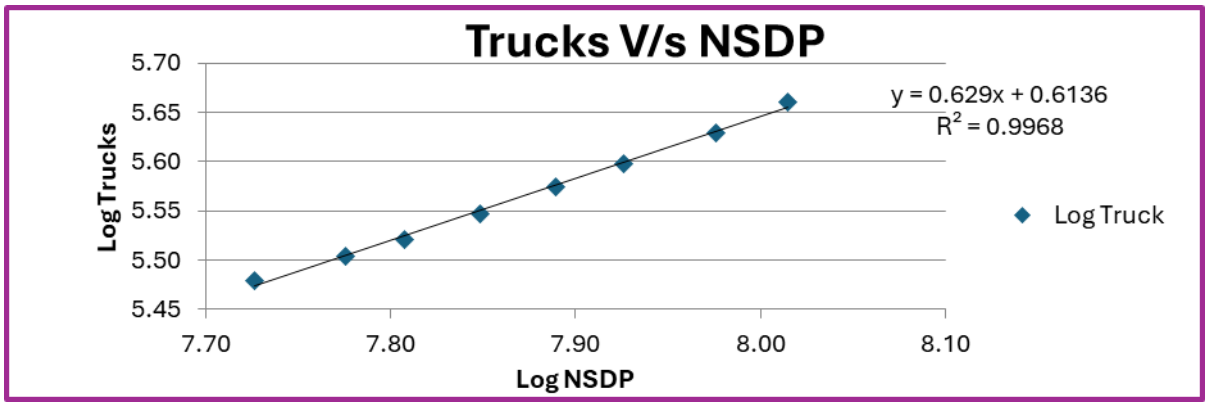

Figure 5-12 : Regression and Elasticity NSDP vs. Trucks Traffic - extrapolation Gujrat.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-16 : Summary Regression Analysis Gujrat

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
GUJRAT	**Car/Jeep**	PCI	y = 1.3673x - - 0.603	R^2 = 0.9935	1.3673	8.51%	11.64%	Good Regression
	Bus	Population	y = 2.2819x - - 12.9206	R^2 = 0.9196	2.2819	1.49%	3.39%	Good Regression
	Truck	NSDP	y = 0.629x - 0.6136	R^2 = 0.9968	0.6290	9.95%	6.26%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Delhi State.

Table 5-17 : Per Capita Income Vs Car Delhi

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	185001	2172069	5.27	6.34		
2012	192220	2416974	5.28	6.38	4%	
2013	200702	2568380	5.30	6.41	4%	
2014	213669	2730071	5.33	6.44	6%	
2015	233115	2986579	5.37	6.48	9%	
2016	244255	3061817	5.39	6.49	5%	
2017	252960	3087309	5.40	6.49	4%	
2018	260967	3249670	5.42	6.51	3%	5.1%

Regression analysis of same is given in figure below.

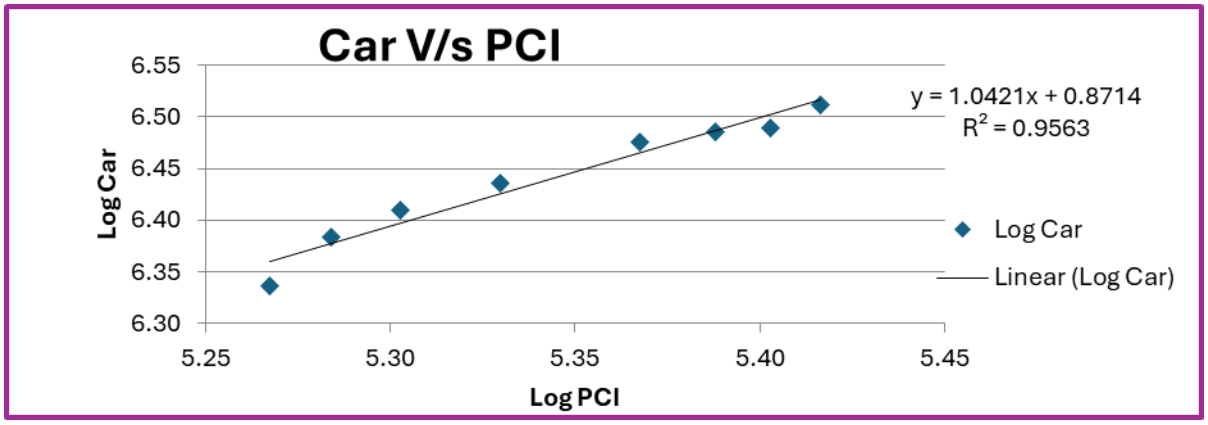

Figure 5-13 : Regression and Elasticity PCI vs. Car – Extrapolation Delhi

Table 5-18 : Population Vs Bus Delhi

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	16788000	20142	7.22	4.30		
2012	17166000	24642	7.23	4.39	2%	
2013	17544000	28142	7.24	4.45	2%

Regression analysis of same is given in figure below.

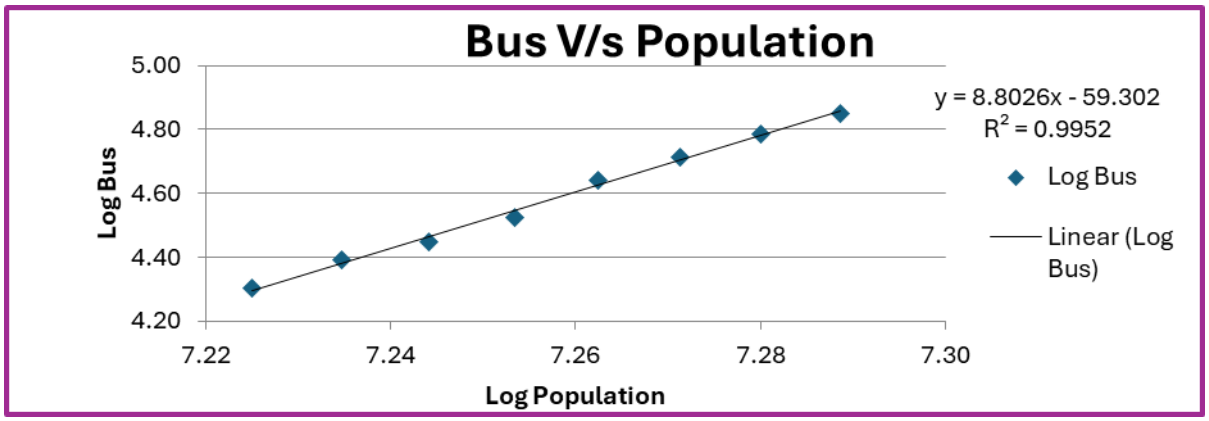

Figure 5-14 : Regression and Elasticity Population vs. Bus – Extrapolation Delhi

Elasticity of Trucks has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-19 : Trucks Vs NSDP Delhi

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2011	31465002	149277	7.50	5.17		
2012	33419330	157277	7.52	5.20	6%	
2013	35652751	165477	7.55	5.22	7%	
2014	38763874	174577	7.59	5.24	9%	
2015	43172959	185027	7.64	5.27	11%	
2016	46159238	196527	7.66	5.29	7%	
2017	48763115	208417	7.69	5.32	6%	
2018	51295715	220417	7.71	5.34	5%	7.2%

The following figure depicts regression analysis and extrapolation.

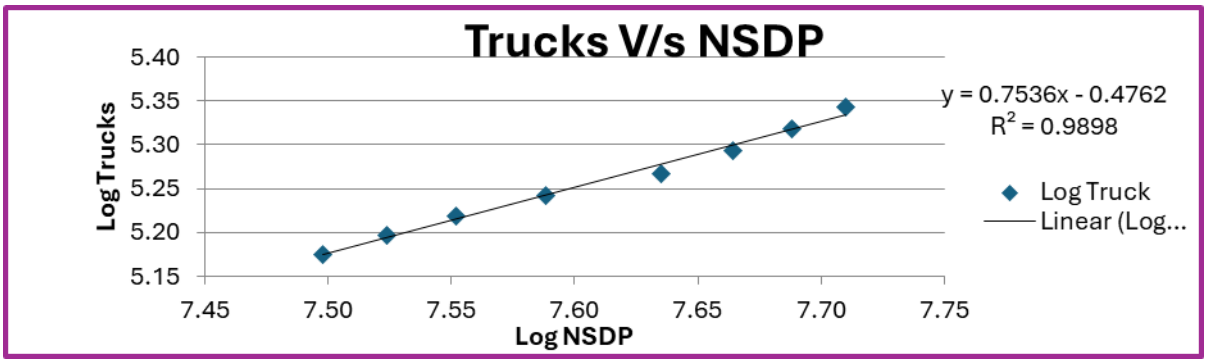

Figure 5-15 : Regression and Elasticity NSDP vs. Trucks Traffic - extrapolation Delhi.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-20 : Summary Regression Analysis Delhi

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
DELHI	**Car/Jeep**	PCI	y = 1.0421x - 0.8714	R^2 = 0.9563	1.0421	5.05%	5.27%	Good Regression
	Bus	Population	y = 8.8026x - - 59.3021	R^2 = 0.9952	8.8026	2.11%	18.61%	Good Regression
	Truck	NSDP	y = 0.7536x - - 0.4762	R^2 = 0.9898	0.7536	7.25%	5.46%	Good Regression

Economical model for predicting growth is good tool, however other local, regional, national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trend of growth. Project stretch of Kota Bypass has recently been awarded to Concessionaire. Hence credible historical traffic data is currently not available.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

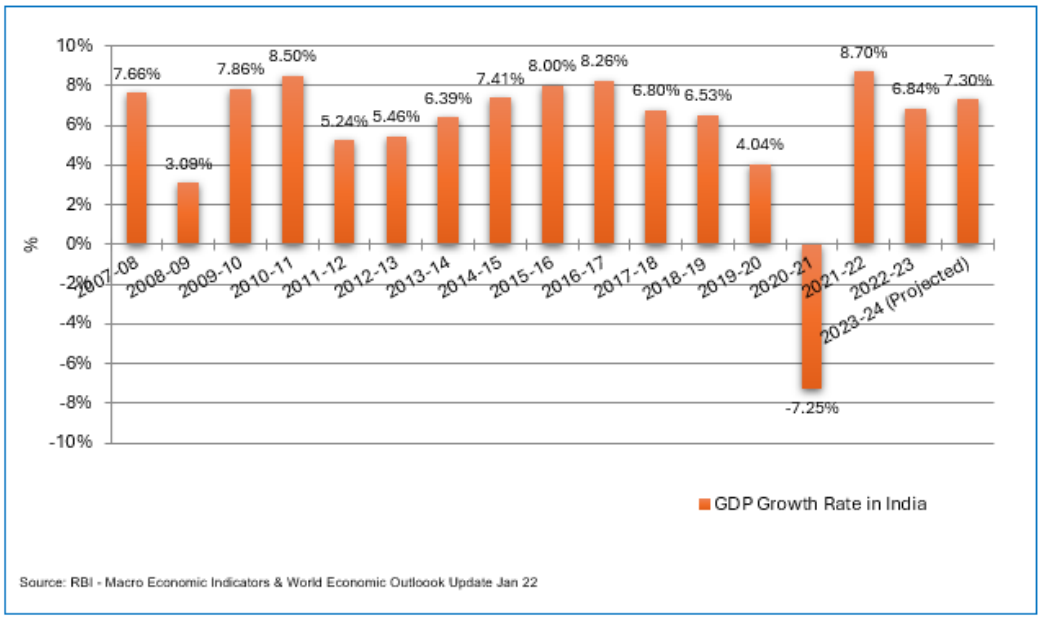

Figure 5-16 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. Leading banking and financial institutions have estimated that India would keep on registering good growth in coming years and the growth in year 2023-24 is expected to be around 7.3%.

5.6 Developments along and around the Project Corridor & State

RAJASTHAN: Rajasthan is a state where tradition and glory meet in the midst of colours. It is endowed with magnificent forts, palaces, havellies, natural resources, heritage, beauty and culture. With the lofty hills of Aravali-one of the oldest mountain ranges of the world and the golden sand dunes of the Great Indian Desert, Rajasthan is the only desert of the sub-continent. Rajasthan is

located in the north-western region of India. It is the largest State in the Republic of India. It forms a corridor between the northern and the western states in the country.

KOTA DISTRICT: Kota district is one of the fifty districts of Rajasthan state. Kota is also the educational headquarters of this state. The town is considered as the Coaching Centre Hub of India.

Overall Rajasthan has 11th rank in India in terms of GDP. The state economy has shown promising growth in the past year in the range of 8-9% and it is expected that this would continue to grow in the same pattern and would contribute to growth of economy of country and region.

From the above it can be expected that the project corridor would serve as one of the important transportation links in the area and would contribute to the growth of the region.

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as under. Rate of growth is moderated in light of overall regional trend. Growth of Multi-Axle is kept slightly higher as trend of technological advances in logistic industry Favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, rate of growth diminishes. Same growth rate is not sustainable for long. Traffic growth has been suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.25% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Stretch

Table 5-21 : Recommended Growth Rates Optimistic

Category / Year	FY 25-29	FY 30-34	FY 35-39	FY 40-44	FY 45-49
Car/Jeep/Van	8.48%	7.48%	6.62%	6.39%	5.51%
Mini LCV	4.78%	3.29%	2.38%	2.01%	2.79%
Bus	4.09%	2.58%	2.36%	2.14%	1.94%
Mini - Bus	4.09%	2.58%	2.36%	2.14%	1.94%
LCV	4.78%	3.29%	2.38%	2.01%	1.82%
2- Axle	4.43%	3.29%	2.38%	2.01%	1.82%
3 - Axle	4.43%	3.29%	2.38%	2.01%	1.82%
4 to6 Axle	5.82%	4.31%	3.09%	2.60%	2.34%
7 and Above Axle	4.43%	3.29%	2.38%	2.01%	1.82%

Table 5-22 : Recommended Growth Rates Pessimistic

Category / Year	FY 25-29	FY 30-34	FY 35-39	FY 40-44	FY 45-49
Car/Jeep/Van	7.98%	6.98%	6.12%	5.89%	5.01%
Mini LCV	4.28%	2.79%	1.88%	1.51%	2.29%
Bus	3.59%	2.08%	1.86%	1.64%	1.44%
Mini - Bus	3.59%	2.08%	1.86%	1.64%	1.44%
LCV	4.28%	2.79%	1.88%	1.51%	1.32%
2- Axle	3.93%	2.79%	1.88%	1.51%	1.32%

3 - Axle	4.18%	3.04%	2.13%	1.76%	1.57%
4 to6 Axle	5.57%	4.06%	2.84%	2.35%	2.09%
7 and Above Axle	4.18%	3.04%	2.13%	1.76%	1.57%

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza - Chainage 1055+217 KM/1058+837 KM (Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)
2024-25	2420	582	84	1253	1013	2898	5	8255	23406
2025-26	2625	610	87	1308	1058	3066	5	8759	24719

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

As per the Toll Notification (Schedule - G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent users monthly pass would be issued at fee at 2/3rd rate for 50 single journey trips.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travellers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van - Rs. 275 per month (for locals residing within a radius of 20 kms from toll plaza)

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2022-23. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

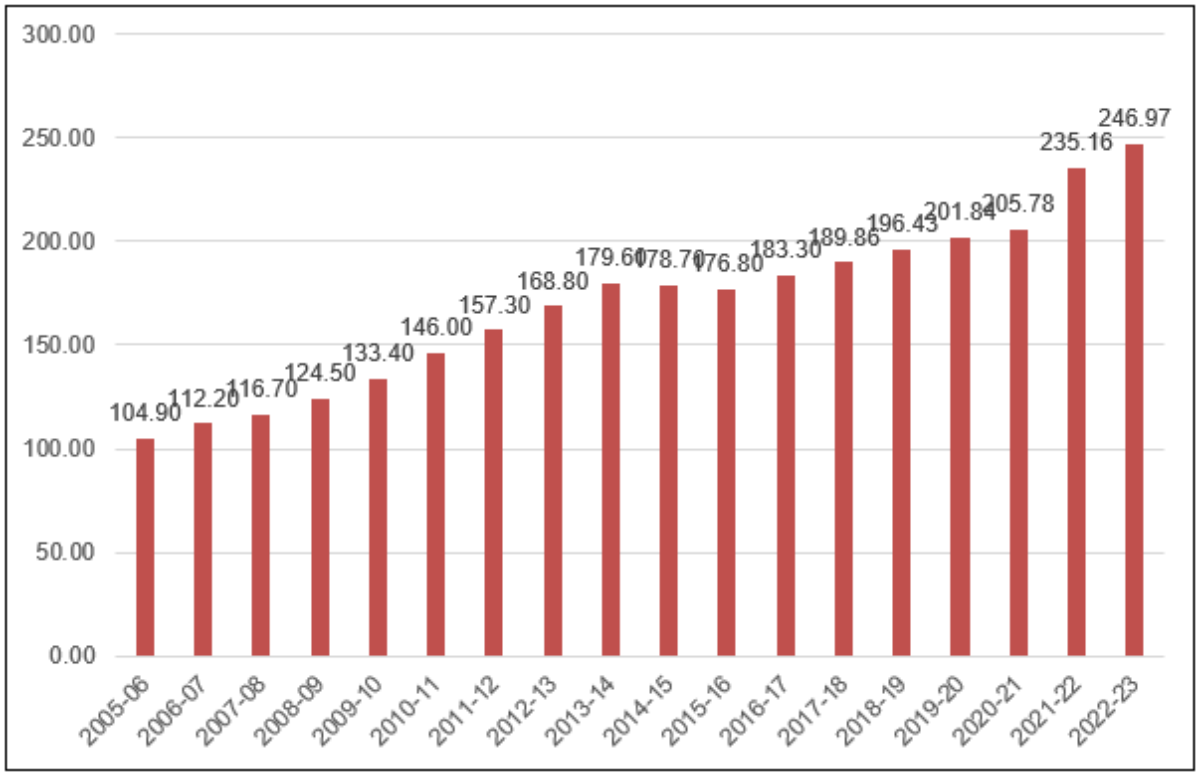

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Oversized Vehicles (7 or more Axles)	4.20

These rates are then modified for as per procedure provided in guidelines of notification considering factors listed below.

- Annual revision of fee rate - @3%
- Application of WPI

Base rates have been worked out to map the current rates. These shall be updated when more details come in. Base toll rates are given below.

Above rates are applicable for base year 2024-25. These rates have been escalated for future. year as NHAI policy and MORTH guideline for future revenue working

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2043-44 years starting from the year 2024-25 are shown in tables below.

Table 7-6 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Location / Year	TP-01	Total
2024-25	73.25	**73.25**

Original Concession Period	20.00	20.00	20.00	19.92	20.00	20.00
Change in Concession period	0.00	0.00	-0.08	0.00	-0.34	0.00
Total Change in Concession period	0.00		-0.08		-0.34	
Calculated Modified Concession Period	20.00		19.92		19.66	
Final Concession Period subject to Cap	0.00		0.00		0.00	

Thus, there is no modification expected in concession period due to variation in revenue as per above estimates in Pessimistic scenarios.
Reduction in Concession Period of about 29 days is expected as per revenue in *Most likely scenarios*.
Reduction in Concession Period of about 124 days is expected as per revenue in *Optimistic scenarios*.

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Kota Bypass from Km 1052+429 to Km 1080+249 section of NH-27 in state of Rajasthan is currently four lane road. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the important regional network East-West connectivity. Kota Bypass is part of Silchar – Porbandar East – West Corridor. There are large number of townships, industrial corridors and other business establishment coming up along project corridor. As discussed, dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give positive impact to traffic flow on project. The following can be considered as major outcomes of the study

a) There is good amount of tollable traffic running on project

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy

c) Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road

Based on above it can be considered a stable healthy project from traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under NHDP Phase V. Under Phase V NHAI has planned to convert 6,500 km of existing 4-lane National Highways into 6-lane National Highway. Sections envisaged under 6-laning comprise the Golden Quadrilateral section (5,700 km) and some other sections which are 800 km in length.

The project under consideration, **Agra** to **Etawah** section of NH-2 from km 199.660 to km 323.525is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. *M/s AE Tollway. Ltd*. (Concessionaire) has been awarded the Project for a concession period of 24 years starting from 1st August 2016. The Project has been commissioned and is currently in the operation / maintenance phase. Six Laning of project has also been completed in Nov 2020.

Length of project road is 124.524 Kms. The project road is section of NH-2, which starts from Delhi and ends at Kolkata and is a part of the Golden Quadrilateral Project. The project road section passes through the districts of Agra, Firozabad and Etawah.

Project road alignment passes through the towns/ built-up areas of Tundla, Firozabad, Shikohabad, Sirsaganj, & Jaswantnagar. The following figure shows

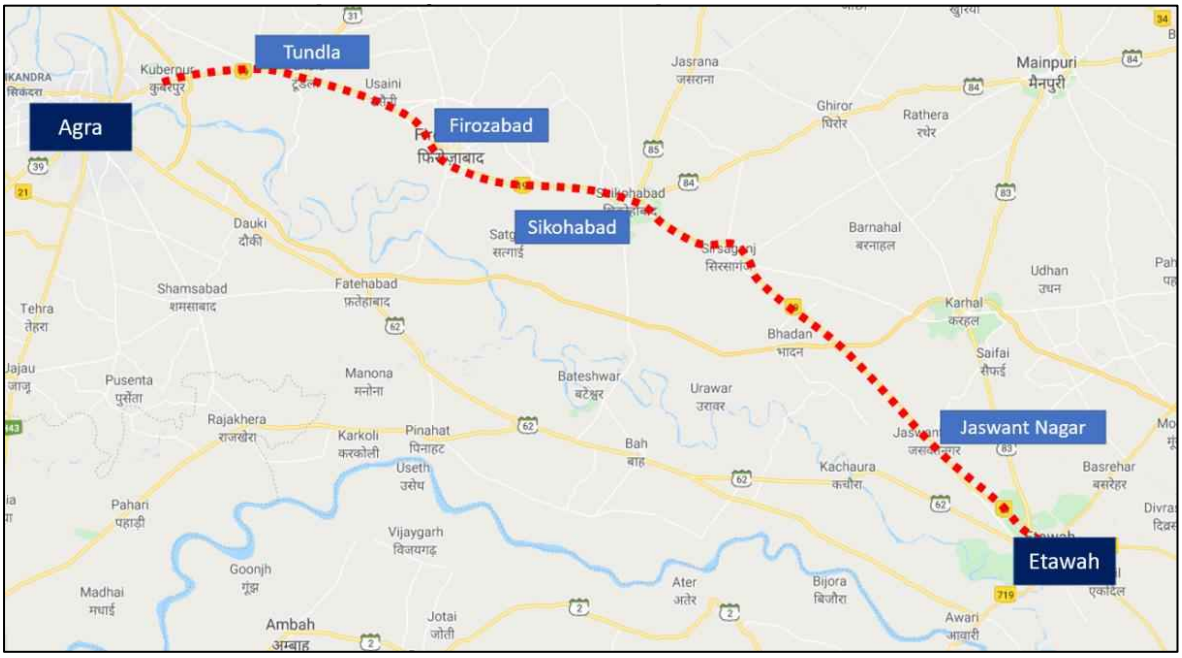

Figure 1-1: Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged *GMD Consultants* to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.

This report named as **"Traffic Study &*Toll Revenue Projection Report*"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

National Highway 2 (NH 2) which is now renumbered as NH-19 is oldest highway in India and connects state of Delhi, Haryana, Uttar Pradesh, Bihar, Jharkhand and West Bengal. It constitutes a major portion of the historical grand truck road.

It connects the national capital Delhi to Kolkata, as well as important cities Mathura, Agra, Kanpur, Allahabad, Varanasi, Dhanbad, Asansol, Durgapur and Bardhman. The highway is part of the Golden Quadrilateral project undertaken by National Highways Authority of India (NHAI).

The project road is a link between Agra and Kanpur in the state of Uttar Pradesh. The main project influence area of the project road consists of the three districts through which the project road passes. In addition, the project influence area includes the districts of Kanpur, Mathura and Aligarh also.

2.2 Project Stretch Description

Section of NH-2 from Agra to Etawah is part of the major transportation link in the area connecting industrial cities of Agra- Kanpur and Lucknow. Important cities of Firozabad, Shikohabad, and Jaswant Nagar fall on project alignment. Firozabad has a famous glass work industry. Like other parts of India rapid ribbon development is happening around these cities on project highway. This also contributes to sustainable traffic growth.

There are two operative toll plazas at project stretch. The first is at Tundla at Km 224.950 and second at Gurau at Km 285.200. The following figure shows project alignment and toll plaza locations.

Figure 2-1: Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

Six laning of project stretch is complete. The following photographs illustrate the project section along the corridor.

Figure 2-2: Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza locations on Agra- Etawah section of NH-2 for years 2017-18, 2018-19, 2019-20, 2020-21,2021-22,22-23,April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 224.950 Toll Plaza at Tundla	AADT for Year 2017-18, 2018-19, 2019-20,2020-21 ,2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from	For Year 2017-18, 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four	For Year 2017-18, 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four	For Year 2017-18, 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four	For Year 2017-18, 2018-19, 2019-20, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to November 2023 &

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		April 2024 to July 2024	month from April 2024 to July 2024	month from April 2024 to July 2024	month from April 2024 to July 2024	Four month from April 2024 to July 2024
2	Km 285.200 Toll Plaza at Gurau	AADT for Year 2017-18, 2018-19, 2019-20,2020-21 ,2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2017-18, 2018-19, 2019-20, 2020-21,2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2017-18, 2018-19, 2019-20, 2020-21,2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2017-18, 2018-19, 2019-20, 2020-21,2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024	For Year 2017-18, 2018-19, 2019-20, 2020-21 ,2021-22, 2022-2023, Eight month from April 2023 to November 2023 & Four month from April 2024 to July 2024

Toll plaza no. 1 & 2 are located in Uttar Pradesh.

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)

Vehicle Type	
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Min Bus /LCV
- Bus
- Truck
- 3-Axle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Gurau Toll Plaza at Km 285.200

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25

7	Oversize Vehicle	10	11	8	10	10	9
	Total	**14918**	**12096**	**13832**	**16260**	**17580**	**17994**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in Table 3-5.

Table 3-5 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-6 : Traffic in PCU at Project Stretch Base Year 2023-24

Year	Toll Plaza Location (Km)	Traffic No.	PCU	PCU Index
2019-2020	Gurau Km 285.200	6892	17043	2.47
	Tundla Km 224.950	14918	27128	1.82

Year	Toll Plaza Location (Km)	Traffic No.	PCU	PCU Index
2020-2021	Gurau Km 285.200	9090	20922	2.30
	Tundla Km 224.950	12096	24923	2.06
2021-2022	Gurau Km 285.200	11197	24889	2.22
	Tundla Km 224.950	13832	28565	2.07
2022-2023	Gurau Km 285.200	9292	23606	2.54
	Tundla Km 224.950	16260	32820	2.02
2023-2024	Gurau Km 285.200	9880	25521	2.58
	Tundla Km 224.950	17580	36151	2.06
2024-2025	Gurau Km 285.200	10004	25981	2.60
	Tundla Km 224.950	17994	36761	2.04

It can be observed from above that project traffic has PCU index close to 2.5 at Guarau which is an indicator of high proportion of commercial traffic in traffic mix. At Tundla the index is more toward passenger traffic due to urban impact. The following figure illustrates variation of PCU index at two toll plaza locations.

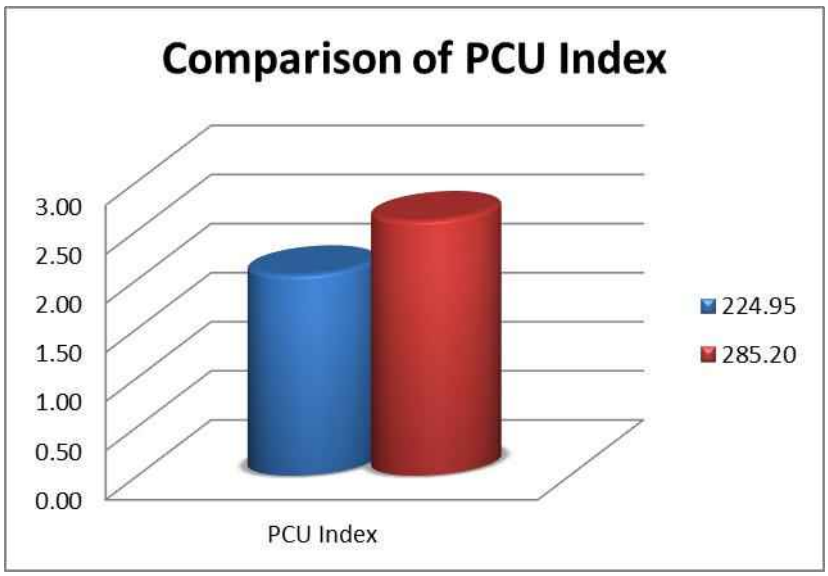

Figure 3-1: Comparison of PCU Index

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

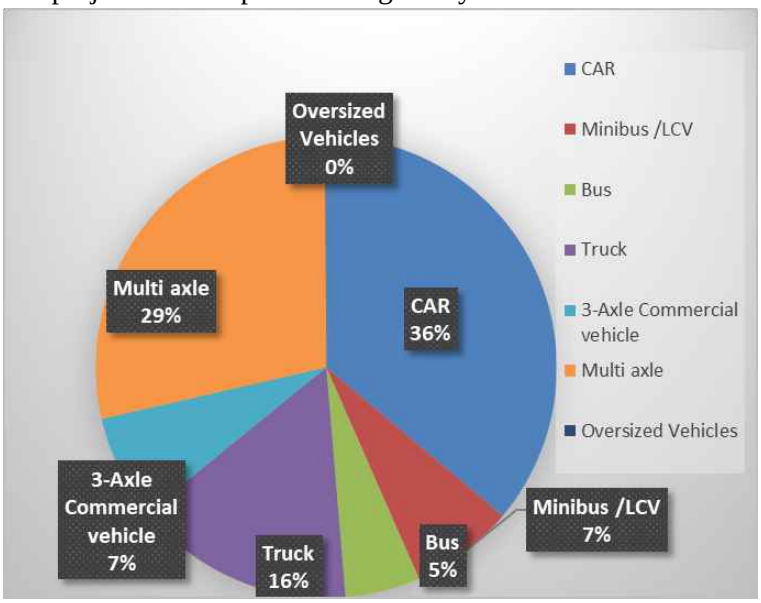

Figure 3-2 :Model Split of Tollable Vehicle-Km 285.200

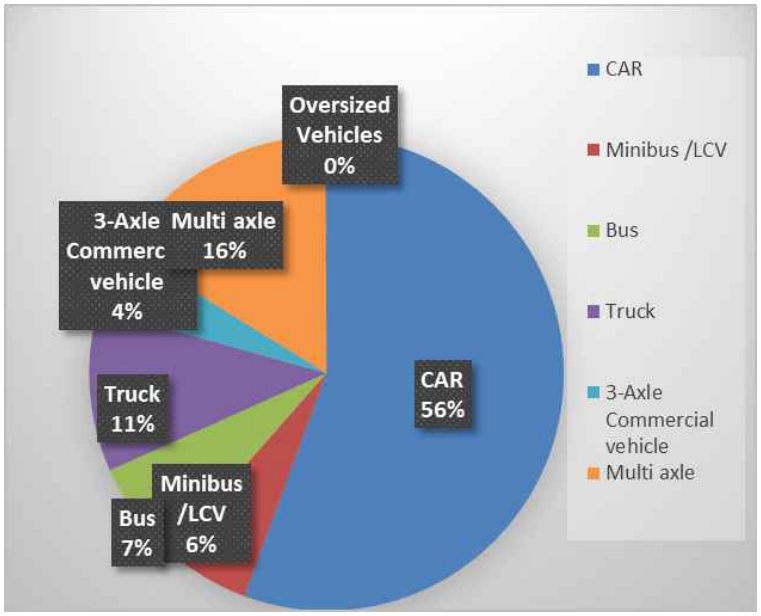

Figure 3-3 :Model Split of Tollable Vehicle-Km 224.950

It is observed that car traffic forms about 36% of total traffic at Gurau toll plaza location while multi axle commercial vehicles and trucks are about 64% of total traffic.

While at Tundla toll plaza car share rises to 56% and commercial vehicles multi axle and trucks share about 44%. This is due to the presence of strong urban impact of Tundla.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey

2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-7 : Journey Type Bifurcation of Traffic at Gurau Toll Plaza KM 285.200

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	6854
2	Return Journey	3126
3	Local Commercial Single Journey	13
4	Monthly Pass Local	11
5	Monthly Pass	0

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 69%. Return journey component is 31%.

The following tables give the details of journey distribution at Tundla toll plaza at Km 224.950.

Table 3-8 : Journey Type Bifurcation of Traffic at Tundla Toll Plaza KM 224.950

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	8752
2	Return Journey	8935
3	Local Commercial Single Journey	114
4	Monthly Pass Local	185
5	Monthly Pass	8

At Tundla toll plaza single journey share drops to 49% while return share is 50% respectively. Monthly pass is 0% and Local 1%.

It is observed that the project corridor demonstrates a similar pattern of single journey dominated mix of traffic across the entire stretch which is typical of major national highways.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Project stretch has toll application history from last few years, and it can be assumed that project traffic is settled. However, from an analysis point of view there can be one alternate route using Agra Lucknow Expressway at local level.
At the regional level, this route connects Delhi to Kanpur and then goes towards Prayagraj and West Bengal. Most obvious alternate route is through Lucknow - Agra Expressway again.
The following maps show these routes in relation to project stretches at both local and regional level.

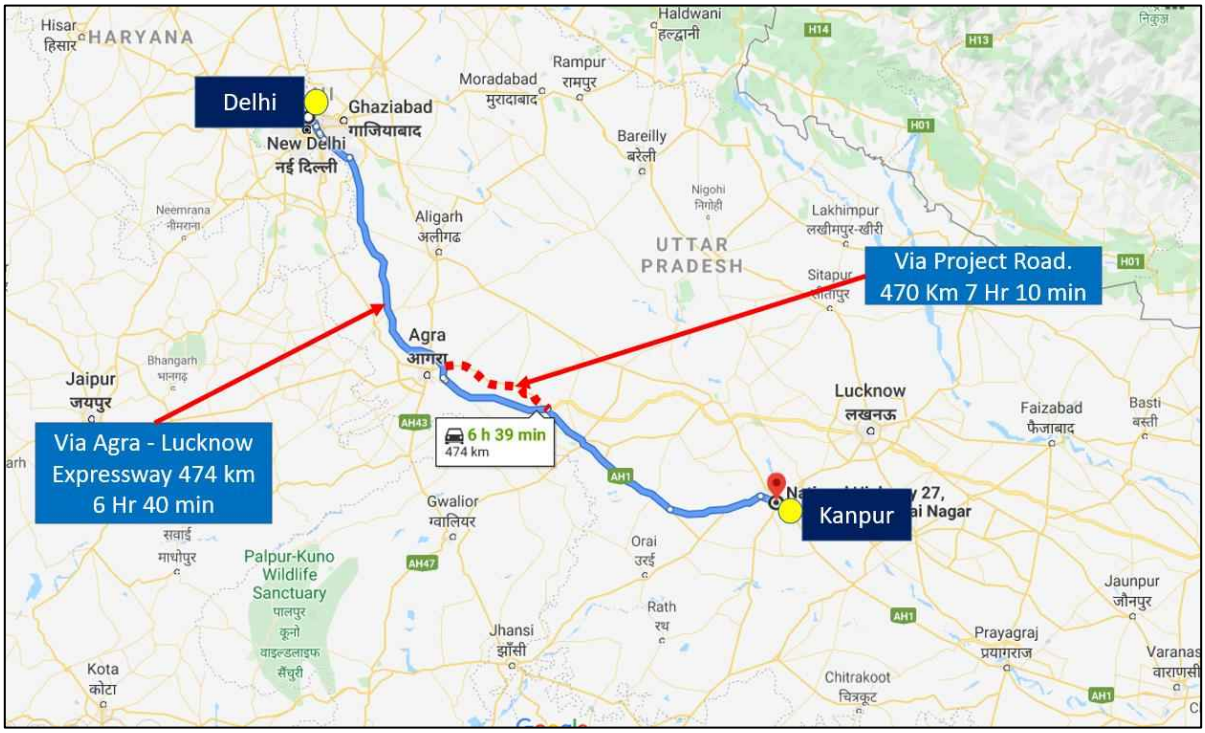

Figure 4-1: Alternate route at regional level.

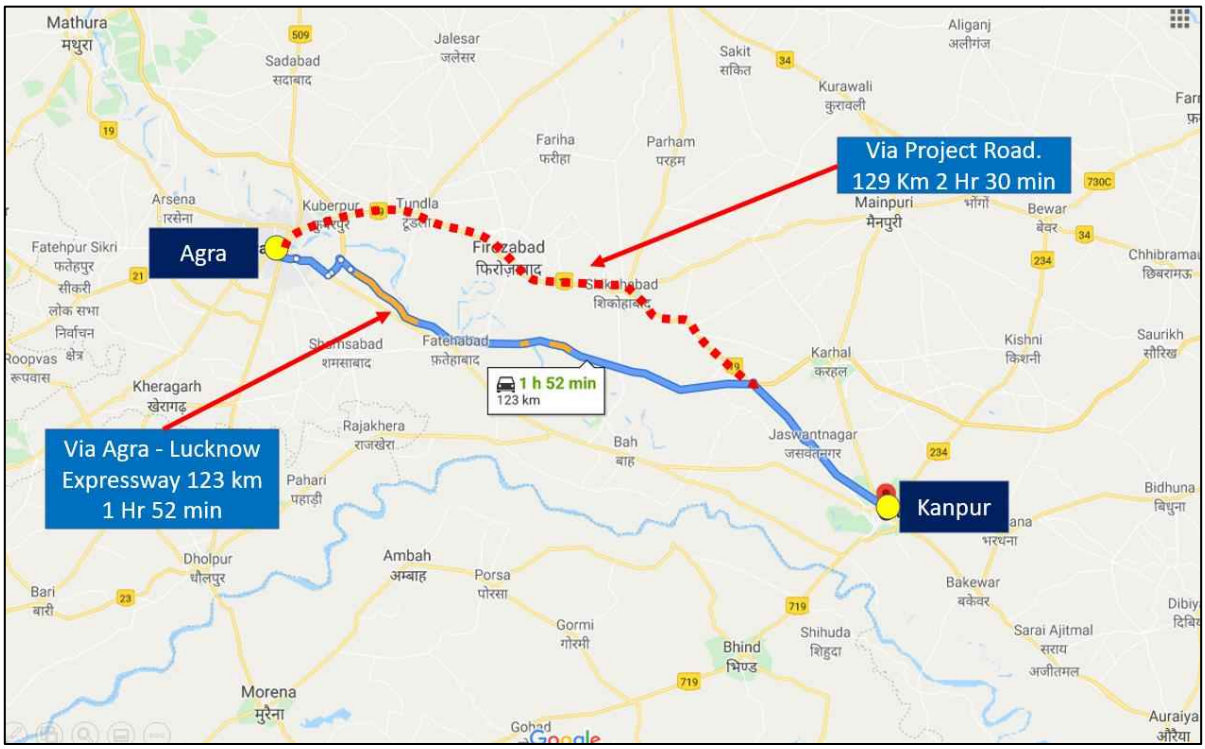

Figure 4-2: Alternate route at local level.

It can be observed that the project highway forms one of the main spines of the corridor between Agra and Etawah. Agra – Lucknow Expressway is a faster connectivity for obvious regions. It's been in operation for the last few years and most of the traffic which had potential of diversion had done so. Traffic on project road is now settled and it can be assumed as dedicated traffic on project road for logistic obligations. With six laning now complete, project stretch has become slightly more attractive due to the improved level of service.

At regional level also the difference between two alignment is only of Agra- Lucknow Expressway. Hence there too, regional level traffic is expected to have settled.

The following table provides summary of analysis of alternate route/ roads discussed above.

Table 4-1 : Competing Roads Details

Sr. No	Route Details	Designation	Length (Km)	Avg. Speed (KMPH)	Time Taken (Min)	Observations
Regional Level						
1	Delhi to Kanpur Via Agra- Lucknow Expressway	Alternate Route	474	70	6 Hr 40 Min	Alternate route running for years after toll on project road. Traffic Settled. No further diversion expected
	Delhi to Kanpur Via Project Road (NH-19)	Project Road	470	65	7 Hr 10 Min	
Local Level						
2	Agra to Etawah Via Agra- Lucknow Expressway	Alternate Route	123	65	1 Hr. 52 Min	Alternate route running for years after toll on project road. Traffic Settled. No further diversion expected
	Agra to Etawah Via Project Road (NH-19)	Project Road	129	50	2 Hr. 30 Min	

Under these circumstances it is not envisaged that commercial or passenger traffic would switch to alternate roads from the project road. Further, it may be noted that during its construction phase, the project road had many bottlenecks like Firozabad bypass etc. Due to this part of traffic preferred Agra Lucknow expressway over project road despite higher toll tariff at Agra – Lucknow Expressway. Now as these bottlenecks are removed it is expected that some part of traffic would return to Project Corridor due to improved level of service and low toll fee as compared to Agra – Lucknow Expressway.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Surat- Dahisar section of NH-8has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would-be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*

EI = *Economic Indicator*

A = *Regression constant*

k = *Elasticity coefficient (Regression coefficient)*

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across the state of Uttar. Toll plazas at Tunda and Gurau are in the state of Uttar Pradesh. Project corridor has certain impact of traffic from Delhi, and Haryana also. For elasticity calculations, working data from these states has been analyzed.

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Uttar Pradesh State.

Table 5-1 : Per Capita Income Vs Car Uttar Pradesh

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	32002	1108100	4.51	6.04		
2013	32908	1205374	4.52	6.08	3%	
2014	34044	1423020	4.53	6.15	3%	
2015	34583	1572217	4.54	6.20	2%	
2016	36973	1746117	4.57	6.24	7%	
2017	40641	2027972	4.61	6.31	10%	4.94%

Regression analysis of same is given in figure below.

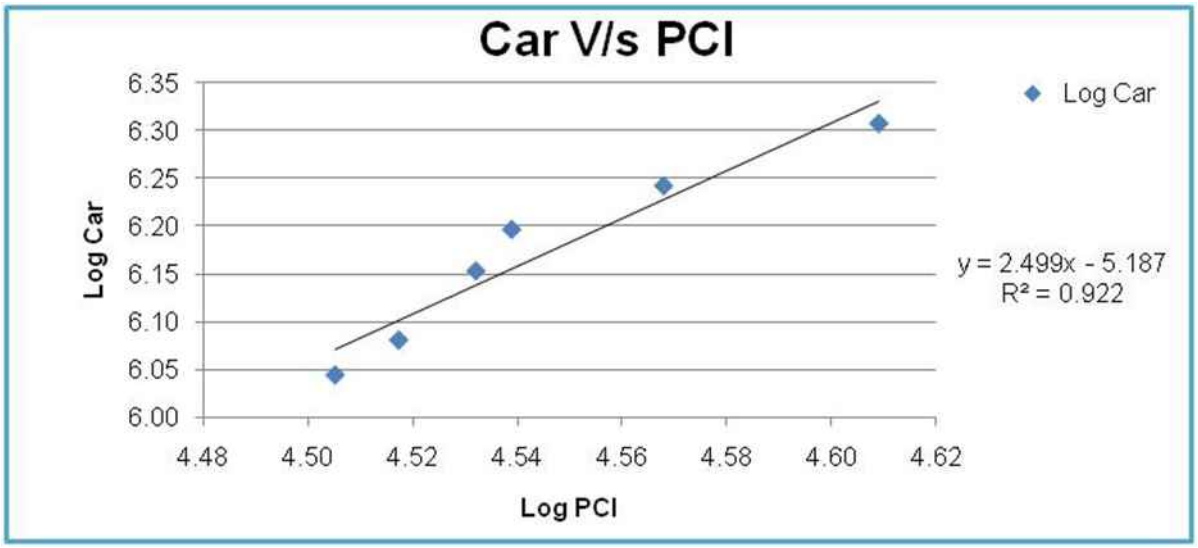

Figure 5-1: Regression and Elasticity PCI vs. Car–Extrapolation Uttar Pradesh

Table 5-2 : Population Vs Bus Uttar Pradesh

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	199812341	57901	8.30	4.76		
2013	203382046	64147	8.31	4.81	2%	
2014	206942855	74389	8.32	4.87	2%	
2015	210493544	80460	8.32	4.91	2%	
2016	214032922	89127	8.33	4.95	2%	
2017	217559836	112020	8.34	5.05	2%	1.72%

Regression analysis of same is given in figure below.

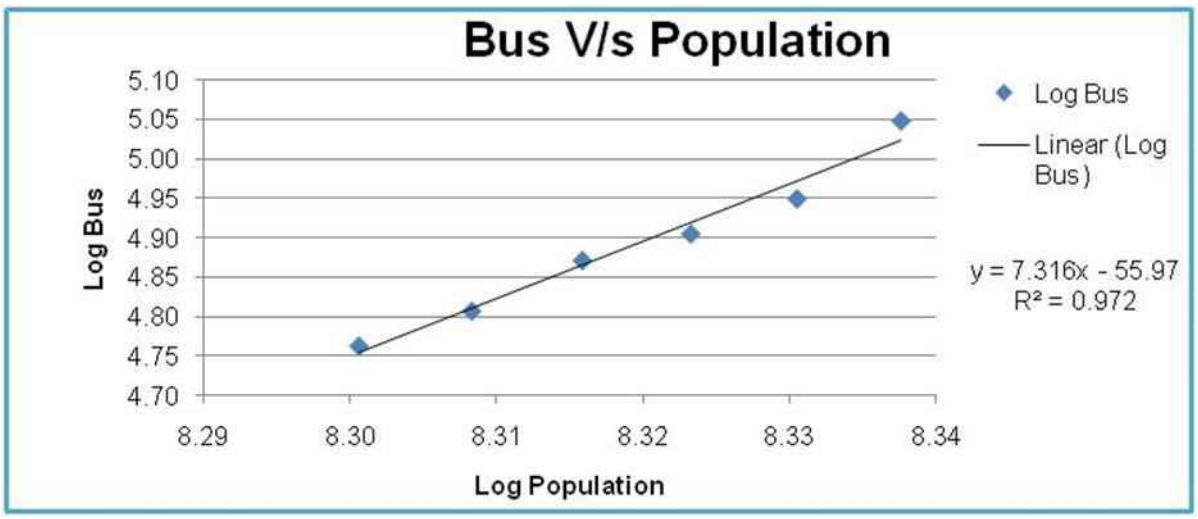

Figure 5-2: Regression and Elasticity Population vs. Bus – Extrapolation Uttar Pradesh

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : LCV Traffic Vs NSDP Uttar Pradesh

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	645132	176164	5.81	5.25		
2013	673552	213657	5.83	5.33	4%	
2014	707469	265025	5.85	5.42	5%	
2015	729686	294022	5.86	5.47	3%	
2016	792049	316815	5.90	5.50	9%	5.28%

The following figure depicts regression analysis and extrapolation.

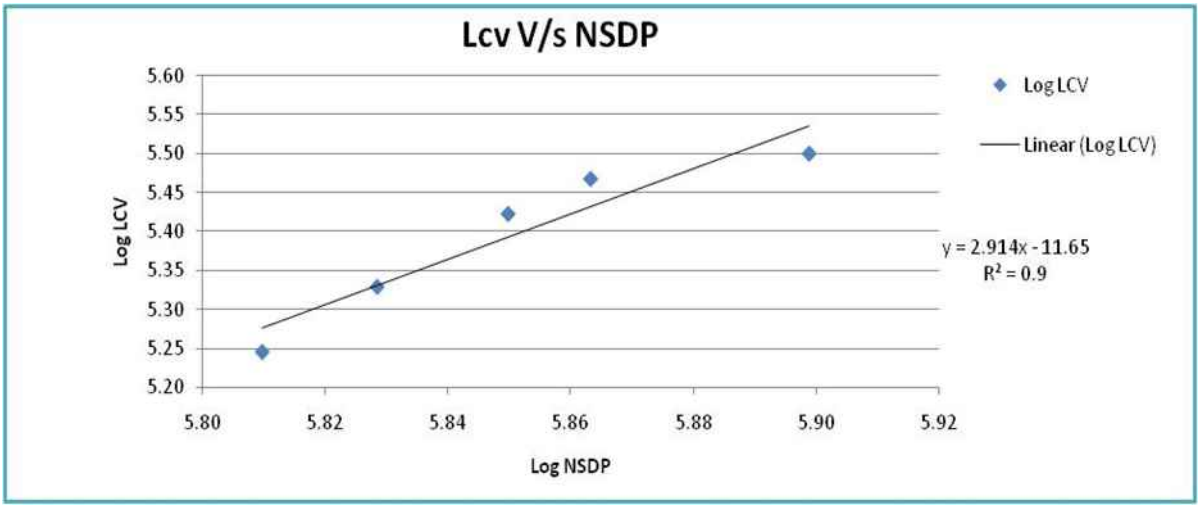

Figure 5-3: Regression and Elasticity NSDP vs. LCV Traffic – extrapolation Uttar Pradesh.

Table 5-4 : Truck Traffic Vs NSDP Uttar Pradesh

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	645132	162813	5.81	5.21		
2013	673552	186404	5.83	5.27	4%	
2014	707469	202761	5.85	5.31	5%	
2015	729686	217609	5.86	5.34	3%	
2016	792049	245688	5.90	5.39	9%	
2017	883962	265167	5.95	5.42	12%	6.55%

The following figure depicts regression analysis and extrapolation.

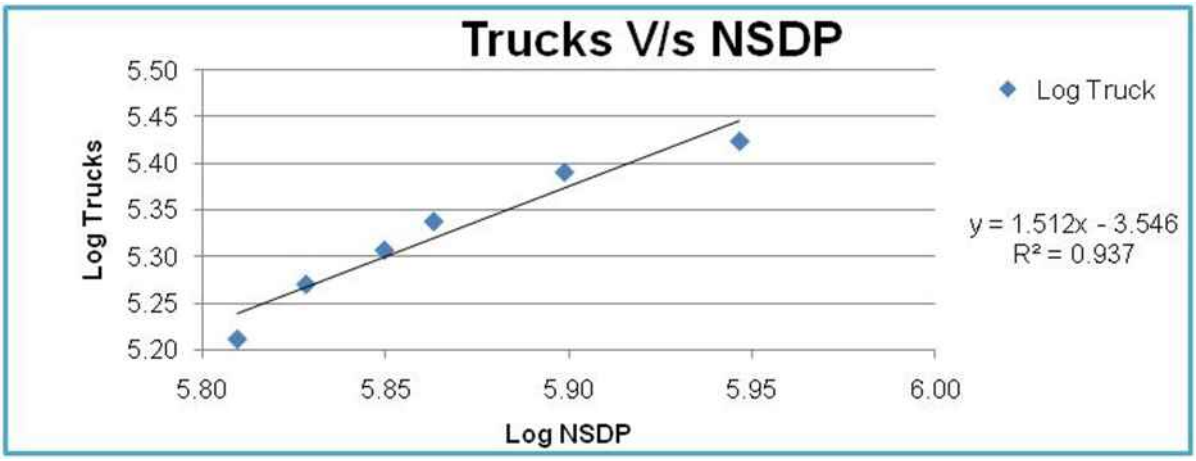

Figure 5-4: Regression and Elasticity NSDP vs. Truck Traffic – extrapolation Uttar Pradesh.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-5 : Summary Regression Analysis Uttar Pradesh

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Uttar Pradesh	Car/Jeep	PCI	y = 2.499x + -5.1874	R² = 0.922	2.4990	4.94%	12.34%	Good Regression
	Bus	Population	y = 7.3167x - -55.9791	R² = 0.9726	7.3167	1.72%	12.56%	Good Regression
	LCV	NSDP	y = 2.9149x - -11.6585	R² = 0.9	2.9149	5.28%	15.40%	Good Regression
	Truck	NSDP	y = 1.5121x - -3.5463	R² = 0.9373	1.5121	6.55%	9.90%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Delhi State.

Table 5-6 : Per Capita Income Vs Car Delhi

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	185361	2172069	5.27	6.34		
2013	193175	2416974	5.29	6.38	4%	

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2014	202216	2568380	5.31	6.41	5%	
2015	215726	2730071	5.33	6.44	7%	
2016	235737	2986579	5.37	6.48	9%	
2017	247255	3061817	5.39	6.49	5%	5.95%

Regression analysis of same is given in figure below.

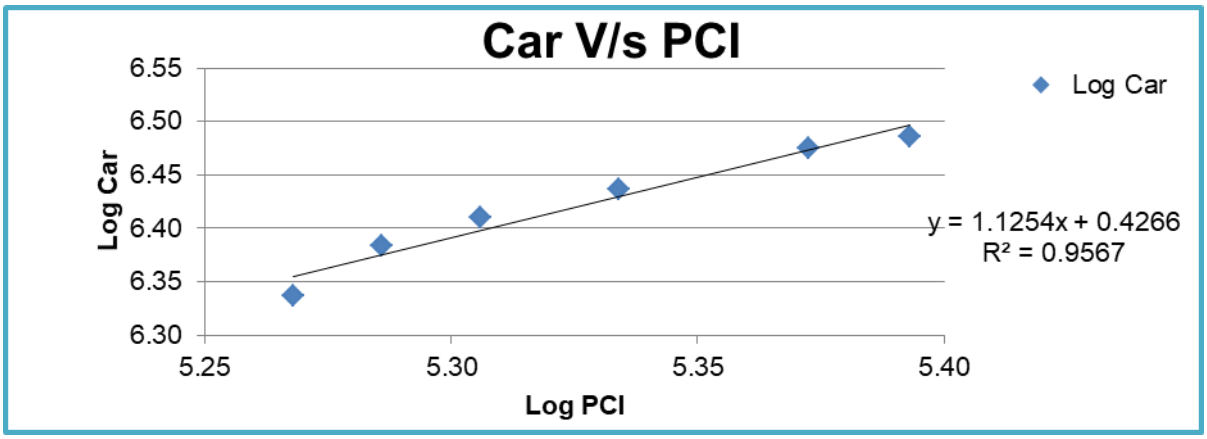

Figure 5-5: Regression and Elasticity PCI vs. Car–Extrapolation Delhi

Table 5-7 : Population Vs Bus Delhi

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	16787941	109790	7.22	5.04

2016	17916359	43723	7.25	4.64	2%	
2017	18195583	41686	7.26	4.62	2%	1.62%

Regression analysis of same is given in figure below.

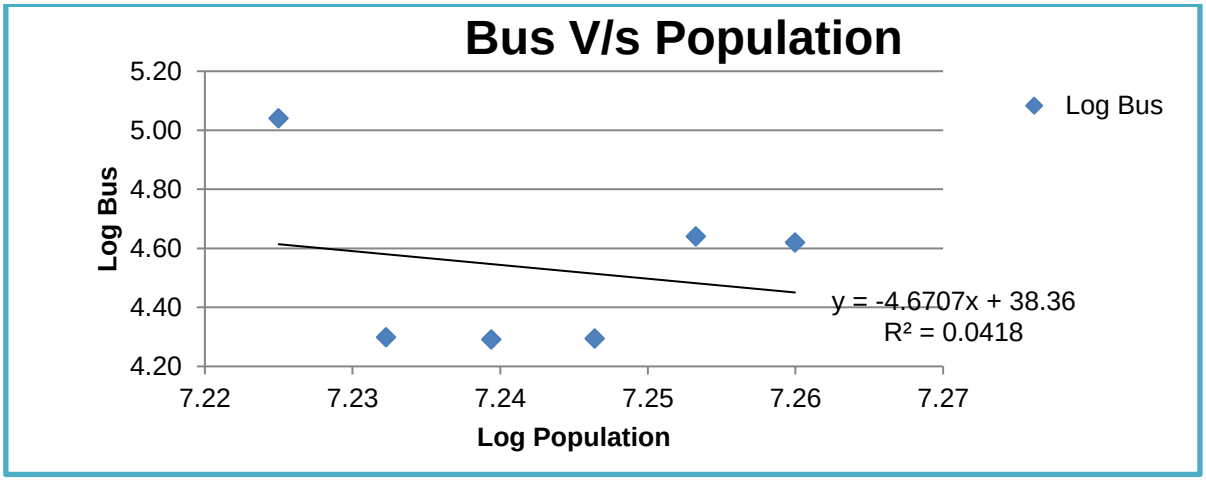

Figure 5-6: Regression and Elasticity Population vs. Bus – Extrapolation Delhi

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-8 : LCV Traffic Vs NSDP Delhi

Year	NSDP	LCV	Log NDSP	Log LCV	NSDP Growth	Average Growth (5 Year)
2012	314650	124547	5.50	5.10		
2013	334193	126539	5.52	5.10	6%	
2014	356528	136110	5.55	5.13	7%	
2015	387639	145903	5.59	5.16	9%	
2016	431730	183486	5.64	5.26	11%	
2017	461476	221068	5.66	5.34	7%	7.98%

The following figure depicts regression analysis and extrapolation.

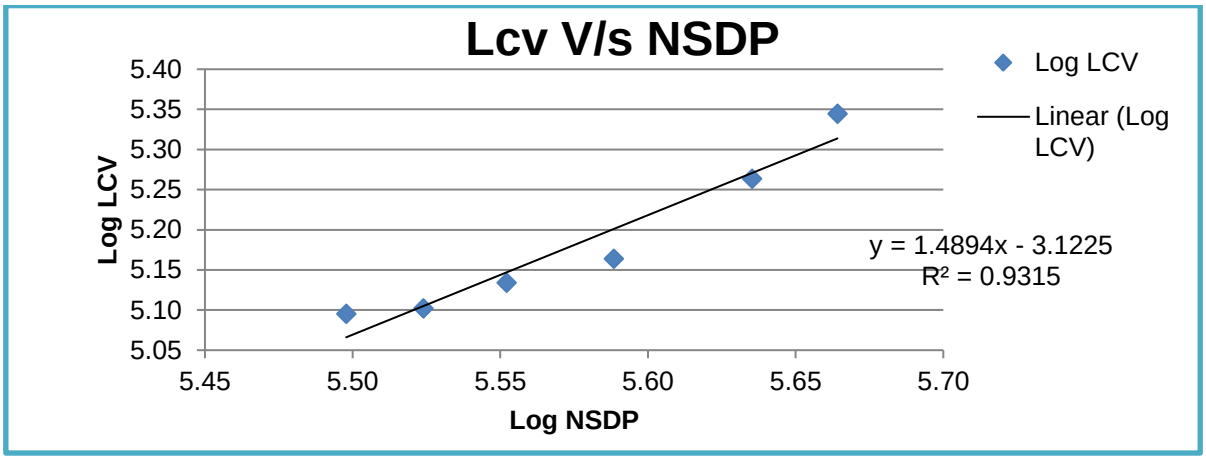

Figure 5-7: Regression and Elasticity NSDP vs. LCV Traffic – extrapolation Delhi.

Table 5-9 : Truck Traffic Vs NSDP Delhi

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	314650	4792	5.50	3.68		
2013	334193	5176	5.52	3.71	6%	
2014	356528	6093	5.55	3.78	7%	
2015	387639	7503	5.59	3.88	9%	
2016	431730	8703	5.64	3.94	11%	
2017	461476	10440	5.66	4.02	7%	7.98%

The following figure depicts regression analysis and extrapolation.

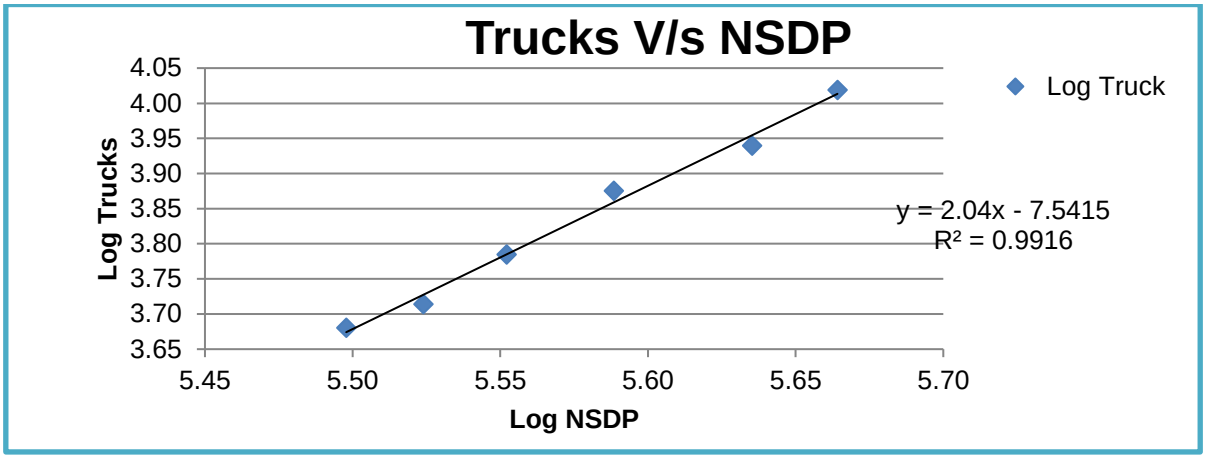

Figure 5-8: Regression and Elasticity NSDP vs. Truck Traffic – extrapolation Delhi.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-10 : Summary Regression Analysis Delhi

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Delhi	Car/Jeep	PCI	y = 1.1254x + 0.4266	R^2 = 0.9567	1.1254	5.95%	6.69%	Good Regression
	Bus	Population	y = -4.6707x - 38.36	R^2 = 0.0418	-4.6707	1.62%	-7.58%	Poor Regression
	LCV	NSDP	y = 1.4894x - -3.1225	R^2 = 0.9315	1.4894	7.98%	11.88%	Good Regression
	Truck	NSDP	y = 2.04x - -7.5415	R^2 = 0.9916	2.0400	7.98%	16.27%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Haryana State.

Table 5-11 : Per Capita Income Vs Car Haryana

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	106085	989519	5.03	6.00		
2013	111780	1134616	5.05	6.05	5%	
2014	119791	1278272	5.08	6.11	7%

Regression analysis of same is given in figure below.

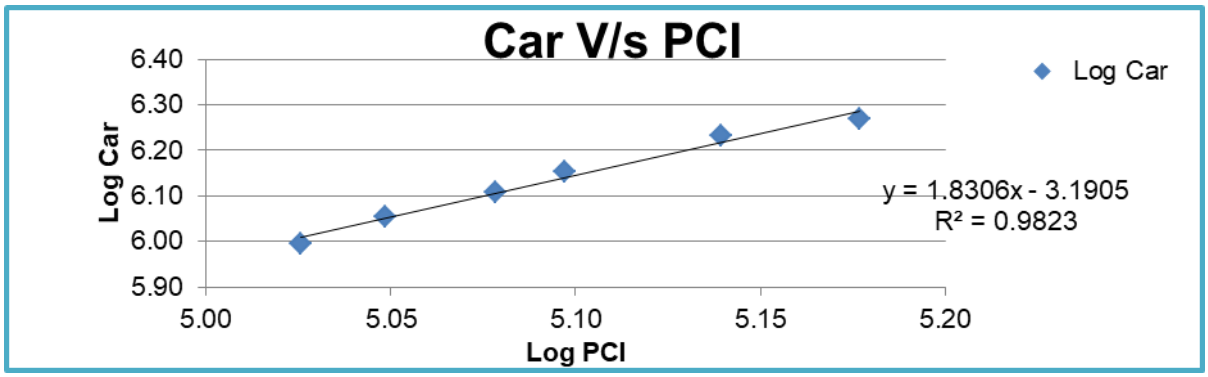

Figure 5-9: Regression and Elasticity PCI vs. Car–Extrapolation Haryana

Table 5-12 : Population Vs Bus Haryana

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	25351462	39153	7.40	4.59		
2013	25751257	43456	7.41	4.64	2%	
2014	26149236	46558	7.42	4.67	2%	
2015	26545282	52640	7.42	4.72	2%	
2016	26939286	55781	7.43	4.75	1%	
2017	27331141	60129	7.44	4.78	1%	1.52%

Regression analysis of same is given in figure below.

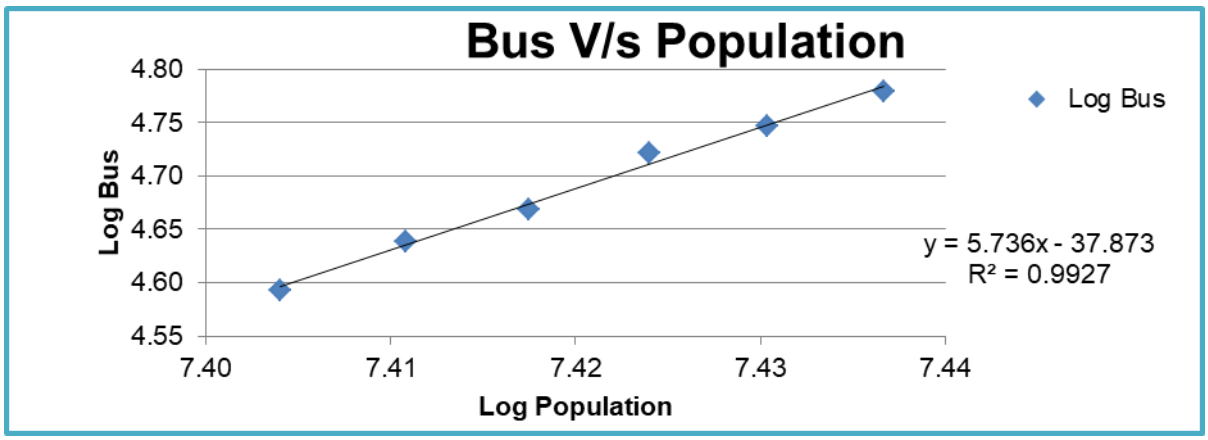

Figure 5-10: Regression and Elasticity Population vs. Bus – Extrapolation Haryana

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-13 : LCV Traffic Vs NSDP Haryana

Year	NSDP	LCV	Log NDSP	Log LCV	NSDP Growth	Average Growth (5 Year)
2012	271152	124897	5.43	5.10		
2013	289756	137511	5.46	5.14	7%	
2014	314931	152069	5.50	5.18	9%	
2015	333359	167901	5.52	5.23	6%	
2016	372659	182776	5.57	5.26	12%	

The following figure depicts regression analysis and extrapolation.

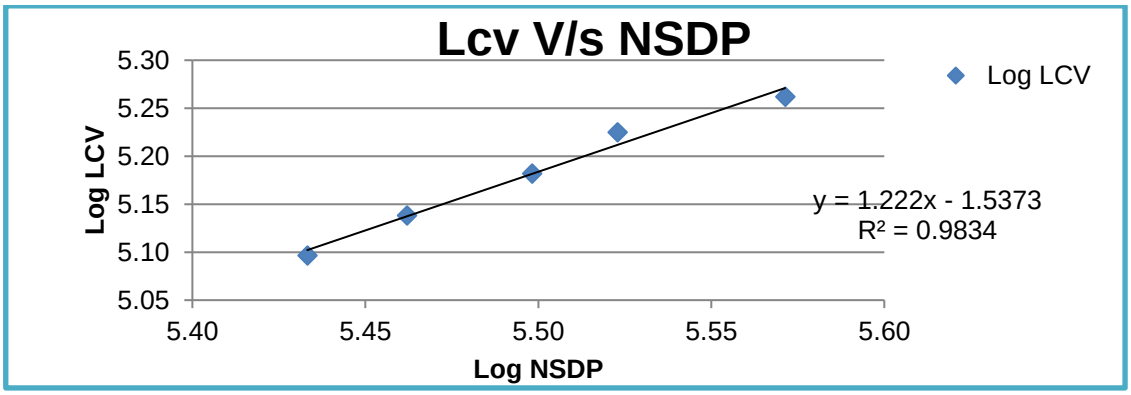

Figure 5-11: Regression and Elasticity NSDP vs. LCV Traffic – extrapolation Haryana.

Table 5-14 : Truck Traffic Vs NSDP Haryana

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	271152	292735	5.43	5.47		
2013	289756	307509	5.46	5.49	7%	
2014	314931	327882	5.50	5.52	9%	
2015	333359	348732	5.52	5.54	6%	
2016	372659	367730	5.57	5.57	12%	
2017	412006	390321	5.61	5.59	11%	8.75%

The following figure depicts regression analysis and extrapolation.

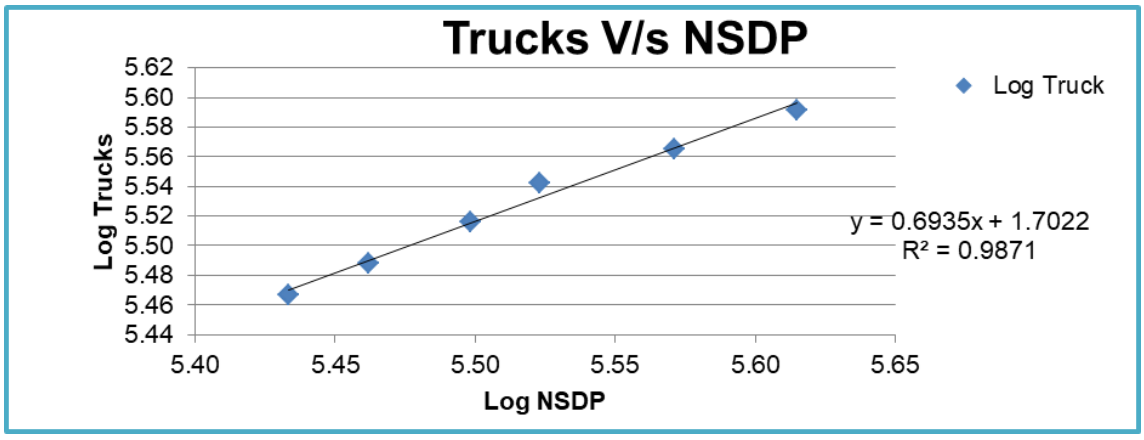

Figure 5-12: Regression and Elasticity NSDP vs. Truck Traffic – extrapolation Haryana.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-15 : Summary Regression Analysis Haryana

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Haryana	Car/Jeep	PCI	y = 1.8306x + -3.1905	R^2 = 0.9823	1.8306	7.23%	13.24 %	Good Regression
	Bus	Population	y = 5.736x - -37.8732	R^2 = 0.9927	5.7360	1.52%	8.69%	Good Regression
	LCV	NSDP	y = 1.222x - -1.5373	R^2 = 0.9834	1.2220	8.30%	10.14 %	Good Regression
	Truck	NSDP	y = 0.6935x - 1.7022	R^2 = 0.9871	0.6935	8.75%	6.07%	Good Regression

The economic model for predicting growth is a good tool, however other local, regional, and national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trends of growth. Project stretch of Agra to Etawah has recently been commissioned and is under tolling operation since 2016-17. As traffic data is available with the project concessionaire of three years, we do not have sufficient data points to be able to establish a reliable past trend of traffic growth. Moreover, the part two years traffic is affected by COVID-19 impact. A minimum of about 5 -6 years' traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

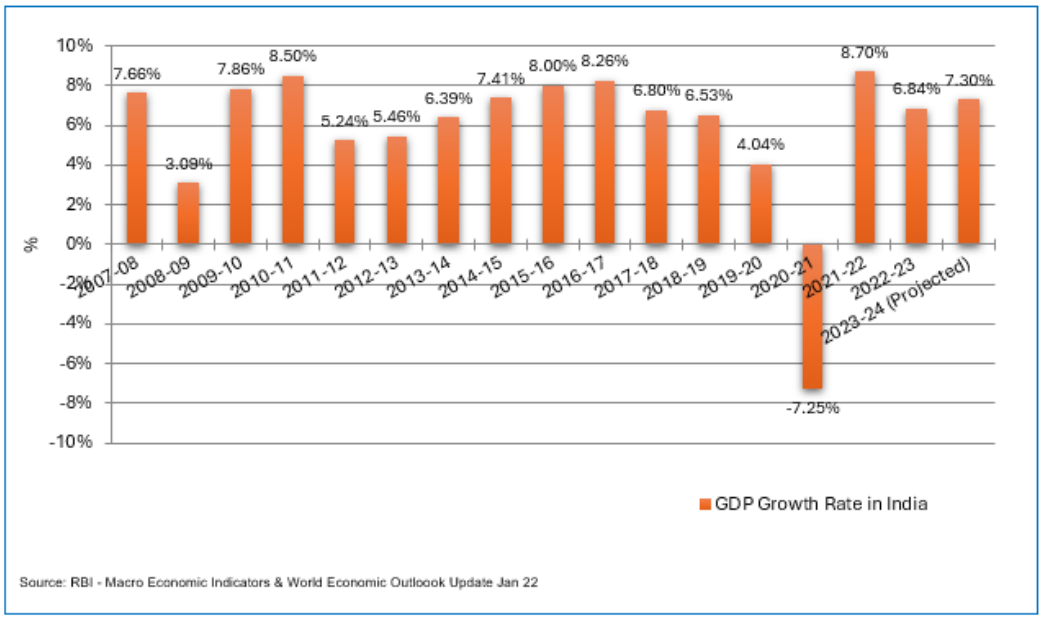

Figure 5-13 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In-India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. The World Economic Outlook update also has predicted a growth rate of about 7.5 % in the year 2022-23.

5.6 Developments along and around the Project Corridor & State

Though the growth of Delhi has been consistently below the national average economic growth, it is the largest state in terms of population and consumption driven demand for goods and services will remain significantly high. The rate of growth of NSDP also seems to be catching up with the national average over the years. Other regions in the influenced area states, namely Delhi, Haryana and Uttarakhand are all growing significantly faster than the national average. Considering the scenario, it may be assumed that the traffic

growth on the project highway would remain high and there are minimal risks in terms of growth.

Table 5-16 : GDP of India, UP and other important states

Year	India (GDP)	Bihar	Haryana	Madhya Pradesh	Maharashtra	Odisha	Punjab	Rajasthan	Uttar Pradesh	Uttarakhand	West Bengal	Delhi

5.7 Industrial Units along Project Corridor

There are a number of big and small industrial units along the project corridor. The following figure shows some of these along corridors.

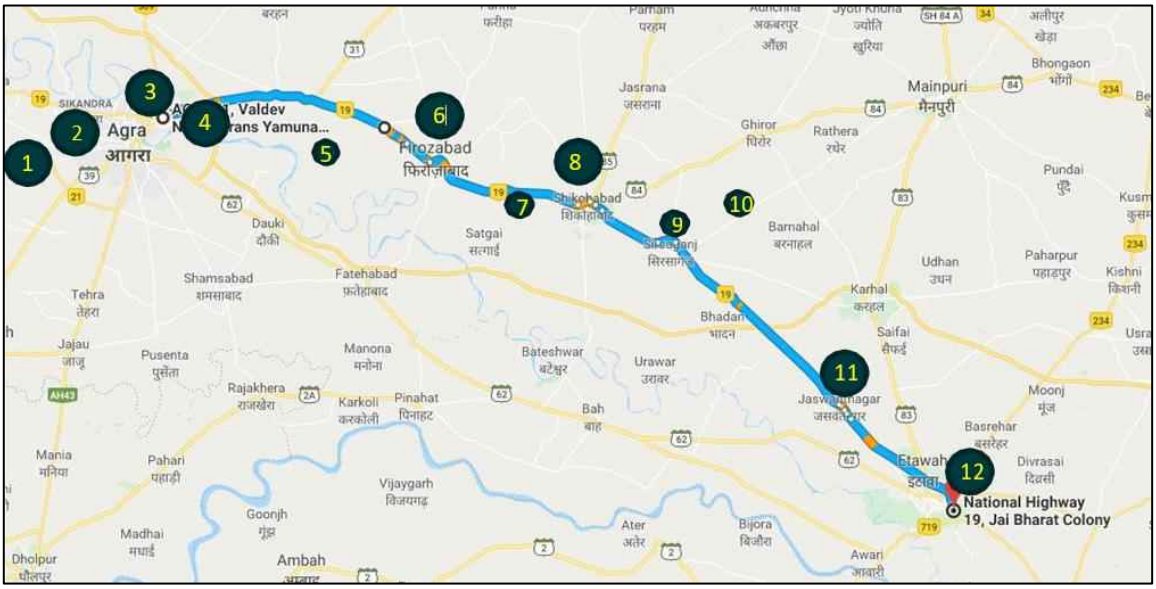

Figure 5-14 : Industrial Units along project corridor.

The following is the list of industrial units along the project corridor.

1. Leather Park, **Agra**
2. Export Promotional Industrial Park (EPIP)
3. Foundry Nagar (BK Casting, Agricultural Industries, Paint Industries, Plastic Industries, Metal Industries), **Agra**
4. Industrial Estate, **Agra**
5. Agarbatti Industry
6. Glass Industries, **Firozabad**
7. Pipe Industries, Glass Bulb Industries
8. Agro Industries, Glass Industries, Cold Storage
9. Food Processing Industries
10. PVC Pipe Industries
11. Rural Industrial Estate, **Jaswant Nagar**
12. **Etawah** (Caplock Industries Private Limited, Rice Mills)

Such industries along project corridor and urban development around major cities of Firozabad, Tundla, Shikohabad, Jaswantnagar and Wtawah provide impetus to project traffic on corridor.

5.8 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The rate of growth is moderate in light of overall regional trends. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, the rate of growth diminishes. Same growth rate is not sustainable for long. Hence growth rates have been suitably stepped down in future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation from Most Likely case for corridor in both states.

5.8.1 Recommended Growth Rates of Traffic for Project Stretch

Table 5-17 : Recommended Growth Rates Optimistic

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046	2046-2051
Car/Jeep/Van	8.96%	8.75%	8.71%	7.42%	6.23%	5.15%

7 and Above Axle	6.43%	6.22%	6.14%	5.08%	4.12%	3.26%

Table 5-19 : Recommended Growth Rates Most Likely

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046	2046-2051
Car/Jeep/Van	8.71%	8.50%	8.46%	7.17%	5.98%	4.90%
Bus	4.61%	4.45%	4.43%	3.04%	2.33%	1.70%
LCV	5.66%	5.46%	5.40%	4.38%	3.46%	2.91%
2- Axle	6.00%	5.82%	5.76%	4.81%	3.95%	3.17%
3 - Axle	6.34%	6.14%	6.08%	5.07%	4.16%	3.34%
4 to 6 Axle	6.68%	6.47%	6.39%	5.33%	4.37%	3.51%
7 and Above Axle	6.68%	6.47%	6.39%	5.33%	4.37%	3.51%

Traffic and revenue have been worked out on the basis of the above growths and some are presented in subsequent chapters of the report.

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza 1- Chainage 224.95 KM

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Agra-Etawah project, the Target Date and Target Traffic are defined as under:

Target Date - 1st April 2025

Target Traffic - 52995 PCU

It was observed that as per traffic projections, average traffic volume falls short of target traffic in all scenarios. The probable extension of the concession period is estimated according to article 29 of the concession agreement which comes to about 5 years. Traffic forecast and revenue projections are done for probable extended period accordingly.

Most Likely

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2025	52995	33477	-37%	55%	20%	24	4.8

Optimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2025	52995	33556	-37%	55%	20%	24	4.8

Pessimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2025	52995	33393	-37%	55%	20%	24	4.8

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

The fee schedule in the CA of Surat-Dahisar section of NH-8 is based on the old toll policy. As per the Toll Notification (Schedule -G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued at fee 50 time the single journey fee at 2/3rd Rate.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: Local Car Jeep Van -Rs. 275 per month (for locals residing within a radius of 20 kms from toll plaza). Additionally, local commercial vehicles are charged at 50% rate of single journey.

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2021-22. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. Following graph provides projection of rate of inflation (WPI) in India. Data has been taken from Office of Economic Advisor web site (www.eaindustry.nic.in). WPI for years 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

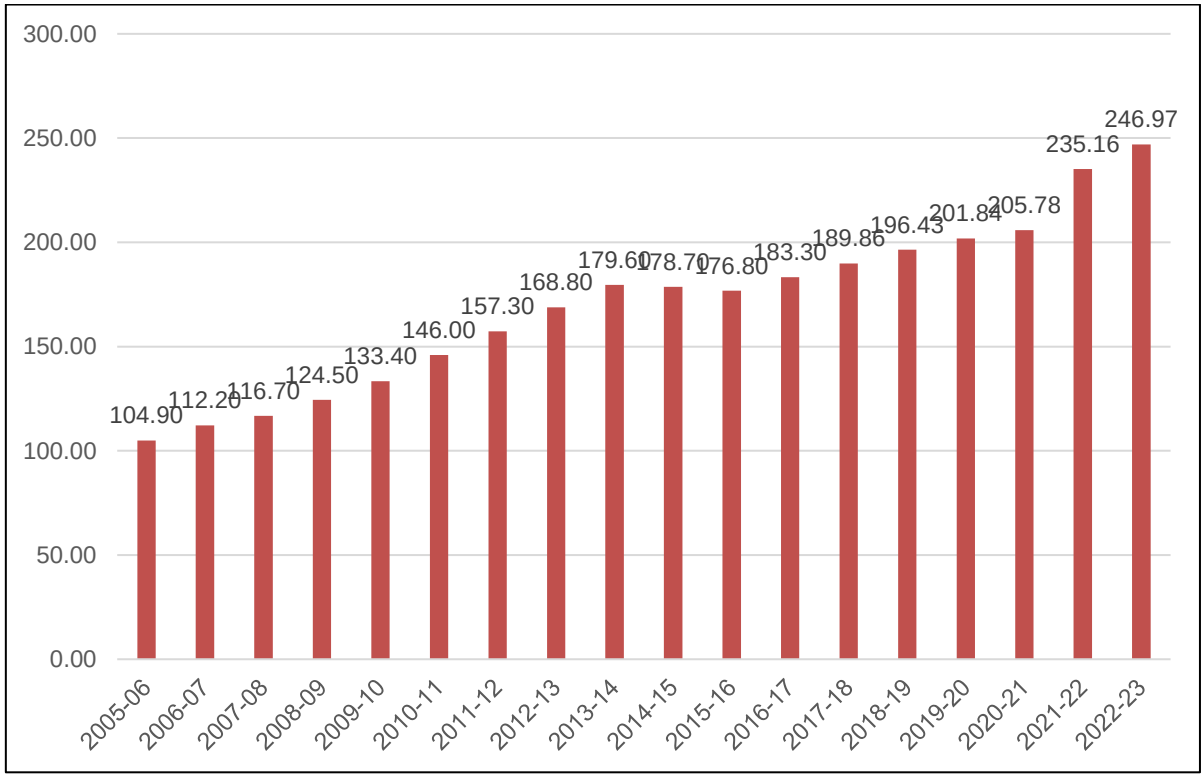

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45
Oversized Vehicles (7 or more Axles)	4.20

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given as under

Table 7-2 : Toll Rates for Single Journey@ Km 224.95

Year	Car	Minibus /LCV	Bus	Truck	3 axles	Multi axle	Oversized Vehicles

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2045-46 years starting from the year 2023-24 are shown in tables below.

Table 7-10 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Year	TP-1	TP2	Total

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Agra to Etawah section of NH-2 in state of Delhi from km 199.660 to km 323.525 is currently six lane road. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the most busy and prominent national highway NH-2 which connects political and cultural capitals of India. This is one of the most important trunk roads which spreads across many states. There are large number of townships, industrial corridors and other business establishments coming up along the project corridor. As discussed, the dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give a positive impact to traffic flow on the project. The following can be considered as major outcomes of the study.

a) There is a good amount of tollable traffic running on the project.

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy.

c) The Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.

Based on the above it can be considered a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under NHDP Phase V. Under Phase V NHAI has planned to convert 6,500 km of existing 4-lane National Highways into 6-lane National Highway. Sections envisaged under 6-laning comprise the Golden Quadrilateral section (5,700 km) and some other sections which are 800 km in length.

The project under consideration, Six Laning of **Hapur Bypass to Moradabad section** of NH-9 from km 50.000 to km 148.277is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. M/s IRB Hapur Moradabad Tollway Ltd. (Concessionaire) has been awarded the Project for a concession period of 22 years starting from 28th May 2019. The Project is under capacity augmentation to six lanes. Tolling operation under current concession started in May 2019.COD-2 has been received in April 2023.

Project stretch from Hapur to Moradabad is part of new NH-9 which starts from Fazilka in Punjab and terminates in Uttarakhand at Pithoragarh. Previously this section was part of old NH-24 which is still popularly known and Delhi – Lucknow Road. New NH-9 takes off towards Pithoragarh from Rampur. A number of sections along the project road from Hapur to Moradabad have witnessed urban development along the highway. Places like Pilakhua, Babugarh, Brijghat, Gajrola and Joya are fast upcoming urban centers. Close proximity to Delhi and this being main connectivity of region to NCR is main region for this ribbon development along highway. The following figure shows the project road alignment.

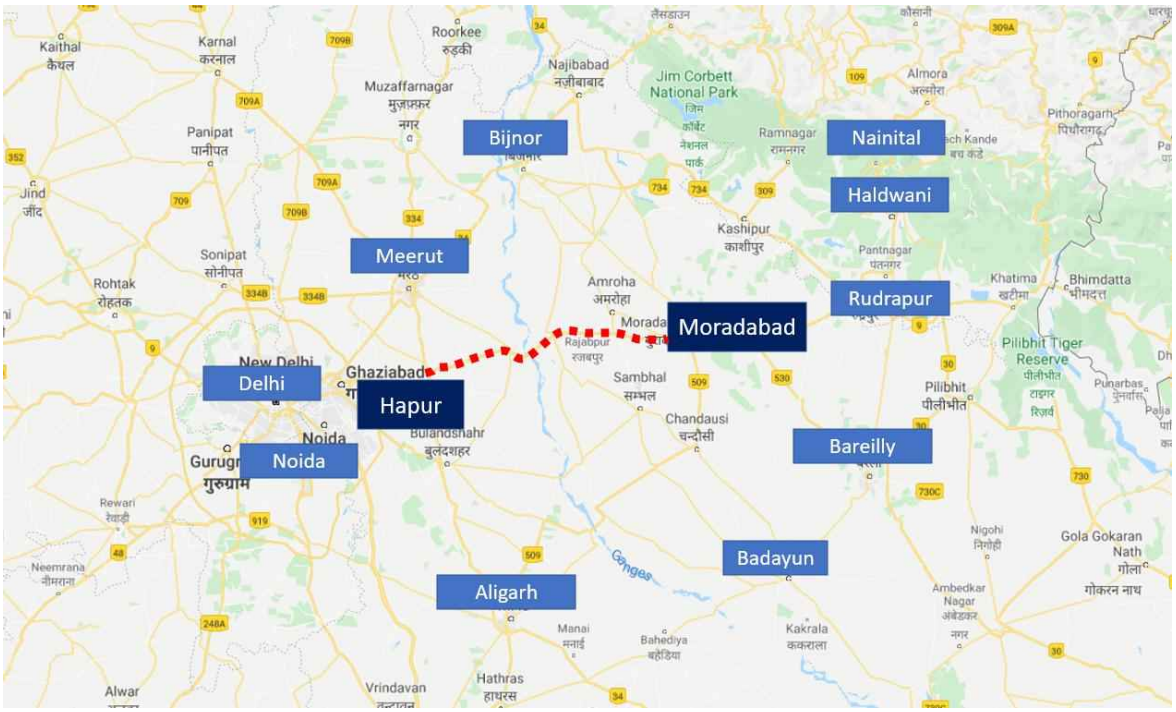

Figure 1-1: Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged GMD Consultants to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.

This report named as **"Traffic Study &Toll Revenue Projection Report"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

The project road is the section of the former NH-24 which has now been re-designated as NH-9 connecting Fazilka in Punjab to Pithoragarh in Uttarakhand. On the way it connects several important cities in five states in North India (from west towards east): Malout, Sirsa, Hisar, Rohtak, Bahadurgarh, Delhi, Ghaziabad, Hapur, Moradabad, Rampur, Rudrapur, Sitarganj, Khatima, Pithoragarh. The total length of the highway is 811 Km. After renumbering of all national highways by National Highway Authority of India in2010, the current NH 9 was formed by merging five differently numbered national highways in 2010, including Old NH 10 (Fazilka-Delhi section), Old NH 24 (Delhi-Rampur section), Old NH 87 (Rampur-Rudrapur section), Old NH 74 (Rudrapur-Sitarganj-Khatima section) and Old NH 125 (Tanakpur-Pithoragarh section)

2.2 Project Stretch Description

The Project section starts from Hapur Bypass (Km50.000) and ends in Moradabad (Km148.277). The total design length of project road section is about 99.869 Kms. The existing road is four lane divided carriageway, which is proposed to be six laned.The road passes through the districts of Hapur, Amrohaand Moradabad; all in Uttar Pradesh.

Project road alignment passes through the small towns/built-up areas of Pakwara, Joya and Babugarh. Simbhaoli, one of the largest integrated sugar refinery complexes is right on the project road.

Hapur – Moradabad section of NH-9 was previously known as Delhi Road locally. This forms the main connectivity of areas like Moradabad, Rampur, Bareilly and important destinations in Uttarakhand like Rudrapur, Kashipur, Ranikhet, Pithoragarh etc to the national capital of Delhi.

There are two operative toll plazas at project stretch. The first is at Garh at Km 90.661 and second at Joya at Km 123.875. The following figure shows project alignment and toll plaza locations.

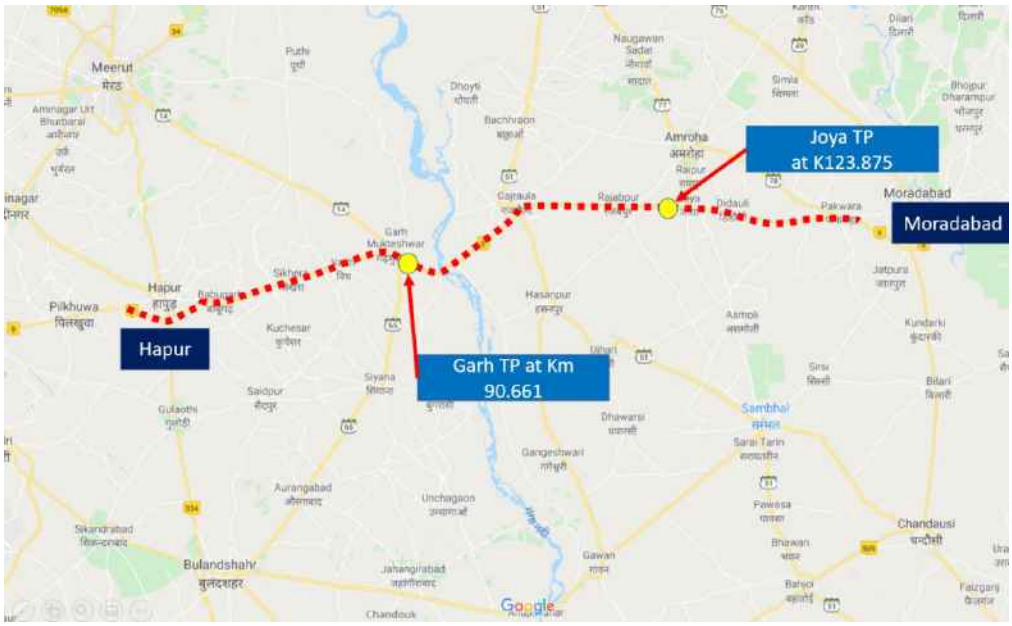

Figure 2-1: Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

Six laning of project stretch is in progress and will be completed soon. The following photographs illustrate the project section along the corridor.

Figure 2-2: Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza locations on Hapur Bypass- Moradabad Section of NH-9 for years 2017-18, 2018-19, 2019-20, 2020-21 ,2021-22,22-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

ic details have been collected.

Table 3-1below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

3.5 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)

Vehicle Type	
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Min Bus /LCV
- Bus
- Truck
- 3-Axle
- Multi Axle

3.6 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.6.1 Traffic Data

Project concessionaire has provided Traffic data for the years 2019-20 ,2020-21, 2021-22, 2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.

Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Garh Toll Plaza at Km 90.661

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25

3.7 Data Analysis

3.7.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in **Table 3-5.**

Table 3-5 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0

Vehicle Type	PCUs
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-6 : Traffic in PCU at Project Stretch Base Year 2023-24

Toll Plaza Location (Km)	Year	Traffic No	PCU	PCU Index
Garh Km 90.661	**2019-2020**	24977	42251	1.69
	2020-2021	24657	40024	1.62
	2021-2022	30283	46705	1.54
	2022-2023	32899	50882	1.55
	2023-2024	36686	56079	1.53
	2024-2025	38184	55975	1.47
Joya Km 123.875	**2019-2020**	17982	31508	1.75
	2020-2021	17570	30337	1.73
	2021-2022	20246	33545	1.66
	2022-2023	23203	38427	1.66
	2023-2024	26481	43300	1.64
	2024-2025	27615	44091	1.60

It can be observed from above that project traffic has PCU index in range of 1.5 to 1.7 which is an indicator of high proportion of Passenger traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at four toll plaza locations.

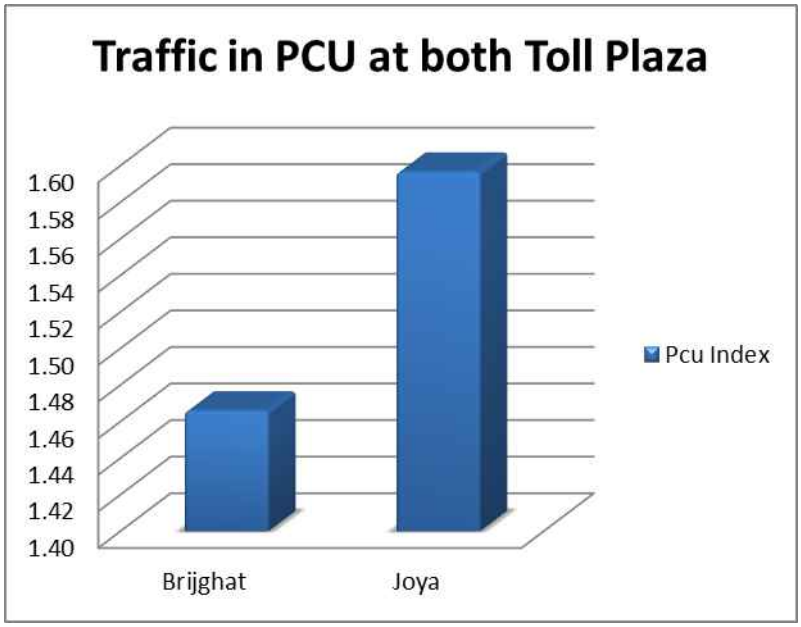

Figure 3-1: Comparison of PCU Index

It can be observed that PCU index is consistent at both toll plaza locations.

3.7.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

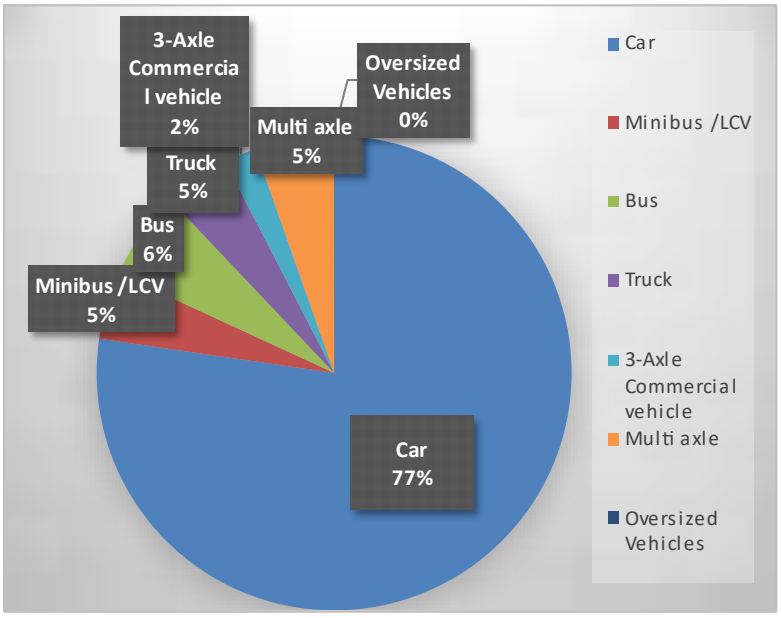

Figure 3-2: Model Split of Tollable Vehicle @TP-1

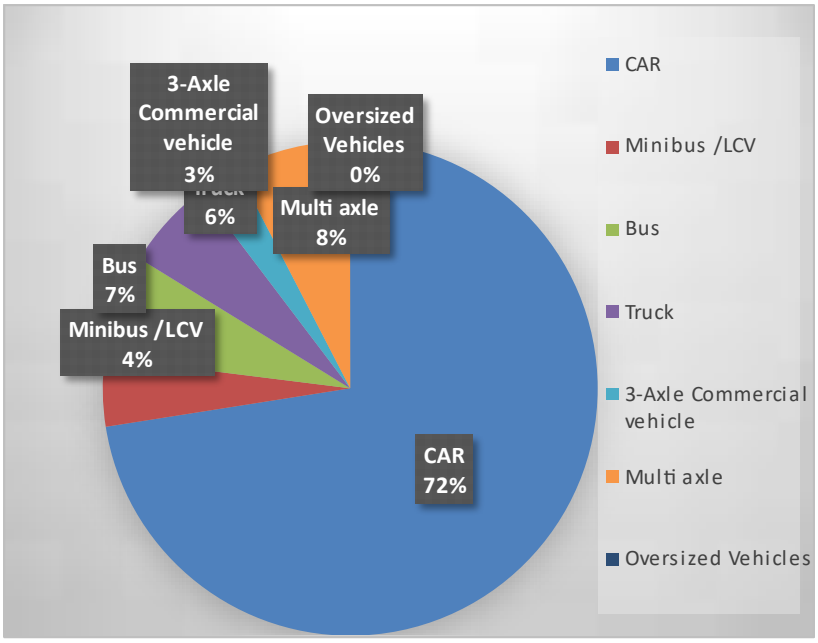

Figure 3-3: Model Split of Tollable Vehicle @TP-2

It is observed that car traffic forms about 77% - 72% of total traffic at toll plaza locations while multi axle commercial vehicles are about 7% -11% of total traffic. Truck / Bus and LCV share about 11%-13% and 5%-4% of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-7 : Journey Type Bifurcation of Traffic at GarhTP-1 KM 90.661

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	17096
2	Return Journey	21044
3	Local Commercial Single Journey	9
4	Monthly Pass Local	30
5	Monthly Pass	5

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 45%. Return journey component is 55%. The number of monthly pass local and Local Commercial Journey is 0% at Brijghat.
The following tables give the details of journey distribution at Joya toll plaza at Km 123.875.

Table 3-8 : Journey Type Bifurcation of Traffic at Zoro ka Khera TP-2 KM 121.020

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	14280
2	Return Journey	13308
3	Local Commercial Single Journey	12
4	Monthly Pass Local	8
5	Monthly Pass	7

It is observed that the project corridor demonstrates a similar pattern of single journey dominated mix of traffic across the entire stretch which is typical of major national highways.

3.8 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan

h) Any other relevant data

3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Project stretch has toll application history from last few years, and it can be assumed that project traffic is settled. However, from an analysis point of view there can be a few alternate routes at local level. Garh toll plaza is very near to the major river Ganga over which major bridge about 1 km in length is constructed. Due to this there is no locals alternative route to toll plaza at Garh. There can be one alternative route which can bypass the toll plaza at Joya. From Atrasi one can take a left and bypass Toll Plaza at Joya and go back to NH-9 at Moradabad. This route quite long and passes through congested areas of Amroha. Further the road alignment of these district roads is very poor with little chance of improvement.

The following maps show these routes in relation to project stretch at local level.

Figure 4-1: Alternate route at regional level

At regional level if we take Hisar and Rudrapur two origin destinations representing Delhi/ Haryana and Uttarakhand region, there can be one alternate via Bulandshahar – Sambhal Road. One can take Bulaandshahar road after getting down from Peripheral Expressway at after Ghaziabad. This road bypasses NH-9 between Ghaziabad and Moradabad. This route is also quite long as compared to NH-9 and also the road between Bulandshahar – Sambhal and Moradabad is poor and mostly of two-lane specifications. Hence in such case it has very little potential of any further traffic diversion from the project road.

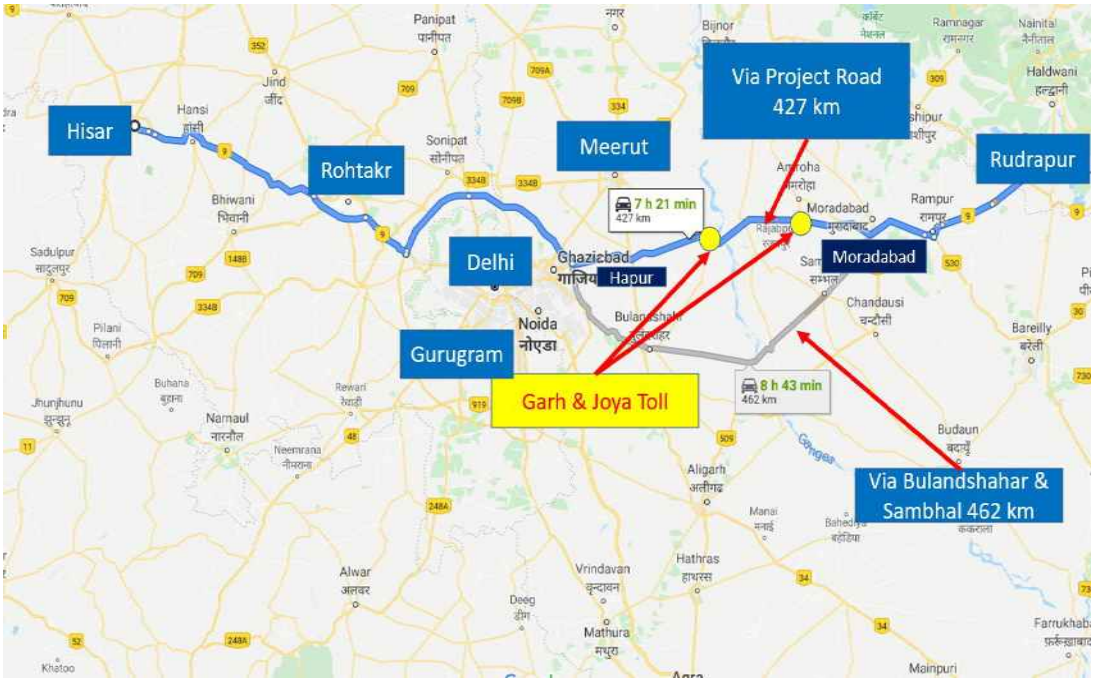

Figure 4-2: Alternate route at local level

It can be observed that the project highway forms one of the main spines of the corridor between Delhi / Ghaziabad/ Hapurand Moradabad / Rudrapur/ Haldwani. Traffic on project road is now settled and it can be assumed as dedicated traffic on project road for logistic obligations.

With six laning now nearing completion, the project stretch would become slightly more attractive due to the improved level of service. In such a case any diversion of traffic from the project road is not envisaged.

The following table provides summary of analysis of alternate route/ roads discussed above.

Table 4-1 : Competing Roads Details

Sr. No	Route Details	Designation	Length (Km)	Avg. Speed (KMPH)	Time Taken (Min)	Observations
Regional Level						
1	Hisar-Delhi- Bulandshahar- Sambhal- Moradabad - Rudrapur	Alternate Route	462	53	8Hr 43 Min	Alternate route is longer and has poor geometrics and specifications. Traffic diversion not envisaged
	Hisar-Delhi- Hapur- Gajrola- Moradabad - Rudrapur	Project Road	427	57	7 Hr 27 Min	
Local Level						
2	Atrasi- Amroha- Pakbara- Moradabad (bypassing Joya Toll)	Alternate Route	36	51	1 Hr.	Alternate route is unlikely to attract project traffic due to very poor geometrics and high congestion
	Atrasi- Joya- Palkbara- Moradabad	Project Road	220	50	28 Min	

Under these circumstances it is not envisaged that commercial or passenger traffic would switch to alternate roads from the project road. Further, it may be noted that since the project highway has already been commissioned and has a tolling history, the current traffic traversing the project corridor already factors in traffic diversion (if any) that may have taken place.

CHAPTER 5
GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Hapur–Moradabad section of NH-9has been done taking the above factors into consideration**. "IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways"** is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways.**

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

Log (P) = k x Log (EI) + A

Where,

P = Number of Vehicles (Mode wise)

EI = Economic Indicator

A = Regression constant

k = Elasticity coefficient (Regression coefficient)

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across the state of Rajasthan. Toll plazas at Garh and Joya are in the state of Uttar Pradesh. For elasticity calculations, working data from Uttar Pradesh, Delhi and Haryana has been analyzed since Delhi and Haryana have substantial impact on project traffic.

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Maharashtra State.

Table 5-1 : Per Capita Income Vs Car Uttar Pradesh

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	32002	1108100	4.51	6.04		
2013	32908	1205374	4.52	6.08	3%	
2014	34044	1423020	4.53	6.15	3%	
2015	34583	1572217	4.54	6.20	2%	

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2016	36973	1746117	4.57	6.24	7%	
2017	40641	2027972	4.61	6.31	10%	4.94%

Regression analysis of same is given in figure below.

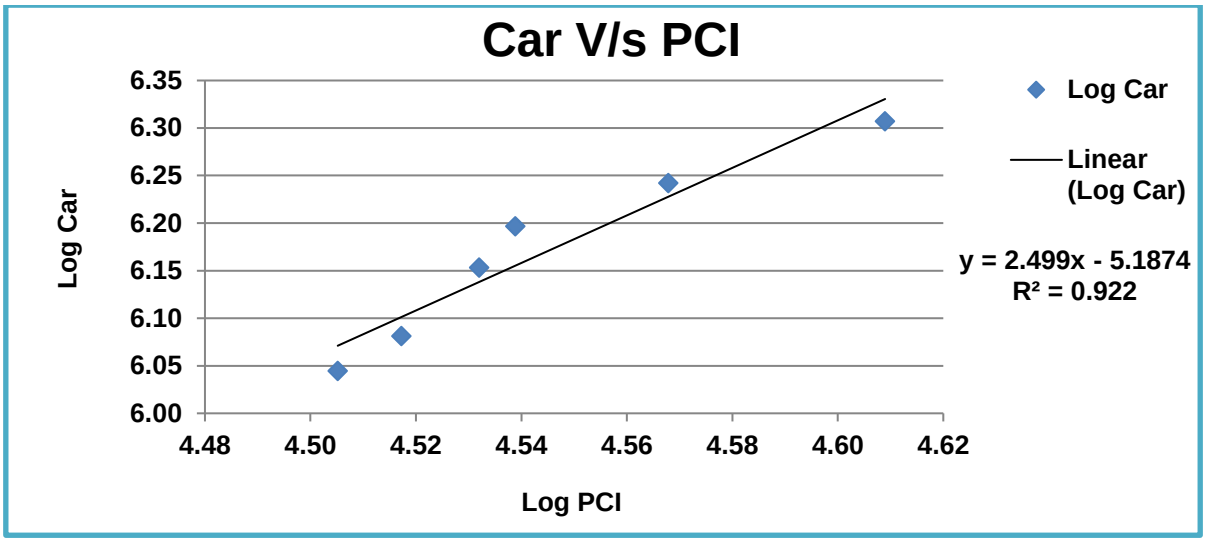

Figure 5-1: Regression and Elasticity PCI vs. Car–Extrapolation Uttar Pradesh

Table 5-2 : Population Vs Bus Uttar Pradesh

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	199812341	57901	8.30	4.76		
2013	203382046	64147	8.31	4.81	2%	
2014	206942855	74389	8.32	4.87	2%	
2015	210493544	80460	8.32	4.91	2%	
2016	214032922	89127	8.33	4.95	2%	
2017	217559836	112020	8.34	5.05	2%	1.72%

Regression analysis of same is given in figure below.

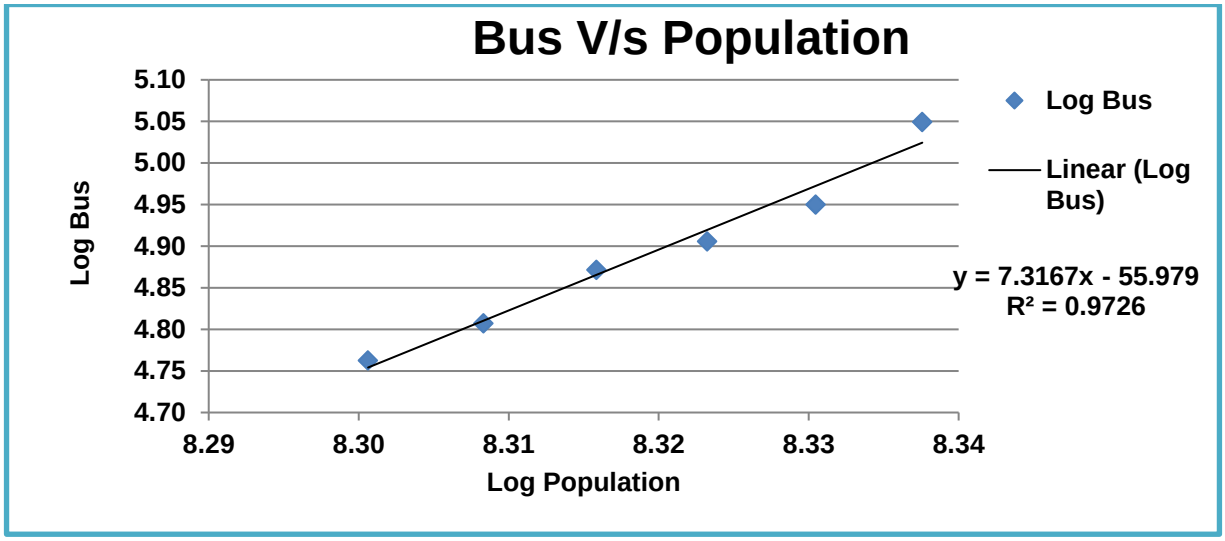

Figure 5-2: Regression and Elasticity Population vs. Bus – Extrapolation Uttar Pradesh

The elasticity of goods traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : LCV Traffic Vs NSDP Uttar Pradesh

Year	NSDP	LCV	Log NDSP	Log LCV	NSDP Growth	Average Growth (5 Year)
2012	645132	176164	5.81	5.25		
2013	673552	213657	5.83	5.33	4%	
2014	707469	265025	5.85	5.42	5%	
2015	729686	294022	5.86	5.47	3%	
2016	792049	316815	5.90	5.50	9%	5.28%

The following figure depicts regression analysis and extrapolation.

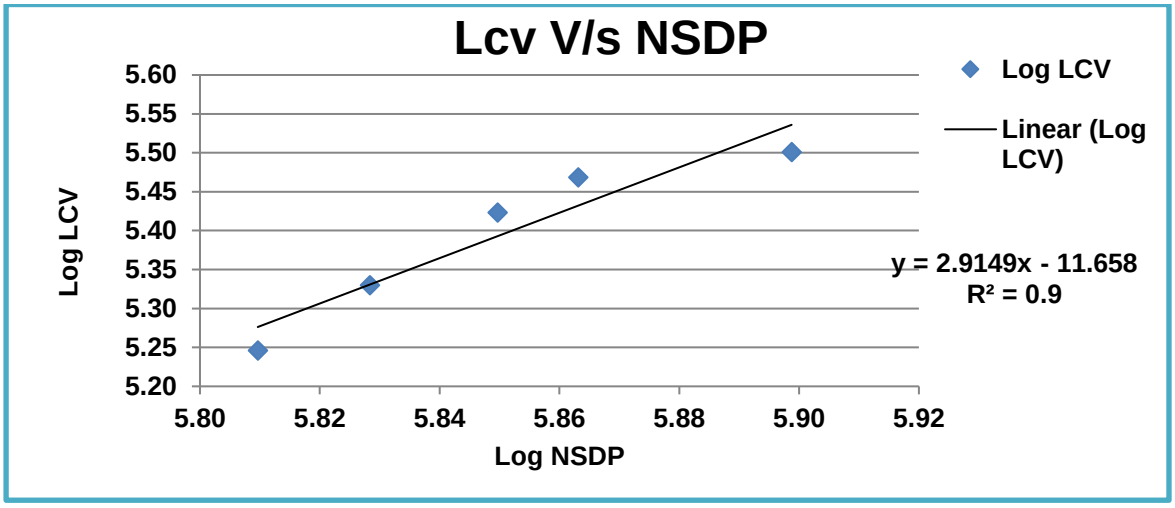

Figure 5-3: Regression and Elasticity NSDP vs. LCV Traffic – extrapolation Uttar Pradesh

Table 5-4: Trucks Traffic Vs NSDP Uttar Pradesh

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	645132	162813	5.81	5.21		
2013	673552	186404	5.83	5.27	4%	
2014	707469	202761	5.85	5.31	5%	
2015	729686	217609	5.86	5.34	3%	
2016	792049	245688	5.90	5.39	9%	
2017	883962	265167	5.95	5.42	12%	6.55%

The following figure depicts regression analysis and extrapolation.

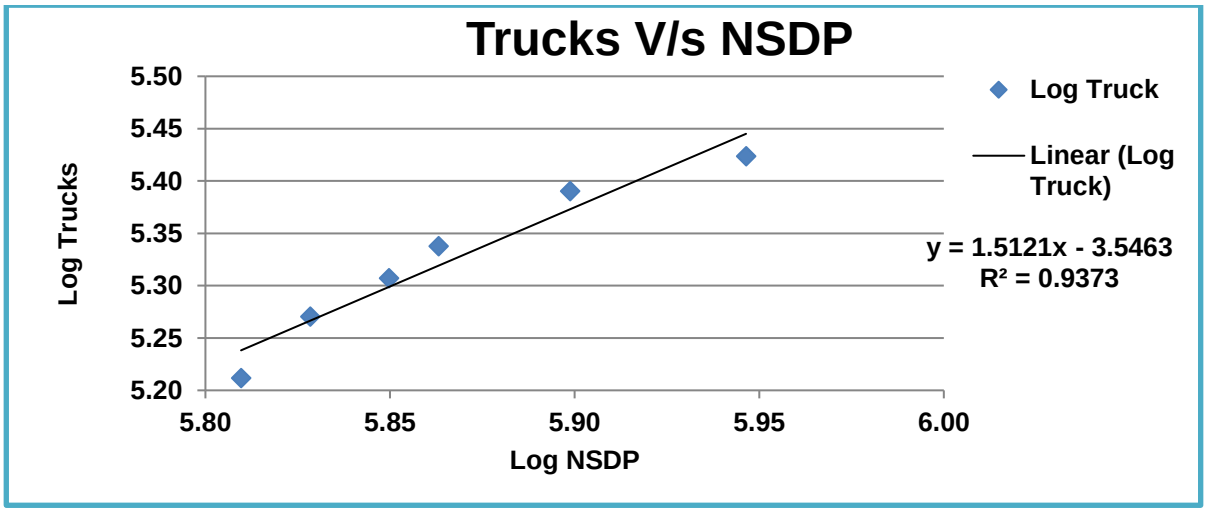

Figure 5-4: Regression and Elasticity NSDP vs. Truck Traffic – extrapolation Uttar Pradesh

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-4 : Summary Regression Analysis Uttar Pradesh

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth	Growth Elastic Model
Uttar Pradesh	Car/Jeep	PCI	y = 2.499x + -5.1874	R^2 = 0.922	2.4990	4.94%	12.34%
	Bus	Population	y = 7.3167x - - 55.9791	R^2 = 0.9726	7.3167	1.72%	12.56%
	LCV	NSDP	y = 2.9149x - - 11.6585	R^2 = 0.9	2.9149	5.28%	15.40%
	Truck	NSDP	y = 1.5121x - - 3.5463	R^2 = 0.9373	1.5121	6.55%	9.90%

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Delhi State.

Table 5-5 : Per Capita Income Vs Car Delhi

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	185361	2172069	5.27	6.34		
2013	193175	2416974	5.29	6.38	4%	
2014	202216	2568380	5.31	6.41	5%	
2015	215726	2730071	5.33	6.44	7%	
2016	235737	2986579	5.37	6.48	9%	
2017	247255	3061817	5.39	6.49	5%	5.95%

Regression analysis of same is given in figure below.

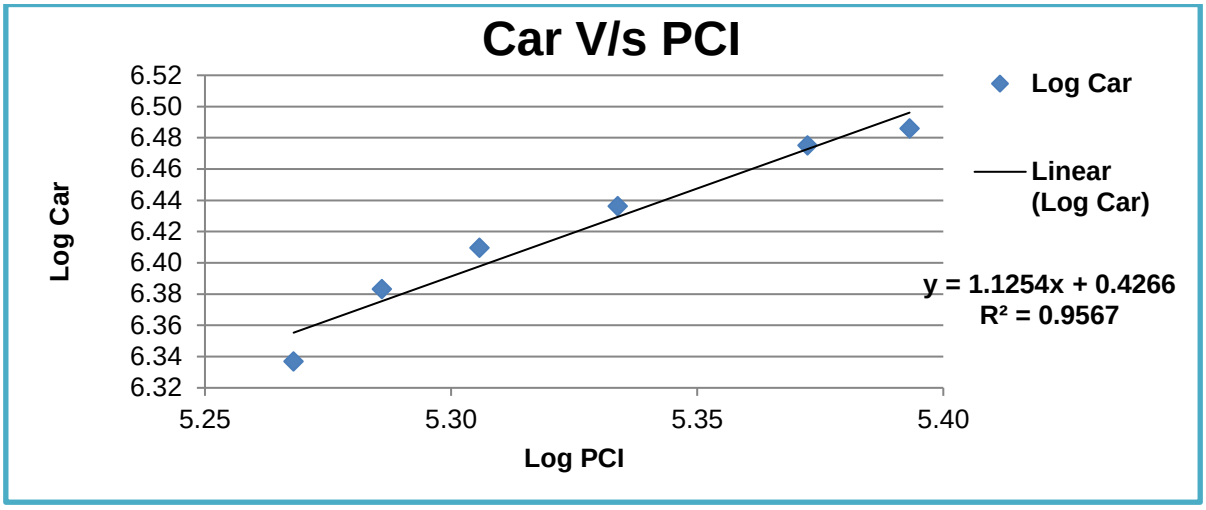

Figure 5-5: Regression and Elasticity PCI vs. Car–Extrapolation Delhi

Table 5-6 : Population Vs Bus Delhi

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	16787941	109790	7.22	5.04		
2013	17071599	19917	7.23	4.30	2%

2015	333359	348732	5.52	5.54	6%	
2016	372659	367730	5.57	5.57	12%	
2017	412006	390321	5.61	5.59	11%	8.75%

The following figure depicts regression analysis and extrapolation.

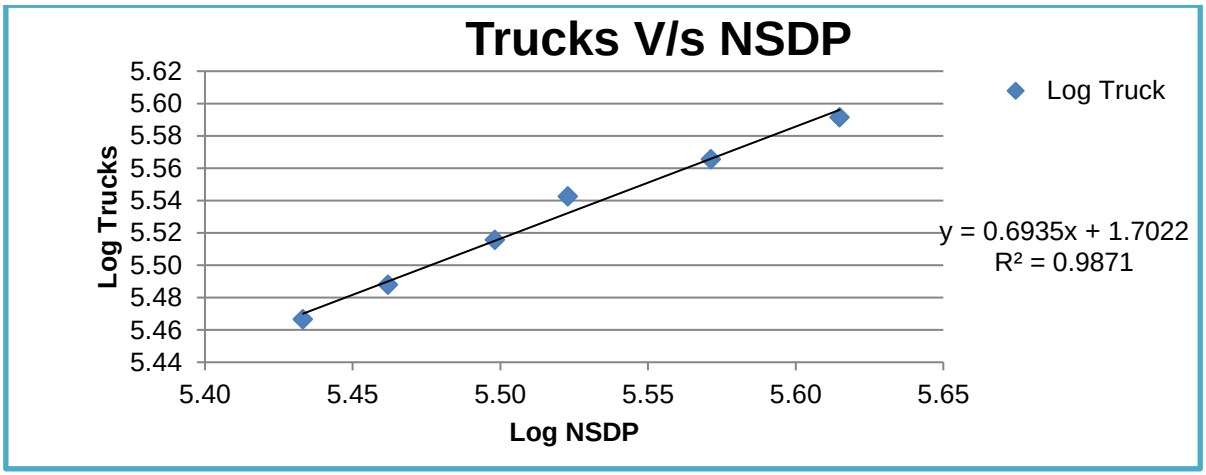

Figure 5-12: Regression and Elasticity NSDP vs. Truck Traffic – extrapolation Haryana

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for the good fit regression as reflected by R2 values are presented in the Table below.

Table 5-13: Summary Regression Analysis Haryana

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth	Growth Elastic Model
Haryana	Car/Jeep	PCI	y = 1.4354x - -1.1361	R^2 = 0.9487	1.4354	7.23%	10.38%
	Bus	Population	y = 5.736x - -37.8732	R^2 = 0.9927	5.7360	1.52%	8.69%
	LCV	NSDP	y = 1.222x - -1.5373	R^2 = 0.9834	1.2220	8.30%	10.14%
	Truck	NSDP	y = 0.6935x - 1.7022	R^2 = 0.9871	0.6935	8.75%	6.07%

The economic model for predicting growth is a good tool, however other local, regional, and national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trends of growth. Project stretch of Hapur to Moradabad is under tolling operation with current concessionaire and has less than a year of tolling history from May 2019. Traffic data for the last two years is affected by COVID-19 impact. Hence sufficient data points are not available to be able to establish a reliable past trend of traffic growth. A minimum of about 5 -6 years' traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

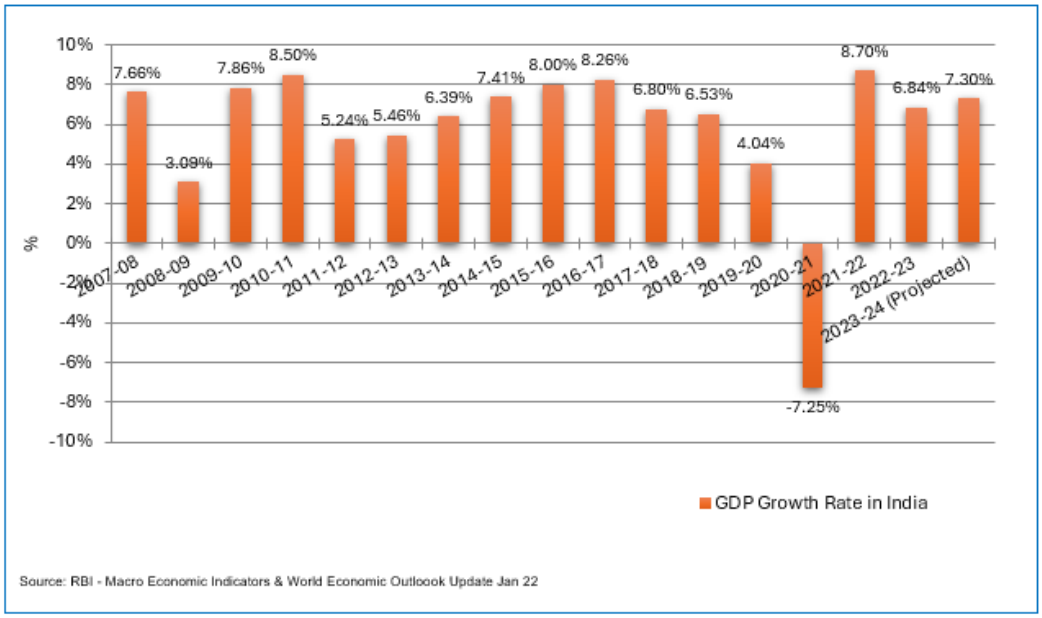

Figure 5-14: Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on Make -In- India it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. The World Economic Outlook update also has predicted a growth rate of about 7.5 % in the year 2022-23.

5.6 Developments along and around the Project Corridor & State

Though growth of Uttar Pradesh has been consistently below the national average economic growth, it is the largest state in terms of population and consumption driven demand for goods and services will remain significantly high. The rate of growth of NSDP also seems to be catching up with the national average over the years. Other regions in the influenced area states, namely Delhi, Haryana and Uttarakhand are all growing significantly faster than the national average. Considering the scenario, it may be assumed that the traffic growth on the project highway would remain high and there are minimal risks in terms of growth.

The corridor passes through heavily cultivated Gangetic plains and also connects the fertile Doaba regions of the Uttarakhand plains. Simbaoli, one of the largest and most modern sugar refinery complexes falls right on the project corridor. Sugar refineries like this link agriculture, distillery, clean fuel technologies, green energy generation including cogeneration etc. which is a positive influence on this agriculturally right region. Other parts of the capital region of Delhi are also

experiencing rapid urbanization fueled by industrialization and growth. Thus, induced traffic from these developments around the project corridor and due to the improved facility will be a positive contributing factor to the traffic growth on the project corridor.

5.6.1 Industrial Units along Project Corridor

This project section of the NH-24 (newNH-9) crosses three districts of Uttar Pradesh (Hapur, Amroha and Moradabad). There are about 1000 significant industrial units in these districts out of which there are 40 large Scale and 11 Medium Scale industries. The major industrial base is dependent on agriculture and timber in the surrounding region. Being a sugarcane growing region, there are a number of sugar mills in the project catchment. Simbhawli Sugarmill is one of the largest integrated refineries producing gsugar, ethanol and other related products. The following map shows some of the major industrial establishments along and in influence area of project stretch.

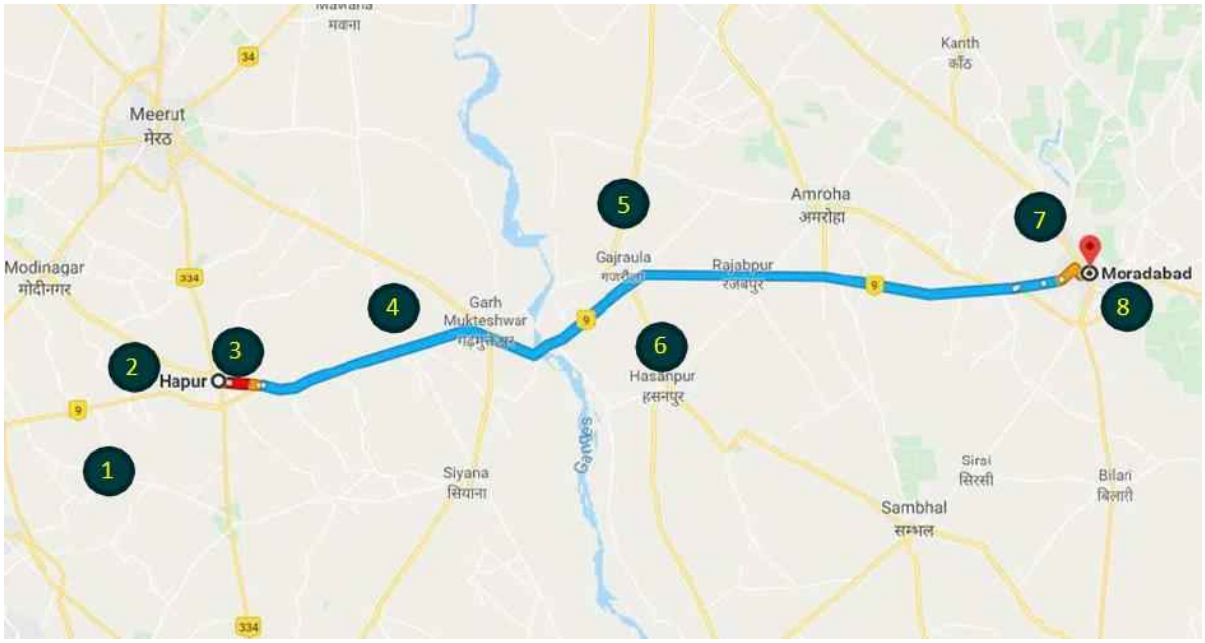

Figure 5-15: Industrial Units along project corridor

Industries shown in the above map are listed below.

1. **Dhaolana** (Chetak enterprises, Spooner Industries Pvt. Ltd., Astech build product India Pvt. ltd.,
2. **Jindal Nagar, Hapur** (Marino Industries Jindal Nagar Hapur)– Large Scale Industry of Laminated Furnitures.
3. Medium Scale Industries in **Shakti Nagar, Hapur**
4. Sugar Mills (**Simbhawali** Sugar mills)
5. **GajraulaIndustrialArea1&2**(Paper & Sugar Mills, Food Products, Organic food Products)
6. Trivani Engineering & Industries Ltd., **Hasanpur** (Engineering Goods)
7. **Agwanpur** (Industries of Milk Powder, Ghee, Acrylic Fibre, Crystal Sugar, Craft Paper)
8. **Dalpatpur** (Moradabad Dugdh Utpadan Sahakari Sangh– Milk & Milk Products)

Rapid expansion of NCR and NOIDA has triggered growth along the project corridor as well. Large number of residential projects can be seen coming up along project road near Hapur, Gajraula and Moradabad. In fact, there is a new city “New Moradabad” has come up near Pakbara on Delhi Road.

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The rate of growth is moderate in light of overall regional trends. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, the rate of growth diminishes. The same growth rate is not sustainable for long. It is an established practice to step down future growth rates at suitable interval of years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic and Most Likely** with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Project Stretch

Table 5-12 : Recommended Growth Rates Optimistic

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046
Car/Jeep/Van	6.23%	6.01%	5.78%	4.36%	4.17%
LCV	3.26%	3.06%	2.47%	1.76%	1.57%
Bus	3.33%	3.20%	3.44%	2.73%	2.62%
2- Axle	3.81%	3.61%	3.17%	1.76%	1.57%
3 - Axle	3.81%	3.61%	3.17%	1.76%	1.57%
4 to 6 Axle	4.14%	3.92%	3.43%	1.89%	1.68%
7 and Above Axle	4.14%	3.92%	3.43%	1.89%	1.68%

Table 5-13 : Recommended Growth Rates Pessimistic

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046
Car/Jeep/Van	5.73%	5.51%	5.28%	3.86%	3.67%
LCV	2.76%	2.56%	1.97%	1.26%	1.07%
Bus	2.83%	2.70%	2.94%	2.23%	2.12%
2- Axle	3.31%	3.11%	2.67%	1.26%	1.07%
3 - Axle	3.31%	3.11%	2.67%	1.26%	1.07%
4 to 6 Axle	3.64%	3.42%	2.93%	1.39%	1.18%
7 and Above Axle	3.64%	3.42%	2.93%	1.39%	1.18%

Table 5-14 : Recommended Growth Rates Most Likely

Category / Year	2024-2026	2026-2031	2031-2036	2036-2041	2041-2046
Car/Jeep/Van	5.98%	5.76%	5.53%	4.11%	3.92%
LCV	3.01%	2.81%	2.22%	1.51%	1.32%
Bus	3.08%	2.95%	3.19%	2.48%	2.37%
2- Axle	3.56%	3.36%	2.92%	1.51%	1.32%
3 - Axle	3.56%	3.36%	2.92%	1.51%	1.32%
4 to 6 Axle	3.89%	3.67%	3.18%	1.64%	1.43%
7 and Above Axle	3.89%	3.67%	3.18%	1.64%	1.43%

Traffic and revenue have been worked out on the basis of the above growths and some are presented in subsequent chapters of the report.

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below. These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza 1- Garh @90.661 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Hapur-Moradabad project, the Target Date and Target Traffic are defined as under:

Target Date - 1st April 2028

Target Traffic - 67413 in PCU

It was observed that as per traffic projections, average traffic volume is in excess of target traffic in all scenarios. The probable extension of the concession period is estimated according to article 29 of the concession agreement which comes to about 2 years. Traffic forecast and revenue projections have been kept up to concession period in report till actual finalization of modification.

Most Likely

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2028	67413	59825	-11%	17%	17%	22	3.7

Optimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2028	67413	60409	-10%	16%	16%	22	3.4

Pessimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2028	67413	59253	-12%	18%	18%	22	4.0

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

The fee schedule in the CA of Hapur-Moradabad section of NH-9 is based on the old toll policy. As per the Toll Notification (Schedule -G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued for 50 trips in month at 2/3d rate.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van I - Rs. 265 per month
    b) Local Commercial Vehicles at 50% rate for single journey

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

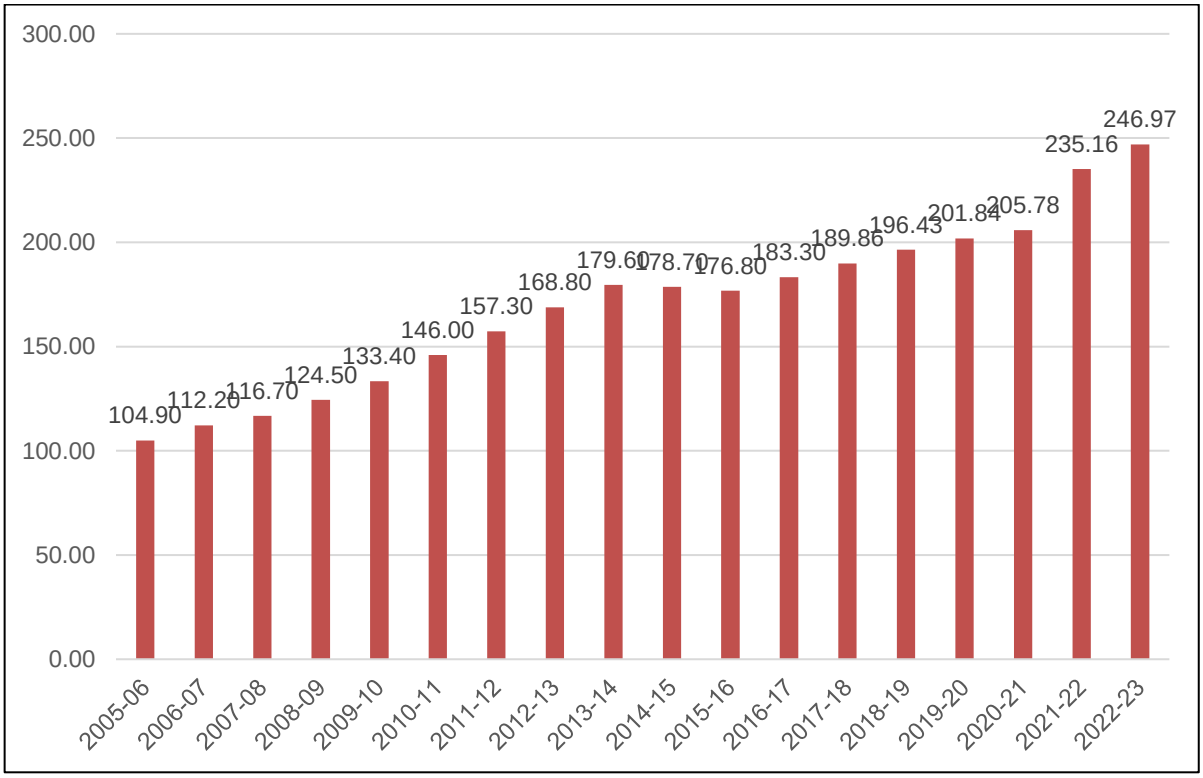

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Oversized Vehicles (7 or more Axles)	4.20

There is no bypass or structure to be factored in for rates calculations.

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given below.

Table 7-2 : Toll Rates for Single Journey@ Km 90.661

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under **Optimistic, Pessimistic and Most Likely** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2045-46 starting from the year 2024-25 are shown in tables below.

Table 7-9 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Year	TP-1	TP2	Total
2024-25	208.26	107.30	**315.56**
2025-26	235.30	118.51	**353.81**

CHAPTER 8

CONCLUSION AND RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Hapur to Moradabad section of NH-9 in state of Uttar Pradesh from km 50.000 to km 148.277is currently four lane and would be augmented to six lane in current concession. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the busy and prominent national highway NH-9which is main link for traffic from Punjab, Haryana, Delhi to Moradabad, Rampur and eastern part of Uttarakhand. There are large number of townships, industrial corridors and other business establishments coming up along the project corridor. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give a positive impact to traffic flow on the project. The following can be considered as major outcomes of the study.

a) There is a good amount of tollable traffic running on the project.

b) Project corridor has potential to witness traffic growth @ 6-8% annually Post COVID-19 in near future due to various development in area and overall development of economy.

c) The Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.

Based on the above it can be considered a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The Government of India through National Highway Authority of India (NHAI) embarked upon a program to enhance the traffic capacity and safety for efficient transportation of goods as well as passenger traffic on National Highway Sections under NHDP Phase V. Under Phase V NHAI has planned to convert 6,500 km of existing 4-lane National Highways into 6-lane National Highway. Sections envisaged under 6-laning comprise the Golden Quadrilateral section (5,700 km) and some other sections which are 800 km in length.

The project under consideration, Six Laning of section from Km 287.400 to Km 401.200 of NH-8 in state of Rajasthan and Gujarat is one such road project NHAI intended to implement on a BOT basis in the DBFOT format. *M/s Udaipur Tollway Ltd*. (Concessionaire) has been awarded the Project for a concession period of 21 years starting from 3rd September 2017. The Project has been commissioned and is currently in the operation / maintenance phase. Six laning of project has also been completed in June 2021.

The length of the project road is 113.800 Km approx. The project road is section of NH-8, one of the busiest national highways of India and part of Mumbai – Delhi arm of golden quadrilateral.

Project road alignment passes through the rural area in most part of stretch. After Udaipur there is no major urban establishment other than Rishabhdeo, a famous religious place in the region. The following figure shows project road in regional context.

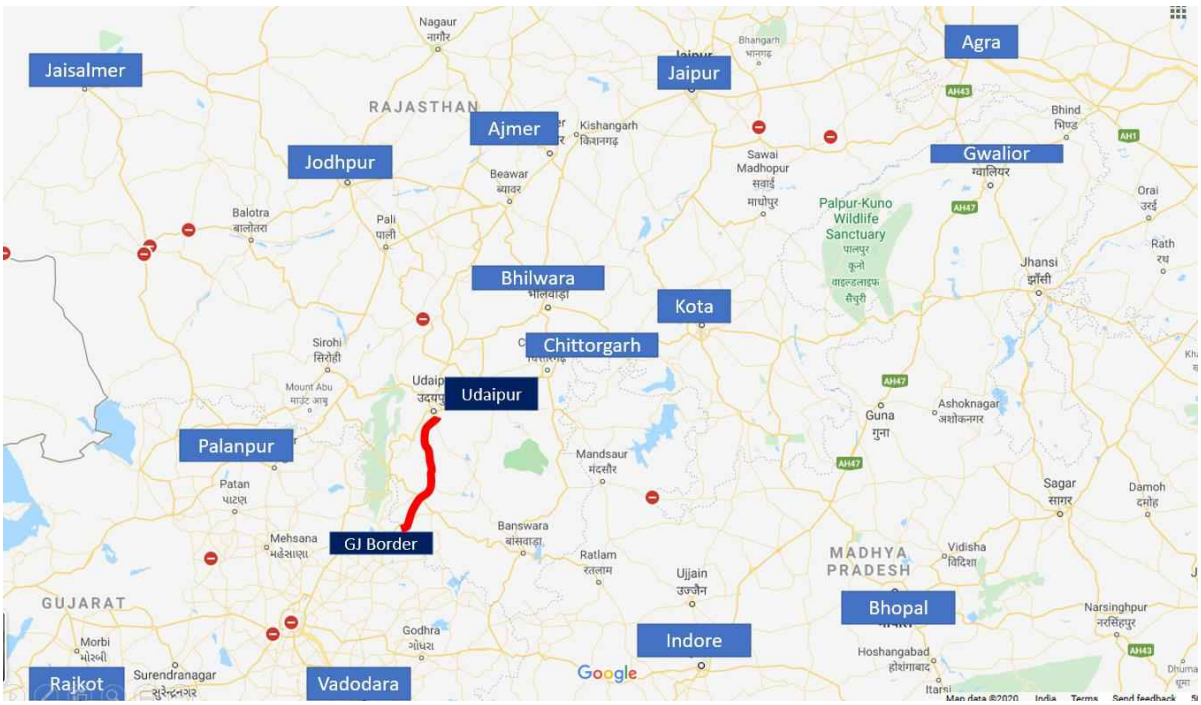

Figure 1-1 : Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB INFRASTRUCTURE TRUST has engaged *GMD Consultants* to assess the future traffic and toll potential of project along with related operation & maintenance expenditure involved.

This report named as **"Traffic Study & *Toll Revenue Projection Report*"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

National Highway 8 is one of the busiest national highways of India. Project stretch from Udaipur to Gujarat border on NH-8 is part of Delhi Mumbai arm of Golden quadrilateral.

Besides being part of major transport link between Mumbai and Delhi, stretching from Udaipur to Shamlaji forms major connectivity between Udaipur, Ahmedabad, Rajkot Jamnagar and Porbandar. After renumbering of all national highways by National Highway Authority of India in 2010, the current NH 48 was formed by merging the old NH 8 (Delhi-Mumbai section) and NH 4 (Mumbai-Chennai). National Highway 48 starts at Delhi and terminates at Chennai and goes through Jaipur, Udaipur, Vadodara, Mumbai, Pune and Bengaluru, traversing through six states of India.

2.2 Project Stretch Description

Section of NH-8 (New NH-48) from Udaipur to Gujarat Border is part of major transportation link in the area connecting industrial / tourist cities of Udaipur-, Ahmedabad, Vadodara, Mumbai. Project stretch would be faster connectivity to Udaipur from Gujarat border and onwards to Ahmedabad once six laning is complete.

Project stretch from Udaipur to Gujarat border as such passes through rural areas. The area has a number of green marble mines and there are many establishments on the way. Rishabhdeo in one such area having more than 500 such units.

Major religious centers like Shamlaji and Ekling ji contribute to substantial passenger traffic on project stretch.

There is one operative toll plaza at project stretch at Khandi Obri at km 348.450. The following figure shows project alignment and toll plaza location.

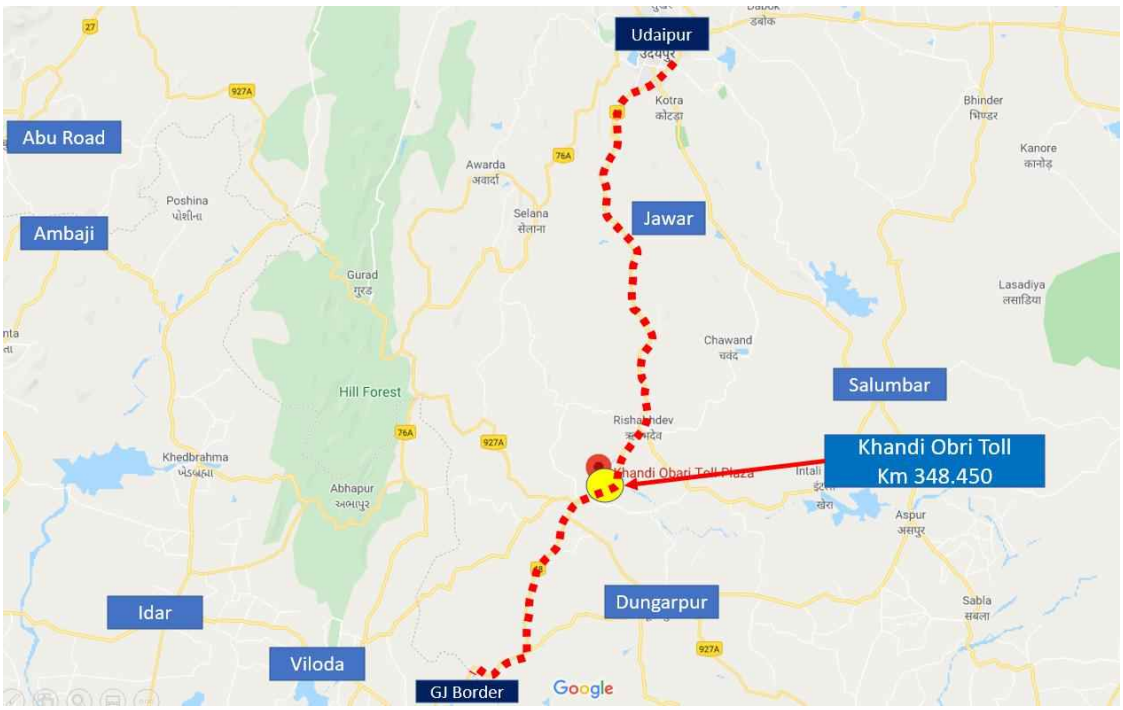

Figure 2-1 : Project Alignment with Toll Plaza

2.3 Project Corridor Illustration

The sixth laning of the project stretch is completely underway and is expected to be completed soon. The following photographs illustrate the project section along the corridor.

Figure 2-2 : Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza location on Udaipur – Gujarat section of NH-8 for year 2017-18, 2018-19, 2019-20, 2020-21 ,2021-22,2022-23, April 2023 to November 2023 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. No	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 348.450 Toll Plaza at Khandi Obri	AADT for Year 2017-18, 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023 to	For Year 2017-18, 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023	For Year 2017-18, 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April	For Year 2017-18, 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April 2023	For Year 2017-18, 2018-19, 2019-2020, 2020-21, 2021-22, 2022-2023, Eight month from April

SR. No	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
		November 2023 & Four month from April 2024 to July 2024	to November 2023 & Four month from April 2024 to July 2024	2023 to November 2023 & Four month from April 2024 to July 2024	to November 2023 & Four month from April 2024 to July 2024	2023 to November 2023 & Four month from April 2024 to July 2024

3.2 Classified traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Min Bus /LCV
- Truck / Bus
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the year 2024-2025(traffic data from April 2024 to July 2024).

Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Khandi Obri Toll Plaza at Km 348.450

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2019-20	Annual Average Daily Traffic (Nos.)- 2020-21	Annual Average Daily Traffic (Nos.)- 2021-22	Annual Average Daily Traffic (Nos.)- 2022-23	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in ***Table 3-4***.

Table 3-4 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-5 : Traffic in PCU at Project Stretch Base Year 2023-24

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2019-20	Khandi Obri at Km 348.450	13248	34871	2.63
2020-21	Khandi Obri at Km 348.450	11113	30155	2.71
2021-22	Khandi Obri at Km 348.450	13355	35453	2.65
2022-23	Khandi Obri at Km 348.450	14545	38213	2.63
2023-24	Khandi Obri at Km 348.450	16919	44472	2.63
2024-25	Khandi Obri at Km 348.450	17820	46081	2.59

It can be observed from above that project traffic has PCU index more than 2.5 which is an indicator of high proportion of commercial traffic in traffic mix in project corridor.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

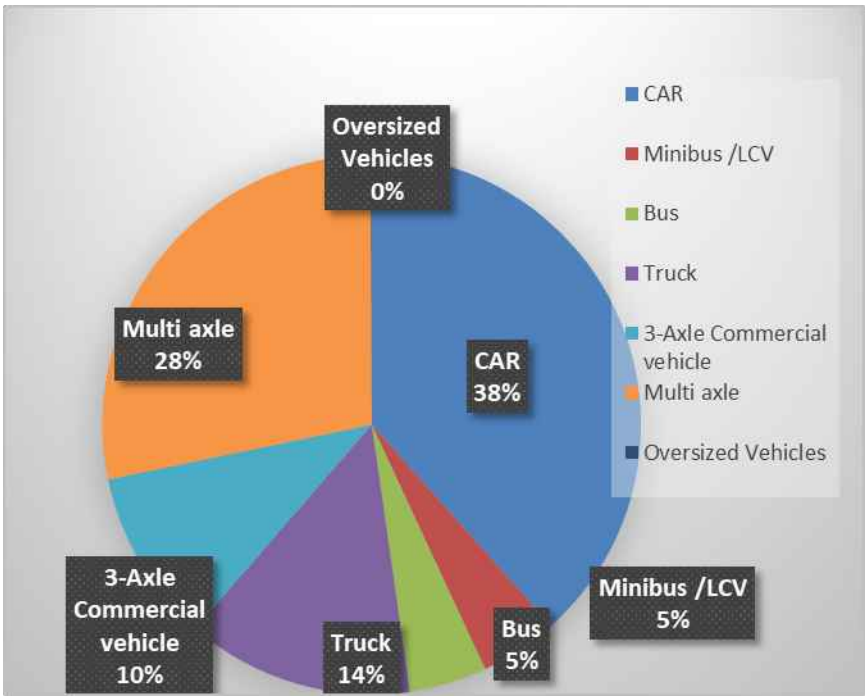

Figure 3-1 : Model Split of Tollable Vehicle

It is observed that car traffic forms about 38% of total traffic at toll plaza locations while multi axle commercial vehicles are about 38% of total traffic. Truck /Bus and LCV share about 18% and 5 % of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-6 : Journey Type Bifurcation of Traffic at Khandi Obri TP KM 348.450

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	14312
2	Return Journey	3280
3	Local Commercial Single Journey	155
4	Monthly Pass Local	73
5	Monthly Pass	0

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 80%. Return journey component is 18%. The number of monthly pass Local is 0% and Local Commercial Single journey is 1% at Khandi Obri toll plaza.

It is observed that the project corridor demonstrates pattern of single journey dominated mix of traffic which is typical of major national highways having more long-distance traffic.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor

- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Competing / Alternate route

Project stretch is part of Delhi – Mumbai arm of golden quadrilateral transport network. Additionally, it also forms good connectivity to Ahmedabad, Rajkot, Jamnagar and other port and industrial establishments in bay of Khambat of Gujarat.

At regional level, there can be three alternates for Udaipur- Ahmedabad pair of Origin & Destination. One via project road (Udaipur – Rishabhdeo- Shamlaji- Ahemedabad), second on east side (via Himmatnagar) and third on far east side via Palanpur- Mehsana.

The following maps show these routes in relation to project stretch at regional level.

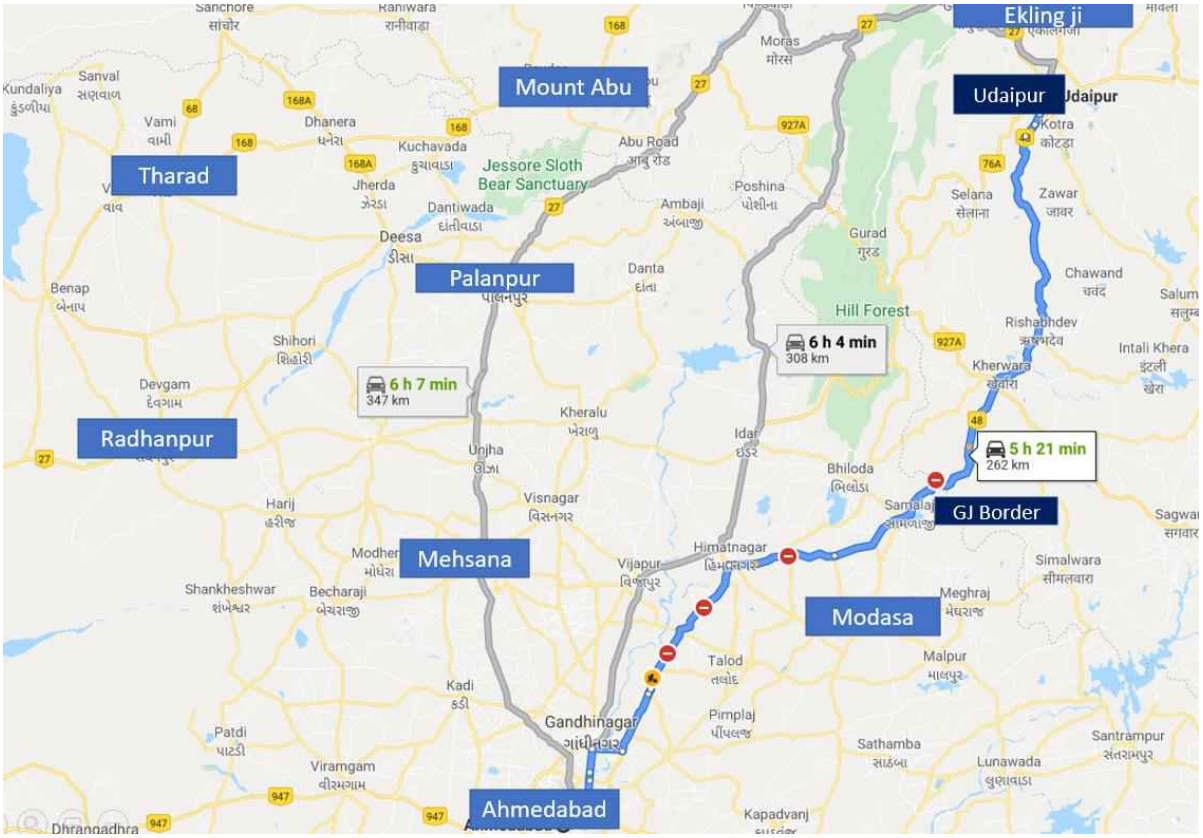

Figure 4-1 : Alternate route at regional level Udaipur - Ahmedabad

The route via project road is the most preferred one due to minimum travel time and shortest length.

On a high level, between Delhi and Vadodara, there can be three alternatives. One via project road (Delhi- Jaipur- Udaipur- Shamlaji -Vadodara), second via Delhi-Sikar-Ahmedabad- Vadodara) and third via Delhi- Jaipur- Mandsauar – Banswara- Godhra- Vadodara. The following map shows these alignments.

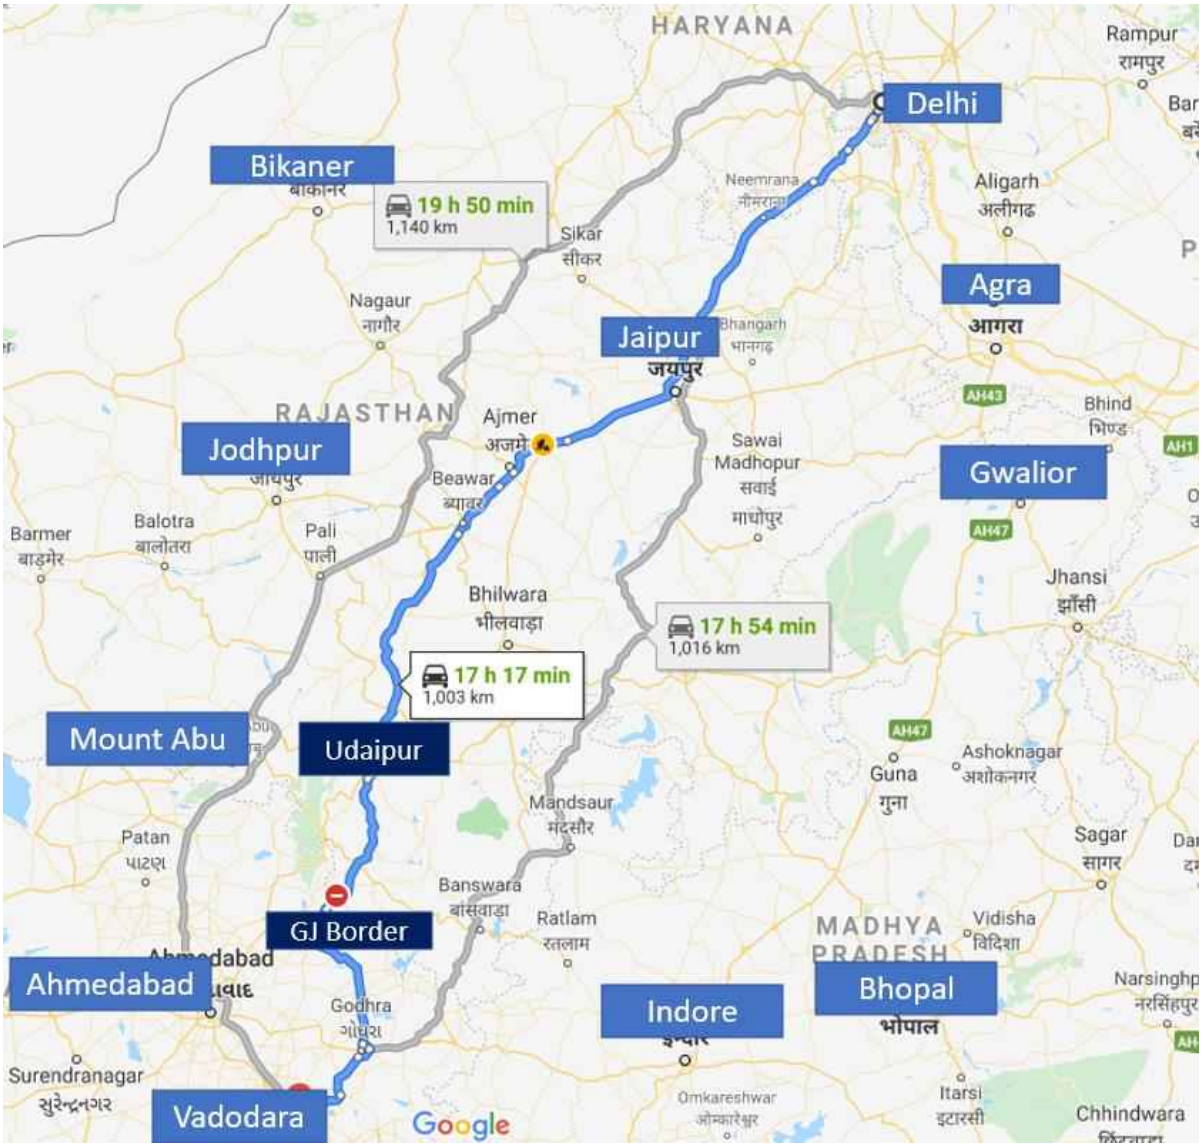

Figure 4-2 : Alternate route at regional level Delhi - Vadodara

For Delhi- Vadodara pair of origin and destination, route via project road (Udaipur – Shamlaji) is most preferred one due to minimum travel time and length of route.

Thus, at regional level project road is preferred route of long-distance traffic between Mumbai- Delhi and Udaipur- Ahmedabad. Project road is under toll operation since long hence traffic on project road is now settled and it can be assumed as dedicated traffic on project road for logistic obligations.

After six laning completion, the project stretch would become slightly more attractive due to the improved level of service. In such a case any further diversion of traffic from the project road is not envisaged. It is expected that there could be some attracted traffic on the project road after completion of the six laning of Kishangarh Gulabpura stretch which is connecting section for project corridor.

At the local level there is no potential alternate route to bypass the toll plaza.

The following table provides summary of analysis of alternate route/ roads discussed above.

Table 4-1 : Competing Roads Details

Sr. No	Route Details	Designation	Length (Km)	Avg. Speed (KMPH)	Time Taken (Min)	Observations
Regional Level						
1	Udaipur- Palanpur -Mehsana- Ahemedabad	Alternate Route	347	64	6 Hr 7 Min	Project road alternate has minimum travel time and shortest road
	Udaipur- Idar - Himmatnagar- Ahemedabad	Alternate Route	308	50	6 Hr 8 Min	
	Udaipur- Rishabhdeo- Shamlaji- Ahemedabad	Project Road	262	49	5 Hr 21 Min	
2	Delhi- Jaipur- Mandsaur - Banswara- Vadodara	Alternate Route	1140	57	19 Hr 50 Min	Project road alternate has minimum travel time and shortest road
	Delhi- Sikar- Mt. Abu - Ahemedabad- Vadodara	Alternate Route	1016	57	17 Hr 54 Min	
	Delhi- Jaipur- Udaipur - Vadodara	Project Road	1003	58	17 Hr 54 Min	

Under these circumstances it is not envisaged that commercial or passenger traffic would switch to alternate roads from the project road. Further, it may be noted that since the project highway has already been commissioned and has a tolling history, the current traffic traversing the project corridor already factors in traffic diversion (if any) that may have taken place. Further after completion of six laning, level of service would improve on project corridor, and this would create favorable conditions for traffic.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Udaipur to Gujarat Border section of NH-8 has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$$Log (P) = k \times Log (EI) + A$$

Where,

P = *Number of Vehicles (Mode wise)*
EI = *Economic Indicator*
A = *Regression constant*
k = *Elasticity coefficient (Regression coefficient)*

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across the state of Rajasthan. Toll plazas at Khondi Obri is in the state of Rajasthan but the traffic on project stretch has certain contribution from other states as well. For elasticity calculations, working data from such states in addition to Rajasthan has been analyzed.

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-1 : Per Capita Income Vs Car Rajasthan

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	57192	591069	4.76	5.77		
2013	58441	659542	4.77	5.82	2%	
2014	61053	733916	4.79	5.87	4%	
2015	64496	814079	4.81	5.91	6%	
2016	68565	899307	4.84	5.95	6%	
2017	71394	988391	4.85	5.99	4%	4.55%

Regression analysis of same is given in figure below.

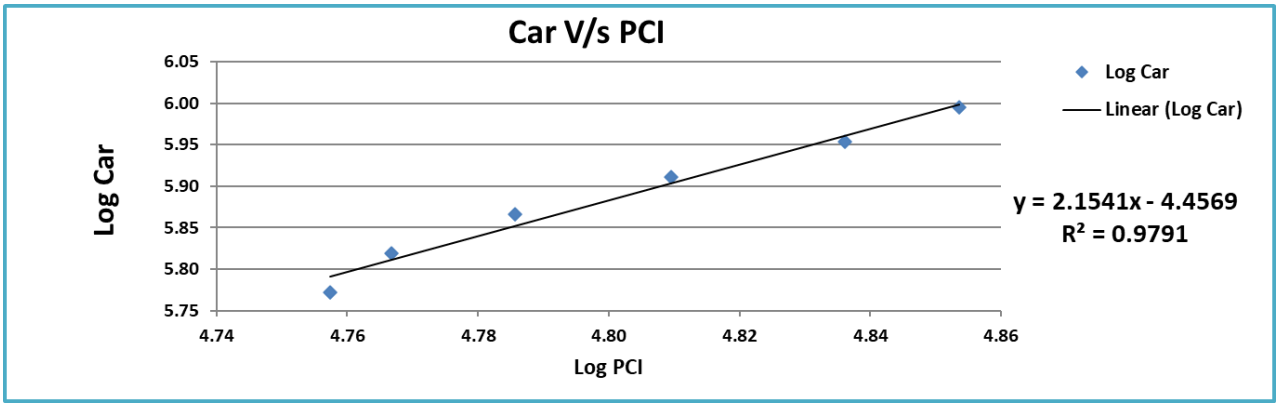

Figure 5-1 : Regression and Elasticity PCI vs. Car – Extrapolation Rajasthan

Table 5-2 : Population Vs Bus Rajasthan

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	68548437	83345	7.84	4.92		
2013	69783885	88616	7.84	4.95	2%	
2014	71016445	93892	7.85	4.97	2%	
2015	72245688	97650	7.86	4.99	2%	
2016	73471198	102818	7.87	5.01	2%	
2017	74692571	108680	7.87	5.04	2%	1.73%

Regression analysis of same is given in figure below.

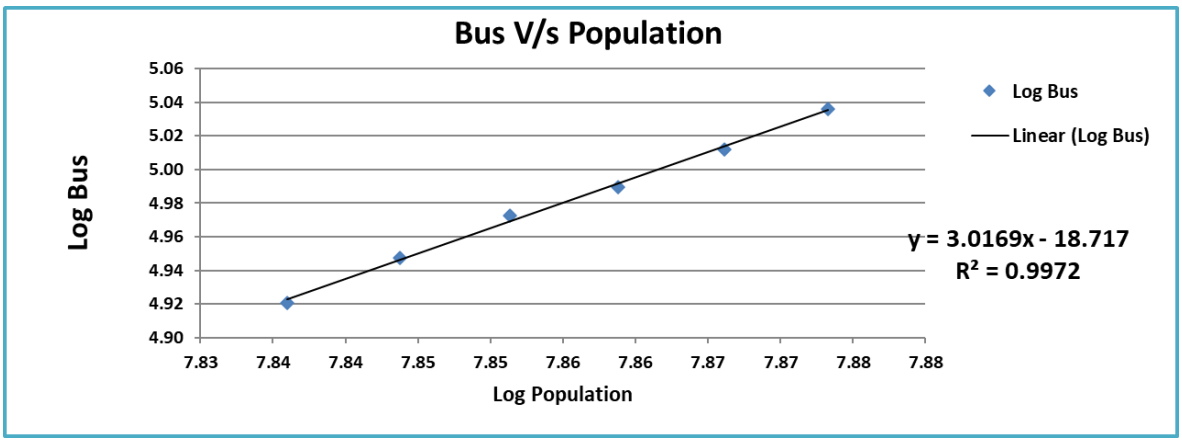

Figure 5-2 : Regression and Elasticity Population vs. Bus – Extrapolation Rajasthan

Elasticity of LCV has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : LCV Vs NSDP Rajasthan

Year	NSDP	LCV	Log NSDP	Log LCV	NSDP Growth	Average Growth
2012	395331	69509	5.60	4.84		
2013	409802	76396	5.61	4.88	4%	
2014	434292	33379	5.64	4.52	6%	
2015	465408	91787	5.67	4.96	7%	
2016	501922	99763	5.70	5.00	8%	6.16%

The following figure depicts regression analysis and extrapolation.

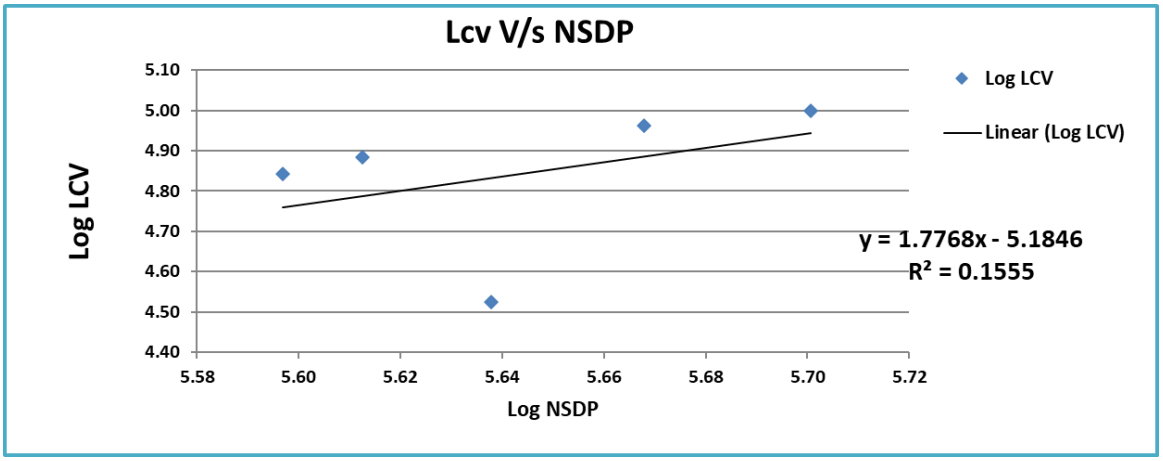

Figure 5-3 : Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Rajasthan.

Elasticity of Goods Traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-4 : GOODS Traffic Vs NSDP Rajasthan

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth
2012	395331	362028	5.60	5.56		
2013	409802	401983	5.61	5.60	4%	
2014	434292	434379	5.64	5.64	6%	
2015	465408	472365	5.67	5.67	7%	
2016	501922	517604	5.70	5.71	8%	
2017	530172	561158	5.72	5.75	6%	6.06%

Following figure depict regression analysis and extrapolation.

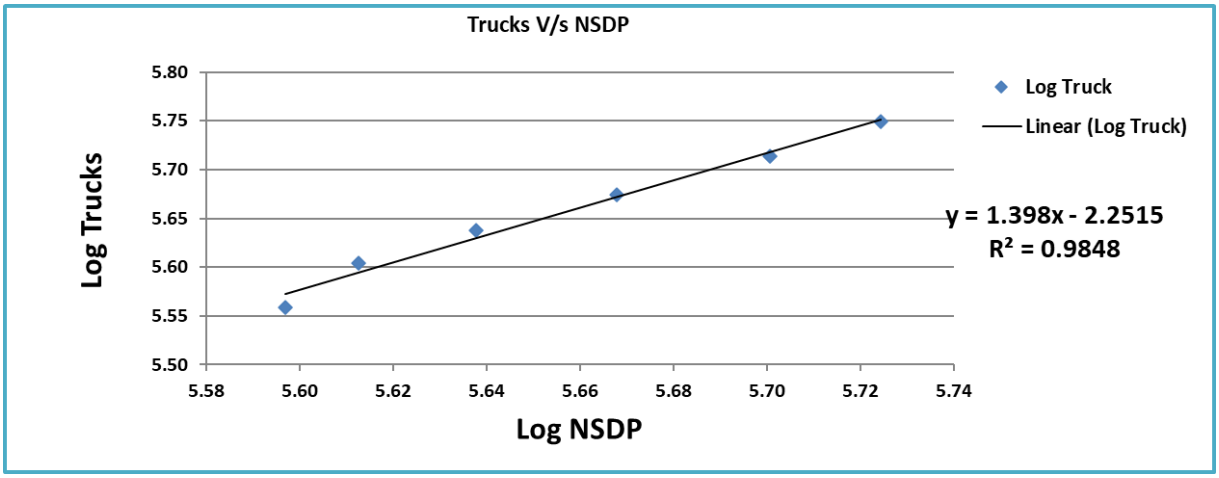

Figure 5-4 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Rajasthan.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-5 : Summary Regression Analysis Rajasthan

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Rajasthan	Car/Jeep	PCI	y = 2.1541x + -4.4569	R² = 0.9791	2.1541	4.55%	9.79%	Good Regression
	Bus	Population	y = 3.0169x - -18.7174	R² = 0.9972	3.0169	1.73%	5.22%	Good Regression
	LCV	NSDP	y = 1.7768x - -5.1846	R² = 0.1555	1.7768	6.16%	10.95%	Poor Regression
	Truck	NSDP	y = 1.398x - -2.2515	R² = 0.9848	1.3980	6.06%	8.46%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-6 : Per Capita Income Vs Car Gujarat

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	87481	1411898	4.94	6.15		
2013	96683	1602129	4.99	6.20	11%	
2014	102589	1771298	5.01	6.25	6%	
2015	111370	2008748	5.05	6.30	9%	
2016	120683	2260084	5.08	6.35	8%	
2017	129738	2527537	5.11	6.40	8%	8.21%

Regression analysis of same is given in figure below.

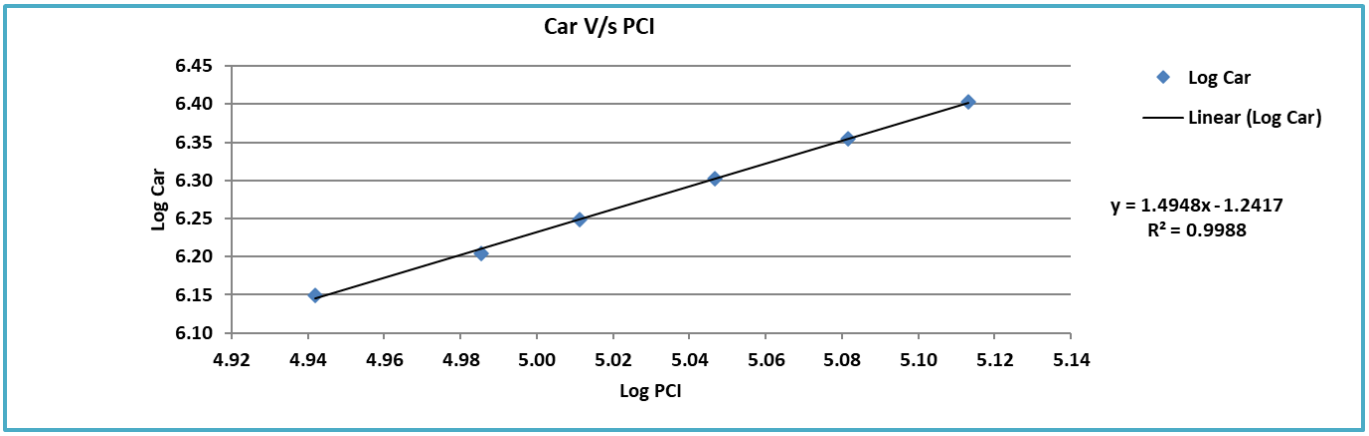

Figure 5-5 : Regression and Elasticity PCI vs. Car – Extrapolation Gujarat

Table 5-7 : Population Vs Bus Gujarat

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2012	60439692	67546	7.78	4.83		
2013	61563037	70615	7.79	4.85	2%	
2014	62684375	72998	7.80	4.86	2%	
2015	63803304	76435	7.80	4.88	2%	
2016	64919427	82734	7.81	4.92	2%	
2017	66032362	74855	7.82	4.87	2%	1.79%

Regression analysis of same is given in figure below.

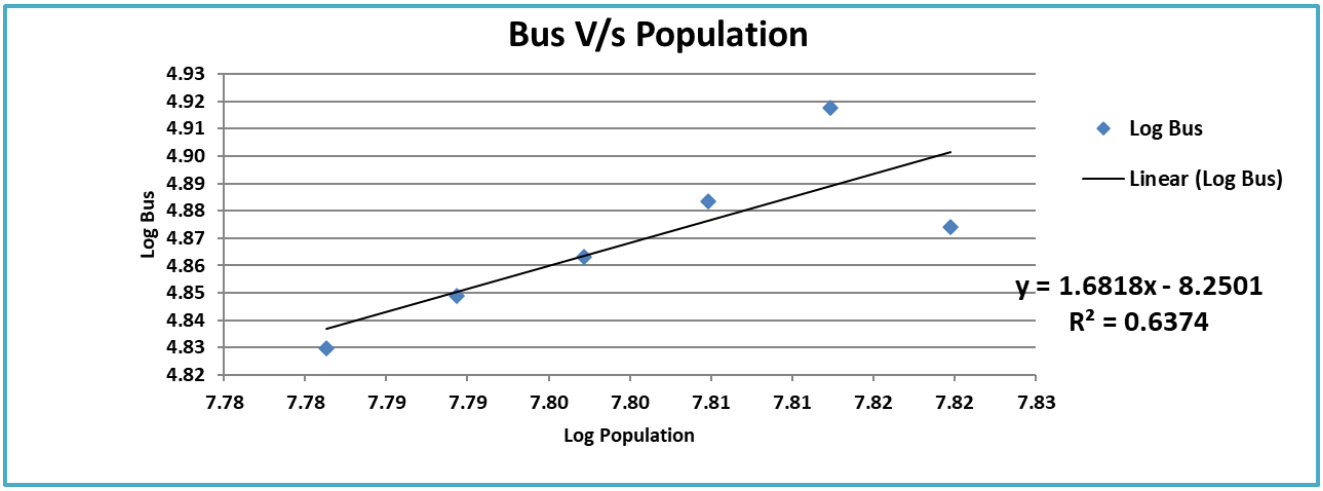

Figure 5-6 : Regression and Elasticity Population vs. Bus – Extrapolation Gujarat

Elasticity of LCV has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-8 : LCV Vs NSDP Gujarat

Year	NSDP	LCV	Log NSDP	Log LCV	NSDP Growth	Average Growth (5 Year)
2012	532809	448958	5.73	5.65		
2013	596659	499277	5.78	5.70	12%	
2014	641489	542918	5.81	5.73	8%	
2015	705629	589984	5.85	5.77	10%	
2016	774775	633599	5.89	5.80	10%	9.82%

The following figure depicts regression analysis and extrapolation.

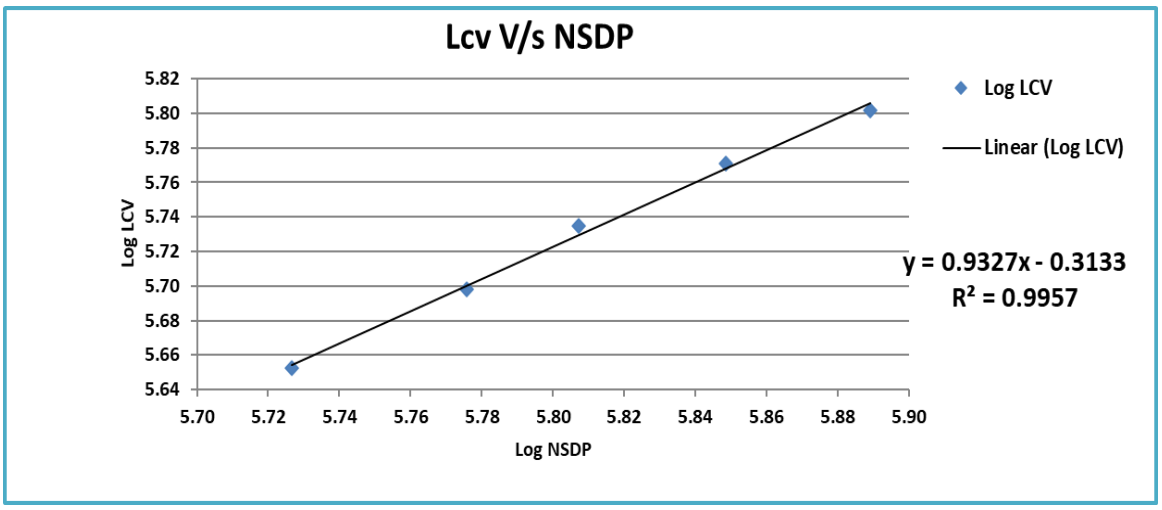

Figure 5-7 : Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Gujarat.

Elasticity of Goods Traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-9 : GOODS Traffic Vs NSDP Gujarat

Year	NSDP	Trucks	Log NSDP	Log Truck	NSDP Growth	Average Growth (5 Year)
2012	532809	301533	5.73	5.48		
2013	596659	319207	5.78	5.50	12%	
2014	641489	332185	5.81	5.52	8%	
2015	705629	352225	5.85	5.55	10%	
2016	774775	375265	5.89	5.57	10%	
2017	843930	396061	5.93	5.60	9%	9.64%

The following figure depicts regression analysis and extrapolation.

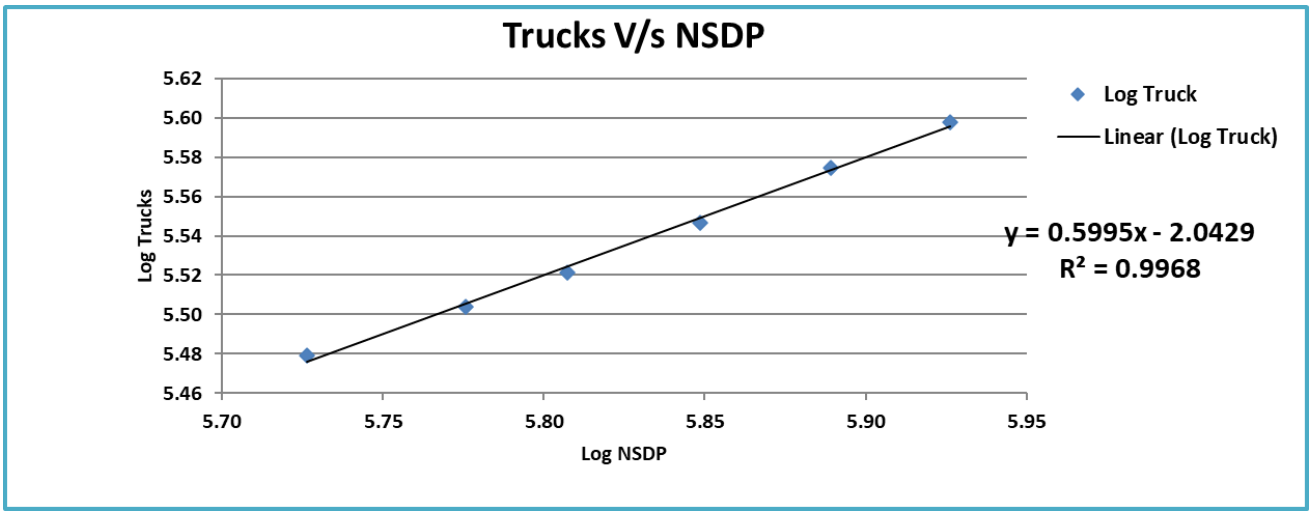

Figure 5-8 : Regression and Elasticity NSDP vs. Goods Traffic - extrapolation Gujarat.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-10 : Summary Regression Analysis Gujarat

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
Gujarat	Car/Jeep	PCI	y = 1.4948x - - 1.2417	R^2 = 0.9988	1.4948	8.21%	12.27%	Good Regression
	Bus	Population	y = 1.6818x - - 8.2501	R^2 = 0.6374	1.6818	1.79%	3.00%	Fair Regression
	LCV	NSDP	y = 0.9327x - - 0.3133	R^2 = 0.9957	0.9327	9.82%	9.16%	Good Regression
	Truck	NSDP	y = 0.5995x - - 2.0429	R^2 = 0.9968	0.5995	9.64%	5.78%	Good Regression

The economic model for predicting growth is a good tool, however other local, regional, and national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trends of growth. Project stretch of Udaipur to Gujarat on NH-8 is under tolling operation with current concessionaire and has three year of tolling history from 2017-18 (Part year). As traffic data available with the project concessionaire is of less than three years, we do not have sufficient data points to be able to establish a reliable past trend of traffic growth. A minimum of about 5 -6 years' traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

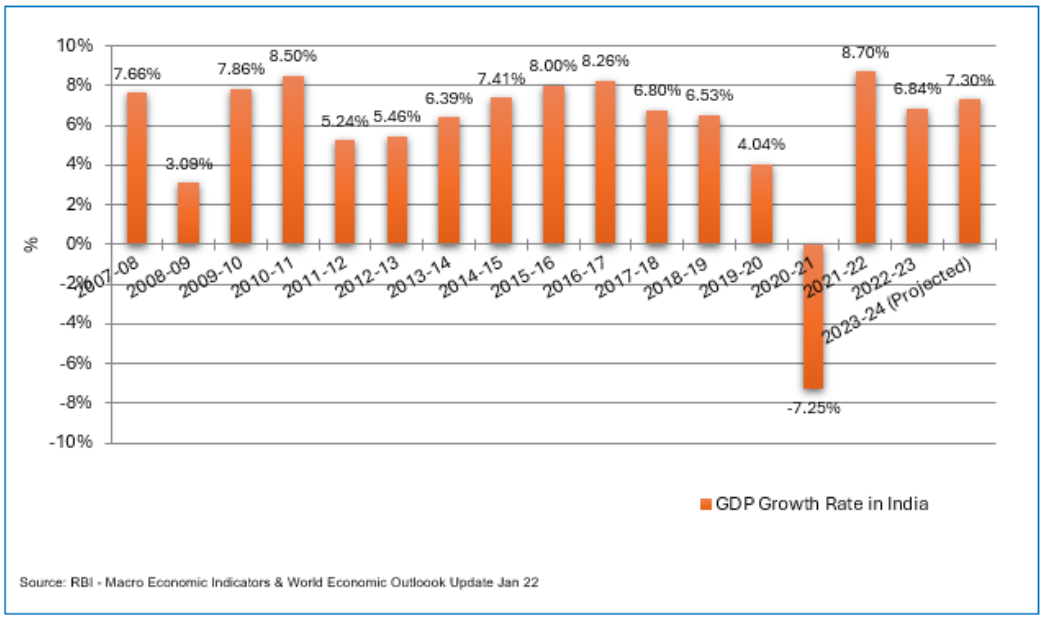

Figure 5-9 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. The World Economic Outlook update also has predicted a growth rate of about 7.5 % in the year 2022-23.

5.6 Developments along and around the Project Corridor & State

Project stretch passes through mineral rich belt of marble and minerals.

Tourism, agriculture, and mineral industries contribute to Udaipur's diverse economic base. Udaipur sees major tourist footfall throughout the year owing to its picturesque landscape, lakes, and historic palaces and architecture. Shamlaji is a major Hindu pilgrimage dedicated to God Vishnu. Each year an annual fair is held in October which attracts huge crowds from the surrounding region. Udaipur district is rich in lead, zinc, silver, phosphate, calcite, copper and limestone minerals. Udaipur is known for its marble which is mined, processed, and exported across the world. Nathdwara in the north of asset is one of biggest extractors of marble and limestone minerals. Hindustran Zinc, which is the world's second largest zinc producer, is based out of Udaipur.

Rishbhdeo is one of the major religious and industrial settlement on project corridor. This region has more than 200 mines of green marble. Rishabhdeo is the largest miner of green

marble.9 0 per-cent of green marble in the world is produced in Rishabhdev. The turnover of marble industry is more than 500 crores. It also gives employment to many labourers. Beyond this the town also has spinning and weaving mill by lnjbhilwara group. Thus, it gives employment to 10000 local workers. The presence of temple also leads to income of many people.

The growth of Rajasthan has been comparable to the national average economic growth. Rajasthan is rich in natural resources and benefits from its strategic geographic location in India. The state is pre-eminent in quarrying, mining in India and has been a leader in crude oil extraction over the past the few years. Moreover, Rajasthan is also a relevant tourism attractor in India. Considering the scenario, it may be assumed that the traffic growth on the project highway would remain high and there are minimal risks in terms of growth.

Table 5-11 : GDP of India, Rajasthan and other important states

Year	India (GDP)	Bihar	Haryana	Madhya Pradesh	Maharashtra	Odisha	Punjab	Rajasthan	Uttar Pradesh	Uttarakhand	West Bengal	Delhi
1980-81	12336	514	357	623	1464	529	504	560	1631	138	830	269
1981-82	13030	543	371	639	1498	528	551	607	1670	141	808	291

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The rate of growth is moderate in light of overall regional trends. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, the rate of growth diminishes. The same growth rate is not sustainable for long. Traffic growth is suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Traffic for Project Stretch

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza - 348.450 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)

6.2 Modification in Concession Period

As per Article 29 of the concession agreement, if actual traffic on the project falls short or exceeds Target Traffic on project highway on defined date, concession period shall be modified subject to calculation stipulated therein. For Udaipur – Gujarat Border on NH-8 project stretch, the Target Date and Target Traffic are defined as under:

Target Date – 21st September 2026

Target Traffic - 61435 in PCU

It was observed that as per traffic projections, average traffic volume falls short of target traffic in all scenarios. The probable extension of the concession period is estimated according to article 29 of the concession agreement which comes to about a year. Traffic forecast and revenue projections are done for probable extended period accordingly.

Most Likely

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	61435	51276	-17%	25%	20%	21	4.2

Optimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	61435	51531	-16%	24%	20%	21	4.2

Pessimistic

Target Year	Target Traffic	Actual Traffic	% of Excess / Short traffic	% Revision (+ or -) in CP as per CA	% Variation in CP	Original CP	Change in CP (In Years)
2026	61435	51022	-17%	25%	20%	21	4.2

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

The fee schedule in the CA of Udaipur- Gujarat Border section of NH-8 is based on the old toll policy. As per the Toll Notification (Schedule - G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued at fee 30 time the single journey fee.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van I - Rs. 275 per month
    b) Other local Commercial at 50% of the regular single journey toll fee

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

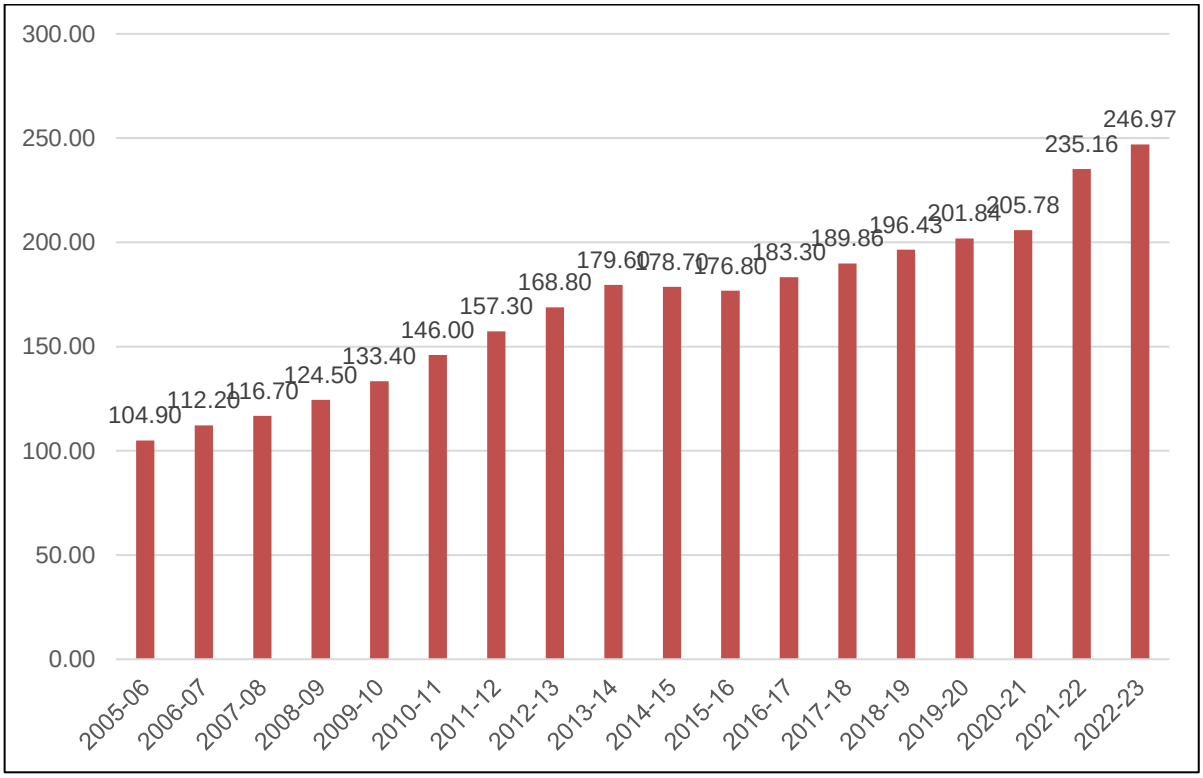

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45
Oversized Vehicles (7 or more Axles)	4.20

There is no bypass or structure to be factored in for rates calculations.

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given as under

Table 7-2 : Toll Rates for Single Journey @ Km TP-348.450 KM

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial Vehicle	Multi Axle	Oversized Vehicle

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2042-43 years starting from the year 2023-24 are shown in tables below.

Table 7-6 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Year	TP-1	Total

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Udaipur to Gujarat Border section of NH-8 in state of Rajasthan is nearing completion of six laning. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the busy and prominent national highway NH-8 which connects Mumbai to Delhi and is part of golden quadrilateral. There are large number of townships, industrial corridors and other business establishments coming up along the project corridor. As discussed, the dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give a positive impact to traffic flow on the project. The following can be considered as major outcomes of the study.

a) There is a good amount of tollable traffic running on the project.

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy.

c) The Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.

Based on the above it can be considered a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

Project stretch from Santalpur to Samakhiyali (Km 339.200 to km 430.100) is a 90.90 km long 4-lane National Highway Section on NH-27 in the state of Gujarat. NH-27 which is basically the east west connector of country.

Project stretch is gateway link to both Kandla and Mundra ports and also to region of Saurashtra from northern part of India. Stretch is also part of Jamnagar – Amritsar Expressway which will boost the connectivity of Saurashtra and both ports from north Indian sates of Punjab, Haryana, Rajasthan, and part of Uttar Pradesh.

The Government of India had entrusted National Highways Authority of India (NHAI) with developing of road infrastructure to match growing transportation demands of expanding economy. The Authority had resolved to undertake the six laning of existing four lane highway section from Santalpur to Samakhiyali (Km 339.200 to km 430.100) on BOT basis. This report is part of the traffic and revenue assessment of stretch including future growth projections. Project Highway alignment is depicted in the following figure.

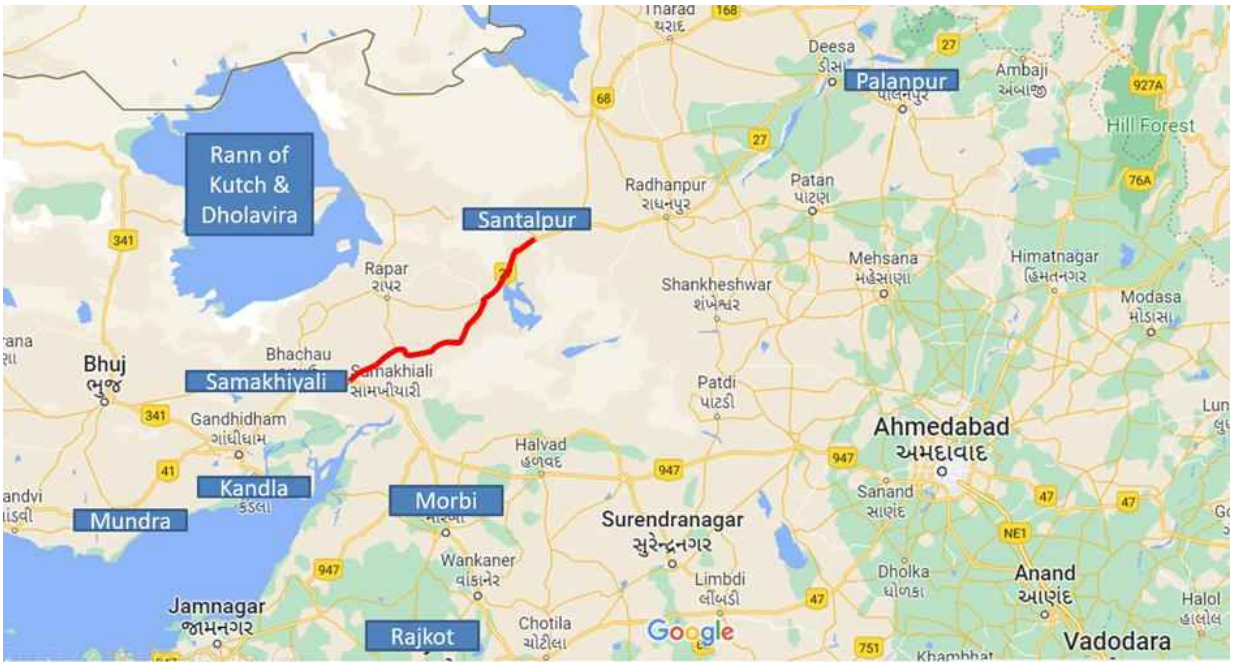

Figure 1-1 : Alignment of Project Stretch

1.2 Objective of the Study

M/s IRB Infrastructure Developers Limited (IRB) intends to participate in bidding for Six Laning of Santalpur- Samakhiyali section of NH-27 on BOT basis.

This report named as **"Traffic Study & *Toll Revenue Projection Report*"** mainly focuses on traffic and revenue aspects of the project. Other parameters like competing road, area developments etc. have been considered from a traffic development point of view.

1.2.1 Scope of Services

The broad scope of work covered in the assignment is as follows.

a) Analysis of Traffic Growth
b) Toll Rate Growth
c) Revenue Forecasting

The Concessionaire has provided basic traffic data and other project details on the basis of which the above analysis has been carried out.

CHAPTER 2

PROJECT DETAILS

2.1 Project Stretch Description

Project stretch from Santalpur to Samakhiyali is gateway link for both the ports of Mundra and Kandla and also of Saurashtra region. The stretch is having combined traffic of NH-27 which is coming from Palanpur / Radhanpur Abu Road and northern link from north Indian states via NH-68 and small section of SH-127 from Suigaon to Sidhadha on project highway. The following figure shows this the alignment of the project highway in the above context.

Figure 2-1 : Project Alignment with Toll Plaza

As discussed previously, the project stretch is gateway link to both ports of Kandla and Mundra and also area of Saurashtra. On the north of the project stretch lies the great Rann of Kutch which is also emerging as an important tourist destination of area. The presence of the historical Harrapan site of Dholavira in Rann of Kutch adds value to historical tourism.

2.2 Project Corridor Illustration

Project stretch has one Toll Plaza at Makhel. It has six lanes on either side including an oversized lane. As observed and inquired, Toll Operations are running smoothly and there no significant violations or forced exemption on toll plaza.

Figure 2-2 : Photographs showing Project Corridor

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza location on Samkhayali–Santalpur section of NH-27 for year 2024-2025.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project.
- Establish base year traffic.
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. No	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 394.200 Toll Plaza at Makhel	AADT for Year 2024-2025 (Four months data from April 2024 to July 2024)	AADT for Year 2024-2025 (Four months data from April 2024 to July 2024).	AADT for Year 2024-2025 (Four months data from April 2024 to July 2024).	AADT for Year 2024-2025 (Four months data from April 2024 to July 2024).	AADT for Year 2024-2025 (Four months data from April 2024 to July 2024).

3.2 Classified traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations based on monthly data shared with NHAI.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in the table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Min Bus /LCV
- Truck / Bus
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of the report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data for the year 2024-2025(traffic data from April 2024 to July 2024).

Since the traffic data available for this update is for only four months, from April 2024 to July 2024, it may not represent the whole year traffic. Hence a seasonality factor for balance part of year has been applied to average traffic of current four months to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Makhel Toll Plaza at Km 394+200

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2024-25
1	Car	1682
2	LCV	91
3	Bus	226
4	Truck	291
5	3-Axle	223
6	Multi Axle	7453
7	Oversized Vehicle	11
	Total	**9977**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in ***Table*** 3-4.

Table 3-4 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-5 : Traffic in PCU at Project Stretch Base Year 2024-25

Year	Toll Plaza Location (Km)	Traffic No	PCU	PCU Index
2024-25	Makhel at Km 394.200	9977	37627	3.77

It can be observed from above that project traffic has PCU index more than 3.5 which is an indicator of high proportion of commercial traffic in traffic mix in project corridor.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

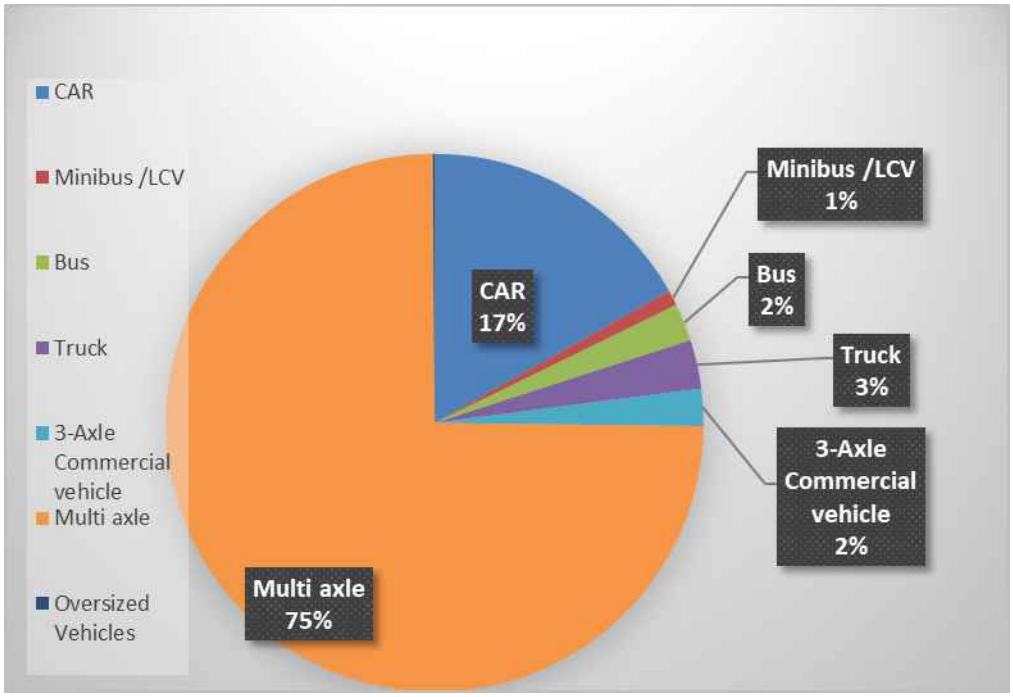

Figure 3-1 : Model Split of Tollable Vehicle

It is observed that car traffic forms about 17% of total traffic at toll plaza locations while multi axle commercial vehicles are about 77% of total traffic. Truck / Bus and LCV share about 5% and 1% of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25

Table 3-6 : Journey Type Bifurcation of Traffic at Makhel TP KM 394.200

Sr. No	Type	Traffic Volume (Nos.) 2024-25
1	Single Journey	8453
2	Return Journey	1414
3	Local Commercial Single Journey	107
4	Monthly Pass Local	2
5	Monthly Pass	2

Most dominant part of the above is the single journey type followed by return journey at project stretch. Monthly pass commuters are a very low fraction of the total traffic on the project corridor.

The single journey component in total traffic numbers is as high as 85%. Return journey component is 14%. The number of monthly pass Local is 0% and Local Commercial Single journey is 1% at Makhel toll plaza.

It is observed that the project corridor demonstrates pattern of single journey dominated mix of traffic which is typical of major national highways having more long-distance traffic.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data
3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS

4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc,
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Development in the Project Influence Area

The Project Highway acts as gateway for the traffic of northern, western and part of central India leading to the major western ports of Kandla and Mundra in Gujarat. The Project Highway would majorly cater to the export and import traffic. The contribution of Kandla and Mundra port is about 60% of total traffic at project stretch. Hence, growth and expansion at port will have a major positive impact on project traffic.

Brief details of key influencing establishments around the project corridor are as summarized below:

a. Kandla Port

- Kandla is the largest Cargo handling major government port with a capacity of approximately 120 MMTA. It shares about 15% of all major port traffic. The port has shown good consistent growth over past years.
- Kandla Port handles a variety of cargo ranging from Bulk Cargo like Coal, Grain, Fertilizer, Minerals, Ores, Steel, Edible Oils, Chemicals, and Petroleum Products to Container Cargo, Automobiles and Crude Oil.
- Petroleum Oil Lubricants ("POL") is about 64% of total cargo handled by the Port.
- At present Kandla is having a Container Terminal with a capacity of 0.75 MTEU.
- The Government of India has recently approved the development of two new mega container terminals at Tuna-Tekra in Kandla Port at an estimated cost of ~ Rs 6,000 crores. This would result in increase in capacity of dry cargo from 60MMTA to about 79 MMTA and increase in container cargo capacity from 6 lakh TEU to 26 lakh TEU.

- The Container Terminal and Multipurpose Cargo Terminal are expected to be completed in ~FY25 / FY26 at a total expenditure of ~Rs.

6000 Cr. The development of the two mega terminals of Container & Multipurpose Cargo is expected to induce migration of some of the traffic from JNPT, Mumbai to Kandla and Mundra port in Gujarat.

- The above development of two major terminal is expected to give high traffic growth on Project Highway.
- **DP World wins bid for development of a mega-container terminal at India's Deendayal Port**
  - DP World has won a major concession to develop, operate and maintain the mega-container terminal at Deendayal port in Gujarat, on the western coast of India.
  - The project involves the construction of a mega-container terminal at Tuna-Tekra through a Public-Private Partnership (PPP). Once complete, the terminal will include a 1,100-metre berth and will be capable of handling vessels carrying more than 18,000 TEUs. Total capacity will be 2.19 million TEUs.
  - The contract was awarded by the Deendayal Port Authority under on a Build-Operate-Transfer (BOT) basis.
  - Once complete, the terminal will help unlock future container traffic growth in India, catering to exports and imports from Northern, Western and Central India, reducing logistics cost and enhancing efficiencies across supply chains. The project will complement initiatives of the Government of India, such as the PM Gati Shakti Master Plan and National Logistics Policy, which has been introduced to provide greater focus on developing multimodal logistics infrastructure promoting economic growth.
  - DP World's strategic investments in ports and terminals in the country is aligned with the Indian Government's Vision 2047, which aims to quadruple the country's port handling capacity.

    Development of mega container terminal would have positive impact on project traffic as it would enhance the hinterland logistic relations and volume of export / import with Kandla port.

b. Mundra Port

- Mundra port is located further to Kandla port and is the largest private port in India with about 330 MMTA capacity, 24 berths & 10 Terminals. The port is owned by Adani Group having 12 ports in total. The mega port at Mundra is a major economic gateway that caters to the northern hinterland of India with multimodal connectivity.
- Mundra port has handled 144 MMT in year 20-21 which is highest by any India port.
- The port handles multiple products – coal, POL, Liquid, Dry Bulk. The Mundra port has expansion plans for various products including Waterfront Development, Multi- Purpose cargo and Liquid/ Gas/ Cryogenic Cargo handling quay development.
- The container handling capacity at Mundra port has shown a very impressive growth of over 15% in past 12 years starting with 0.92 MTEU in FY10 to 6.94 MTEU expected in FY23. The total Container handling capacity at Mundra port is 7.5 MTEU and would be operating at over 90% Capacity Utilization by end of FY23.

- Mundra port is coming up with expansion of Container Terminal of 1.2 MTEU at estimated expense of R. 1239 Cr. The expansion work of Container Terminal is under progress and is expected to be operational by FY24.
- Other growth drivers in long term at ports of Kandla and Mundra Ports will be increasingly adoption of China+1 policy by Europe and US market. The diversification

of manufacturing facilities to India in addition to other emerging Asian economies is expected to boost exports consistently over next 10 years.

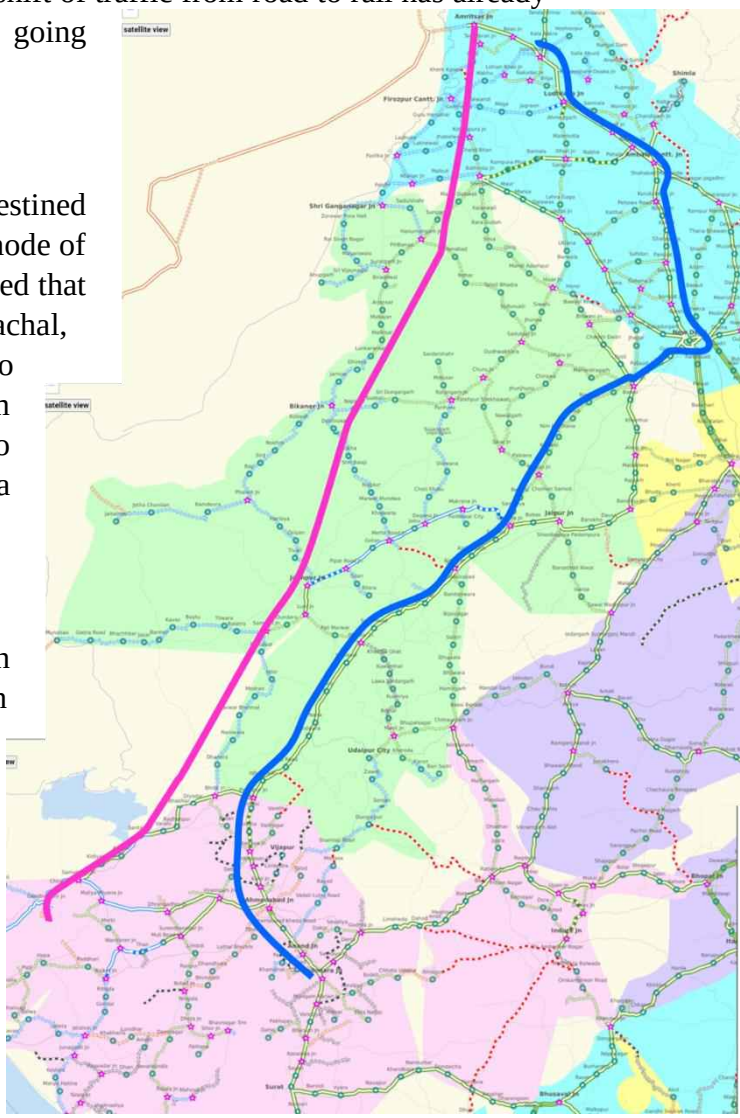
- China decision to cap its steel production and no export of steel from Russia would help India steel export.
- Coal import has also seen a surge due to domestic shortage of Coal.
- Defence Corridor at Jhansi and also Tata Aircraft manufacturing plant at Vadodara would have some add on to port traffic.
- As per an ICRA report, the port traffic is expected to grow by 6-8% per year.
- The above development of major terminal is expected to give high traffic growth on Project Highway.

c. Barmer Refinery

- A 9 MTA capacity refinery and a 2 MTPA Petrochemical Complex is under construction at Pachpadra near Barmer. The complex is a 74:26 Venture between HPCL & Govt. of Rajasthan being developed across 4400 acres at a cost of Rs. 5000 Cr.

- This refinery will relate to Jamnagar Refinery and Bathinda Refinery through Amritsar Jamnagar Expressway
- The refinery is likely to be commissioned by FY25.
- About 6.5 MTA crude will be transported from Gujarat for processing
- RIICO (Rajasthan State Industrial Development & Investment Corporation Limited) to develop PCPIR - Petroleum, Chemical and Petrochemical Investment Region in vicinity of Refinery cum Petrochemical Complex (area ~100km)
- Development of a third refinery enroute Jamnagar to Amritsar, viz; Bhatinda, Barmer and Jamnagar will lead to Petrochemical based traffic growth along Project Highway (via Amritsar Jamnagar Expressway).

d. Ceramic Cluster at Morbi



- Morbi accounts for 70% of total ceramic production in India and 2nd largest ceramic tile producing cluster in world.
- The cluster houses ~ 1,000 ceramic units, catering to 18 % of global demand and earns Rs 15,000 crore from exports.
- The ceramic cluster provides 10 Lakhs plus employment and produces over 14000 SQM tiles per day. The tiles are exported through Kandla and Mundra Port.
- The tiles are exported to more than 160 countries through Kandla and Mundra Port which are within 180 km from Morbi. This results in competitive pricing of the tiles in the international market due to savings in transportation costs. Domestic brands like Kajaria, HR Johnson, AGL, Somani outsource from Morbi. Global brands housed in Morbi include Daltile, Portobello, Emser, RAK, etc.
- Rajasthan has the highest proven reserves of China Clay followed by Gujarat. China clay mining is in Nagaur, Bikaner, Jaisalmer, Jodhpur, Bhilwara, and Chittorgarh.
- The Project highway is enroute to supply raw material to Morbi and finished products to domestic market in north India.
- The ceramic industry in India is expected to grow annually at a rate of ~9-10%.

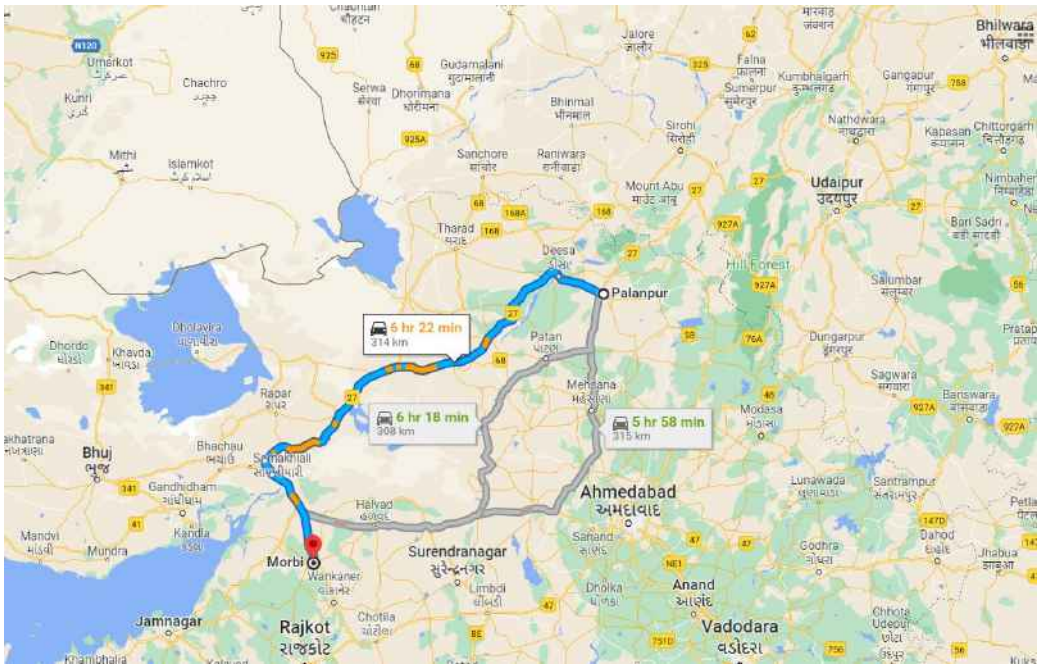
Western DFCC -

Western DFCC is 1500 km plus dedicated freight corridor of railway which connects Dadri in Uttar Pradesh to JNPT in Mumbai. It is designed to carry double stack, higher capacity trains at higher speed. The section from Rewari to Palanpur is already operational since March 2021. The balance section from Palanpur-Makarpura-Sachin-Vaitarna-JNPT is expected to be commissioned in stages by end of FY24.

The Kandla and Mudra ports are connected to Palanpur by an operational western railway line. Since rail movement from Rewari to Palanpur and Palanpur to Kandla / Mundra are operational since long, the modal shift of traffic from road to rail has already taken place and no diversion is expected going forward.

Further, only the traffic originating and destined within 50-75 kms of the DFCC will find rail mode of transport logistically viable. It is also to be noted that the cargo originating from Punjab, Himachal, Haryana will have to travel from Sahnewal to Dadri, Rewari along Eastern DFCC from where it will have to take Western DFCC to reach Palanpur which is connected to Ports via Western Railway.

The traffic originating from the northern hinterland has to take rail route via. Eastern DFCC by 450 kms from Sahnewal upto Dadri and then take Western DFCC from Dadri to Palanpur by 786 kms and further Palanpur to Gandhidham/Kandla by western rail which is 300 kms. Thus, the total rail route will be over 1500 kms which is ~25% longer as compared to alternative road network via. upcoming Jamnagar-Amritsar Expressway having a length of ~ 1200 kms.



Thus, we do not see the material impact of DFC on the Project and no further diversion of good traffic to DFCC is envisaged.

e. Amritsar – Jamnagar Expressway

The Amritsar – Jamnagar Expressway (AJE) is an access controlled 1300 km long partly greenfield / brownfield expressway. The AJE which is 4-lane up to PB/HR border and then 6-lane up to Jamnagar is under execution and is likely to be commissioned in FY25. The AJE will not only act as port connectivity expressway but will also have induced traffic due to connectivity of 3 refineries enroute, the Bhatinda refinery, Barmer refinery and Jamnagar refinery. Further all the major cities enroute the AJE are developing bypass / ring roads which will facilitate diversion of long-distance traffic. Thus, the long-distance traffic will have a better level of service and shorter turnaround time for port bound traffic which will be comparable to Freight movement by rail.

f. Morbi – Rajasthan via Mehsana: Divergence

There is some traffic originating from Morbi, Rajkot and travelling towards Punjab, Himachal, Haryana, Rajasthan and are taking alternate route via. Mehsana, Palanpur. Once the AJE is commissioned, the distance to the northern states via. AJE will be shorter by ~5-7%.

We have conducted OD survey along this alternate route near Mehsana and have worked out a total impact of divergence from alternate route and the development of AJE together will be nearly +2% for all categories of commercial vehicles.

Summary of impact as estimated is given in table below.

Sr. No	Development Factor	Impact	Action
1	Amritsar Jamnagar Expressway	Reduces travel time substantially. Connects Rajasthan, Haryana, UP & Punjab with a faster connectivity. New fast connectivity may add to growth in the initial years of its commissioning. May also add new development area around its greenfield corridor	4% additional traffic including divergence may be taken in year 2025-26, expected commissioning of full stretch
2	Barmer Refinery	New refinery. About 70% of crude is expected to come from Gujarat and also Amritsar – Jamnagar Expressway would provide fast access to ports for export / import,	It will add to traffic growth on the project road once Expressway is commissioned. No additional impact separately
3	Kandla Mundra Ports	About 30% of the traffic on project stretch has Kandla Mundra connection. Both ports are doing good in terms of growth. These basically serve to northern hinterland of Rajasthan, Gujarat, Haryana, Punjab and UP	Capacity and facility expansion of both ports would support traffic growth on the project stretch. No additional impact on traffic
4	Morbi Tile Industry	90% of India's Ceramic is produced in Morbi. Over 1000 Ceramic factories. Domestic supplies to northern India through project stretch.	Would support traffic growth on project stretch. Would be part of growth

Sr. No	Development Factor	Impact	Action
5	Road Network	No Competing Road Network	No Impact
6	DFCC	Kandla to Palanpur is existing rail line and Palnpur to Rewari is operational since last year. DFCC stretches from Rewari to Palanpur is already operational. Most of the traffic has already been shifted. Lack of last mile connectivity from DFCC hub to final destination of Goods will keep dependability of road network for goods transport.	No additional diversion is envisaged.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

Traffic growth forecast for project corridor Udaipur to Gujarat Border section of NH-8 has been done taking the above factors into consideration. "*IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways*" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in *IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways.*

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$Log (P) = k \times Log (EI) + A$

Where,

P = *Number of Vehicles (Mode wise)*
EI = *Economic Indicator*
A = *Regression constant*
k = *Elasticity coefficient (Regression coefficient)*

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across the state of Gujrat. Toll plazas at Makhel is in the state of Gujrat but the traffic on project stretch has certain contribution from other states as well. For elasticity calculations, working data from such states in addition to Gujrat has been analyzed.

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-1 : Per Capita Income Vs Car Rajasthan

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2011	57192	591069	4.76	5.77		
2012	58441	659542	4.77	5.82	2%	
2013	61053	733916	4.79	5.87	4%	
2014	64496	814079	4.81	5.91	6%	
2015	68565	899307	4.84	5.95	6%	
2016	71324	988391	4.85	5.99	4%	
2017	73109	1095526	4.86	6.04	3%	
2018	75555	1204005	4.88	6.08	3%	4.1%

Regression analysis of same is given in figure below.

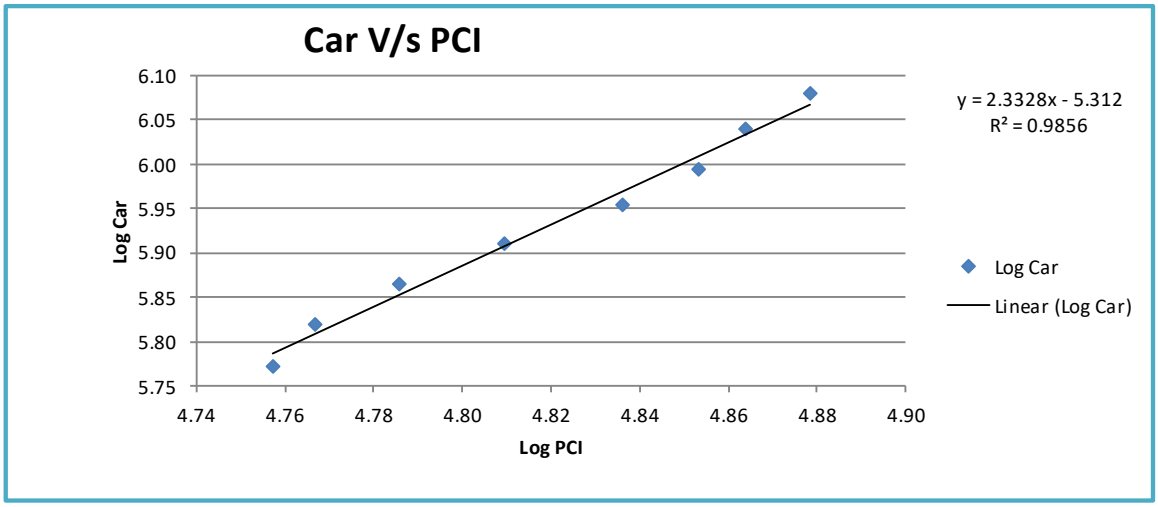


Figure 5-1 : Regression and Elasticity PCI vs. Car – Extrapolation Rajasthan

Table 5-2 : Population Vs Bus Rajasthan

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2011	68548000	83345	7.84	4.92		
2012	69687000	88616	7.84	4.95	2%	
2013	70825000	93892	7.85	4.97	2%	
2014	71963000	97650	7.86	4.99	2%	
2015	73102000	102818	7.86	5.01	2%	
2016	74240000	108680	7.87	5.04	2%	
2017	75248000	113964	7.88	5.06	1%	
2018	76256000	118301	7.88	5.07	1%	1.5%

Regression analysis of same is given in figure below.

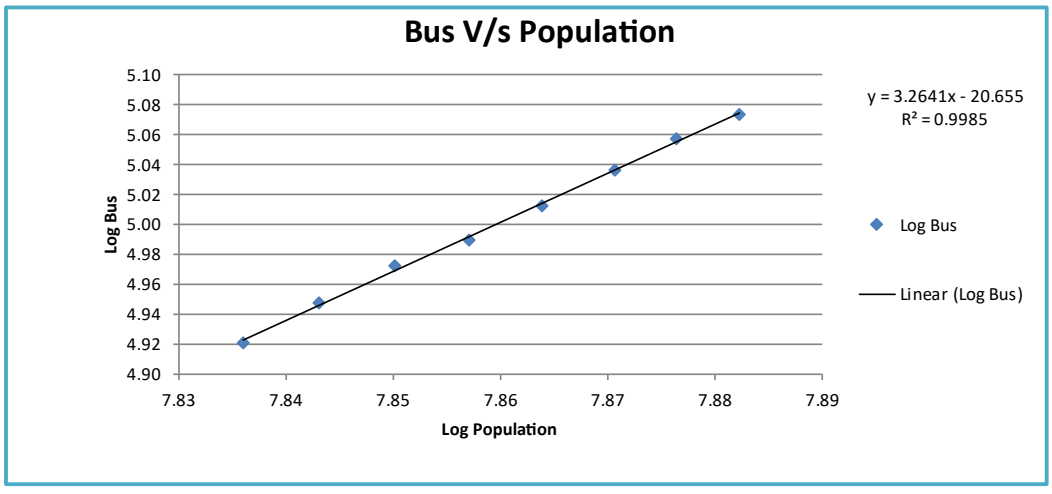

Figure 5-2 : Regression and Elasticity Population vs. Bus – Extrapolation Rajasthan

Elasticity of LCV has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : Trucks Vs NSDP Rajasthan

Year	NSDP	Trucks	Log NSDP	Log LCV	NSDP Growth	Average Growth
2011	39533093	362028	7.60	5.56		
2012	40980249	401983	7.61	5.60	4%	
2013	43429222	434379	7.64	5.64	6%	
2014	46540773	472365	7.67	5.67	7%	
2015	50192151	517604	7.70	5.71	8%	
2016	52965038	561158	7.72	5.75	6%	
2017	55442912	613055	7.74	5.79	5%	
2018	58059438	665926	7.76	5.82	5%	5.7%

The following figure depicts regression analysis and extrapolation.

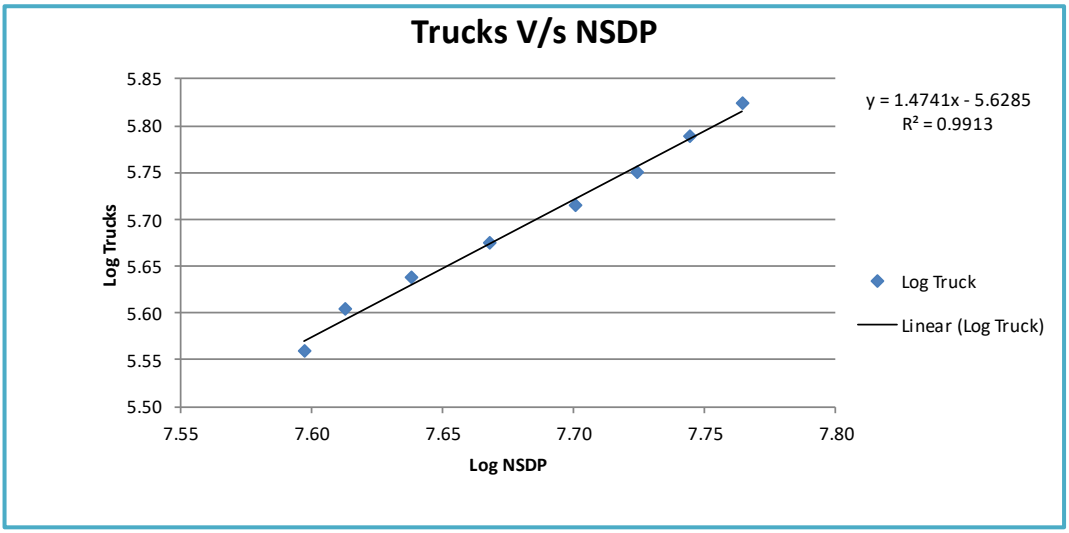

Figure 5-3 : Regression and Elasticity NSDP vs. LCV Traffic - extrapolation Rajasthan.

Elasticity of Goods Traffic has been worked out by regression analysis with NSDP. The following table represents the data and details.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-4 : Summary Regression Analysis Rajasthan

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth	Growth Elastic Model	Remarks
Rajasthan	Car/Jeep	PCI	y = 2.3328x - - 5.312	R^2 = 0.9856	2.3328	4.07%	9.49%	Good Regression
	Bus	Population	y = 3.2641x - - 20.6548	R^2 = 0.9985	3.2641	1.53%	5.01%	Good Regression
	Truck	NSDP	y = 1.4741x - - 5.6285	R^2 = 0.9913	1.4741	5.65%	8.33%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-5 : Per Capita Income Vs Car Gujarat

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2012	96683	1602129	4.99	6.20		
2013	96039	1771298	4.98	6.25	-1%	
2014	101424	2008748	5.01	6.30	6%

	Truck	NSDP	y = 1.4741x - - 5.6285	R^2 = 0.9913	1.4741
HARYANA & PUNJAB	Car/Jeep	PCI	y = 1.667x - - 2.3608	R^2 = 0.9828	1.667
	Bus	Population	y = 4.9905x - - 32.348	R^2 = 0.9908	4.9905
	Truck	NSDP	y = 0.7737x - - 0.2859	R^2 = 0.9857	0.7737

The economic model for predicting growth is a good tool, however other local, regional, and national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trends of growth. Project stretch of Udaipur to Gujarat on NH-8 is under tolling operation with current concessionaire and has three years of tolling history from 2017-18 (Part year). As traffic data available with the project concessionaire is of less than three years, we do not have sufficient data points to be able to establish a reliable past trend of traffic growth. A minimum of about 5 -6 years' traffic data is required for establishing a reliable past trend.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

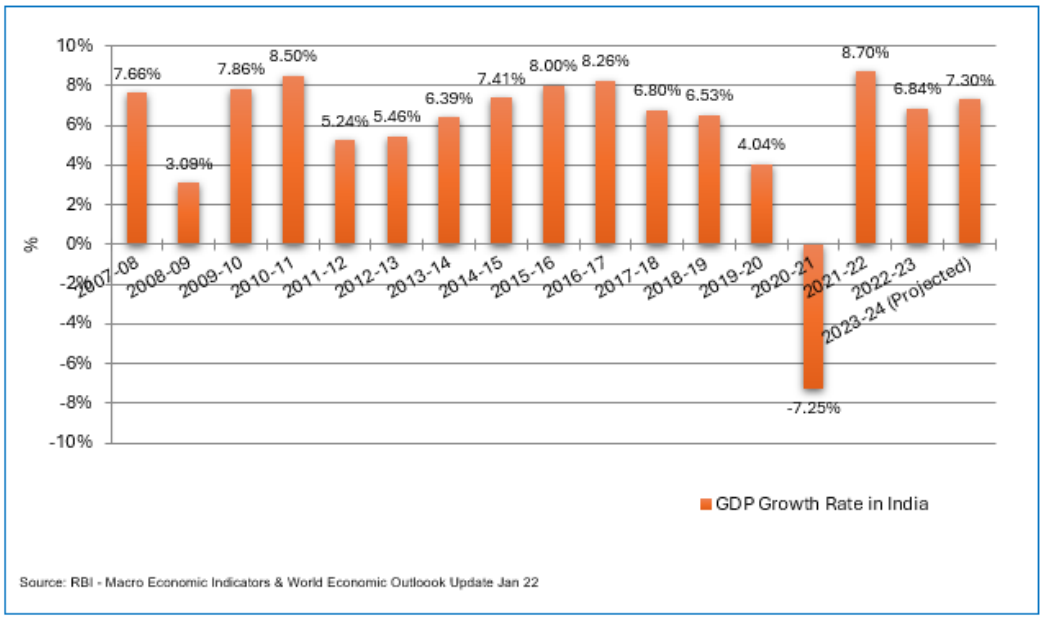

Figure 5-13 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. The World Economic Outlook update also has predicted a growth rate of about 7.5 % in the year 2022-23. Recommended Growth Rates of Traffic

5.5.1 Recommended Growth Rates of Traffic for Project Stretch

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The rate of growth is moderate in light of overall regional trends. Growth of multi-Axle is kept slightly higher as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, the rate of growth diminishes. The same growth rate is not sustainable for long. Traffic growth is suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.5% from Most Likely case for corridor in both states.

Table 5-18 : Recommended Growth Rates Optimistic

Category / Year	FY24 - FY28	FY29 - FY33	FY34 - FY38	FY39- FY43	FY44 - FY48	FY49 - FY53
Car/Jeep/Van	8.06%	7.16%	6.13%	5.57%	5.57%	5.57%
Mini LCV	3.30%	3.22%	2.85%	2.25%	2.25%	2.25%

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza – Chainage 394+200 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)
2024-25	1682	91	226	291	223	7453	11	9977	37627

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)
2045-46	5797	152	368	458	651	24866	32	32324	122497

6.2 Modification in Concession Period

Modification is concession period due to variation in traffic is worked out as per procedure given in RFP. There are three milestones for traffic testing in the years 2028, 2033 and 2038. The working of modification in concession period is given as under for all scenarios.

- Appointed date – 28th December 2023
- Concession Period (Days) – 7300 (For 20 Years)
- Hence, Original Concession end date is – 23rd December 2043

Pessimistic Case

Sr. No	Target Date	Target Traffic	Actual Traffic	Variation in CP as per CA %	Change in CP (Days	Total Variation in CP Years
1	01-Oct-28	58741	49197	11.25%	625	
2	01-Oct-33	66539	66136	0.00%	0	**1.7**
3	01-Oct-38	84919	83704	0.00%	0	

Optimistic Case

Sr. No	Target Date	Target Traffic	Actual Traffic	Variation in CP as per CA %	Change in CP (Days	Total Variation in CP Years
1	01-Oct-28	58741	50118	9.68%	538	
2	01-Oct-33	67713	68973	0.00%	0	**1.5**
3	01-Oct-38	86419	89400	0.00%	0	

Most Likely Case

Sr. No	Target Date	Target Traffic	Actual Traffic	Variation in CP as per CA %	Change in CP (Days	Total Variation in CP Years
1	01-Oct-28	58741	49647	10.48%	583	**1.6**
2	01-Oct-33	67112	67550	0.00%	0	
3	01-Oct-38	85651	86531	0.00%	0	

Hence a positive variation of about **625 days** in concession period is expected as per traffic projections in *Pessimistic case*.

538 days in concession period is expected as per traffic projections in *Optimistic case* and **583 days** in concession period is expected as per traffic projections in *Most likely case*.

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

The fee schedule in the CA of Udaipur- Gujarat Border section of NH-8 is based on the old toll policy. As per the Toll Notification (Schedule - G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent user's monthly pass would be issued at fee 30 time the single journey fee.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van I - Rs. 275 per month
    b) Other local Commercial at 50% of the regular single journey toll fee

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2018-19. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

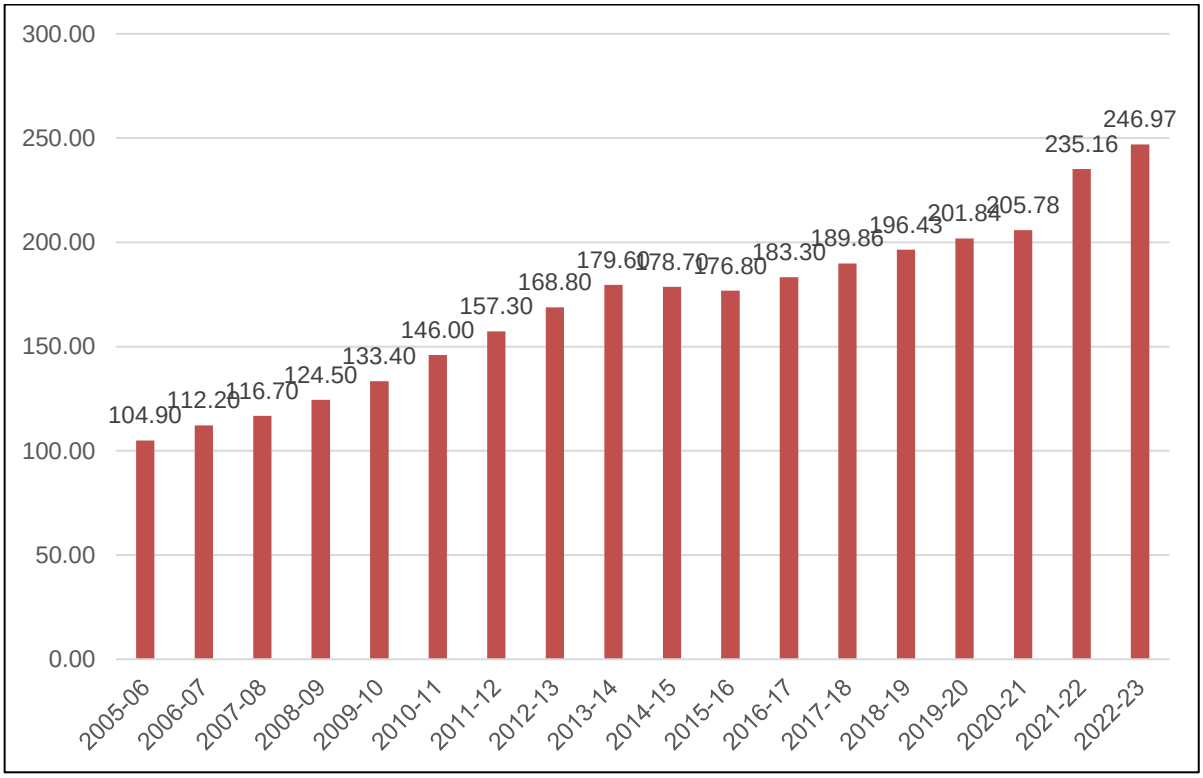

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45
Oversized Vehicles (7 or more Axles)	4.20

There is no bypass or structure to be factored in for rates calculations.

Toll rates are calculated as per guidelines provided in schedule R (rounded to nearest Rs.) for the concession period and are given below.

Thus, worked out rates for various categories of vehicle and discounts are given as under

Table 7-2 : Toll Rates for Single Journey @ Km TP-394+200 KM

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2044-45 years starting from the year 2024-25 are shown in tables below.

Table 7-6 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Location / Year	Makhel Toll	Total
2024-25	153.13	**153.13**
2025-26	187.16	**187.16**
2026-27	270.71	**270.71**

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

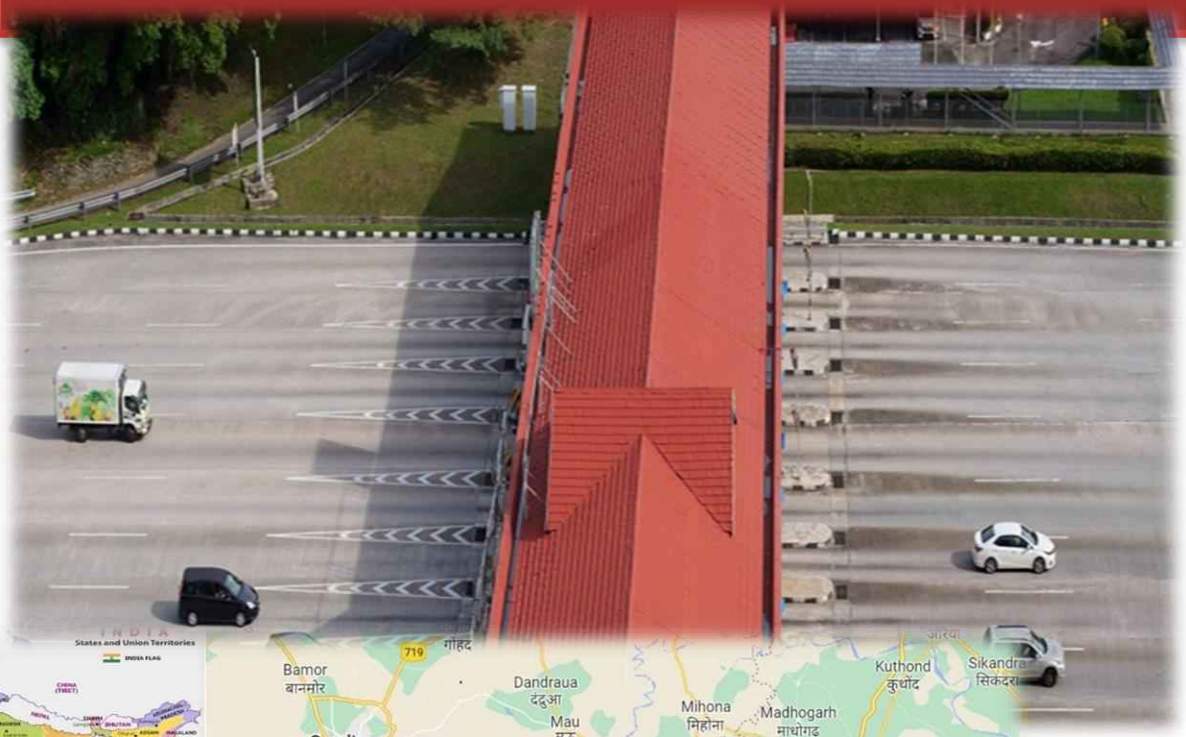
8.1 Conclusion & Recommendations

Project stretch of Samakhiyali to Santalpur of NH-27 in state of Gujarat is a four-lane national highway which is being upgraded to six lanes. Project corridor is main feeder road from North India and other parts of Gujarat and Rajasthan to major ports of Kandla and Mundra. Due to this there is considerable volume of heavy commercial vehicles on stretch. Jamnagar – Amrtisar Expressway would also add good value to project traffic as will provide faster connectivity to north India to Jamnagar refinery and also to Mundra and Kandla port. Morbi tile Industry is also a good contributor to traffic of project road. As Indian economy is poised to grow at good rate, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give a positive impact to traffic flow on the project. The following can be considered as major outcomes of the study.

a) There is a good amount of tollable traffic running on the project.

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy.

c) The Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road.



Based on the above it can be considered a stable healthy project from the traffic and revenue point of view.

CHAPTER 1

INTRODUCTION

1.1 Background

The National Highways Authority of India (NHAI) introduced the Toll, Operate and Transfer (TOT) model for partnership with private developers in the road sector. Under this model, NHAI passes on the toll collection rights and operation and maintenance obligations for 20 years to the private developer against payment of upfront, one-time, lump sum concession fees quoted by the private developer as part of the comprehensive bidding process. Projects under this model are awarded as a bundle of operational national highways, which allows the investor to offset the risks of one project against another. Existing and operational roads are auctioned under the TOT model.

Under the Toll Operate and Transfer (ToT) 13 bundle, NHAI had invited tenders for selection of concessionaire for maintenance of the National Highway stretch from km 0.000 to km 103.000 (revised section km 16.000 to km 98.455) of NH-75 (New NH-44) in the state of Madhya Pradesh and Uttar Pradesh.

M/s. IRB Infrastructure Developers Limited., has been declared as the selected bidder for the project. This report is for part section of ToT bundle 13 “Gwalior to Jhansi from km 0.000 to km 103.000 (revised section km 16.000 to km 98.455) of NH-75 (New NH-44) in the state of Madhya Pradesh and Uttar Pradesh. Project Highway alignment is depicted in the following figure.

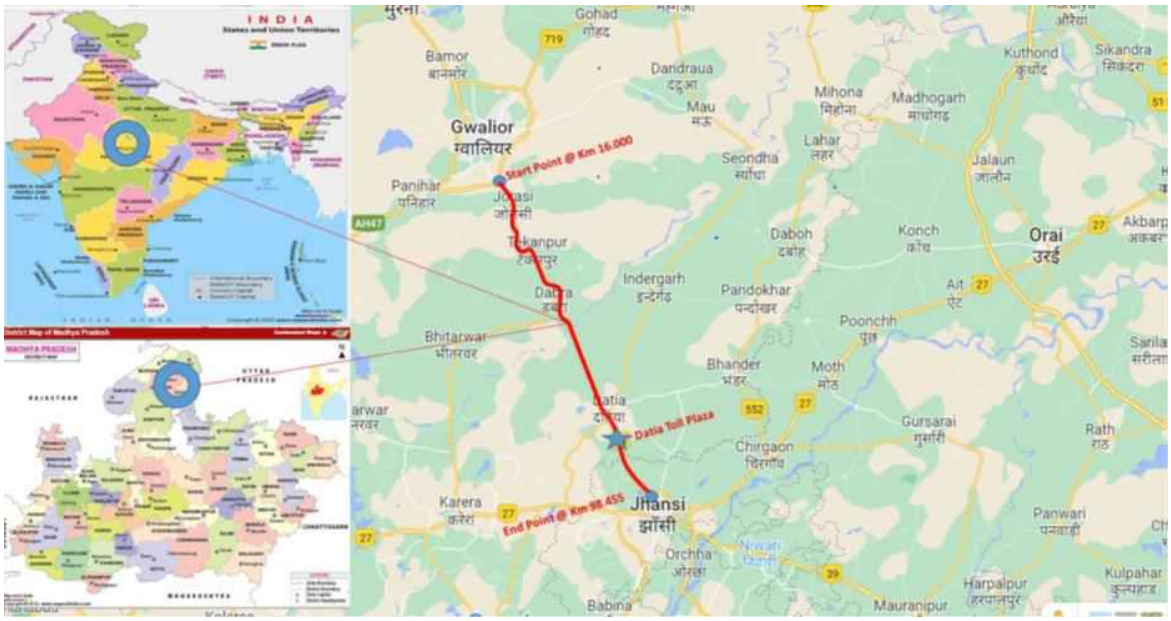

Figure 1-1: Project Stretch of ToT Bundle 13 (Part)

1.2 Objective of the Study

M/s IRB Infrastructure Developers Limited (IRB) intends to develop a traffic study report for Four Laning of Gwalior to Jhansi from km 0.000 to km 103.000 (revised section km 16.000 to km 98.455) of NH-75 (New NH-44) in the state of Madhya Pradesh and Uttar Pradesh on BOT basis. GMD Consultants have been assigned the work of conducting traffic study and developing revenue model based on traffic projections and forecast.

The year 2024-25 has been taken as the base year for projections and forecasting of traffic in the horizon year. This report fulfils part of the requirement of the assignment.

1.3 Scope of Services

The following may be referred to as broad scope of Traffic Study of Four Laning of Gwalior to Jhansi from km 0.000 to km 103.000 (revised section km 16.000 to km 98.455) of NH-75 (New NH-44) in the state of Madhya Pradesh and Uttar Pradesh.

Classified Traffic Volume Count at main toll plaza location at Toll Plaza locations. This data was supplied by the Concessionaire.

- Establishment of traffic pattern
- Working our traffic demand elasticity and growth
- Traffic forecast up to concession period.
- Preparation of revenue model up to concession period
- Any other analysis relevant to scope

CHAPTER 2

PROJECT DETAILS

2.1 Project Corridor

The project stretch is a section of NH-44, which is the longest National Highway in the country, running through North, Central and South India. A major part of the project section from Gwalior to Jhansi Road lies in Gwalior and Datia district of Madhya Pradesh followed by Jhansi district. The major towns along the project corridor are Gwalior, Tekampur, Dabra, Datia and Jhansi.

Project Stretch Description

The project stretch under this study starts from km 0.000 to km 103.000 (revised section km 16.000 to km 98.455) of NH-75 (New NH-44) in the state of Madhya Pradesh and Uttar Pradesh. The length of project stretch is 82.455 km and has 4-lane configuration with single Toll Plaza (Dagrai village at ch.97.900 KM).

The following figure shows this the alignment of the project highway in the above context.

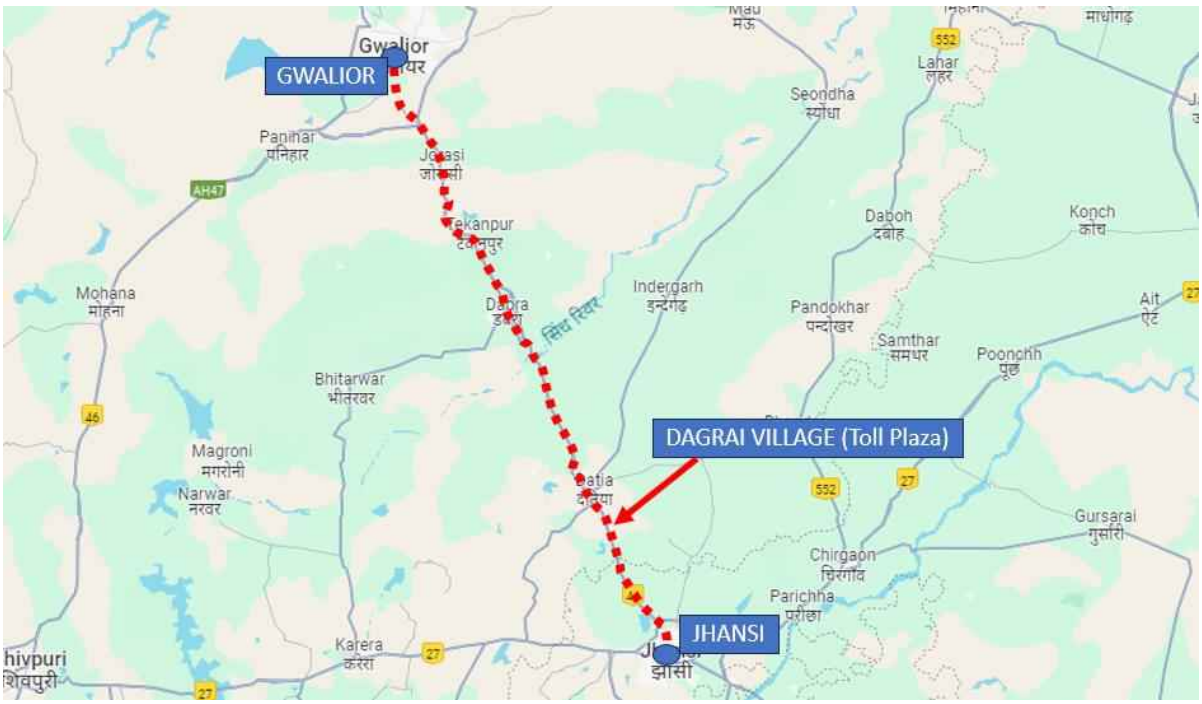

Figure 2-1 : Project Alignment with Toll Plaza

CHAPTER 3

TRAFFIC SURVEYS AND ANALYSIS

3.1 Traffic Surveys

The Consultants have collected the required information for project corridor to understand the general traffic and travel characteristics on the corridor.

The following traffic data has been collected from a client for a project.

- Classified traffic volume counts at toll plaza locations on Gwalior- Jhansi section km 0.000 to km 103.000 (revised section km 16.000 to km 98.455) of NH-75 (New NH-44), provided by Concessionaire for year 2023-24 and traffic data from April 2024 to July 2024.
- Local Component of traffic
- Component of Return Journey
- Component of Monthly Pass Journey

The main objective of the traffic data analysis is to:

- Determine the existing traffic movement characteristics of the project
- Establish base year traffic
- Identification of travel patterns and modal split of project traffic
- Deriving growth factors for traffic forecasting
- Estimation of corridor traffic including traffic diversion if any
- Preparation of revenue model and projection of revenue as per toll policy for various scenarios

Table 3-1 below lists provides details of locations from where traffic details have been collected.

Table 3-1 : Traffic Data Details

SR. NO	LOCATION	CTV	Single Journey Traffic	Daily Return Journey	Monthly Pass	Local Pass
1	Km 97.900 Toll Plaza at Dagrai Village	AADT from previous traffic study report for year 2023-24 & Four month from April 2024 to July 2024	AADT from previous traffic study report for year 2023-24 & Four month from April 2024 to July 2024	AADT from previous traffic study report for year 2023-24 & Four month from April 2024 to July 2024	AADT from previous traffic study report for year 2023-24 & Four month from April 2024 to July 2024	AADT from previous traffic study report for year 2023-24 & Four month from April 2024 to July 2024

Toll plaza is located in Uttar Pradesh.

3.2 Classified Traffic Volume

The objective of conducting a Classified Traffic Volume Count is to understand the traffic flow pattern including modal split on a roadway. The Classified Traffic Volume Count survey has been provided by the concessionaire of project highway from actual traffic data gathered at toll plaza locations-based traffic survey done at project stretch.

The vehicles can broadly be classified into fast moving / motorized and slow moving / non-motorized vehicles, which can be further classified into specific categories of vehicles. The groupings of vehicles are further segregated to capture the tollable vehicle categories specifically and toll exempted vehicles are counted separately. The detailed vehicle classification system as per IRC: 64-1990 is given in table below.

Table 3-2 : Vehicle Classification System

Vehicle Type	
Auto Rickshaw	
Passenger Car	Car, Jeep, Taxi & Van (Old / new technology)
Bus	Minibus
	Standard Bus
Truck	Light Goods Vehicle (LCV)

Vehicle Type	
	2 – Axle Truck
	3 Axle Truck (HCV)
	Multi Axle Truck (4-6 Axle)
	Oversized Vehicles (7 or more axles)
Other Vehicles	Agriculture Tractor, Tractor & Trailer

Source - IRC: 64 – 1990

However, since the project highway is currently under toll operation, the data collected corresponds to the category of tollable vehicles. The following are the types of vehicles as per concession agreement.

- Car / Jeep / van
- Minibus /LCV
- Bus
- Truck /
- 3 Axle commercial vehicle
- Multi Axle

3.3 Traffic Characteristic

Toll revenue of project highway does not solely depend on traffic volume. There are certain characteristics of traffic which have substantial potential to affect toll collection. Component of local traffic, component of passenger and commercial traffic, portion of return journey traffic, % of monthly pass traffic are some of such characteristics of traffic. These will be discussed in subsequent sections of report.

3.3.1 Traffic Data

Project concessionaire has provided Traffic data as per traffic survey conducted at toll plaza locations. It may not represent the whole year traffic as this pertains to specific period only. Hence a seasonality factor has been applied to average traffic of current period to arrive at Annual Average Daily Traffic of base year 2024-25. Same corrected traffic is used for future projections and revenue calculations. The following table shows historical traffic on project stretch and derived Annual Average Daily Traffic (AADT) for year 2024-25.

Table 3-3 : Traffic Data at Dagrai Village Toll Plaza at Km 97.900

Sr. No	Type of Vehicle	Annual Average Daily Traffic (Nos.)- 2023-24	Annual Average Daily Traffic (Nos.)- 2024-25
1	Car	4865	4096
3	Minibus /LCV	558	364
4	Bus	210	170
6	Truck	1026	1390
7	3-Axle Commercial vehicle	1253	1361
8	Multi axle	1393	1694
9	Oversized Vehicles	0	4
	Total	**9,305**	**9078**

3.4 Data Analysis

3.4.1 Analysis of Traffic Volume Count

Understanding the character of existing traffic forms the basis of the traffic forecast. The various vehicle types having different sizes and characteristics can be converted into a single unit called Passenger Car Unit (PCU). Passenger Car equivalents for various vehicles are adopted based on recommendations of Indian Road Congress prescribed in "IRC-64-1990: Guidelines for Capacity of Roads in Rural areas". The adopted passenger car unit values (PCU) are presented in Table 3-4.

Table 3-4 : PCU Factors Adopted for Study

Vehicle Type	PCUs
Car	1.0
Minibus	1.5
Standard Bus	3.0
LCV/LGV	1.5
2 Axle Truck	3.0
3 – 6 Axle Truck	4.5
MAV	4.5
Auto Rickshaw	1.0
Van/Tempo	1.0
Agriculture Tractor with Trailer	4.5
Agriculture Tractor without Trailer	1.5

Source: IRC: 64-1990

Traffic volume at each toll plaza was converted to PCU and same is presented as under

Table 3-5 : Traffic in PCU at Project Stretch

Year	Toll Plaza Location (Km)	Traffic No.	PCU	PCU Index
2023-2024	Km 97.900 Toll Plaza at Dagrai Village	9305	19438	2.09
2024-2025	Km 97.900 Toll Plaza at Dagrai Village	9078	21044	2.32

It can be observed from above that project traffic has PCU index 2 to 2.5 which is an indicator of high proportion of commercial traffic in traffic mix in project corridor. The following figure illustrates variation of PCU index at four toll plaza locations.

3.4.2 Components of Traffic

As discussed previously, components of traffic volume play an important role in determining project revenue. A larger component of commercial traffic with higher axle configuration adds to project revenue positively. Similarly, a larger component of local traffic affects the project revenue potential negatively.

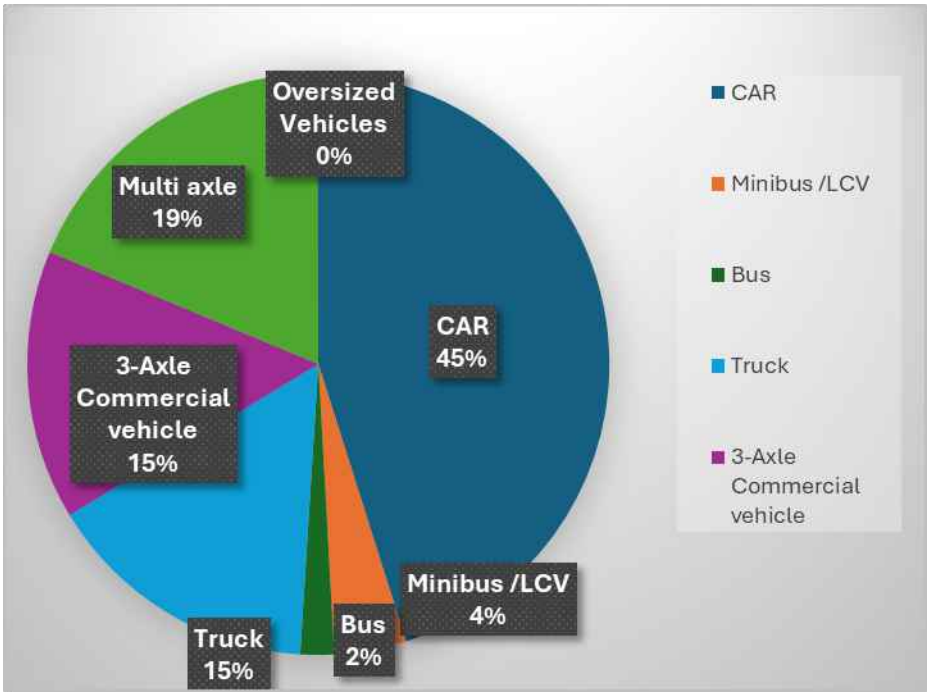

Figure 3-2: Model split of tollable vehicle @ Km 97.900

It is observed that car traffic forms about 45% of total traffic at toll plaza location KM 134.000 while multi axle commercial vehicles are about 34% of total traffic. Truck / Bus and LCV share about 17% and 4% of traffic volume respectively.

Another important bifurcation of traffic is components of traffic with respect various type of toll ticketing like

1. Single Journey
2. Multi Journey
3. Monthly Pass (Local and General)

The following table provides numbers of vehicles falling in each of above category on base year 2024-25.

Table 3-6 : Journey Type Bifurcation of Traffic at Dagrai Village Toll Plaza KM 97.900

Sr. No	Type	Traffic Volume (Nos.)
		2024-25
1	Single Journey	6298
2	Return Journey	2672
3	Local Commercial Single Journey	68
4	Monthly Pass Local	38
5	Monthly Pass	2

It is observed that the project corridor demonstrates a similar pattern of single journey dominated mix of traffic across the entire stretch which is typical of major national highways.

3.5 Secondary Data Collection

There are several other factors which have a substantial impact on traffic patterns and growth on any project corridor. The following are some of such important factors.

- Industrial development around project corridor and its catchment
- Educational infrastructure along project corridor
- Demographic pattern
- Urban area development
- Tourism potential
- Upcoming major infrastructural or Industrial projects
- Special Industry in project corridor
- Overall trends of economic growth local as well as national / regional

Hence in addition to traffic details on the project site, secondary data was also collected from various other sources. Typical secondary data includes the following:

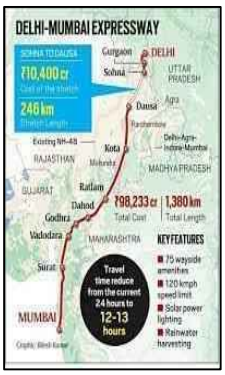
1. Vehicle registration data of regional and national level.
2. Economic Data
   a) GDP
   b) NSDP
   c) Population Growth
   d) Per Capita Income growth
   e) Industrial Growth
   f) Special Industry Potential
   g) Regional and National development vision / plan
   h) Any other relevant data

3. Competing road network

We have collected and utilized such underlying data in the study to estimate the growth and risk factors for traffic along the project corridor. Same is discussed in subsequent chapter.

CHAPTER 4

INFLUENCE ZONE TRANSPORT NETWORK ANALYSIS



4.1 Introduction

Highway corridors behave like integrated circuit networks and more often than not every road is connected to various networks having different origins and destinations. Traffic running on these networks behaves like fluid and flow on network on alignment of least friction.

Following Factors can be considered as major contributors to friction on transportation network.

- Travel Speed / Travel Time
- Geometric deficiencies like blind horizontal curves and steep vertical gradients etc.
- Configuration of road
- Riding quality
- Traffic delays,
- Length of road,
- Passing through built up or Urban Area,
- Terrain,
- Facilities,

4.2 Regional Network

Project road has been in existence for a long time and traffic is almost settled. However, there are few upcoming corridors which may have interest in project road catchments. These are discussed below.

Delhi – Mumbai Expressway - The access controlled greenfield expressway connects Delhi and Mumbai (up to Jawaharlal Nehru Port Trust) and passes through states of Haryana, Rajasthan, Madhya Pradesh, Gujarat and Maharashtra. DME alignment will largely cater to traffic between North of India and Gujarat/Western Maharashtra and is not likely to affect traffic on the project road which caters to traffic on NH-44 which is north south highway. Hence it is not likely to impact project road traffic.

Surat – Chennai Expressway - The alignment will largely cater to traffic between states of Gujarat and Central Maharashtra /Andhra Pradesh/ Telangana/Karnataka/Tamilnadu and is not parallel to Project Road. Therefore, it is not likely to affect traffic on the project road.

Pune – **Bangalore Expressway** – Entire catchment of this proposed expressway falls south of project road. It is not likely to affect the project road traffic.

All other major highways in the region exist and traffic is settled in the region. On the local level also, there is no formidable competing route network. Hence it is not envisaged that

there will be any major impact on project road traffic in the near future due to regional or local network developments.

CHAPTER 5

GROWTH OF TRAFFIC ON PROJECT HIGHWAY

5.1 Introduction

Traffic growth is a function of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. As these factors have a number of uncertainties associated with them, forecasts of traffic are dependent on the projections of other factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a reasonable degree of accuracy and hence the resultant traffic forecast levels may not be precise.

The traffic growth forecast for the project corridor of Gwalior-Jhansi from km 0.000 to km 103.000 (revised section km 16.000 to km 98.455) of NH-75 (New NH-44) has been done taking the above factors into consideration. "**IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**" is established best practice and has been used for traffic growth forecast.

5.2 Trend Analysis

One of the methods of estimation of future rate of growth is to assume the same rate of growth as in the past. Although such a method is more suitable for projects of short durations say 5-10 years, however for long term projections it would be erroneous to assume that the past rate of growth will continue to prevail for a long time in future. Economic conditions, which are major influencing factors, are bound to change over a long period of time. Thus, it would be necessary to modify the past trends of growth suitably.

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. The same is recommended in **IRC: 108-12015-Guidelines for Traffic Prediction on Rural Highways**.

In this method the past trend of vehicular data is paired with an economic indicator and a regression analysis is done to yield the economic model of growth. Growth of vehicle traffic varies for different types of vehicles. It is a proven fact that the growth pattern for passenger and goods vehicle is different. Traffic growth on any highway typically depends on a number of economic parameters. Most important and direct parameters are given as under

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

It can be observed that the ownership of a car is more closely related to affordability; hence per capita is the index which closely fits the growth of car traffic among other criteria. In a similar fashion, the following can be pairs of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population

- Goods Vehicle – NSDP

5.3 Estimation of Traffic Demand Elasticity

Elasticity of traffic demand is defined as the rate at which traffic intensity varies due to a change in the corresponding indicator selected. Hence, In order to estimate the elasticity of traffic demand, it is necessary to establish relationship between the growth in number of given category of vehicles with the relevant economic variable considered, such as NSDP, per capita income and population growth. Latest available data for vehicle registration, per capita income, NSDP and population is used in analysis.

As per IRC: 108-1996 the model for estimating elasticity index for the project corridor is of the following form and is given as below:

$$Log (P) = k \times Log (EI) + A$$

Where,

P = *Number of Vehicles (Mode wise)*
EI = *Economic Indicator*
A = *Regression constant*
k = *Elasticity coefficient (Regression coefficient)*

The elasticity for car and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

The project corridor spreads across state of Madhya Pradesh & Uttar Pradesh. Toll plaza at Dagrai Village in the state of Uttar Pradesh. Project traffic has share of majorly states like Madhya Pradesh, Uttar Pradesh, Delhi, Haryana and Rajasthan. For elasticity calculations, working data from these states also has been analysed.

Following tables and graphs depict regression and elasticity of growth model for stretch falling in Madhya Pradesh State.

Table 5-1 : Per Capita Income Vs Car Madhya Pradesh

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	38497	424644	4.59	5.63		
2012	41142	493412	4.61	5.69	7%	
2013	42548	555461	4.63	5.74	3%	
2014	44027	637626	4.64	5.80	3%	
2015	47351	820391	4.68	5.91	8%	
2016	52782	869777	4.72	5.94	11%	
2017	54829	982124	4.74	5.99	4%	
2018	57401	1087124	4.76	6.04	5%	5.9%

Regression analysis of same is given in figure below.

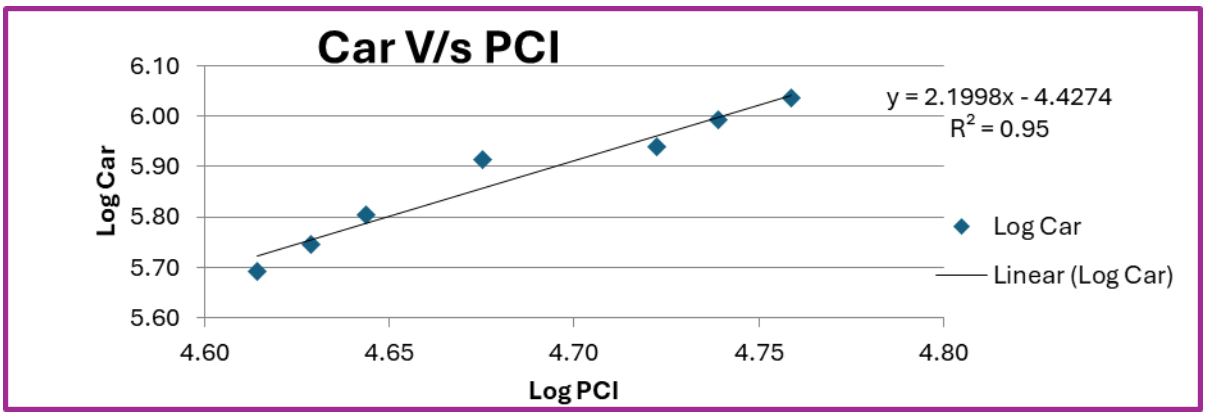


Figure 5-1 : Regression and Elasticity PCI vs. Car – Extrapolation Madhya Pradesh

Table 5-2 : Population Vs Bus Madhya Pradesh

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	72627000	181770	7.86	5.26		
2012	73863000	208530	7.87	5.32	2%	
2013	75099000	233569	7.88	5.37	2%	
2014	76334000	277898	7.88	5.44	2%	
2015	77570000	322227	7.89	5.51	2%	
2016	78806000	347227	7.90	5.54	2%	
2017	79948000	382227	7.90	5.58	1%	
2018	81090000	402227	7.91	5.60	1%	1.6%

Regression analysis of same is given in figure below.

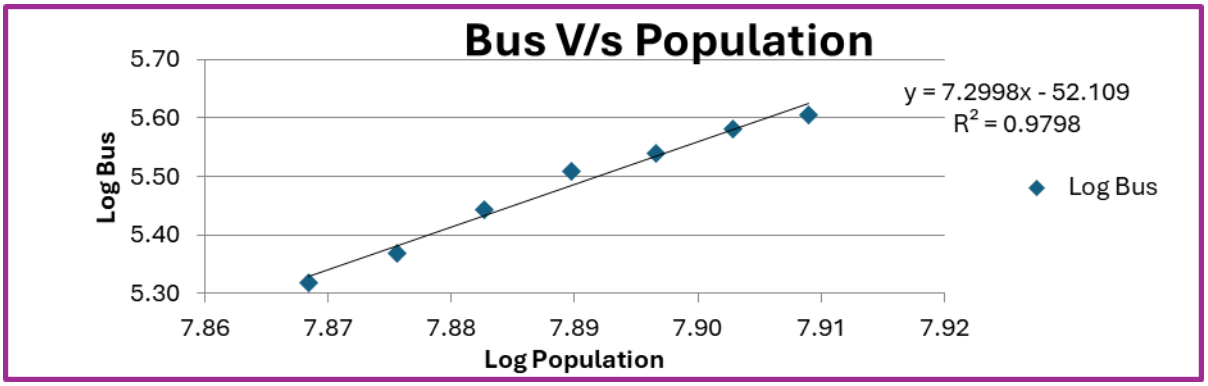

Figure 5-2 : Regression and Elasticity Population vs. Bus – Extrapolation Madhya Pradesh

Elasticity of Trucks has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-3 : LCV Vs NSDP Madhya Pradesh

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2011	28237104	121916	7.45	5.09		
2012	30685334	131098	7.49	5.12	9%	
2013	32259760	137815	7.51	5.14	5%	
2014	33924690	150921	7.53	5.18	5%	
2015	37071567	177352	7.57	5.25	9%	
2016	41946525	233553	7.62	5.37	13%	
2017	44200243	289754	7.65	5.46	5%	
2018	46928896	326291	7.67	5.51	6%	7.6%

The following figure depicts regression analysis and extrapolation.

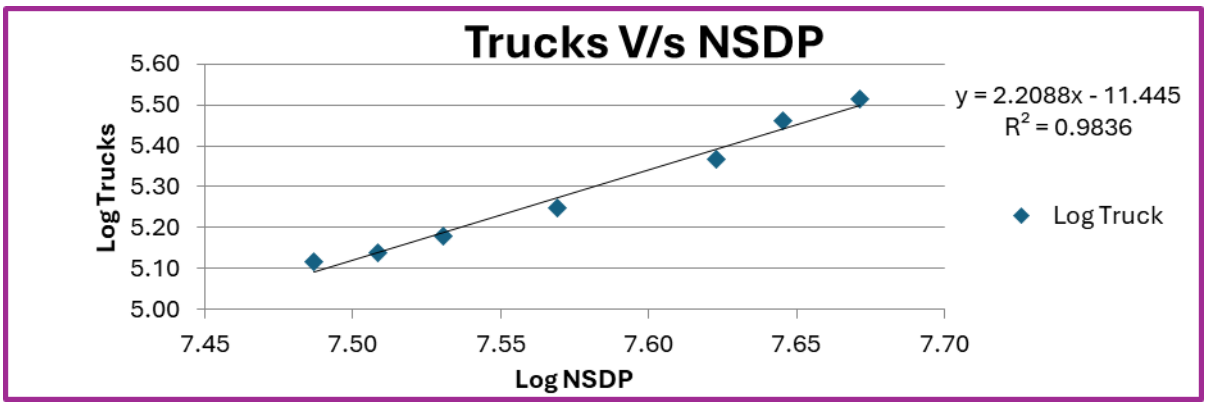

Figure 5-3 : Regression and Elasticity NSDP vs. Trucks Traffic - extrapolation Madhya Pradesh.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-4 : Summary Regression Analysis Madhya Pradesh

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
MADHYA PRADESH	**Car/Jeep**	PCI	y = 2.2965x - - 4.8829	R^2 = 0.9634	2.3	6%	13.57%	Good Regression
	Bus	Population	y = 7.4978x - - 53.6722	R^2 = 0.9862	7.5	2%	11.90%	Good Regression
	Truck	NSDP	y = 2.2088x - - 11.4451	R^2 = 0.9694	2.2	8%	16.70%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Uttar Pradesh State.

Table 5-5 : Per Capita Income Vs Car Uttar Pradesh

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	32002	1108100	4.51	6.04		
2012	32908	1205374	4.52	6.08	3%	
2013	34044	1423020	4.53	6.15	3%	
2014	34583	1572217	4.54	6.20	2%

The following figure depicts regression analysis and extrapolation.

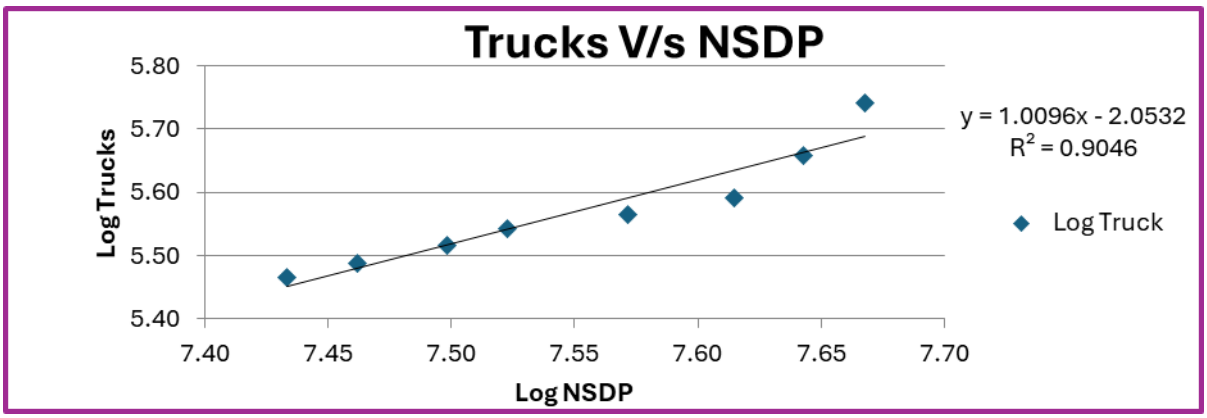

Figure 5-12 : Regression and Elasticity NSDP vs. Trucks Traffic - extrapolation Haryana.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-16 : Summary Regression Analysis Haryana

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
HARYANA	**Car/Jeep**	PCI	y = 2.0655x - - 4.2769	R^2 = 0.8851	2.0655	6.53%	13.49%	Good Regression
	Bus	Population	y = 5.2767x - - 34.4708	R^2 = 0.9959	5.2767	1.57%	8.27%	Good Regression
	Truck	NSDP	y = 1.0096x - - 2.0532	R^2 = 0.9046	1.0096	8.04%	8.12%	Good Regression

The following tables and graphs depict regression and elasticity of growth model for stretch falling in Rajasthan State.

Table 5-17 : Per Capita Income Vs Car Rajasthan

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth (8 Year)
2011	57192	591069	4.76	5.77		
2012	58441	659542	4.77	5.82	2%	
2013	61053	733916	4.79	5.87	4%	
2014	64496	814079	4.81	5.91	6%	
2015	68565	899307	4.84	5.95	6%	
2016	71324	988391	4.85	5.99	4%	
2017	73109	1095526	4.86	6.04	3%	
2018	75555	1204005	4.88	6.08	3%	4.1%

Regression analysis of same is given in figure below.

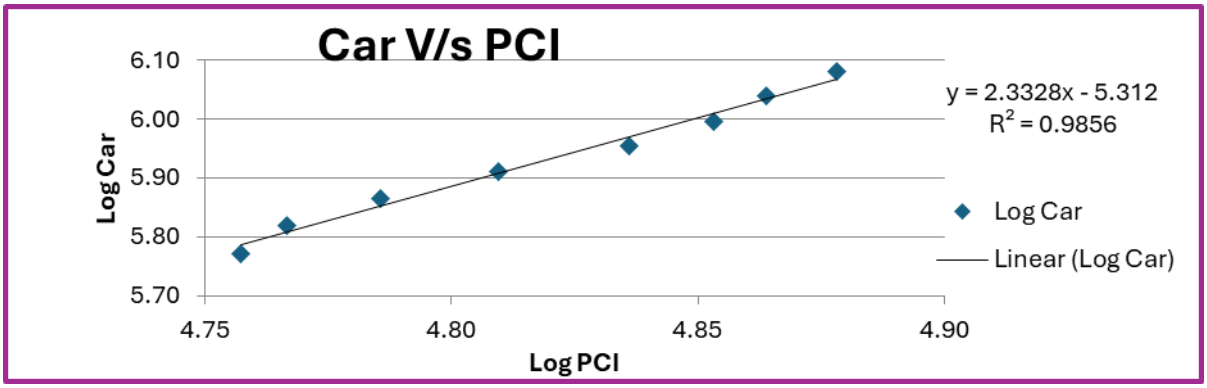

Figure 5-13 : Regression and Elasticity PCI vs. Car – Extrapolation Rajasthan

Table 5-18 : Population Vs Bus Rajasthan

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth (8 Year)
2011	68548000	83345	7.84	4.92		
2012	69687000	88616	7.84	4.95	2%	
2013	70825000	93892	7.85	4.97	2%	
2014	71963000	97650	7.86	4.99	2%	
2015	73102000	102818	7.86	5.01	2%	
2016	74240000	108680	7.87	5.04	2%	
2017	75248000	113964	7.88	5.06	1%	
2018	76256000	118301	7.88	5.07	1%	1.5%

Regression analysis of same is given in figure below.

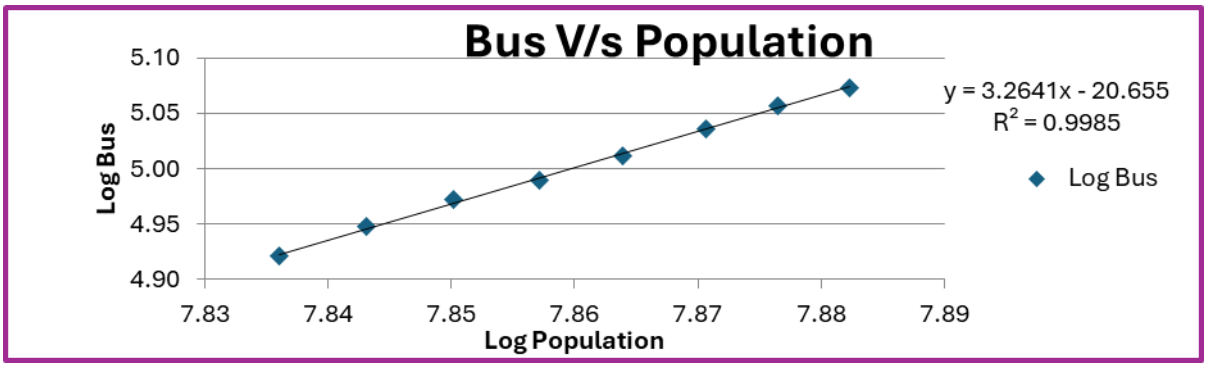

Figure 5-14 : Regression and Elasticity Population vs. Bus – Extrapolation Rajasthan

Elasticity of Trucks has been worked out by regression analysis with NSDP. The following table represents the data and details.

Table 5-19 Trucks Vs NSDP Rajasthan

Year	NSDP	Trucks	Log NDSP	Log Truck	NSDP Growth	Average Growth (8 Year)
2011	39533093	362028	7.60	5.56		
2012	40980249	401983	7.61	5.60	4%	
2013	43429222	434379	7.64	5.64	6%	
2014	46540773	472365	7.67	5.67	7%	
2015	50192151	517604	7.70	5.71	8%	
2016	52965038	561158	7.72	5.75	6%	
2017	55442912	613055	7.74	5.79	5%	
2018	58059438	665926	7.76	5.82	5%	5.7%

The following figure depicts regression analysis and extrapolation.

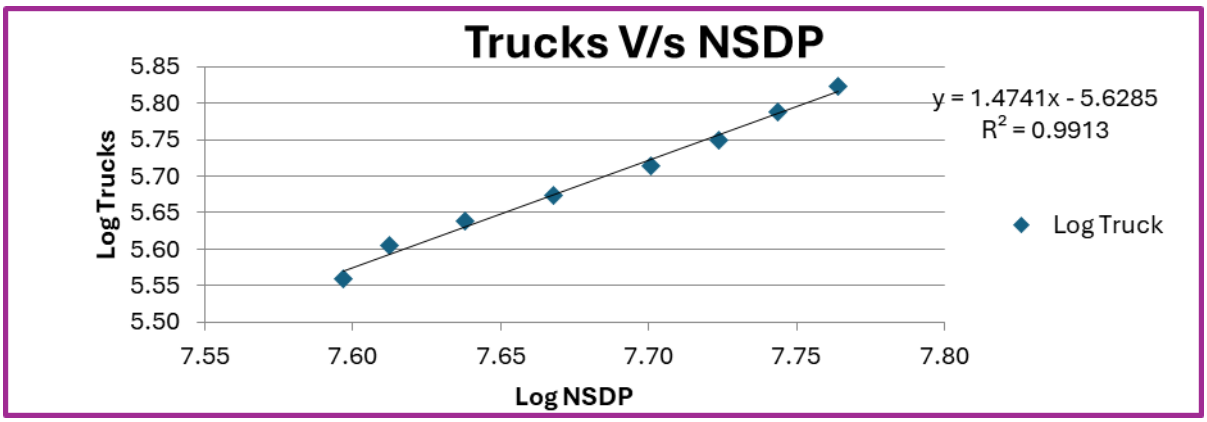

Figure 5-15 : Regression and Elasticity NSDP vs. Trucks Traffic - extrapolation Rajasthan.

Using the regression analysis above, we have arrived at the elasticity of traffic demand for each class of vehicle to a given change in relevant economic indicators. Average traffic growth of a vehicle class is multiplied by the corresponding elasticity coefficient to arrive at traffic growth. R2 statistical measure of how close the data are to the fitted regression line. It varies from 0 to 1. The higher the value of R2 more representative is the regression model of data.

The results of these analyses for *the good fit* regression as reflected by R^2 values are presented in the Table below.

Table 5-20 : Summary Regression Analysis Rajasthan

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average Growth (8yrs)	Growth Elastic Model	Remarks
RAJASTHAN	**Car/Jeep**	PCI	y = 2.3328x - - 5.312	R^2 = 0.9856	2.3328	4.07%	9.49%	Good Regression
	Bus	Population	y = 3.2641x - - 20.6548	R^2 = 0.9985	3.2641	1.53%	5.01%	Good Regression
	Truck	NSDP	y = 1.4741x - - 5.6285	R^2 = 0.9913	1.4741	5.65%	8.33%	Good Regression

Economical model for predicting growth is good tool, however other local, regional, national factors should also be considered before finalizing growth factors. Considering factors such as proposed developments and other influencing economic factors, moderated growth should be considered. These factors are discussed in subsequent sections.

5.4 Analysis of Historic Traffic Data

Historical traffic data forms useful information for any highway project. It provides useful information for establishing past trend of growth. Project stretch of Gwalior_ Jhansi has recently been awarded to Concessionaire. Hence credible historical data on project traffic is not available.

5.5 Other Factors Influencing Growth

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

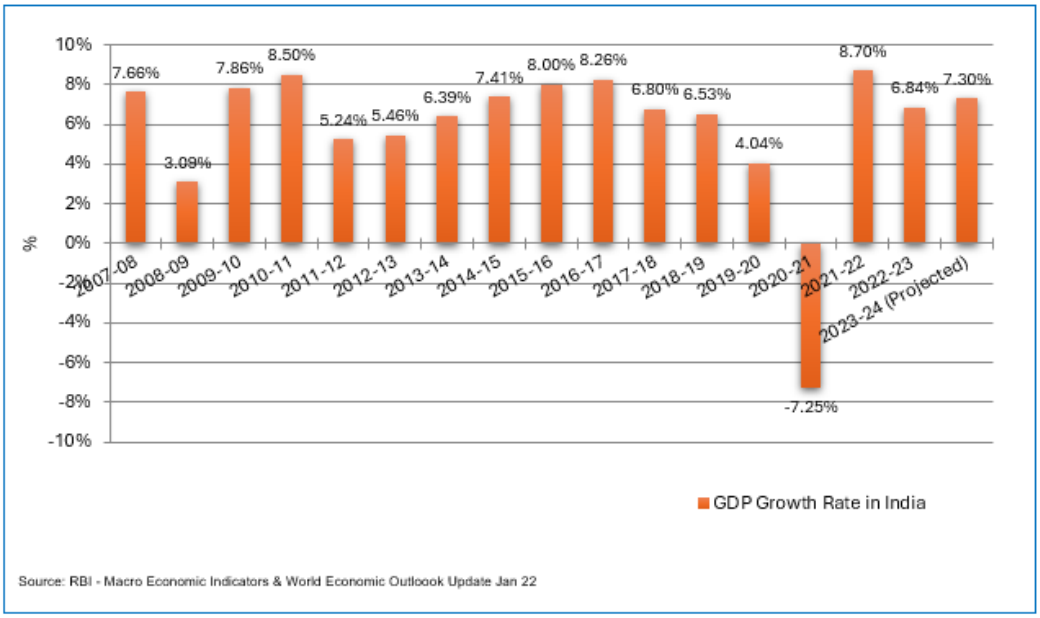

Figure 5-16 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In- India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario. Leading banking and financial institutions have estimated that India would keep on registering good growth in coming years and the growth in year 2023-24 is expected to be around 7.3%.

5.6 Developments along and around the Project Corridor & State

MADHYA PRADESH: Madhya Pradesh state, which is located in central India is bound on the north by Uttar Pradesh, on the east by Chhattisgarh, on the south by Maharashtra, and on the west by Gujarat and Rajasthan. It is the second largest Indian state and one of the fastest growing states in the country. At current prices, the Gross State Domestic Product (GSDP) of Madhya Pradesh is estimated at Rs.1,151,049 crore trillion (US$ 150.74 billion) in 2022-23, registering an annual growth of 10% over FY21. Between 2015-16 and 2021-22, The GSDP increased at a CAGR (in Rs.) of 13.09% from 2015-16 to 2021-22. Net State Domestic Product (NSDP) of Madhya Pradesh was about Rs. 8.27 trillion (US$ 113.94 billion) in 2020-21. Between 2015-16 and 2020-21, state's NSDP grew at a CAGR of around 11.22%

GWALIOR DISTRICT: Gwalior district is one of the fifty-two- districts of Madhya Pradesh state. Gwalior is also the administrative headquarters of this district. The population density in the district is 446 people per sq. Km. In the year 2020 the number of live births in the district was 61265 out of which 34162 where male and 27102 were females**.**

INDUSTRIAL PROFILE OF GWALIOR DISTRICT: The economy of the district is basically based on various Industrial sectors. It comprises 3 prominent industrial areas namely Sitholi, Banmore and Malanpur. Earlier the place had two main big manufacturing industries, such as Gwalior Grasim and J.C. Mills of Birlanagar.

DATIA DISTRICT: Datia district is the one of the fifty-two districts in the state of Madhya Pradesh with its admistrative headquarter located at Datia city. According to the census of the district has population of 7,86,754 out of which 420,157, are males and 3,66,597 are females.

The chief agriculture products in the district are all food grains and cotton.

UTTAR PRADESH: The state has an area of 240,928 sq kms and is the most populous state in India, with population of 199.8 million as per 2011 census with an average population density of 828 persons per sq. km. The economy of Uttar Pradesh is the third largest of all the states in India. Nominal GDP of the state for the year 2022-23 is Rs. 21.74 trillion.

It is reported that the economy of Uttar Pradesh is growing at a faster rate than the national economy at about 9%. In terms of traffic and transportation as well Uttar Pradesh is one of the leader states in India now.

- Air Connectivity: Major national & international airports connecting the rest of India, Middle East & Southeast Asian countries; Only state to have 05 International Airports (03 existing & 02 upcoming at Jewar (G. Noida & Ayodhya)
- Railway Network: Largest railway network in the country spanning over 8,949 km; 05 Railway Zones
- Inland Waterway: India's 1st Inland Waterway is operational in UP (1100 km Haldia - Varanasi tract
- Expressways: Uttar Pradesh boasts state of art expressways ensuring seamless connectivity; 13 Expressways (existing & upcoming)
- Road Network: Largest Road Network in India; 4 Lakh Km Total Road Length 11,737 Km Total National Highway

Logistics hubs emerging across UP: MMLH Dadri, MMTH Boraki, MMT Varanasi etc.

From the above it can be expected that the project corridor would serve as one of the important transportation links in the area and would contribute to the growth of the region.

JHANSI DISTRICT: Jhansi district is a district of Uttar Pradesh state with its headquarters located at Jhansi city. The district is named Jhansi after the headquarter city Jhansi. According to 2011 census the district has a population of 1998603 out of which 1057436 are males and 941167 are females. To some extent the economy of the district is based on agriculture some of its chief agriculture products are wheat, barley. pea, gram, paddy, groundnut, and different types of pulses. The foremost industries of the district are BHEL Jhansi, Heidelberg cement factory, Baidyanth factory, government cotton mill, Paricha

thermal power plant, Indian hume pipe Co.Ltd. its silk material and industries are not only famous in the country but also in the world.

5.7 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as under. Rate of growth is moderated in light of overall regional trend. Growth of Multi-Axle is kept slightly higher as trend of technological advances in logistic industry Favors multi-axle over 2/3 axle carriage. It is also expected that as the economy moves from developing to developed, rate of growth diminishes. Same growth rate is not sustainable for long. Traffic growth has been suitably stepped down for future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation 0.25% from Most Likely case for corridor in both states.

5.7.1 Recommended Growth Rates of Stretch

Table 5-21 : Recommended Growth Rates Optimistic

Category / Year	FY 25-29	FY 30-34	FY 35-39	FY 40-44	FY 45-49
Car/Jeep/Van	7.90%	6.76%	5.15%	4.96%	4.29%
Mini LCV	4.87%	3.09%	2.38%	2.01%	3.22%
Bus	4.97%	3.91%	2.67%	2.45%	2.23%
Minibus	4.97%	3.91%	2.67%	2.45%	2.23%
LCV	4.54%	3.09%	2.38%	2.01%	1.82%
2- Axle	4.87%	3.56%	2.38%	2.01%	1.82%
3 - Axle	4.87%	3.56%	2.38%	2.01%	1.82%
4 to 6 Axle	5.53%	4.03%	3.09%	2.60%	2.34%
7 and Above Axle	5.53%	4.03%	3.09%	2.60%	2.34%

Table 5-22 : Recommended Growth Rates Pessimistic

Category / Year	FY 25-29	FY 30-34	FY 35-39	FY 40-44	FY 45-49
Car/Jeep/Van	7.40%	6.26%	4.65%	4.46%	3.79%
Mini LCV	4.37%	2.59%	1.88%	1.51%	2.72%
Bus	4.47%	3.41%	2.17%	1.95%	1.73%
Minibus	4.47%	3.41%	2.17%	1.95%	1.73%
LCV	4.04%	2.59%	1.88%	1.51%	1.32%
2- Axle	4.37%	3.06%	1.88%	1.51%	1.32%
3 - Axle	4.37%	3.06%	1.88%	1.51%	1.32%
4 to 6 Axle	5.03%	3.53%	2.59%	2.10%	1.84%
7 and Above Axle	5.03%	3.53%	2.59%	2.10%	1.84%

Table 5-23 : Recommended Growth Rates Most Likely

Category / Year	FY 25-29	FY 30-34	FY 35-39	FY 40-44	FY 45-49
Car/Jeep/Van	7.65%	6.51%	4.90%	4.71%	4.04%
Mini LCV	4.62%	2.84%	2.13%	1.76%	2.97%
Bus	4.72%	3.66%	2.42%	2.20%	1.98%
Minibus	4.72%	3.66%	2.42%	2.20%	1.98%
LCV	4.29%	2.84%	2.13%	1.76%	1.57%
2- Axle	4.62%	3.31%	2.13%	1.76%	1.57%
3 - Axle	4.62%	3.31%	2.13%	1.76%	1.57%
4 to 6 Axle	5.28%	3.78%	2.84%	2.35%	2.09%
7 and Above Axle	5.28%	3.78%	2.84%	2.35%	2.09%

CHAPTER 6

TRAFFIC FORECAST

6.1 Traffic Projections

Growth rates recommended in the previous section of the report are used to arrive at traffic projections for future years. Toll plaza wise futuristic traffic projection is given in tables below.

These projections have been done for the following three cases of growth up to concession period.

1. Optimistic Scenario
2. Pessimistic Scenario
3. Most Likely Scenario

Table 6-1 : Total Tollable Traffic @ Toll Plaza - Chainage 97.900 KM

(Optimistic Growth Scenario)

Year	Car	Minibus /LCV	Bus	Truck	3-Axle Commercial vehicle	Multi axle	Oversized Vehicles	Total Tollable Traffic	PCU (Including Exempted)
2024-25	4096	364	170	1390	1361	1694	4	9078	21044
2025-26	4420	382	178	1457	1427	1788	4	9656	22243

CHAPTER 7

FORECAST OF TOLL REVENUE

7.1 General

This chapter presents the tolling rate calculations, categories and toll revenue of the project.

7.2 Discount Categories

As per the Toll Notification (Schedule - G) the discounts and special provisions have been considered. In addition to discounts as per Fee Notification concessionaire has declared special category rates also. Salient features of toll rate structure are given as under

1. Monthly Pass: For frequent users monthly pass would be issued at fee at 2/3rd rate for 50 single journey trips.
2. Multiple Journeys (for Return Trip): Will be charged at 1.5 times single journey.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travellers or whose frequency does not yield any discount from the above categories.
4. Local Discounts: There are several categories of local discounts.
    a) Local Car Jeep Van - Rs. 275 per month (for locals residing within a radius of 20 kms from toll plaza)

Building of inflation and escalation of rate on the basis of WPI are done as per toll notification (Schedule G) as given under as extract from concession agreement.

The formula for determining the applicable rate of fee shall be as follows:-

$$\text{Applicable rate of fee} = \text{base rate} + \text{base rate} \times \left\{ \frac{\text{WPI A-WPI B}}{\text{WPI B}} \right\} \times 0.4$$

Factor of inflation / growth has been incorporated as per Schedule R. WPI numbers (2011-12 series) are available up to 2022-23. A moderate growth in Wholesale Price Index (WPI) has been assumed after that. The following graph provides historical rate of inflation (WPI) in India. Data has been sourced from the Office of Economic Advisor web site (www.eaindustry.nic.in) WPI for year 2017-18 and 2018-2019 is worked back by applying a correlation factor for 2004-05 series as 2017-18 and 2018-2019 data is available in 2011-12 series only. Ratio of WPI for year 2016-17 for both series is used for conversion of WPI in 2004-05 series.

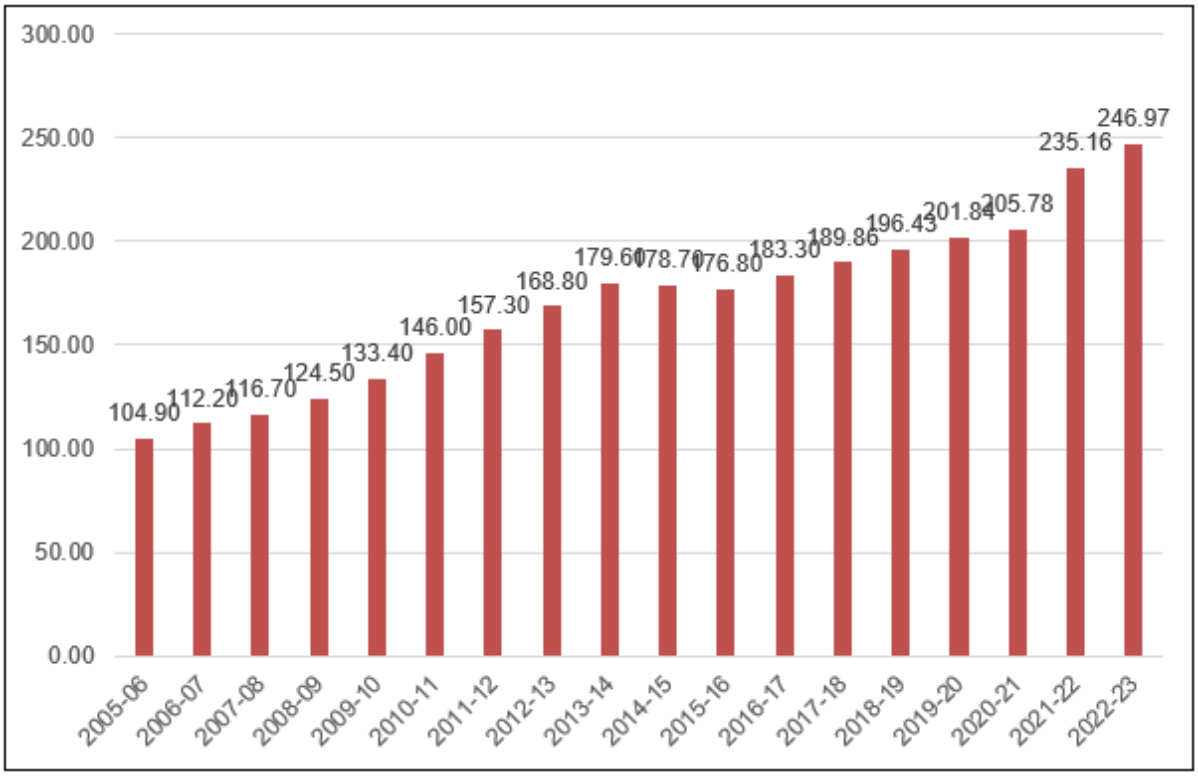

Figure 7-1 : Historical Rate of WPI Inflation in India

Average inflation in WPI in the last few years is steadily growing. It grew by the range of 4% - 5% in previous years. For future years initially it is takes 5% and Suitably Stepped down for future years.

7.3 Estimation of Toll Rates

As per the applicable MORTH notification and Schedule R of contract agreement, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules applicable for contract.

Table 7-1 : Base Toll Rates June 2007-08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Commercial Vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4 to 6 axles)	3.45

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Oversized Vehicles (7 or more Axles)	4.20

These rates are then modified for as per procedure provided in guidelines of notification considering factors listed below.

- Annual revision of fee rate - @3%
- Application of WPI

Base rates have been worked out to map the current rates. These shall be updated when more details come in. Base toll rates are given below.

Table 7-2 : Toll Rates for Forecasting Year (Rs. Rupees) Single Journey @ Toll Plaza 1 – KM 97.900

Year	Car	Minibus /LCV	Bus	Truck	3 axles	Multi axle	Oversized Vehicles

7.4 Toll Revenue

As indicated earlier, toll revenue on the Project Road has been calculated in all three scenarios based on above rates and projected traffic. The estimates of toll revenue under ***Optimistic***, ***Pessimistic*** and ***Most Likely*** growth scenarios are presented in the following section.

7.5 Toll Revenue at all toll plazas under Scenarios

Toll Revenue estimates under all scenarios at each of the toll plaza up to 2043-44 years starting from the year 2024-25 are shown in tables below.

Table 7-6 : Toll Revenue Optimistic Scenario

(Rs. Crores)

Location / Year	TP-01	Total
2024-25	120.19	**120.19**
2025-26	133.17	**133.17**

Location / Year	TP-01	Total
2026-27	147.82	**147.82**

2043-44	627.05	**627.05**

7.6 Modification in Concession Period

Modification of the concession period shall be done on the basis of Revenue targets given in the contract for milestones 1 & 2.

Modification in concession period as per provisions of DCA and same is summarized in table for all scenarios.

Pessimistic Case

Target Point 1- March 2031									
Target Month - March 2031	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Crores)**	**Difference %**	**If qualifies for Modification in Concession Period**	**Qualifying increment or shortfall**	**Change in Concession period %**	**Original Concession Period (Year)**	**Change in Concession period (Year)**	**Modified Concession Period**
TOT-13 - Gwalior to Jhansi	17	17.82	4.80%	No	-	0.00%	20.00	0.00	

Target Point 2- March 2038											
Target Month - March 2038	**Target Revenue (Rs. Crores)**	**Calculated Revenue (Rs. Target Point 2- March 2038											
Target Month - March 2038	Target Revenue (Rs. Crores)	Calculated Revenue (Rs. Crores)	Difference %	If qualifies for Modification in Concession Period	Qualifying increment or shortfall	Change in Concession period %	Original Concession Period (Year)	Change in Concession period	Total Change in Concession period (Year)	Calculated Modified Concession Period	Final Concession Period subject to Cap
TOT-13 - Gwalior to Jhansi	31	33.60	8.39 %	No	-	0.00%	20.00	0.00	0.00	20.00	

TOT-13 (Gwalior to Jhansi)-Modification in Concession Period						
Types of Scenarios	**Pessimistic Case**		**Most likely Case**		**Optimistic Case**	
Target Month	**Mar-31**	**Mar-38**	**Mar-31**	**Mar-38**	**Mar-31**	**Mar-38**
Target Revenue (Rs. Crores)	17	31	17	31	17	31
Calculated Revenue (Rs. Crores)	17.82	31.56	18.07	32.56	18.32	33.60
Differences %	4.80%	1.80%	6.28%	5.02%	7.77%	8.39%
If qualifies for Modification in Concession Period	No	No	No	No	No	No
Qualifying Increment or shortfall	-	-	-	-	-	-
Change in Concession period %	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%
Original Concession Period	20.00	20.00	20.00	20.00	20.00	20.00
Change in Concession period	0.00	0.00	0.00	0.00	0.00	0.00
Total Change in Concession period	0.00		0.00		0.00	
Calculated Modified Concession Period	20.00		20.00		20.00	
Final Concession Period subject to Cap	0.00		0.00		0.00	

Thus, there is no modification expected in concession period due to variation in revenue as per above estimates in all scenarios.

CHAPTER 8

CONCLUSION & RECOMMENDATIONS

8.1 Conclusion & Recommendations

Project stretch of Gwalior-Jhansi from km 0.000 to km 103.000 (revised section km 16.000 to km 98.455) of NH-75 (New NH-44) in the state of Madhya Pradesh and Uttar Pradesh is currently four lane road. The road is in sound condition and serves healthy traffic volumes. Project corridor is a part of the important regional network connecting Uttar Pradesh, Madhya Pradesh to Southern States and vice-versa. There are large number of townships, industrial corridors and other business establishment coming up along project corridor. As discussed, dominant portion of traffic is long route traffic, which is more sensitive towards the growth of national economy. As Indian economy is poised to grow at 7%+ post COVID-19, the project corridor is expected to pick up the same trend in terms of traffic flow. All these developments have potential to give positive impact to traffic flow on project. The following can be considered as major outcomes of the study

a) There is good amount of tollable traffic running on project

b) Project corridor has potential to witness traffic growth @ 6-8% annually in near future due to various development in area and overall development of economy

c) Project corridor has committed traffic as long route traffic and does not run a risk of traffic leakage due to quality competing road

Based on above it can be considered a stable healthy project from traffic and revenue point of view.

1 Introduction

1.1 Project Background

The Government of Uttar Pradesh had entrusted Uttar Pradesh Expressway Industrial Development Authority (UPEIDA) to develop a six lane access controlled Expressway extendable to eight lane from Meerut to Prayagraj under Design Build Finance Operate and Transfer (DBFOT) mode. The total length of project corridor is approximately 594 km. This length is divided in four groups and RFP cum RFQ document is invited for all four groups. IRB Infrastructure Developers Limited has appointed M/s T&T Consultants Private Limited to study the traffic revenue potential of this project.

1.2 Report Updation in 2024 with optimistic and pessimistic Scenario

In this report updation from previous version the toll rates are revised as per WPI changes and optimistic, pessimistic scenario. The table below provides these changes. The growth rate forecast remains the same as FY-2021 report. This forecast remains in acceptable range since the GDP of India in FY 24 is 173.82 lakh crore and projected GDP in this report in FY 24 is 174.4 lakh crore. The percentage difference is 0.3% which is in acceptable range. Hence growth forecast in current is report is taken same as FY 21/FY 22 report.

Table 1-1 Optimistic and Pessimistic Scenario of Analysis

Parameter	Pessimistic	Optimistic
Seasonality	-15%	10%
ADT	-15%	10%
Growth Rate	-20%	10%

1.3 Project Corridor Description

1.3.1 Districts of Project Corridor

The project corridor starts from Meerut and ends at Parayagraj passing through the districts of Meerut, Hapur, Bulandshahr, Amroha, Sambhal, Budaun, Shahjahapur, Hardoi, Unnao, Raebarelli, Pratapgarh and Prayagraj. Figure 1-1 shows the alignment of project corridor.

1.3.2 Concept of Tolling based on Entry and Exit in the Project Corridor

The total Project Corridor has 21 nodes. Nodes are entry exit points or interchange points at which the traffic could enter and exit the Project Corridor or traffic interchanges between two Groups of the Project Corridor. The division of project corridor into groups is described in Section 1.4 The nomenclature from A to U in the figure below describes these points on the project corridor. The toll fee paid by the user is based on length of section the user uses. This is described in further detail in Section 1.4.1

Figure 1-1 Districts of Project Corridor

1.3.3 Strategic Location of Project Corridor

1.3.3.1 Distance Advantage from Competing Highways

Figure 1-2 shows the project corridor and its vicinity. Old NH-24, NH-19, NH-34, Yammuna-Expressway and Agra Lucknow Expressway and NH-34 are important parallel roads to the project corridor. The project corridor shortens the distance between Merrut to Prayagraj by 74 Km from Old NH-24 and 120 km from NH-19. Figure 1-2 Shows location of project highways vis-à-vis other competing highways. In the figure it could be seen competing highways of NH-19 and old NH-24 have a curvature in the alignment while the alignment of Ganga Expressway is straight. Table 1-2 compares the distance between project corridor and important OD pairs where Ganga Expressway is shorter in length.

Table 1-2 Distance Comparison (in km) between Ganga Expressway and other alternate routes between important OD pairs

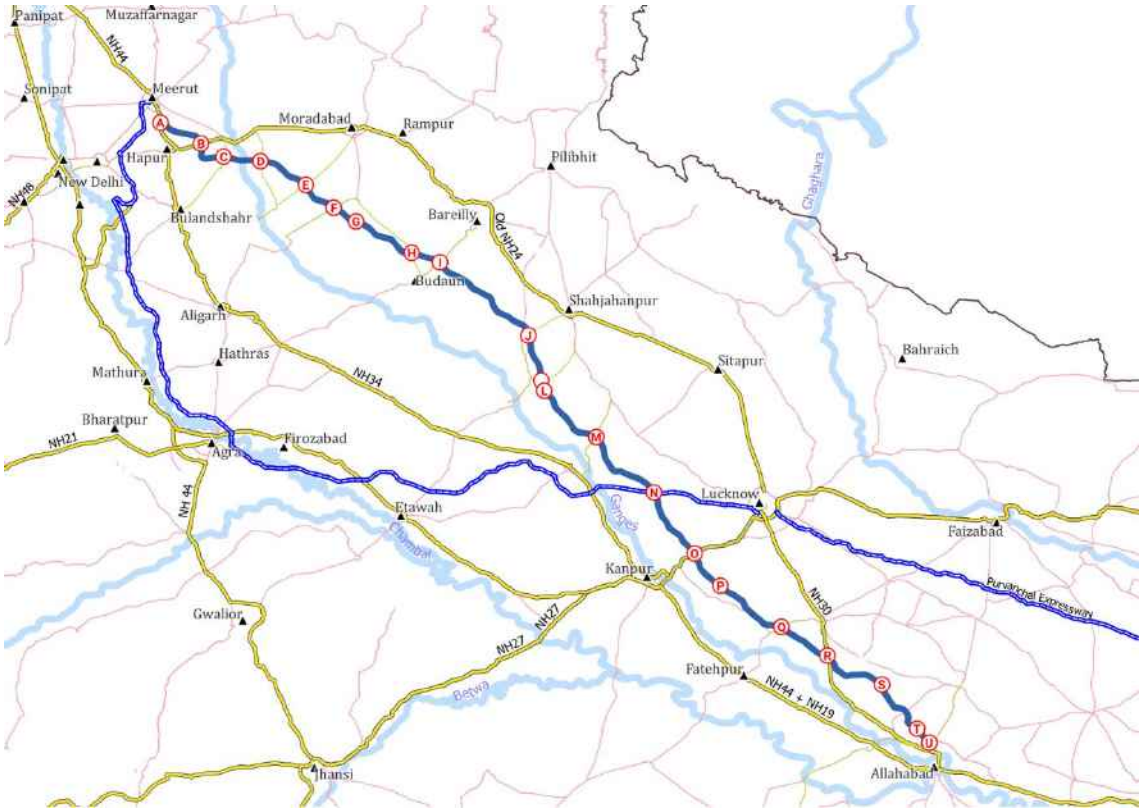
From	To	Ganga Expressway	NH-19	Old NH-24	Agra-Lucknow Expressway
Meerut	Prayagraj	620*	740	694	
Meerut	Kanpur	469	544		
Meerut	Lucknow	460		486	575
Delhi	Prayagraj	672	702		
Delhi	Lucknow	505		534	554
Northern States**	Prayagraj	737	832	831	
Northern States	Kanpur	579	638		
Northern States	Lucknow	570		623	677

*Distance from Meerut centroid to Prayagraj centroid

**Northern states means states above Delhi i.e. North Haryana, Punjab, Jammu & Kashmir. The centroid taken for distance calculation is Karnal.

1.3.3.2 Network of Expressways with Ganga Expressway

With North linkages and Eastern Linkages the Ganga Expressway gets connected from Jammu & Kashmir/Uttarakhand upto Bihar-Uttar Pradesh border. This is described in following subsections.



1.3.3.2.1 North Linkages of Ganga Expressway (Meerut and Hapur End)

1. Delhi-Amritsar-Katra Expressway links Katra in Jammu and Kashmir to Western Peripheral Expressway via Amritsar, Ludhiana and Jind
2. Kundli-Manesar Expressay (Western Peripheral Expressway) links to Eastern Peripheral Expressway.
3. Link of Ganga-Expressway with Eastern Peripheral Expressway links it with Ganga Expressway. The connection of Ganga Expressway become seamless with Jammu & Kashmir and Punjab.
4. Haridwar link of Ganga Expressway is also proposed that would connect Garhwal region of Uttarakhand with Ganga Expressway
5. Delhi-Dasna-Hapur is 8 lane expressway that connects Delhi to Hapur. There is one node (node B) of Ganga Expressway at Hapur.

1.3.3.2.2 Eastern Linkages of Proposed Ganga Expressway

1. The Ganga-Expressway forms a seamless connection with other existing and proposed expressways. Agra-Lucknow Expressway intersects the project corridor at node N. Through node N Ganga Expressway connects to Lucknow and further to Purvanchal Expressway and NH-27. This forms a connection to Ganga Expressway to Purvanchal region of Uttar Pradesh, North Bihar and North Eastern States. Agra-Lucknow expressway and NH-21 is also likely to feed traffic from Rajasthan to Eastern parts of India (South Bihar, Jharkhand, Odhisa) at node N.
2. It is proposed in future that Ganga-Expressway would be extended from Prayagraj upto Ballia via Varanasi. These connections will increase the network length of expressway and would complement the traffic of project corridor.

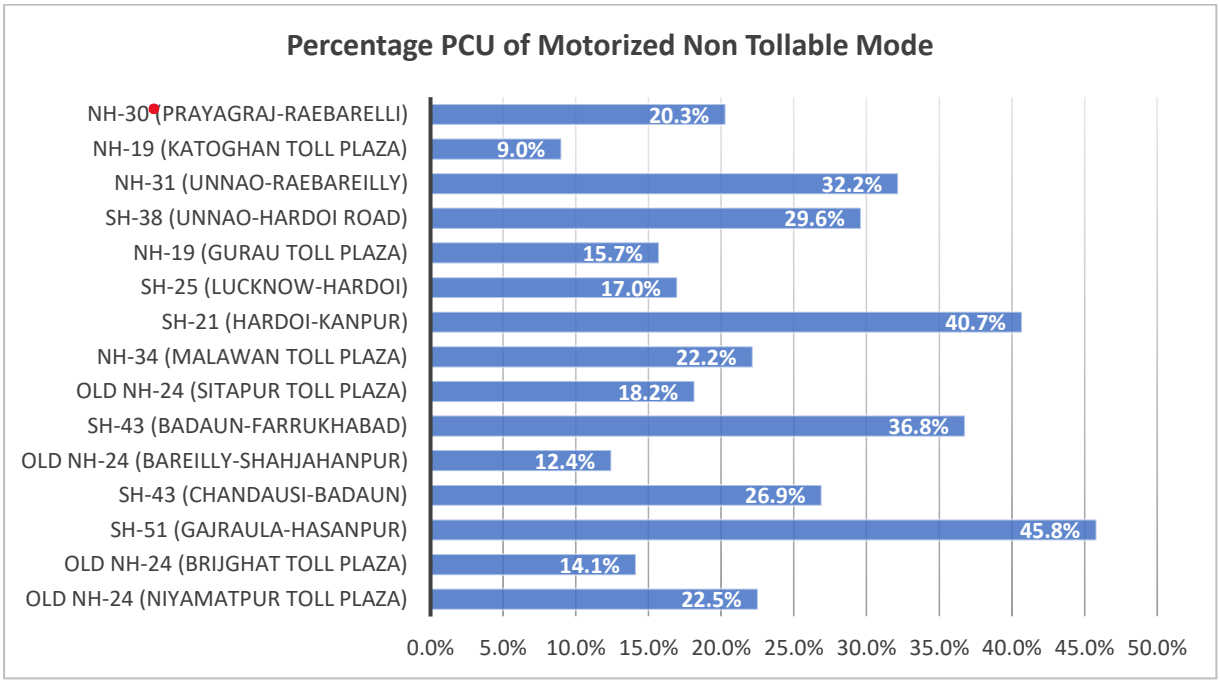


Figure 1-2 Project Corridor and Highways in the Vicinity

1.3.4 Advantage of Expressway over National Highway

The expressway because of higher design speed result in time savings of user and because of less curvatures, better riding quality, absence of non tollable modes, access control result in lower operating cost of the vehicle. All these factor are captured in Road User Cost analysis of Section 3.5. One of the significant advantages of expressway over National Highway is absence of non tollable modes like two wheeler, three wheeler, non-motorized vehicles which ply on National Highways and State Highway. In National Highways and State Highways because of ribbon development occurring along the Highways friction causing factors like non tollable increase in number. Figure 1-3 shows the percentage PCU of motorized non tollable mode at various locations of parallel highways. It could be seen that at Brijghat toll plaza and Niyamatpur Toll Plaza of old NH-24 that lie in the vicinity of project corridor the percentage contribution of PCU of non-tollable mode is 14.1% and 22.5% respectively. In the State Highways in the vicinity of Project corridor the contribution is even higher and goes as high as 45.8% at SH-51. These non tollable modes along with non motorized modes become impediment to the movement of tollable modes. Moreover there percentage share is likely to increase with growing habitation near National Highway and State Highway.

Figure 1-3 Percentage Contribution of PCU of motorized non-tollable mode

1.4 Groups of Project Corridor

The Project Corridor is divided into four groups in RFQ cum RFP documents. The following sections describes each group of Project Corridor. The tolling of the project is based on length traversed from entry and exit points. The description of group is provided in following sub sections.

1.4.1 Group 1 and Concept of Entry-Exit based Tolling

Group 1 of Project Corridor starts in district of Meerut and ends at Budaun. It starts at node A and ends at node G. The length of Group 1 is 129.7 km. Table 1-3 and Table 1-4 provides nodes, section length and tolling details of the group. As described in Section 1.3.2, the user pays toll fee based on the length of corridor the user uses. Hence the user pays the toll fee at exit points. For example if the user travels from node A to node B, the user pays toll fee at exit point B based on length of expressway and structure tollable on the relevant toll plaza . However, if the user enters at nodes of Group 1 but travels beyond Group 1 (i.e. beyond Km 137+600), there is a provision of toll collection booth at this point. This point on Package 1 is at Km 137+600 which is defined as node G on the Project Corridor.

Figure 1-4 Group 1 Project Corridor

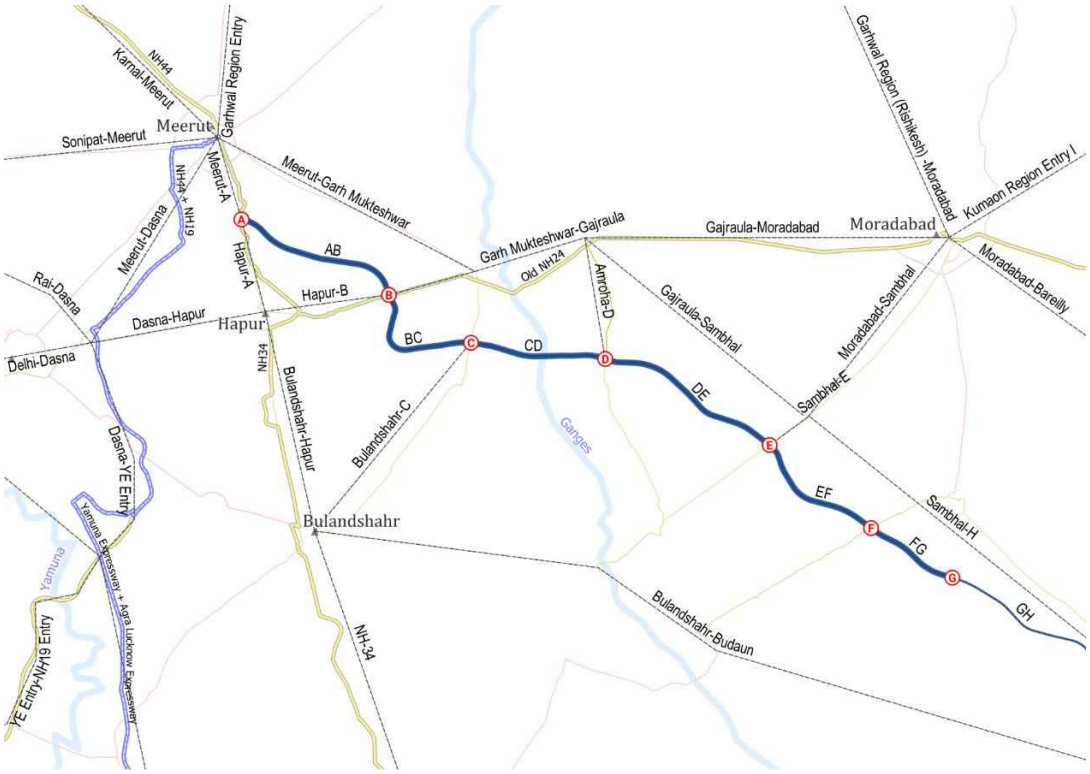

Table 1-3 Group 1 Project Stretch

SectionFrom	SectionTo	SectionFrom Code	SectionTo Code

F	G	123+288	14.312	0.000	0.000	

1.4.2 Group 2

Group 2 of Project Corridor starts in district of Budaun and ends at Hardoi. It starts at node G and ends at node L. The length of Group 2 is 151.7 km. Table 1-5 and Table 1-6 provides nodes, section length and tolling details of the group.

Figure 1-5 Group 2 Project Corridor

1.5 Project Influence Area

1.5.1 Socio-Economic Profile of Uttar Pradesh

The project corridor lies entirely in the state of Uttar Pradesh. In the origin Destination survey, it was found that states of Uttar Pradesh, Bihar, Jharkhand, Rajasthan, Delhi, Haryana, Punjab, Uttarakhand, Jammu and Kashmir have contribution to goods vehicle traffic. Since the entire Project lies in the state of Uttar Pradesh, the socio-economic growth of Uttar Pradesh will have major contribution in traffic growth. Northern states of Delhi, Haryana, Punjab, Uttarakhand and eastern states of Jharkhand, West Bengal, Orissa, North Eastern states would also contribute in goods traffic of the project corridor. The figure below shows the contribution of different states in GDP of India. Uttar Pradesh contributes 8.1% to GDP of India and has a population of 16.9% of total population of India.

Figure 1-8 Percentage Contribution of different states to GDP of India in year 2018-19 (base years 2011-12)

1. Table 1-11 describes the NSDP, Per Capita NSDP and Net Value Added by Primary, Secondary and tertiary sector of states of India. The state of Uttar Pradesh ranks 5th in NSDP and 4th in Net value added by secondary sector and 2nd in Net Value Added by Primary sector.

Table 1-11 NSDP, PCNSDP and contribution of Primary, Secondary and Tertiary Sector of Major States in India (base year2011-12)

2. Table 1-12 compares the socio-economic profile of districts in the vicinity of project corridor with Uttar Pradesh. Gautambudh Nagar, Lucknow and Prayagraj are top contributors in States income. The Per capita income of Gautambudh Nagar is almost 7 times states average.

Table 1-12 Socio-Economic Profile of Districts in vicinity of project corridor

Rank	District	Ratio of PCI of district with UP	Percentage contribution of State Income
1	Gautambudh Nagar	6.9	9.20%
2	Lucknow	2.7	3.60%
3	Prayagraj	2.5	3.40%
5	Meerut	2.4	3.30%
6	Kanpur Nagar	2.1	2.80%
7	Bareilly	1.9	2.50%
8	Ghaziabad	2.1	2.80%
9	Buland Shahar	1.6	2.10%
20	Badaun	1	1.30%
23	Shahjahanpur	0.9	1.30%
25	Amroha	1	1.40%
27	Unnao	0.9	1.20%
28	Hardoi	1	1.30%
37	Raebareilly	0.7	1.00%
40	Hapur	0.7	0.90%
48	Sambhal	0.7	0.90%
55	Pratapgarh	0.6	0.80%

2 Data Collection

2.1 Data collection

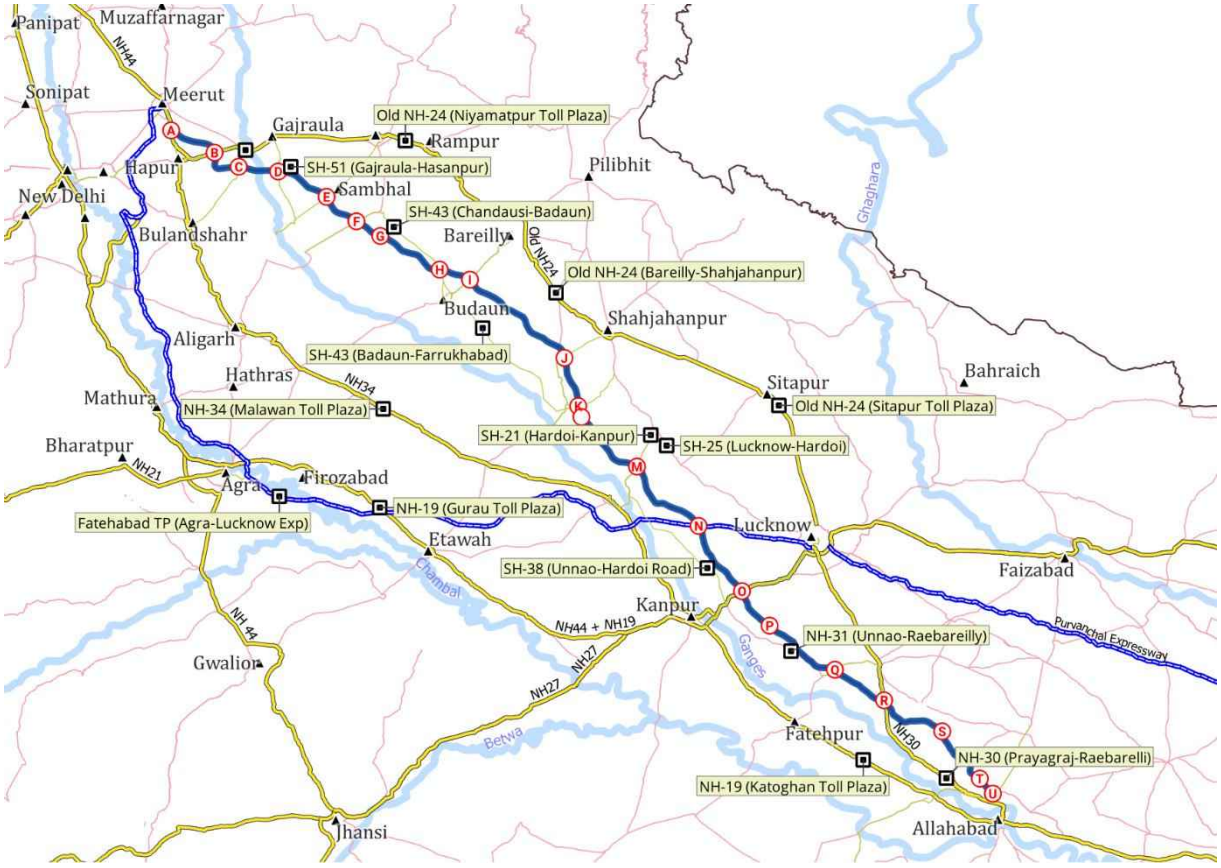
The data collection is mainly classified into

- Primary data collection: The primary data collection is a very important component of analysis. The aim of the primary data collection process is capture base year traffic volume counts, local traffic and spatial analysis of traffic moving in the project corridor.
- Secondary data collection: The aim of secondary data collection is to capture historical trends in traffic growth, economic parameters of Project Influence Area that drives growth, new transport projects under implementation that is likely to affect traffic in the project corridor.

The following section describes type of data collected and their source

2.1.1 Primary data collection

Primary data collection in form of Classified Volume Count (CVC) Survey and roadside origin-destination (OD) surveys. CVC and Road side OD surveys were carried out at locations shown in Figure 2-1. The schedule of surveys is described in Table 2-1. The selection of location of traffic survey were based on following criteria:



1. To capture, long distance traffic which is likely to use major part of corridor and the traffic which is moving on highways of South bank of river Ganga (NH-19, Agra-Lucknow Expressway and NH-34). Traffic moving in roads of South bank of river Ganga have origin destination pairs in Northern parts of India (Punjab, Haryana, Delhi) and Eastern part of India like Purvanchal region of Uttar Pradesh, Bihar, West Bengal, Odhisa etc. This traffic is captured at survey locations of Old NH-24, NH-19 and Agra-Lucknow Expressway.
2. The Expressway is divided into four groups and each group has entry and exit points. In order to capture sectional traffic between entry-exit points of short distances various survey locations were chosen. For example to capture traffic between districts of Badaun and Sambhal, OD survey at location of SH-43 (Chandausi-Badaun) was carried out.
3. Section 3.4 describes the method of estimating potentially divertible traffic or divertible traffic and this section gives the location of survey used in estimating potentially divertible traffic. Potentially divertible traffic or divertible means the traffic that are likely to be diverted from existing roads to proposed Ganga Expressway. For example traffic moving from Meerut to Prayagraj is captured at Old NH-24, NH-19 and Agra-Lucknow Expressway. The traffic captured at these locations from OD survey reporting Meerut and Prayagraj is potentially divertible traffic to Ganga Expressway. Likewise OD survey is used to estimate divertible traffic for different OD pairs which is described in Section 3.4. It is to be noted to derive the traffic on Ganga Expressway potentially divertible traffic and diversion percentage (derived from diversion analysis Section 3.5) is used to derive traffic on proposed Ganga Expressway. This traffic which is diverted to Ganga Expressway is defined as diverted traffic. The diverted traffic for base year (2021-22) is explained in Section 3.6.

Table 2-1 Schedule of traffic Surveys

Sno.	Location	OD Date	CVC Start Date	CVC End Date
1	Old NH-24 (Niyamatpur Toll Plaza)	09-09-2021	05-09-2021	12-09-2021
2	Old NH-24 (Brijghat Toll Plaza)	03-09-2021	05-09-2021	12-09-2021
3	SH-51 (Gajraula-Hasanpur)	21-09-202	12-09-2021	19-09-2021
4	SH-43 (Chandausi-Badaun)	17-09-2021	11-09-2021	18-09-2021

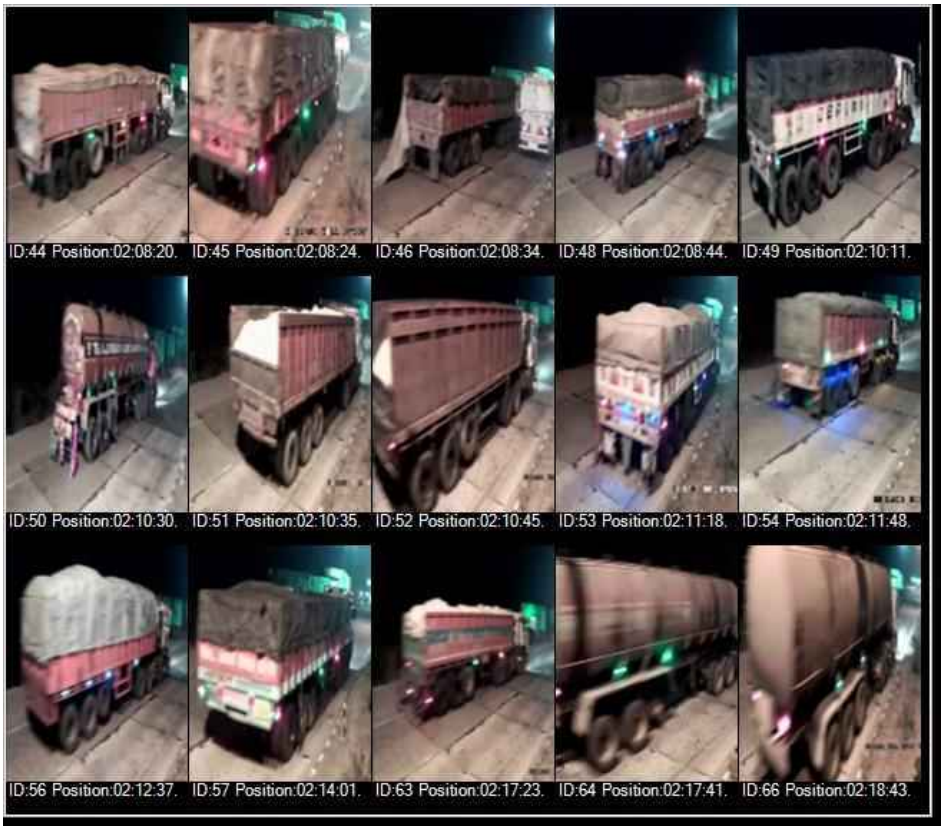
5	Old NH-24 (Bareilly-Shahjahanpur)	20-09-2021	14-09-2021	21-09-2021
6	SH-43 (Badaun-Farrukhabad)	16-09-2021	11-09-2021	18-09-2021
7	Old NH-24 (Sitapur Toll Plaza)	14-09-2021	08-09-2021	15-09-2021
8	NH-34 (Malawan Toll Plaza)	20-09-2021	15-09-2021	22-09-2021
9	SH-21 (Hardoi-Kanpur)	13-09-2021	10-09-2021	17-09-2021
10	SH-25 (Lucknow-Hardoi)	13-09-2021	10-09-2021	17-09-2021
11	Fatehabad TP (Agra-Lucknow Exp)	08-09-2021	09-09-2021	17-09-2021
12	NH-19 (Gurau Toll Plaza)	06-09-2021	06-09-2021	13-09-2021
13	SH-38 (Unnao-Hardoi Road)	17-09-2021	11-09-2021	18-09-2021
14	NH-31 (Unnao-Raebareilly)	17-09-2021	10-09-2021	17-09-2021
15	NH-19 (Katoghan Toll Plaza)	10-09-2021	08-09-2021	15-09-2021
16	NH-30 (Prayagraj-Raebarelli)	17-09-2021	09-10-2021	17-10-2021

Figure 2-1 Survey Locations

2.1.2 Secondary data collection

The secondary data collection was done to capture socio economic data like national and state domestic product, per capita income, population. Table 2-2 describes the list of documents referred their sources and its significance in parameters for which they are used.

Table 2-2 Secondary Data Sources



Parameters	Variables	Source	Documents referred
Elasticity of Transport Demand	Toll data Vehicle Registration data, Population, Per capita Income at county, State and Country level	Department of Planning commission, MORTH, Directorate of economics and statistics, NHAI, Central Statistical Organization	• Road Transport Year book • Socio-Economic survey • Population Projections for India and States • Toll Data
Economic Factor	NSDP, Sector-Wise GDP, for county, NSDP, State and Country level		

2.2 Traffic Survey

2.2.1 Classified Volume Count Survey

Classified Traffic Volume Count was carried out on site using a varifocal camera. The data was extracted from the video using image processing techniques. Image processing technique also produced time stamped thumbnails of each vehicle category that was used to cross check with automated counts results. A sample thumbnail of six axle truck is shown in figure below.The vehicles were classified according to the toll categories.

Figure 2-2 Sample Thumbnails of Six axle Truck

2.2.2 Origin & Destination (O-D) survey

Objective

The objective of the O-D survey was to gather information regarding travel characteristics of different users on the project road. Results of the O-D survey were used to describe the user characteristics, both of passengers and freight vehicles, such as distribution of local traffic, through traffic, trip characteristics like occasional, frequent users of corridor as well as commodity type carried by freight vehicles. Additionally, O-D survey was used to identify the geographical, spatial location of trips and project influence area of the project corridor.

Methodology

The O-D survey was carried out adopting road-side interview method as detailed in *IRC: 102-1988*. The survey was carried out for passenger and goods vehicles for 24 hours at three toll plaza locations. Trained enumerators under the supervision of transport planners collected and carried out the survey. The O-D survey of passenger modes captures characteristics like origin, destination, occupancy, trip purpose and length of trip by mode type etc. For freight modes, the survey captures characteristics like origin, destination, commodity type and frequency of trips.

2.3 PCU Values

The toll data was collected or past 10 years categories having different sizes and characteristics are to be converted into a standard equivalent unit called “Passenger Car Unit” (PCU). The PCU values (Rural Roads) as suggested in the IRC: 64 – 1990 “Guidelines for Capacity of Roads on Highway” have been adopted as given in Table 2-3.

Table 2-3 PCU factors

Fast Vehicles

Vehicle Group	PCU Factor
Car, Jeep, Van, Taxi and Utility Vehicles	1.0
Auto Rickshaw / Tempo	1.0
2 Wheelers	0.5
Mini Bus	1.5
Standard Bus	3.0
Light Commercial Vehicle (LCV)	1.5
2 – Axle Truck	3.0
3 – Axle Truck	3.0
Multi Axle Truck (Semi Articulated & Articulated)/ HCM/EME	4.5
Agriculture Tractor +Trailer	4.5
Agriculture Tractor	1.5

2.4 Traffic Volume Count Analysis

1. The Average Daily Traffic (ADT) was derived by taking out the mean of seven days for each category of vehicle. Table 2-4 and Table 2-5 provides ADT in volume and PCU at survey locations.
2. Table 2-6 provides the seasonal correction factor. The seasonal correction factor was derived from toll data of Agra Lucknow expressway The SVF values for month of September was used to convert ADT into AADT.
3. Table 2-7 and Table 2-8 provides AADT for at survey locations.
4. It is observed that highest number of cars were at Brijghat toll plaza and Niyamatpur toll plazas of NH-24. The proximity to Delhi is one of the reasons for high number of cars.
5. At all 4-6 lane National highways the MAV* vehicle is in the range of 1800 to 2900. The highest number of Multi Axle vehicles were observed at Katoghan Toll Plaza.

*4-6 Axle Truck

3 Network Analysis & Potentially divertible Traffic

3.1 Introduction

Appraisal of project corridor influenced network is the significant assignment in understanding various aspects such as (i) Potential revenue threats to the project in terms of traffic diversions due to prospective network improvements, (ii) scope of prospective capacity augmentation of project corridor due to variations in level of service and prospective land use transformations. This chapter deals with following aspects.

1. Identification of project corridor influenced network
2. The macro level if network that describes the importance of corridor for long distance traffic from different parts of India.
3. The network in the vicinity of project corridor that describes movement of traffic in the vicinity of the project corridor.
4. Zoning System that divides traffic into homogeneous zone which helps to understand the movement of traffic.
5. Major contributors of different zones in the traffic.
6. Identification and assessment of potential competing alternative routes/sections (Existing and proposed) in the project network.
7. Estimating of generalized road user cost for project corridor and competing alternative routes considering level of service (Design Service Volume/Capacity).
8. Divertible traffic in base year on the project Corridor.

3.2 Tools and Software Used

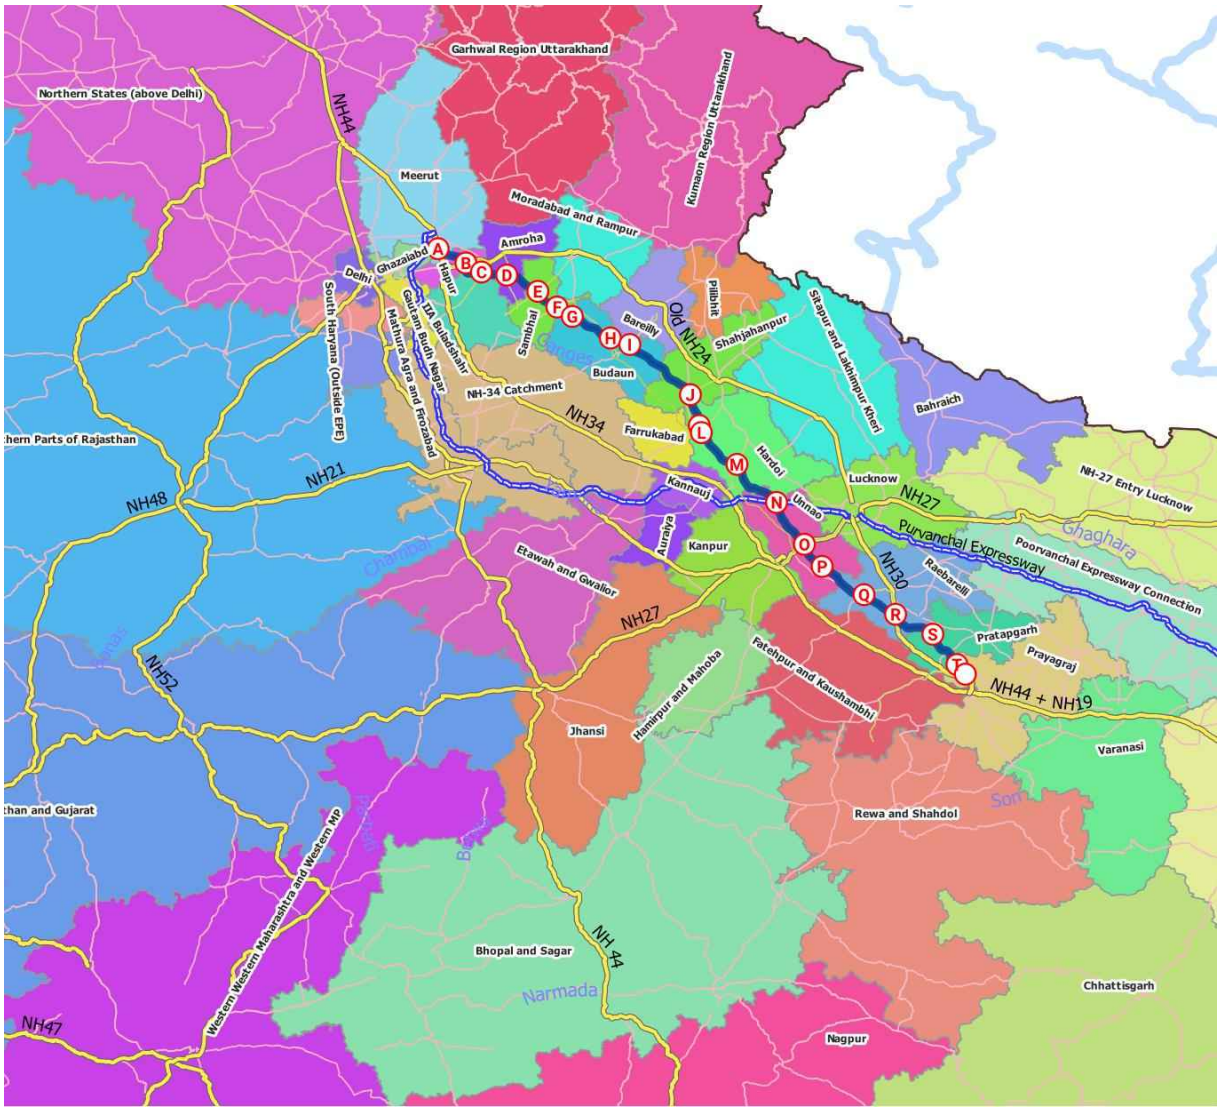
The following sections describes diverted traffic on Ganga Expressway from competing Highways. In order to derive a detailed system of zones and parallel routes for OD pairs were developed forming a transportation network comprising of Ganga Expressway, its parallel roads with network characteristics of parallel route and Expressway. Network characteristics includes congestion factor, toll rates and factors that are required in estimating Road User which is explained in detail in Section 3.3, 3.4, 3.5 and 3.6. Quantum GIS software was used for developing zoning system, divertible OD pairs and network characteristics which was integrated with spreadsheets to run diversion percentage algorithm.

3.3 Zoning System

The study area is divided in homogeneous zone to carry out the traffic demand analysis.The location of OD survey was marked on GIS map and locations within the polygon of study area. The basis of zoning are as follows:

1. Criteria of Network access: This means that regions that have common access and egress point in the network is assigned one zone. For example the traffic originating from South Bihar, Odhisa, West Bengal would enter the network via Varanasi and hence they are allotted same zone.
2. Important Location with Separate Zone: The zones that are important from the point generating trips are allotted different zones though they may be accessing the corridor via same access and egress point. For example South Bihar, Odhisa and West Bengal would enter the network via Varanasi but they are allotted different zones. The Reason being Varanasi is an important location from the point of generating trips since it is one major cities of Uttar Pradesh that have direct access to the Project Corridor.

3. Districts of Project Corridor: Each districts through which project corridor passes is allotted separate zone because they lie in immediate vicinity of the project.
4. All the locations found during OD survey interview was superimposed over zone map (Figure 3-1) and locations falling in the boundary of the zone has been allotted that particular zone.



The list of zones for this study is shown in Table 3-1 and Figure 3-1.

Table 3-1 Zoning System

Sno	ZONE	Sno	ZONE
1	Amroha	26	Meerut
2	Auraiya	27	Moradabad and Rampur
3	Bahraich	28	Nagpur
4	Bareilly	29	NH-27 Entry Lucknow*
5	Bhopal and Sagar	30	NH-34 Catchment*
6	Budaun	31	North Bihar and North Eastern States
7	Chhattisgarh	32	Northern Parts of Rajasthan*
8	Delhi	33	Northern States (above Delhi)*

14	Ghazaiabd	39	Rewa and Shahdol
15	Gurugram and Faridabad	40	Sambhal
16	Hamirpur and Mahoba	41	Shahjahanpur
17	Hapur	42	Sitapur and Lakhimpur Kheri
18	Hardoi	43	South Bihar West Bengal Jharkhand and Odhisa
19	IIA Buladshahr	44	South Haryana
20	Jhansi	45	South Rajasthan and Gujarat
21	Kannauj	46	Southern States
22	Kanpur	47	Unnao
23	Kumaon Region Uttarakhand	48	Varanasi
24	Lucknow	49	Western Maharashtra and Western MP
25	Mathura Agra and Firozabad		

* marked zones explanation
NH-27 entry Lucknow are the districts of Uttar Pradesh that uses NH-27 to reach Lucknow.
NH-34 catchment is the districts on NH-34 South of Bulandshahr and North of Kanpu, includes Aligarh, Kannauj.
The traffic from this zone is not considered for diversion to Gan
Northern parts of Rajasthan is region that uses NH-21 to reach Agra. Includes Jaipur Ajmer
Northern States (above Delhi) includes North Haryana, Punjab and Jammu & Kashmir
Poorvanchal Expressway connection includes districts of Uttar Pradesh connected with Poorvanchal Expressway

Figure 3-1 Zoning Map

3.4 Assessment of Potentially Divertible Traffic

3.4.1 Divertible Zone Pairs

In assessment of divertible zone pairs the first preliminary investigation was done through hub and spoke model in which each zone is assigned the nearest node based on aerial distance. The hub and spoke model is shown in Figure 3-2. The hub and spoke gives an estimate of likely node to be used by any zone. Since traffic moves through road the assigned node were suitably changed and pairs that were unlikely to use the corridor. This was based on the fact that distance through corridor should not be higher that 10% to 20%. The hub and spoke model gives a good indication of nodes of corridor which is used by different OD pairs. For example Lucknow zone, Poorvanchal Expressway zone, NH-27 entry zones while travelling towards North India will use Node N of the Project Corridor. The zone of South India shows an access point at node U while travelling to Northern parts of India but they were not taken as divertible zones since NH-44 is a better option available in terms of distance to reach Northern parts of India. The divertible OD zones is described in Table 3-2.

Figure 3-2 Hub and Spoke Model for Corridor

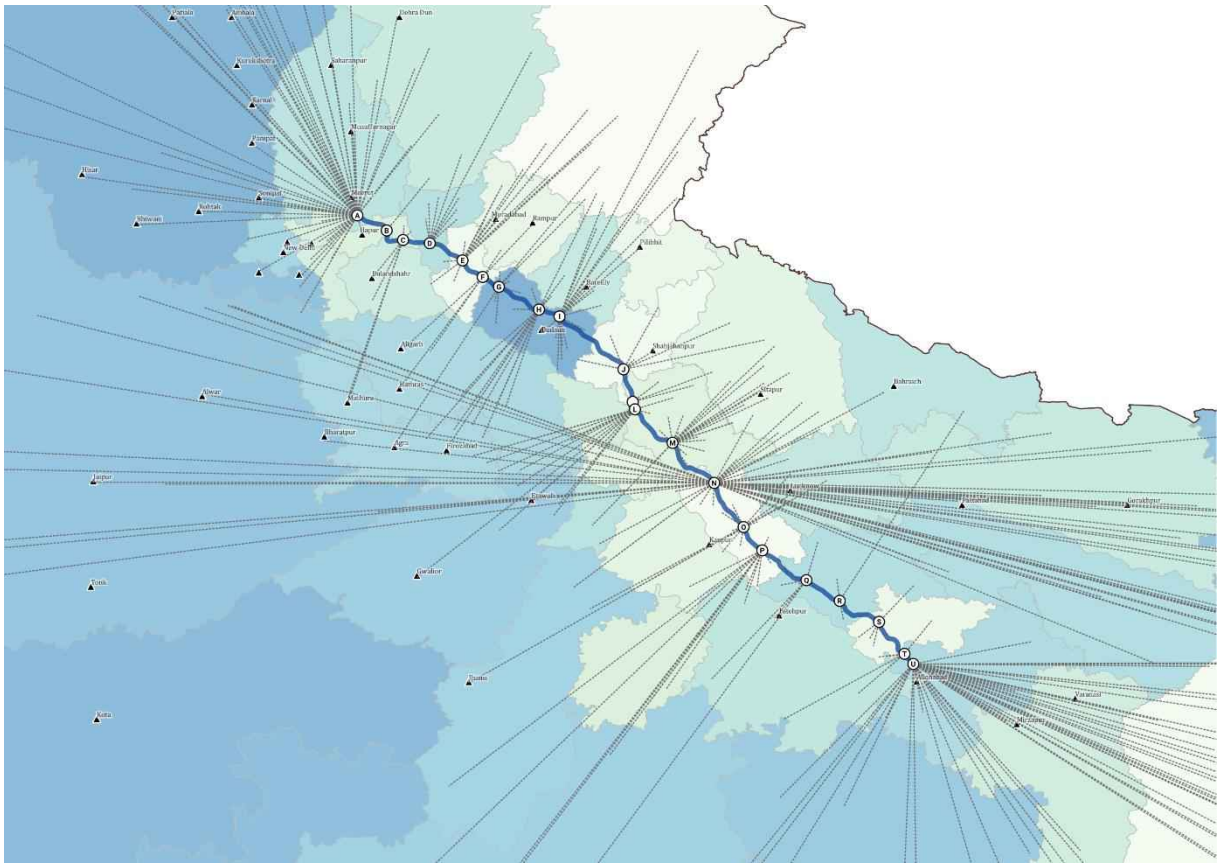

Table 3-2 Divertible Zones

Sno.	Name	Sno.	Name
1	Bareilly	17	Poorvanchal Exp Conn

3	Delhi	19	Raebarelli
4	Hapur	20	Sambhal
5	Hardoi	21	Shahjahanpur
6	IIA Buladshahr	22	South Bihar etc
7	Kanpur	23	Unnao
8	Kumaon Region Uttarakhand	24	Varanasi
9	Lucknow	25	Amroha
10	Mathura Agra and Firozabad	26	Gautam Budh Nagar
11	Meerut	27	Ghazaiabd
12	Moradabad and Rampur	28	Gurugram and Faridabad
13	NH-27 Entry Lucknow	29	Fatehpur and Kaushambhi
14	N Bihar and NE States	30	Garhwal Region Uttarakhand
15	Northern Parts of Rajasthan	31	Pilibhit
16	Northern States (above Delhi)	32	Sitapur and Lakhimpur Kheri

3.4.2 Development of Route System

Route system comprises of alternate route through which currently traffic is moving and routes traversed if the traffic moves through project corridor. 105 such routes were developed for this study. Annexure gives all the route maps developed and route code, OD pair and entry exit points in the corridor. Figure 3-3 shows the route system of traffic moving Northern states to Varanasi as an illustration. It gives following information and inputs that will be used further in analysis.

1. It gives the current route options available for traffic moving in Route 14 i.e. from Northern states to Varanasi. There are four alternatives named 14A, 14B, 14C and 14D along with project corridor.
2. It gives the entry point and exit points if the traffic moves through the project corridor. This means if the traffic moving in alternative routes moves on Project Corridor it will use entry exit points shown in figure i.e. point A and point U.
3. It gives location of survey points which is used to capture traffic moving in Route no. 14. This survey location is used further in calculating divertible OD pairs. All the traffic between the Origin Destination pairs is captured at the survey location.
4. Table 3-3 gives the route no. OD pair movement in the route and entry and exit points on the Project Corridor (if this OD pair moves on the project corridor). Route 14 shown as an illustration is marked in red.

5. It divides each route in sections that is used further in analysis of Road user Cost. Figure 3-4 gives the name of sections and corresponding numeric code is shown in Figure 3-3. In Road User Cost Analysis attributes of each section is assigned in terms of capacity, length roughness etc which is used as input for calculation of Road user Cost.
6. Table 3-4 Shows the sections of the Project Corridor and characteristics of the sections in terms of length, toll rate, type of Highway. Based on type of highways roughness value, capacity is used for Road User Cost Calculation.

3.4.3 Conversion of Divertible OD Matrix into Node Matrix of Project Corridor

The next step is estimation of node matrix from OD matrix obtained from field surveys. As discussed in previous section route system is developed. Each divertible OD pair is assigned a route. For example Route 14 is assigned to OD pair Northern States and Varanasi and same route no. 14 is assigned to OD pair of Northern States and South Bihar. Table 3-5 shows the routes assigned to each divertible OD pair. The routes and code assigned is defined in the Annexure.

Table 3-5 Routes Assigned to Divertible OD Pairs

Since the route system gives the entry and exit points of divertible OD pair, this OD pair gets converted into node pair when assigned to Project corridor. Nodes of project corridor means the entry and exit point of Project Corridor (in this case from point A to U as shown in the route map). The traffic moving in each parallel route is captured at survey locations described in route map. This OD pair is converted into Node Matrix of divertible traffic. For example all the OD pairs moving in different routes having an entry point at A and U is captured in the matrix at intersection cell of row containing A and column containing U. The node matrix of divertible traffic for entire Expressway for each mode is shown from Table 3-6 to Table 3-10. This node matrix was converted into Groupwise divertible node matrix for each mode and is shown from Table 3-11 to Table 3-15. This divertible traffic is candidate traffic that is considered for diversion.

Table 3-6 Divertible Node Matrix of Car

3.5 Estimation of Road User Cost and Diversion Percentage

This section is divided into two subsections. The first subsection provides the methodology for Road User Cost and diversion analysis. The second subsection provides the Road User Cost and Diversion Percentage.

3.5.1 Methodology for Road User Cost Analysis and Divertible Traffic

RUC analysis includes both monetary and non-monetary impacts. Monetary impacts include the vehicle operation cost, value of time, traffic accident costs, as well as vehicle emissions costs. Non-monetary impacts may include undesirable impacts to ecology and environment, increased noise, or impacts to local businesses as a result of construction activities. RUC calculations primarily make use of monetary impacts; other impacts are often neglected due to the difficulty of quantifying their effects. Road User Cost (RUC) is the primary input for estimating the percentage of diversion. In this study, Road user cost for potential route option between the O-D pairs has been estimated as per the guidelines suggested by IRC SP 30-2019. Road user cost comprises of following components such as

- Vehicle operation cost (VOC) in Rs/km
    - Uncongested condition
    - Congested condition
- Value of time (VOT) in Rs/km

The generic expression for estimating RUC is as follows

$$RUC_m^i = VOC_m^i + VOT_m^i \quad \text{Eq. 1}$$

Where, RUC is Road user cost for i^{th} route by a particular type of mode (m), VOC is vehicle operation cost for i^{th} route by a particular type of mode (m); VOT is Value of Time through i^{th} route by a particular type of mode (m);

Following parameters are required for RUC analysis:

1. Identifying appropriate alternate route by detailed network Analysis. Based on the rating analysis.
    - Number of habitations passed
    - Length of habitations: Visually
    - No: of intersections at habitations
    - Construction points at habitations
2. Identifying the congestion points in the Road Network based on the rating
3. Type of the carriageway with number of lanes for each section
4. Rise/Fall of the carriageway of existing corridors for each section
5. Roughness of the carriageway in terms of International Roughness Index (IRI) value for each section of corridor.
6. Traffic volume counts on the existing roads (Project corridor& alternate routes influencing project corridor)
7. Estimating Travel time by speed and delay survey on the existing corridors for each section
8. Distance related congestion factors of the existing roads (Project corridor & alternate routes influencing project corridor)
9. Time related congestion factors of the existing roads (Project corridor & alternate routes influencing project corridor)

Each component of RUC for each mode and each route has been calculated and the corresponding parameters considered as shown in Table 3-17.

Table 3-17 Inputs considered for RUC analysis

Description of RUC component	Parameters/Inputs considered for RUC analysis
Vehicle Operating Cost (VOC), Rs/Km	Project Corridor influence Network Elements Such as • Length of the Route/Road Section in Km • Category of Route (National Highway/State Highway. • Rise/Fall of the carriageway of existing corridors for each section (Based on visual inspection of Network). • Roughness of the carriageway in terms of International Roughness Index (IRI) value for each section of corridor (Based on visual inspection of Network). The value of 3000 is taken for SH and 2000 for SH. • Volume/Design Capacity (V/C) values for Project corridor (based on Traffic volume counts). • Volume/Design Capacity (V/C) values for alternate routes (Considered based on visual inspection of alternate routes in project influence network). • Distance related congestion factors of the existing roads (Project corridor & alternate routes influencing project corridor) for uncongested and Congested conditions. • Time related congestion factors of the existing roads (Project corridor & alternate routes influencing project corridor).
Value of Time, Rs/Km	VOT values are adopted for each mode according to the RF and Roughness values from IRC SP 30-2019.
Additional user cost (Toll Cost, Rs/Km)	Toll rates have been adopted as per the Toll information system, NHAI database.

VOC for each mode and each route considered for O-D Pair has been estimated for two distinct conditions as discussed in proceeding sections i.e. Uncongested and congested conditions of each route. Distance related and Time related congestion factors have been calculated for Uncongested and congested conditions to calculate Vehicle operation costs. Following are the generic expressions considered for estimating vehicle operating costs.

For Uncongested condition,

$$VOC_{mode}^{RF,\ IRI} = DRCF_{mode}^{Lanes} + TRCF_{mode}^{Lanes}$$

Where, VOC of a mode at a Particular Rise/Fall and IRI values of 2/4 lane road in Rs/Km; DRCF= Distance related congestion factors; TRCF= Time related congestion factors

$$DRCF_{mode}^{Lanes} = \sum Fuel,\ \ Lubricants, Tyre, Spare\ Parts, Maintenance\ Labour$$

$$TRCF_{mode}^{Lanes} = \sum Depreciation,\ \ Fixed\ Costs, Value\ of\ passenger\ time\ or\ value\ of\ commodity, wages\ of\ Crew$$

The costs for DRCF and TRCF components of each mode has been adopted from the tables suggested in the Annex-D (Clause 6.6), Page No. 86 IRC SP 30-2019 to calculate VOC in uncongested condition for each mode of selected alternate route choice. The DRCF and TRCF component values considered for economic cost of operation for all modes. These costs of DRCF and TRCF components are calibrated to

current 2021 price levels by applying Wholesale price indices. The detailed VOC values for uncongested condition for the selected O-D Pairs is calculated.

For Congested condition,

$$VOC_{mode}^{Lanes} = DRCF_{mode}^{Lanes} + TRCF_{mode}^{Lanes}$$

$$DRCF_{mode}^{Lanes} = a + b\left(\frac{V}{C}\right)$$

$$TRCF_{mode}^{Lanes} = a + b\left(\frac{V}{C}\right)$$

Where, VOC of a mode of 2/4 lane road in Rs/Km; DRCF= Distance related congestion factors; TRCF= Time related congestion factors; a & b are regression coefficients; V= Practical traffic volume/capacity of selected route section and C= Design capacity of selected route section.

The V/C values considered in this study are based on the Peak hour traffic volumes. Based on these V/C values of a selected route section, DRCF and TRCF values are calculated for each mode and further, VOC for congested condition has been calculated as per the above equation.

Final VOC for a section of road and mode

Thus based on the DRCF and TRCF values for both congested and uncongested conditions, the final DRCF, TRCF and VOC values for each mode and project section is calculated as per the expression shown below. The VOC values for congested condition and final VOC values for the selected O-D Pairs and its corresponding route options are calculated.

$$Final\ DRCF_{mode}^{Lanes} = Uncongested\ DRCF_{mode}^{Lanes} \times Congested\ DRCF_{mode}^{Lanes}$$

$$Final\ TRCF_{mode}^{Lanes} = Uncongested\ TRCF_{mode}^{Lanes} \times Congested\ TRCF_{mode}^{Lanes}$$

$$Final\ VOC_{mode}^{Lanes} = Final\ DRCF_{mode}^{Lanes} + Final\ TRCF_{mode}^{Lanes}$$

Estimation of Road user Cost

Road use cost for each mode and each route considered for O-D Pair has been estimated per km and entire length of the road section based on the VOC values and Toll cost to be paid by the user as per the equation as discussed in the preceding section. The generic equation has been modified as follows for this study since the accident cost data is not available.

$$RUC_m^i = VOC_m^i + VOT_m^i + Toll\ Cost_m^i$$

The equation used to calculate divertible traffic is shown in table below.

Mode	Cost Ratio Interval	Equations
Busses & Trucks	<0.750	$\%\ Div = 100 - \left(\frac{CR}{0.75}\right)0.500$
	$0.750 \leq CR \leq 1.250$	$\%\ Div = 95 - \left(\frac{CR - 0.75}{0.5}\right)90$
	$1.250 \leq CR \leq 2.00$	$\%\ Div = \left(\frac{2 - CR}{0.750}\right)5$

3.5.2 Road User Cost and Diversion Percentages of Routes

1. As descried in Section 3.4.2 and Figure 3-4 the project corridor and alternative routes are divided into sections and based on the attributes of section like number of lanes, roughness, type of road (NH, SH, Expressway), length, toll rate, volume and capacity the Road User Cost of each section is calculated. The Road User Cost of sections are described in Table 3-18.

2. Once the sectional road user cost is calculated then the road user cost of all the 105 routes are calculated. In each route the road user cost for each mode is calculated via Project Corridor and alternate routes. The diversion percentage is calculated from alternative route to Project Corridor. In routes where the alternative is more than 1 the average road user cost is considered for diversion percentage. The diversion percentage is capped to 90% if it exceeds 90%.

3.6 Diverted Traffic on Project Corridor in Base Year

The diversion percentage was applied on divertible OD pairs and traffic was assigned to the project corridor through the developed route system. The mode wise node matrix of diverted traffic on Project Corridor is shown from Table 3-19 to Table 3-24. The mode wise and package wise matrix is shown from Table 3-25 to Table 3-30.

3.7 Impact of Eastern Dedicated Freight Corridor

The Eastern Dedicated Frieght corridor passes through Ludhiana, Meerut, Bulandhahr, Kanpur, Prayagraj upto Dankuni. It runs in close vicinity of the project corridor. However, it is unlikely to have diversion from project corridor and instead the growth of DFC corridor is likely to increase the induced traffic in the project corridor. The reasons are as follows:

1. DFC is more likely to carry bulk commodities like oil and container traffic of heavy haulage trucks. Separate vehicle counts were carried out for container traffic and tankers at Old NH-24 (Brijghat Toll Plaza) and NH-19 (Katoghan Toll Plaza). Brijghat Toll Plaza is on North bank of river Ganga and Katoghan Toll Plaza is on South Bank of river Ganga (near Prayagraj). Less than 5% of 4-6 Axle trucks are container trucks at both plazas. Less than 7.5% 4-6 axle trucks are tanker at both plazas. At NH-19 (Katoghan Plaza) the tanker traffic is 2.5%.

Table 3-31Container Traffic

Container Traffic	Old NH-24 (Brijghat Toll Plaza)	NH-19 (Katoghan Toll Plaza)
Day 1 Counts	43	57
Day 2 Counts	44	60
Day 3 Counts	79	54
ADT of Container	55	57
ADT of MAV (4-6 Axle Truck)	1594	2859
Percentage Container of MAV	3.5%	2.0%

Table 3-32 Tanker Traffic

Tanker	Old NH-24 (Brijghat Toll Plaza)	NH-19 (Katoghan Toll Plaza)
Day 1 Counts	89	108
Day 2 Counts	117	41
Day 3 Counts	146	69
ADT of Tanker	117	73
ADT of MAV (4-6 Axle Truck)	1594	2859
Percentage Tanker Traffic	7.4%	2.5%

2. Eastern DFC is likely to induce growth on the Project Corridor as it is likely to push industrialization in the vicinity of the project corridor. It could be seen that all major Highways having high volume of traffic has parallel rail lines which is evident from the both eastern DFC and traditional rail line runs parallel to GT road (NH-19) and Western DFC and traditional rail line runs parallel to NH-8.

4 Traffic Forecasting

4.1 Methodology

Transport demand elasticity method is used to forecast traffic for horizon year. In this method the elasticity of growth of vehicles with respect to economic factor is calculated for the base year. Under this method the growth of vehicles is taken as independent variable and economic factor is taken as dependent variable. Once the elasticity is calculated the economic factor is projected, and using the calculated elasticity values the growth rate is established. The detailed methodology is as follows:

The Generic Equation both for passenger and freight vehicles is as follows

$$G = f(F, E)$$

where,

G= Growth rate of Traffic

F= Growth of Economic Factor

E= Elasticity. Elasticity of Transport Demand

Estimation of CAGR for Passenger and Freight Vehicles:

Estimation of Cumulative Annual Average Growth Rate based on vehicle data/time series data by using ln-ln regression for interpreting elasticity. The generic equation is as follows:

Equation 4-1

$$Y_i = B_1 + B_0 lnX_i$$

where,

B_1 = Intercept;

B_0 = Regression coefficient (elasticity); and

$\ln X_i$= Annual growth rate of each mode.

Estimation of Economic factor (F) for Base Years

The economic factor of Passenger vehicles

Equation 4-2

$$\mathrm{F_{Passenger}} = \left(1 + \sum_i PIA_i \times G_{p_i})\right) \times \left(1 + \sum_i PIA_i \times CAGR_{PCNSDP_i}\right) - 1$$

$\mathrm{F_{Passenger}}$: Economic Factor of Passenger Vehicles

G_{p_i} : Growth rate of Population of ith state

$CAGR_{PCNSDP_i}$: CAGR of Percapita Net State Domestic Product of ith state

$\mathrm{PIA_i}$: Percentage contribution of ith State

The economic factor of Freight Vehicles

For freight vehicles, CAGR of freight vehicles (based on toll data and registration data) and economic indicator (NSDP/DDP) are calculated. For economic indicator and for growth of registered vehicles the weights are based on the PIA which is essentially trip generating and trip attracting locations (i.e. origin and destination of trips).

Equation 4-3

$$\mathbf{F_{Freight}} = \sum_{i} \boldsymbol{PIA_i} \times \boldsymbol{CAGR_{sNSDP_i}}$$

where,

$F_{Freight}$: Economic Factor of Freight Vehicles
PIA_i : Project influence area of each mode
$CAGR_{NSDP/DDP}$: CAGR of Net State Domestic Product of PIA states or PIA districts

Estimation of elasticity for Base Year

Passenger vehicles

For calculating the elasticity of each for the Base year the generic equation is as follows

Equation 4-4

$$E_{Passenger\ Vehicle} = \frac{CAGR_{Passenger\ Vehicles}}{F_{Passenger}}$$

where,

$E_{Passenger\ Vehicles}$: Base year Elasticity of Passenger vehicles;
$G_{p(PIA_i)} =$: Urban Population growth rate;
$CAGR_{PCNSDP(PIA_i)}$: CAGR of Per capita Net State Domestic Product/ PNDDP for each PIA

Freight Vehicles

Elasticity for Freight Vehicles,

Equation 4-5

$$E_{Freight\ Vehicle} = \frac{CAGR_{Freight\ Vehicles}}{CAGR_{NSDP(PIA)_i}}$$

where,

$E_{Freight\ Vehicles}$: Base year Elasticity of Freight vehicles
G : Growth rate of vehicles;

$CAGR_{NSDP(PIA_i)}$: CAGR of Net State Domestic Product/ DDP for each PIA

Forecasting of Economic Factor

The growth rate of economic factor of both Passenger and freight vehicles for the horizon years is projected by correlating the Weighted PCNSDP/PCNDDP (for Passenger vehicles) data and Weighted NSDP (Freight vehicles) data with GDP growth rate through ln-ln regression analysis.

Equation 4-6

For Passenger vehicles:

$$PCNSDP/PCNDDP_i = B_1 + B_0 \ln GDP_i$$

where,

$PCNSDP/PCNDDP\ is$

B_1 is Intercept;

B_0 is Regression coefficient (elasticity); and

GDP_i is Gross Domestic Product of India.

Equation 4-7

For Freight vehicles:

$$DDP/NSDP_i = B_1 + B_0 \ln GDP_i$$

where,

$DDP/NSDP_i$ is District Domestic Product/Net State Domestic Product

B_1 is Intercept;

B_0 is Regression coefficient (elasticity); and

GDP_i is Gross Domestic Product of India.

Forecasting of traffic growth rates

Based on the elasticity values calculated and projected economic factor, traffic growth rate is derived.

4.2 Traffic Growth Rates for Project Corridor

Section 4.1 describes the methodology to estimate growth rates of the Project Corridor. The following steps and inputs are required to estimate the growth rates.

1. Project Influence Area of the Project Corridor.
2. Growth rate of Economic factor for goods and passenger vehicles.
3. CAGR of each vehicle category for which growth rate is to be estimated.
4. Base year elasticity for each vehicle category as defined in Equation 4-4 and Equation 4-5.
5. Forecasting of Economic Factor for each vehicle type.
6. Forecasting of growth rates.

All these steps are described in subsequent sections.

4.2.1 Project Influence Area

The Project Influence Area (PIA) is derived from origin Destination Survey. PIA gives the contribution of different states in traffic of the Project Corridor. The PIA for each mode is determined by the following Equation:

$$PIA_j = \left(\frac{{}^{n_{O_i}}/_{S_j} + {}^{n_{D_i}}/_{S_j}}{2 \times AADT_j} \right) \times 100$$

Where

PIA_j , is Project Influence Area of j_{th} mode

n_{O_i} , is number of occurrences in origin of i_{th} state in the samples of OD survey

n_{D_i} , is number of occurrences in destination of i_{th} state samples of OD survey

S_j , is the sampling rate of j_{th} mode

$AADT_j$, is AADT of j_{th} mode*

However, In this project growth rate is calculated based on the Origin and destination of each vehicle. This means if the vehicle moves from Delhi to Uttar Pradesh the PIA is 50% Uttar Pradesh and 50% Delhi. The weight of economic factor is 50% of NSDP of Uttar Pradesh and 50% of NSDP of Delhi.

4.2.2 Growth Rate of Economic Factor

1. Equation 4-2 and Equation 4-3 defines Economic factor of goods vehicles and passenger vehicles. In order to estimate the economic factor $CAGR_{NSDP}$, $CAGR_{NSDP}$, $CAGR_{NSDP}$ and G_p is required to be estimated.
2. Log-Linear regression method is adopted to calculate $CAGR_{NSDP}$, $CAGR_{PCNSDP}$, and G_p of PIA states.
3. Table 4-1, Table 4-2 and Table 4-3 gives $CAGR_{NSDP}$, $CAGR_{PCNSDP}$, and G_p and R^2 value for PIA states.

Table 4-1 CAGR and R^2 of NSDP/GDP of PIA states using Log-Linear Regression Model (2011-2018)

	CAGR	R-Square
India (GDP)	7.0%	0.9958
Uttar Pradesh	6.6%	0.9822
Delhi	7.6%	0.9969
Bihar	6.2%	0.9673

Punjab	4.4%	0.997
Rajasthan	4.8%	0.9947
Uttarakhand	3.9%	0.9965
West Bengal	4.2%	0.9546

Table 4-3 CAGR of Population of PIA states

Urban Population Growth Rate	2011-2019
India	2.3%
Uttar Pradesh	2.2%
Delhi	2.3%
Gujarat	2.7%
Haryana	3.2%
Maharastra	1.7%
Punjab	1.9%
Rajasthan	2.1%
Uttarakhand	2.8%

4.2.3 CAGR of Passenger and Goods Vehicles

In the absence of time series of toll data vehicle registration data was used to calculate the growth rate. Following steps were used to derive CAGR of vehicle growth:

1. Road Transport Years book classifies goods vehicle in three categories namely LMV goods, Trucks and Lorries and Multi Axle/articulated vehicles. The CAGR of Multi Axle Vehicles and Trucks of neighboring states of Uttar Pradesh is shown in Table 4-4 and Table 4-5

Table 4-4 CAGR of Multi Axle Vehicles neighboring states of Uttar Pradesh

MAV	Bihar	Chhattisgarh	Haryana	Madhya Pradesh	Nagaland*	Uttar Pradesh	Cumalative
2011-12	1,899	17,356	75,220	31,026	26,560	47,938	1,99,999

4.2.4 Elasticity of transport Demand

Based on Consultants experience and growth rates of economic factor and vehicle registration the following elasticity is adopted for horizon year forecast

Table 4-7 Elasticity Adopted of different Vehicle Types

	2022-26	2027-31	2032-36	2037-41	2042-46	2047-51	2051-56
Car	1.13	1.13	1.13	1.13	1.13	1.13	1.13
Mini Bus	0.70	0.63	0.63	0.63	0.63	0.63	0.63
Bus	0.70	0.63	0.63	0.63	0.63	0.63	0.63
Pickup	1.13	1.01	1.01	1.01	1.01	1.01	1.01
LCV	0.82	0.74	0.74	0.74	0.74	0.74	0.74
2 Axle Truck	0.89	0.80	0.80	0.80	0.80	0.80	0.80
3 Axle Truck	0.53	0.47	0.47	0.53	0.53	0.53	0.53
MAV	1.20	1.08	1.08	1.08	1.08	1.08	1.08

4.2.5 Forecasting of Economic Factor

The forecasting of Economic Factor involves two important steps:

1. Forecasting the GDP of India and its growth rate up to horizon year.
2. Developing a relationship between available NSDP, PCNSP data of PIA states with GDP of India. Using this relationship the growth rate of economic factor of PIA states is predicted.

The subsection describes the above two steps

4.2.5.1 Forecasting of GDP Growth of India

1. Table 4-8 shows the forecasted GDP published by OECD.

Table 4-8 Forecasted GDP Growth as per OECD forecast and National Rail Plan

Year	GDP growth	Year	GDP Growth	Year	GDP growth
2018	6.98%	**2030**	5.30%	**2042**	3.99%
2019	7.59%	**2031**	5.16%	**2043**	3.92%
2020	7.72%	**2032**	5.03%	**2044**	3.84%
2021	7.30%	**2033**	4.91%	**2045**	3.77%
2022	6.92%	**2034**	4.79%	**2046**	3.70%
2023	6.59%	**2035**	4.68%	**2047**	3.63%
2024	6.32%	**2036**	4.56%	**2048**	3.56%
2025	6.10%	**2037**	4.46%	**2049**	3.50%
2026	5.91%	**2038**	4.36%	**2050**	3.43%
2027	5.74%	**2039**	4.26%		
2028	5.58%	**2040**	4.17%		
2029	5.44%	**2041**	4.08%

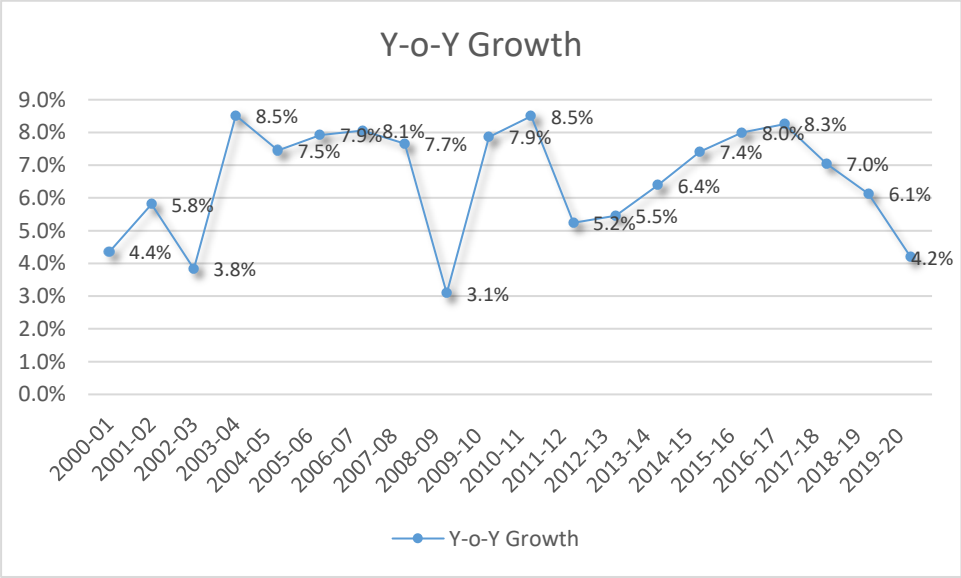
2. However, with the onset of COVID world economy has shown a contraction. Reserve Bank of India published a report dated 7th April 2021 that have forecasted depression in 2020-21 and growth in 2021-22.

Table 4-9 RBI Forecast for GDP depression and growth in 2020-21 and 2021-22

Year	RBI Forecast
2020-21	-7.50%
2021-22	11.00%

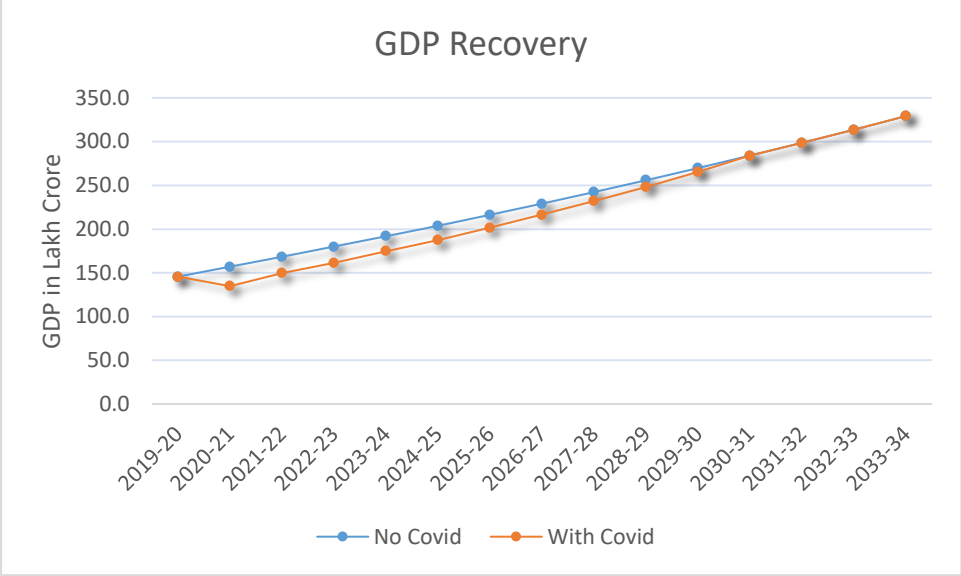


3. Figure 4-1 shows GDP growth in different block years. In block of 8 years the highest GDP growth that has occurred is 7.4%.

Figure 4-1 GDP Growth in block years

Source: Central Statistical Organization

Figure 4-2 Year-to-Year (Y-o-Y) GDP Growth of India



Source: Central Statistical Organization

4. Future forecast for GDP is based on following assumptions:

a. GDP will show a V shape recovery (refer Figure 4-3) and the GDP achieved by OECD forecast without COVID would be achieved by 2033-34.
b. Post 2033-34 the GDP growth is assumed to be same as the forecast OECD.

Figure 4-3 V-Shape Recovery of GDP

c. The GDP table with and without COVID is shown in Table 4-10.
d. The GDP growth forecasted for future block years is shown in Table 4-11.

Table 4-10 GDP Growth table with and without COVID

Year	No Covid Growth Growth	No Covid	With Covid growth	With Covid
2019-20		145.7		145.7
2020-21	7.72%	156.9	**-7.50%**	134.7
2021-22	7.30%	168.4	**11.00%**	149.6
2022-23	6.92%	180.0	8.00%	161.5
2023-24	**6.59%**	**191.9**	**8.00%**	**174.4**
2024-25	6.32%	204.0	7.50%	187.5
2025-26	6.10%	216.4	7.50%	201.6
2026-27	5.91%	229.2	7.50%	216.7
2027-28	5.74%	242.4	7.00%	231.9
2028-29	5.58%	255.9	7.00%	248.1
2029-30	5.44%	269.8	7.00%	265.5
2030-31	5.30%	284.1	7.03%	284.1
2031-32	5.16%	298.8	5.16%	298.8
2032-33	5.03%	313.8	5.03%	313.8
2033-34	4.91%	329.2	4.91%	329.2
2034-35	4.79%	345.0	4.79%	345.0

2051-52	3.43%	667.7	3.43%	667.7

Table 4-11 GDP Growth in block years

Block Year	GDP Growth
2022-2026	7.7%
2027-2031	6.6%
2032-2036	4.8%
2037-2041	4.3%
2042-2046	3.8%
2047-2051	3.5%

Forecasting OF NSDP AND PCNSDP of PIA STATES

1. Log-Log regression between GDP of India and NSDP of PIA states from FY-2011-12 to 2019-20 is carried out to derive a relationship between growth of GDP of India and growth of NSDP of PIA states. Table 4-12 provides the regression analysis of PIA states.

Based on this regression equation and predicted GDP growth as described

2. Table 4-11, NSDP growth rate is predicted in the following manner.

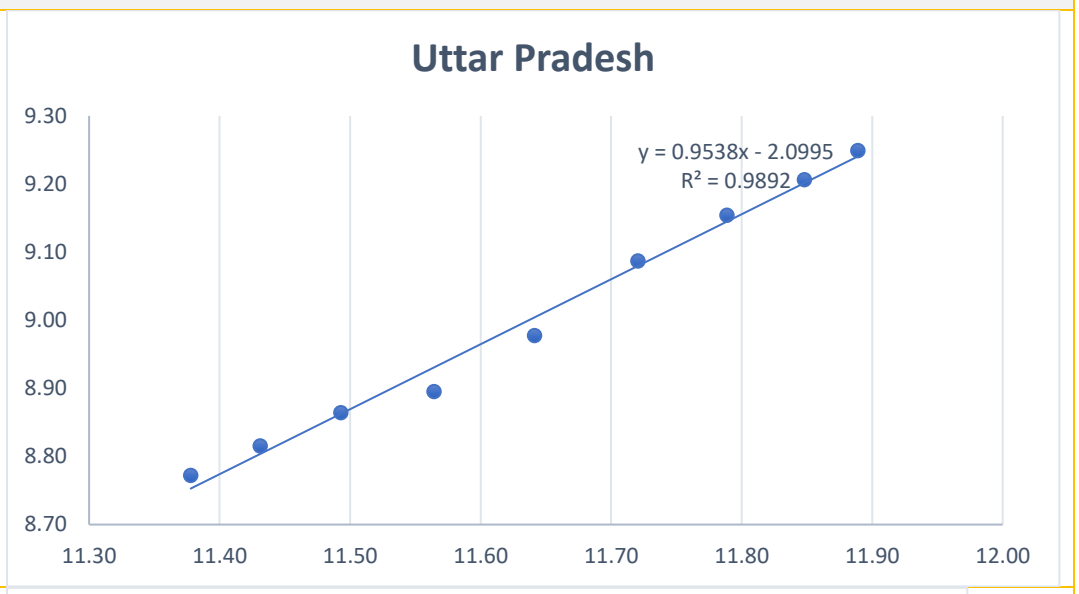
$$\text{Ln}\, NSDP_{year_i} = 0.9538 \ln GDP_{year_i} - 2.0995 \qquad R^2 = 0.9892$$

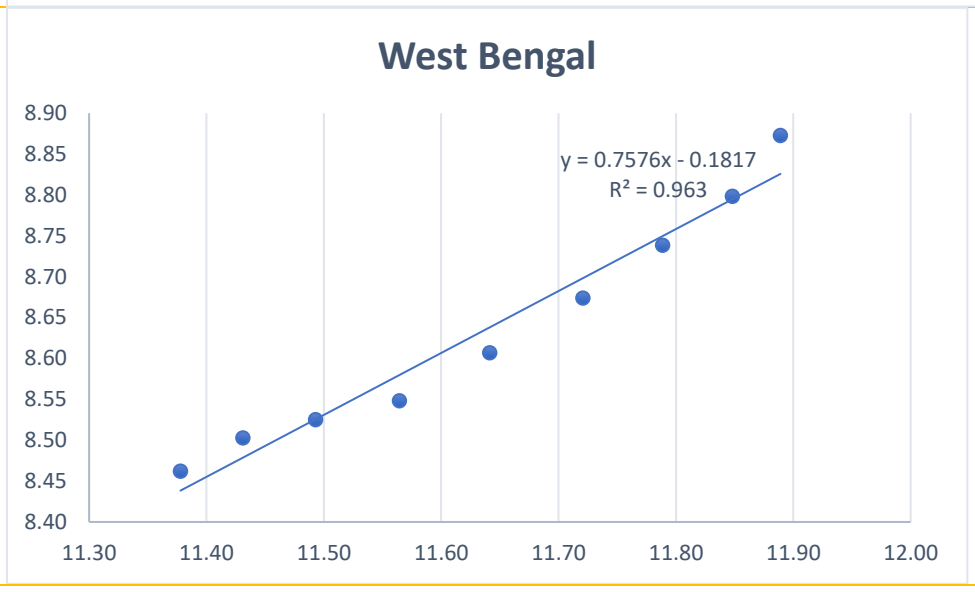
Using the above equation NSDP growth rate is determined in the following manner

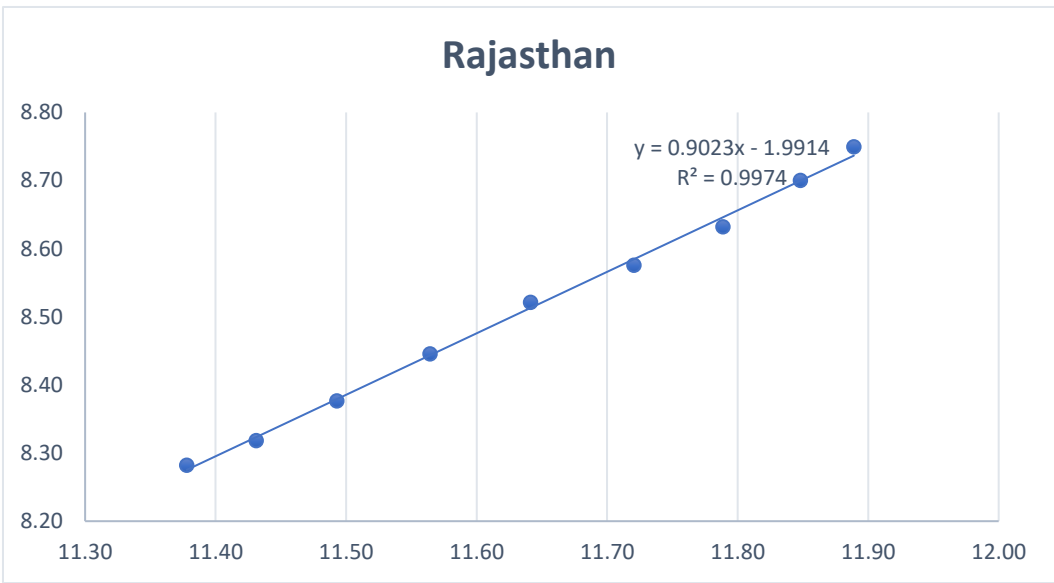
$$\frac{NSDP_{year_{i+1}} - NSDP_{year_i}}{NSDP_{year_i}} = e^{1.1379 \ln \frac{GDP_{year_{i+1}}}{GDP_{year_i}}} - 1$$

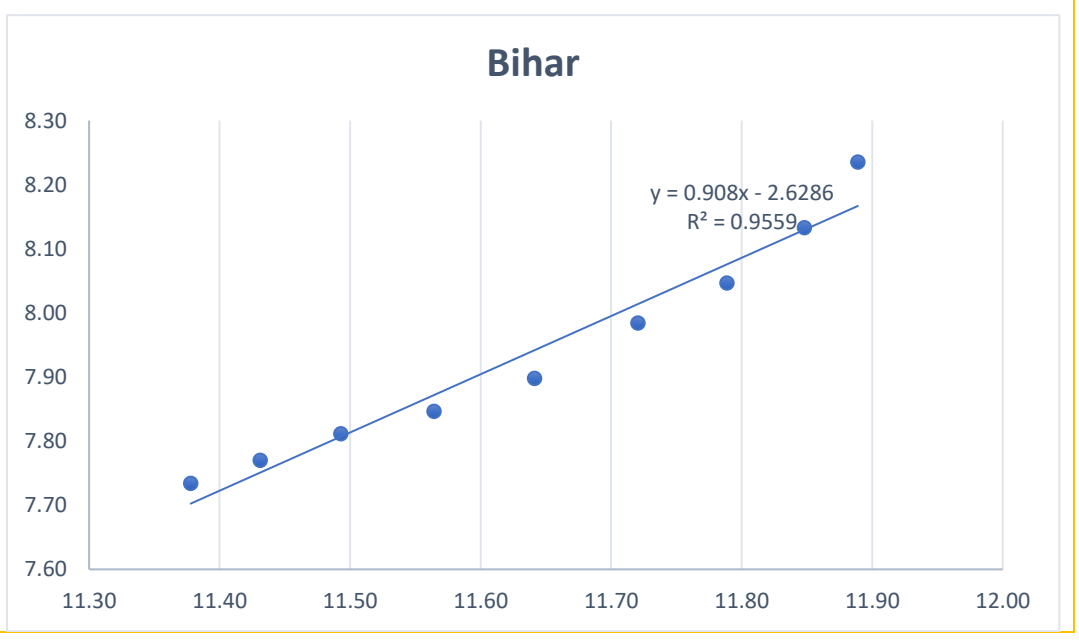
$$G_{NSDP} = e^{0.9538 \ln(1+G_{GDP})} - 1$$

where









$$G_{NSDP} = Growth\ Rate\ of\ NSDP\ of\ the\ state$$

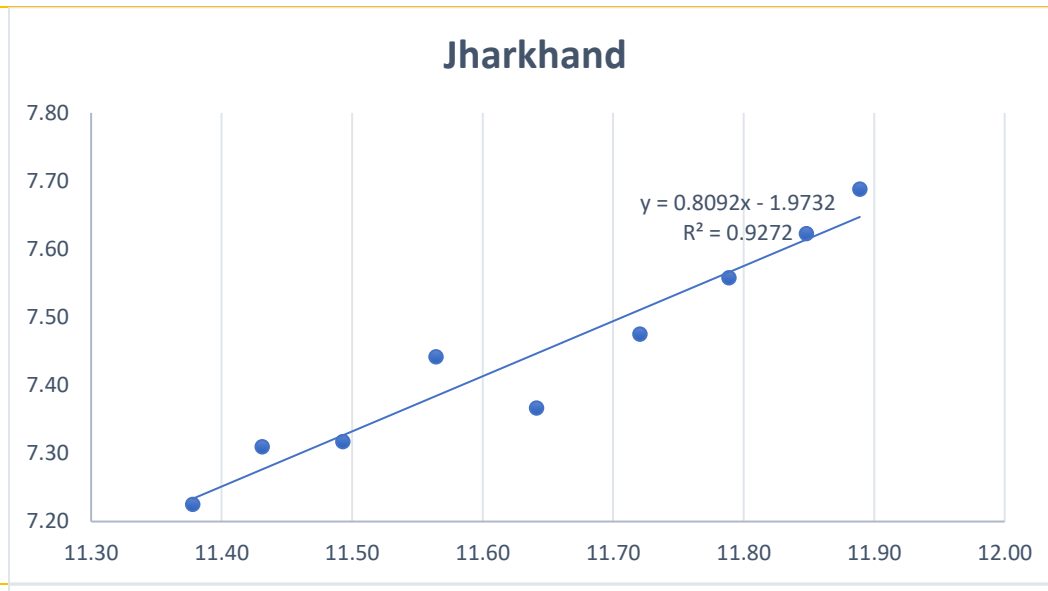
$$NSDP_{year_i} = NSDP\ of\ year_i$$

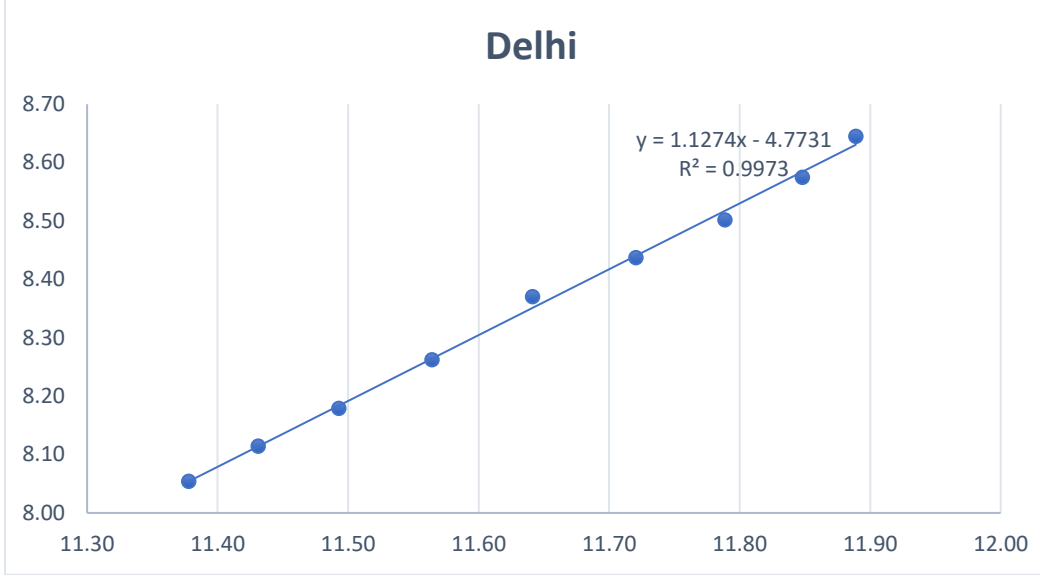
$$GDP_{year_i} = GDP\ of\ year_i$$

3. The β value for relationship between the GDP and NSDP in the above step is 0.9538. This β value is used for prediction of horizon year NSDP of PIA states
4. Table 4-12 describes the regression equation with β value and equation to predict growth rate of NSDP of PIA states.
5. Table 4-13 and Table 4-14 describes the β value of NSDP and PCNSDP states .

Table 4-12 Log-Log Regression of growth of NSDP of States (dependent variable) versus GDP of India (Independent variable)

Name of the State	Growth Rate Equation of NSDP	Log-Log Regression
Uttar Pradesh	$G_{NSDP} = e^{0.9538 \ln(1+G_{GDP})} - 1$	
West Bengal	$G_{NSDP} = e^{0.7576 \ln(1+G_{GDP})} - 1$	
Rajasthan	$G_{NSDP} = e^{0.9023 \ln(1+G_{GDP})} - 1$	
Bihar	$G_{NSDP} = e^{0.908 \ln(1+G_{GDP})} - 1$	





Jharkhand	$G_{NSDP} = e^{0.8029 \ln(1+G_{GDP})} - 1$	
Delhi	$G_{NSDP} = e^{1.1274 \ln(1+G_{GDP})} - 1$	

Table 4-13 β value for Log-Log Regression of growth of NSDP of States (dependent variable) versus GDP of India (independent variable)

NSDP	β	R-Square
Uttar Pradesh	0.9583	0.9892
Delhi	1.1274	0.9973
Bihar	1.02875	0.9532
Haryana	1.2268	0.9977
Jharkhand	1.01416	0.9979
Madhya Pradesh	1.0645	0.9929
Punjab	0.8356	0.9952
Rajasthan	0.9023	0.9974
Uttarakhand	1.1093	0.9988
West Bengal	0.9652	0.9838

Table 4-14 β value for Log-Log Regression of growth of PCNSDP of States (dependent variable) versus GDP of India (independent variable)

PCNSDP	β	R-Square
Uttar Pradesh	0.7293	0.9801
Delhi	0.825	0.9959
Bihar	0.8655	0.9449
Haryana	1.0189	0.9972
Jharkhand	0.90279	0.9971
Madhya Pradesh	0.8381	0.9985

4.2.6 Forecasting of Growth Rates

In calculating the traffic for horizon year the growth is calculated based on individual OD pairs. For example if the origin and destination is Delhi and Uttar Pradesh the growth rate is calculated as product of mean of economic factor of both states and elasticity value described in Table 4-7. This growth rate is input directly to OD pairs and horizon year traffic is calculated. The growth rates of different vehicle type commuting between different OD pairs is shown in Table below.

Table 4-18 Origin Destination wise Growth rate of Car

Origin	Destination	2022-26	2027-31	2032-36	2037-41	2042-46	2047-51	2051-56	2056-61

4.2.7 Apparent Growth Rate For Group 1

Apparent growth rate is growth of traffic from $(n+1)^{th}$ year and n^{th} year. The traffic in all the years are derived using the growth rate described in above section and from this derived traffic entry and exit growth rate is derived. This is called apparent growth which is the growth at a particular entry exit pair. The table below shows apparent growth rate at entry-exit pairs whose traffic was non-zero in the base year. The last row gives the average growth rate of for a particular year.

Table 4-24 Apparent Growth Rate of Car (Entry-Exit wise)

5 Forecasted AADT and Revenue Forecast for Group 1

5.1 Groupwise Forecasted Entry-Exit AADT

1. The base year diverted traffic forms and input to horizon year AADT forecast.
2. Using the base year diverted traffic and growth rates between OD pairs described in the preceding chapter the horizon year mode wise sectional AADT is forecasted. 2% of induced traffic is added to the calculated AADT from the year 2025-26 to 2039-40 and 1% of induced traffic is added thereafter. The reasons for introducing induced traffic is explained in Section 5.1.1. The adopted growth rate for this project has been on conservative side which is described in Section 5.1.2.
3. The following section provides mode wise entry-exit AADT for base year and horizon year for Group 1.

5.1.1 Induced Traffic

Induced traffic/developmental traffic is defined as additional traffic that is likely to be generated when a new Transportation Infrastructure is built. A 2% induced traffic is added over normal growth. This traffic is generated on account of new infrastructure which is over and above the normal growth.To understand the induced traffic as against normal growth please refer to the following extract from World Bank Report on China's High Speed Rail Development authored by Martha Lawrence, Richard Bullock, and Zimung Li. This report was published post development of High-Speed Rail (HSR) in China.

"In addition to its direct economic benefits, HSR has played an important role in promoting regional economic and macroeconomic development. The HSR services have generated many new trips, for both business and leisure. The business trips are in principle associated with the development of larger and better-connected markets, which in turn should promote regional development for the areas served by the new services. Interviews with both passengers and businesses confirm that HSR services have significantly increased mobility and interaction between urban centers. With about 50 percent of riders traveling for business purposes, for a total ridership of 1.7 billion passengers per year, over 850 million new opportunities are created to connect, trade, and exchange ideas each year—compared to the situation prior to the HSR—leading to additional economic activity, innovation, and increased productivity."

5.1.2 Conservative Estimate of Growth Adopted

1. In current study the total diverted traffic of cars on the project corridor is 4,892 (Table 3-19). This is the result of diverted traffic based on cost benefit analysis described in Section 3.5 and 3.6. However, in adjoining highways the at Old NH-24 ON Brijghat Plaza and Niyamatpur Plaza the total number of cars is 21,103 and 13,102 (Table 2-7). In horizon years the development of new infrastructure (Ganga Expressway) in the vicinity of the Highways with increasing congestion on parallel roads would increase the traffic of car over and above normal growth.
2. In case of MAV the elasticity value for growth adopted is 1.2 and further decreasing to 1.08 in horizon years (Table 4-7). This is a conservative estimate of elasticity because the growth of registered MAV is more than 10% in Uttar Pradesh and neighboring states (except Haryana, Table 4-5). The growth of vehicle registration of MAV is 13.3% in the state of Uttar Pradesh. It is to be noted that three axle truck is counted as MAV in vehicle registration data but in this traffic study MAV only means 4-6 axle truck. The traffic report has been further

conservative in adopting elasticity value of 0.53 decreasing to 0.47 in case of 3 axle truck. With NSDP growth in the range of 6-7% the elasticity value is expected to be around 1.5 for MAV but it has been adopted as 1.2 for 4-6 axle truck and 0.57 for Three Axle truck.

3. In parallel Highways the competitive advantage in terms of road user cost would decrease when compared to Ganga Expressway because of following reasons:
    a. Increase in congestion is expected to be more in parallel highways because of growth of tollable modes as well as non tollable modes. This is described in Section 1.3.4.
    b. The annual revision of toll rates for National Highways has a fixed factor of 3% + 40% of WPI increase. However, Ganga Expressway toll rate revision is based only on 40% of WPI increase. Therefore the rate of increase of toll rate of competing National Highways will be higher than Ganga Expressway.

The entry-exit MAV traffic for most likely scenario for horizon years is shown in table below. The traffic in this format is calculated for all modes and all scenarios. This is used as an input in the financial model.

Table 5-1 Most Likely Scenario MAV Traffic Entry-Exit wise

5.2 Estimation of Entry-Exit Toll Rates

1. The gazette notification of Government of Uttar Pradesh provides per km base rate for expressway and base rate of structures based on the cost of structure. This forms an input to the toll rate calculation for each vehicle type. The base rate of expressway is provided in table below

Table 5-2 Base Rate of Expressway according to Gazette Notification

Toll Rates for Expressway excluding the length of Structures / Bypass	Base rate of Fee per Km (in rupees) based on the Wholesale price index(WPI) of week ending on December 2016 (WPI 343.32) for the year 2017-18
Car, Jeep, Van, LMV	2.20
Mini Bus	3.50
Bus	7.05
LMV Goods	2.20
LCV, LGV	3.50
2 Axle Truck	7.05
3 Axle Truck	10.85
MAV	10.85
HCM/EME	10.85
Oversized	13.85
SemiTollable	1.10

2. Table 5-3 provides the section length and details of structures for tolling.

Table 5-3 Group 1 Expressway Section Length and Structure Details

SectionFrom Code	SectionTo Code	Location of TP (Sch R)	Length of Expressway excluding Structure in km (Sch R)	Length of Stuctures	Cost of Stuctures	Location of Structures
A	B	013+400	27.310	0.060	69.309	019+941
B	C	035+270	19.370	0.000	0.000	
C	D	054+640	18.581	0.960	299.960	066+850

D	E	074+181	28.246	0.000	0.000	
E	F	102+427	20.755	0.106	60.056	123+100
F	G	123+288	14.312	0.000	0.000	

The entry-exit single entry MAV toll rate for most likely scenario for horizon years is shown in table below. The toll rate in this format is calculated for all modes and all scenarios and for return and monthly passes. This is used as an inpurt in the financial model.

Table 5-4 MAV Single Entry Toll Rate

5.3 Forecasted Toll Revenue and PCU for Group 1

1. The toll rates and forecasted AADT forms an input to revenue estimate for base year and horizon years. Section 5.1 provides the entry-exit AADT for base and horizon years and Section 5.2 provides entry-exit wise toll rates for base and horizon years.
2. In revenue calculation 90% of vehicles are assumed to single entry, 7% as return pass and 3% as monthly pass.
3. The following sections provide revenue estimates for base year and horizon years.
4. The growth rates adopted for calculation of AADT and revenue is based on average value of apparent growth rate described in Section 4.2.7. The tables (Table 4-24 to Table 4-29) in Section 4.2.7 also gives average value of growth rate for each financial year. This average growth is applied on base year and future year with induced growth as defined in 5.1.1 to obtain AADT and revenue in the financial model. It may be noted that there is negligible difference in AADT provided in previous section which is based on actual values of apparent growth rates (entry-exit wise) and AADT of financial model. The five-year average of growth rate used in financial model is shown in Table 5-5. After obtaining traffic from this growth rate induced traffic is applied.

Table 5-5 Growth Rate of financial Model

	Car, Jeep, Van, LMV	Bus	LCV, LGV	2 Axle Truck	3 Axle Truck	MAV
2022-23 to 2026-27	8.16%	5.06%	5.89%	6.49%	3.79%	8.64%
2027-28 to 2031-32	7.27%	4.06%	4.81%	5.30%	3.10%	7.06%
2032-33 to 2036-37	6.81%	3.77%	3.89%	4.22%	2.47%	5.64%
2037-38 to 2041-42	6.15%	3.40%	3.46%	3.76%	2.45%	5.02%
2042-43 to 2046-47	5.60%	3.10%	3.01%	3.28%	2.13%	4.37%
2047-48 to 2051-52	5.10%	2.82%	2.64%	2.89%	1.88%	3.86%
2052-53 to 2056-57	4.59%	2.54%	2.37%	2.60%	1.69%	3.47%
2057-58 to 2061-62	4.59%	2.54%	2.37%	2.61%	1.69%	3.47%

5. The revenue and PCU forecast was done for three scenarios namely optimistic, pessimistic and most likely. The variation of parameters based from most liley scenario based on which optimistic and pessimistic scenarios were calculated is shown in table below.

Parameter	Pessimistic	Optimistic
Seasonality	-15%	10%
ADT	-15%	10%
Growth Rate	-20%	10%

6. The revenue forecast for most likely, pessimistic and optimistic scenario is shown in tables below.

Table 5-6 Annual Revenue in crores for most likely scenario

Most Likely	Car, Jeep, Van, LMV	Bus	LCV, LGV	2 Axle Truck	3 Axle Truck	MAV	Total Revenue

5.4 Modification in Concession Agreement as per Clause 29.2

5.4.1 Most Likely Scenario

In most likely scenario as per Article 29.2 and traffic at traffic dates the concession period will be extended by 2190 days. The detailed calculations shown in table below.

Table 5-12 Calculation for Modification in Concession Period as per Article 29.2 (Most Likely Scenario)

FY:	2025-26	2030-31	2035-36	2040-41	2045-46	2050-51
Weighted Average Traffic for Previous FY:	8,142	12,340	17,812	24,900	32,444	41,473
Target Traffic:	25,719	40,759	61,199	87,256	1,18,274	1,48,644
Revised Target Traffic:		32,607	48,959	69,805	94,619	1,18,915
Percent Difference from Target:	-68.34%	-49.73%	-63.62%	-64.33%	-65.71%	-65.12%
Percent Difference exceeding 5%:	-63.34%	-44.73%	-58.62%	-59.33%	-60.71%	-60.12%
Percent Difference exceeding 5% Upto 20%:	-20.00%	-20.00%	-20.00%	-20.00%	-20.00%	-20.00%
Remaining Concession Period without any Modification	10056	8230	6404	4577	2751	925
Capped at 20%	12247.6	10421.6	8595.6	6768.6	4942.6	3116.6
Remaining Resultant Concession Period (yrs):	12067.2	10421.6	8595.6	6768.6	4942.6	3116.6

5.4.2 Optimistic Scenario

In optimistic scenario as per Article 29.2 and traffic at traffic dates the concession period will be extended by 2190 days. The detailed calculation shown in table below.

Table 5-13 Calculation for Modification in Concession Period as per Article 29.2 (Optimistic Scenario)

FY:	2025-26	2030-31	2035-36	2040-41	2045-46	2050-51
Weighted Average Traffic for Previous FY:	10,051	15,716	23,306	33,377	44,469	58,025
Target Traffic:	25,719	40,759	61,199	87,256	1,18,274	1,48,644
Revised Target Traffic:		32,607	48,959	69,805	94,619	1,18,915
Percent Difference from Target:	-60.92%	-41.44%	-52.40%	-52.19%	-53.00%	-51.20%

Percent Difference exceeding 5%:	-55.92%	-36.44%	-47.40%	-47.19%	-48.00%	-46.20%
Percent Difference exceeding 5% Upto 20%:	-20.00%	-20.00%	-20.00%	-20.00%	-20.00%	-20.00%
Remaining Concession Period without any Modification	10056	8230	6404	4577	2751	925
Capped at 20%	12247.6	10421.6	8595.6	6768.6	4942.6	3116.6
Remaining Resultant Concession Period (yrs):	12067.2	10421.6	8595.6	6768.6	4942.6	3116.6

5.4.3 Pessimistic Scenario

In pessimistic scenario as per Article 29.2 and traffic at traffic dates the concession period will be extended by 2190 days. The detailed calculation shown in table below.

Table 5-14 Calculation for Modification in Concession Period as per Article 29.2 (Pessimistic Scenario)

FY:	2025-26	2030-31	2035-36	2040-41	2045-46	2050-51
Weighted Average Traffic for Previous FY:	5,649	8,042	10,998	14,654	18,267	22,420
Target Traffic:	25,719	40,759	61,199	87,256	1,18,274	1,48,644
Revised Target Traffic:		32,607	48,959	69,805	94,619	1,18,915
Percent Difference from Target:	-78.04%	-60.27%	-77.54%	-79.01%	-80.69%	-81.15%
Percent Difference exceeding 5%:	-73.04%	-55.27%	-72.54%	-74.01%	-75.69%	-76.15%
Percent Difference exceeding 5% Upto 20%:	-20.00%	-20.00%	-20.00%	-20.00%	-20.00%	-20.00%
Remaining Concession Period without any Modification	10056	8230	6404	4577	2751	925
Capped at 20%	12247.6	10421.6	8595.6	6768.6	4942.6	3116.6
Remaining Resultant Concession Period (days):	12067.2	10421.6	8595.6	6768.6	4942.6	3116.6

Dear Sir,

Valuation Report ("Valuation Report")

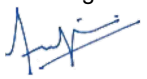
This is in accordance with the terms of reference set out in our Letter of Engagement dated 17 September 2024 along with Addendum to the letter of engagement dated 10 December 2024 (together referred as "LoE"), wherein KPMG Valuation Services LLP (Registered valuer entity under Companies (Registered Valuers and Valuation) Rules, 2017 having IBBI Registration No. IBBI/RV-E/06/2020/115) (hereinafter referred to as "KPMG " or "us" or "we" or "Valuer") has been appointed by IRB Infrastructure Trust ("IRBI Trust/Trust" or "the Company"), MMK Toll Road Private Limited ("Investment Manager") and IDBI Trusteeship Services Limited ("Trustee") (together referred as "the Clients" or "You") in relation to carrying out valuation of Meerut Budaun Expressway Limited ("SPV" or "MBEL" or "Target") as on the agreed date of the valuation in accordance with Regulation 21 of the Securities Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 ("SEBI InvIT Regulations") where valuation is required to be conducted by a registered valuer (as defined under section 247 of the Companies Act, 2013) and such valuation report ("Report") is required to be in compliance with the SEBI InvIT Regulations ("Engagement").

The date for the valuation is 30 September 2024 ("Valuation Date").

We hereby enclose our Valuation Report dated 14 December 2024. This is our deliverable and sets out KPMG's conclusions on the valuation of the Target and has been prepared in accordance with the LoE as of Valuation Date.

The report is based on the information provided to KPMG by the management of the Trust ("Management"). In arriving at our conclusion, KPMG has applied generally accepted valuation methodologies as on the Valuation Date.

The Valuation Report is confidential to the Clients and will be used by the Clients only for the purpose, as indicated in this Report, for which we have been appointed. The results of our valuation analysis and our Report cannot be used or relied by the Clients for any other purpose or by any other party for any other purpose whatsoever.



The Valuation Report is issued by us on the express understanding that it shall not be copied, disclosed or circulated or referred to in correspondence or in discussion with any third party or used for any other purpose without KPMG's prior written consent. We are aware that the Report may have to be shared with certain regulatory authorities in India and stock exchanges in India and therefore Report may enter the public domain and hereby provide our consent to such sharing. It is clarified that reference to this Valuation Report in any document and/ or filing with aforementioned regulatory authorities/ stock exchanges in India, shall not be deemed to be an acceptance by the Valuer of any responsibility or liability to any person/ party other than the Clients.

We will not, pursuant to the LoE, perform any management functions for You, nor make any decisions. You are responsible for making management decisions, including accepting responsibility for the results. Additionally, the Clients are responsible for designating a management-level individual or individuals responsible for overseeing the services provided, evaluating the adequacy of the services provided, evaluating any findings or recommendations, establishing and maintaining internal controls, and monitoring ongoing activities.

The Valuation Report does not constitute an offer or invitation to any section of the public to subscribe for or purchase any securities in, or the other business or assets or liabilities of the Target or Clients. This letter forms an integral part of the Valuation Report and should be read in conjunction with the Valuation Report enclosed herein.

The Valuation Report has been prepared by KPMG Valuation Services LLP (IBBI Registration No. IBBI/RV-E/06/2020/115) solely for the purpose as stated above. The Valuation Report forms an integral whole and cannot be split into parts. The outcome of the valuation can only lead to proper conclusions if the Valuation Report as a whole is taken into account.

Yours faithfully
For KPMG Valuation Services LLP

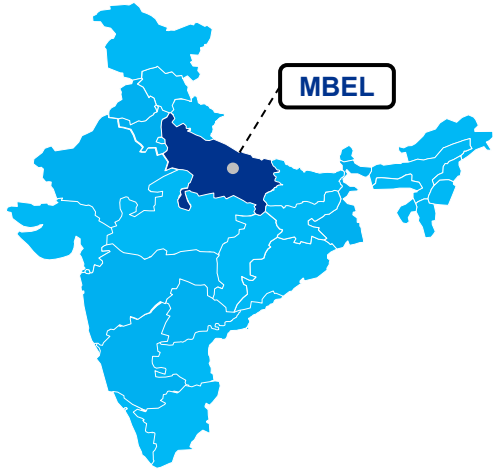
1.
Executive Summary

Overview

Terms of the Engagement

- IRBI Trust is contemplating to acquire 80.4 per cent stake in Meerut Budaun Expressway Limited ("MBEL" or "Target") through acquisition of equity shares and non-convertible debentures ("NCDs") from existing shareholders of the Target ("Proposed Transaction"). We have been appointed by IRBI Trust to undertake equity valuation of the Target in relation to Proposed Transaction..
- The Valuation shall be undertaken in accordance with sub regulation 8 under Regulation 21 of the SEBI InvIT Regulations where full valuation is required to be conducted by a registered valuer and such valuation report is required to be in compliance with the SEBI InvIT Regulations.
- As per the LoE, the valuation is to be carried out as on 30 September 2024. This report has been prepared by KPMG pursuant to terms of LoE.



IRBI Trust Overview

- IRB Infrastructure Developers Limited ("IRBIDL" or "sponsor") is one of the largest infrastructure development and construction companies in India in the roads and highways sector. It was incorporated on 27 July 1998 and is based in Mumbai, India.
- The object and purpose of IRBI Trust is to carry on the activity of an infrastructure investment trust under the InvIT regulations. Investment by IRBI Trust shall only be in holding companies, SPVs, infrastructure projects, securities in India or other permitted investments in accordance with the InvIT regulations, the investment strategy and IRBI Trust documents.
- IRBI Trust units are held by IRBIDL as sponsor with 51% stake, Cintra InvIT Investments B.V. with 24% stake and remaining 25% stake is held by GIC through its affiliates.
- We understand that IRBI Trust is contemplating a rights issue, to fund acquisition of 80.4 percent stake in Target including Non-Convertible Debentures ("NCDs") held by existing shareholders of the Target.
- As of 30 September 2024, IRBI Trust owns stake in 15 SPVs.

Source(s): Management information, IRBI Trust website, KPMG Analysis

SPV Overview

- MBEL has entered into concession agreement with Uttar Pradesh Expressways Industrial Development Authority ("UPEIDA") ("Concession Agreement") for construction and operation on Design, Build, Finance, Operate and Transfer ("DFBOT") basis Meerut – Budaun section from 7.9 km to 137.6 km of NH334 stretching across Uttar Pradesh for concession period of 30 years from appointed date.
- As per the Concession Agreement, MBEL will receive grant of INR 1,746 crores as equity support towards construction cost.

Valuation Summary

Calculation of Enterprise Value to Equity Value of MBEL

INR Crore

The Enterprise Value of the MBEL is INR 3,955 crores and Equity Value (including NCDs) of 100 per cent stake of MBEL is estimated to be INR 2,127 crores as on 30 September 2024.

Equity value (including NCDs) for 80.4 per cent stake of MBEL is estimated to be INR 1,710 cr.

Source(s): Management information, KPMG analysis

1	Cash and cash equivalents comprise cash in hand, liquid investments and balance with banks as at 30 September 2024.
2	Surplus assets primarily comprise of Grant receivable of INR 131 Cr and GST receivable from concession authority on account of change in law of INR 32 Cr as at 30 September 2024.
3	Debt primarily represents loan from banks and financial institutions of INR 1,696 Cr as at 30 September 2024.
4	Unsecured loan from related party represent repayable loan taken from related parties as at 30 September 2024 to cover project cost against grant receivable.
5	Capital creditors of INR 245 Cr have been considered debt like in nature and adjusted from the Enterprise Value to arrive at the Equity Value of MBEL. Management represented that they do not consider these liabilities as part of the working capital and thus they have not been considered as part of the forecast working capital.
6	Our Valuation conclusion assumes that outstanding Non-Convertible debentures ("NCDs") of INR 1600 Cr issued to shareholders in proportion of their shareholding as a part of their equity contribution in the project cost are treated as quasi equity and not adjusted as debt like item in arriving from enterprise value to equity value. This assumption is based on representation from Management that the acquisition consideration will be inclusive of consideration towards acquisition of 80.4 per cent stake in Target including both equity shares and NCDs held by existing shareholders and debenture holders of the Target.

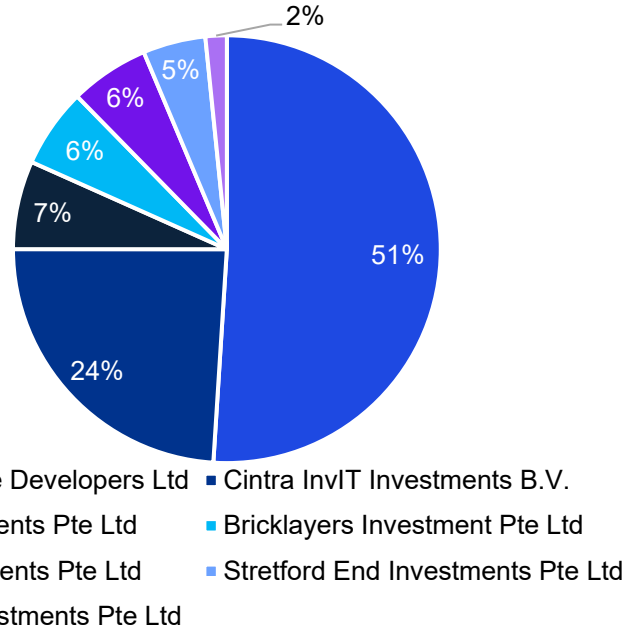
Overview

IRBI Trust Overview

Overview



- IRB Infrastructure Developers Limited ("IRBIDL" or "Sponsor") is one of the largest infrastructure development and construction companies in India in the roads and highways sector. It was incorporated on 27 July 1998 and is based in Mumbai, India.
- IRBI Trust has been settled by the Sponsor as an irrevocable trust under the provisions of the Trusts Act in New Delhi, India pursuant to the Indenture of Trust dated August 27, 2019, as amended. The Indenture of Trust is registered under the Registration Act. IRBI Trust is registered with the SEBI as an infrastructure investment trust under the InvIT regulations.
- The object and purpose of IRBI Trust is to carry on the activity of an infrastructure investment trust under the InvIT regulations. Investment by IRBI Trust shall only be in holding companies, SPVs, infrastructure projects, securities in India or other permitted investments in accordance with the InvIT regulations, the investment strategy and IRBI Trust documents.
- As at 30 September 2024 IRBI Trust assets comprised of 15 SPVs. IRBI Trust has acquired 11 DBFOT road assets and 4 TOT road asset. All SPVs of IRBI Trust are revenue generating. Refer subsequent slides for more details.
- IRBI trust is held by IRBIDL as Sponsor with 51% stake, Cintra InvIT Investments B.V. with 24% stake and remaining 25% stake is held by GIC through its affiliates.

Transaction Overview

- IRBI Trust is contemplating to acquire 80.4% stake in MBEL, through acquisition of equity shares and NCDs from existing equity shareholders and debenture holders i.e. IRB Infrastructure Developers Ltd (51 per cent) and Anahera Investment Pte Ltd (49 per cent)
- IRB Infrastructure Developers Limited is sponsor of the Trust and hence this is a related party transaction.

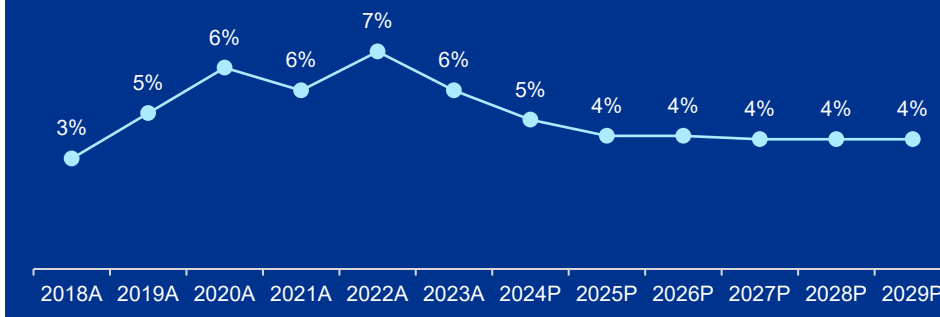
Industry Overview

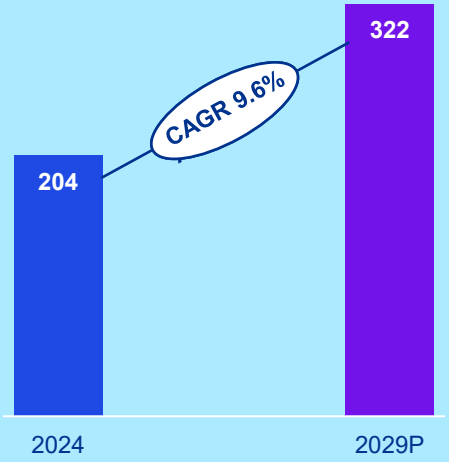


Indian Economy Outlook

Strong economic growth in the first quarter of 2023 helped India overcome the UK to become the fifth-largest economy after it recovered from the COVID-19 pandemic shock. Also, according to IMF economic outlook, India continues to be the fastest-growing economy in the world.

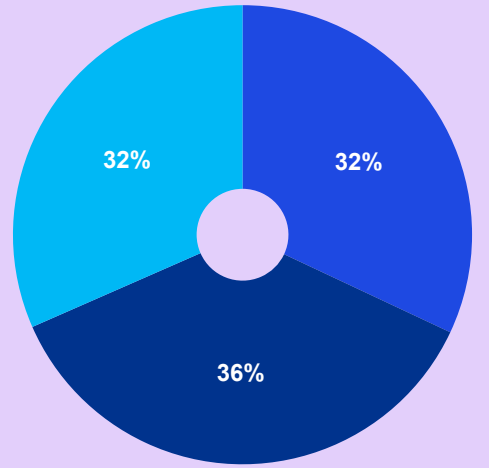
Real GDP growth rate (%)

Annual percentage changes of average consumer prices (%)



Infra Sector

Infrastructure is a key enabler in helping India become a USD 26 trillion economy by 2047. The government has announced a strong pipeline of infra projects across sectors.



Capital investment outlay for infrastructure is being increased by 33 per cent, which would be 3.3 per cent of GDP and almost three times the outlay in 2019-20.

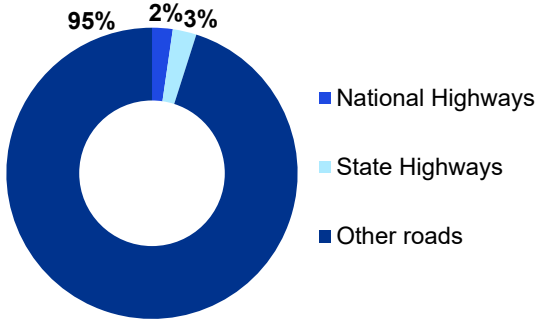
Road Transport and Highways

Road Transport and Highways sector

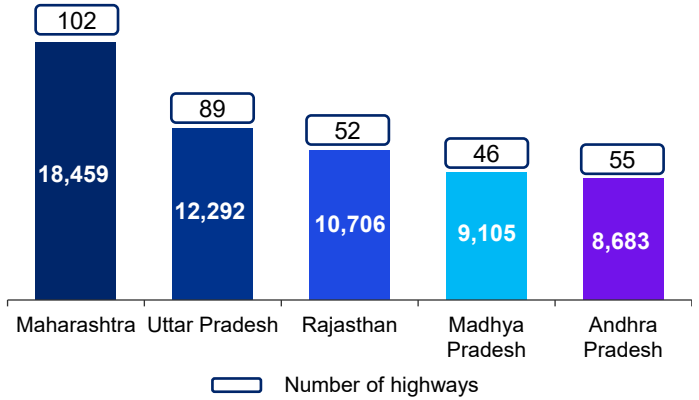
- The Ministry of Road Transport and Highways ("MoRTH") formulates and administers policies for road transport, national highways and transport research. It is also involved with the construction and maintenance of the National Highways ("NHs") through the National Highways Authority of India ("NHAI"), and the National Highway and Infrastructure Development Corporation Limited ("NHIDCL"). NHAI is an agency of MoRTH which is also responsible for the toll collection on several highways.
- Under Interim Budget 2024-25, capital investment outlay for infrastructure has been increased by 11.1% to RS 11.1 lakh crore, which is 3.4% of GDP.

Outlay for Roads under the Union Budget (USD billion)



Source(s): MoRTH, IBEF, Invest India

2nd



India has the second largest road network in the world of about 67 lakh km. This comprises National Highways, Expressways, State Highways, District Roads, Other District Roads and Village Roads.

Road & Highway – classification breakup

As per the data from Ministry of Road Transport and Highways, National Highways (NHs) make up for about 2.2 per cent (1,46,145 km) of the total road network of India (66,71,083 km).

Top 5 states by length of NHs in India (Km)

National Highways carry over 40 per cent of the total traffic across the length and breadth of the country. Maharashtra has the largest network of National Highways with 18,459 km (12.7%). As per MoRTH, there are 970 highways in India.

(*State-wise split is as per March 2024)[*

36.2%

The market for roads and highways in India is projected to grow at a CAGR of 36.2 per cent during 2016-2025, on account of growing government initiatives to improve transportation infrastructure in the country.

Key drivers of the sector

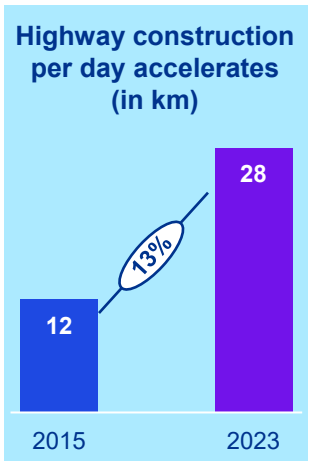
Pace of length of highways awarded and constructed (in kms)

The awarding of projects has picked up pace after the sanction of ambitious Bharatmala programme. The Government of India has allocated INR 1.9 lakh crore under the National Infrastructure Pipeline for 2025. The government also aims to construct 23 new national highways by 2025.

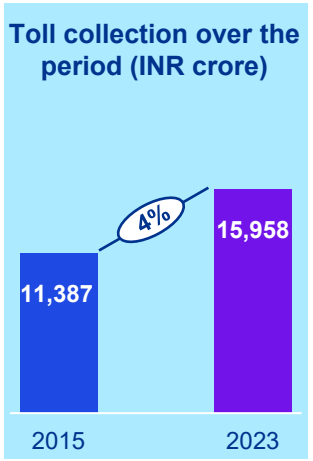
13% (2015-2023) — CAGR - Length of highways constructed

1.3 (2030) — Estimated toll collection (in INR lakh crore)

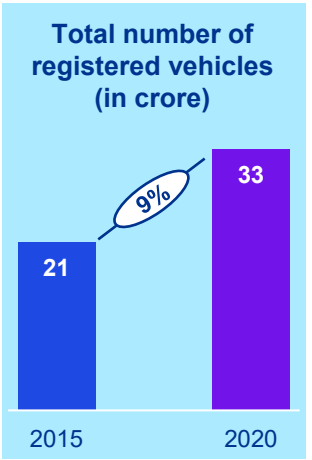
14k (2024) — Road construction target (in km)



40 km (2024) — Estimated road constructed per day



Source(s): MoRTH, Press Information Bureau ("PIB"), Money control



Toll operations efficiency increased due to adoption and growth of FASTag

8.8 Cr As of 31st March 2024, banks have issued over 8.8 crore FASTags

190 Cr The average daily collection via FASTag on NH fee plaza is INR 190.6 crore thereby increasing efficiency in toll operations.

2023 data is as of 05 January 2024
- CAGR

Government has implemented multiple initiatives in the last 9 years to augment the capacity of the National Highway infrastructure in the country. The pace of National Highways construction has increased consistently between 2014-15 and 2022-23 due to the systematic push through corridor-based National Highway development approach.

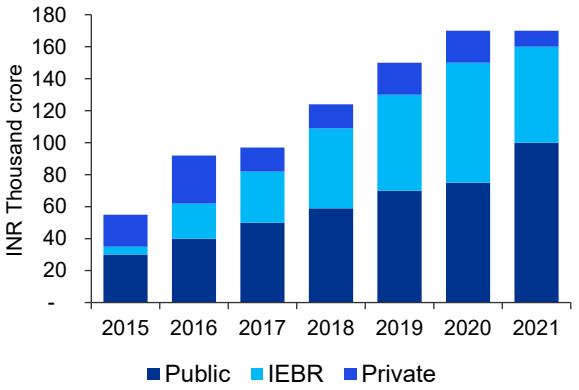
Financing in road infrastructure

Financing infrastructure

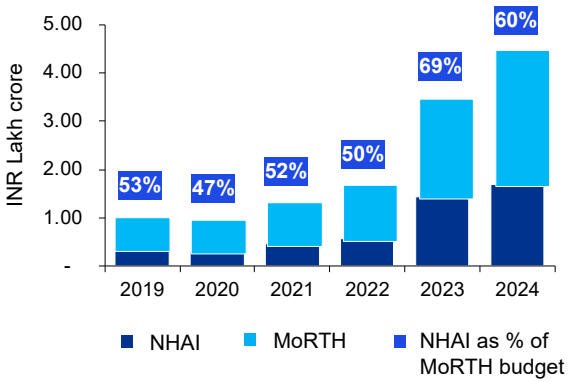
Investment in road infrastructure is long-term and returns are seen several years after construction. Roads and highways are financed through Government and private sources. Funding from Government sources includes budgetary allocations.

Private financing



Under private financing, the private developer builds a road, and in return has the right to collect toll for a specified period of time. The developer is responsible for the maintenance of roads during this period.

Public financing



Funding from government sources includes budgetary allocations, which are financed from taxes, cesses, or dedicated road funds. Publicly funded projects are usually given to contractors under various contract models such as the Engineering Procurement Construction (EPC).

Financing in road sector & MoRTH, NHAI budget

Investment sources (Public, Private or Internal and Extra-Budgetary Resources) for road construction projects over the past six years.

With the high share of NHAI funding in MoRTH budget, NHAI is expected to account for 5k - 5.5k km in this fiscal and 5.8k - 6.2k km in the next.

Investment Opportunities in Roads & Highways

5,954	2568	701	392
Projects	Promoters	District	Opportunity (USD billion)

Types of projects awarded by NHAI

a. Engineering Procurement & Construction

Under the EPC model, Government pays private players to lay roads. The private player has no role in the road's ownership, toll collection or maintenance.

b. Build Operate Transfer ("BOT")

Private players build, operate and maintain the road for a specified period before transferring the asset back to the Government. The private player arranges all the finances for the project, while collecting toll revenue/ annuity fee from the Government.

c. Hybrid Annuity Model ("HAM")

HAM is a hybrid model, a mix of the EPC and BOT (build, operate, transfer) models. HAM combines EPC (40 per cent) and BOT-Annuity (60 per cent). On behalf of the government, NHAI releases 40 per cent of the total project cost. The balance 60 per cent is arranged by the developer.

Valuation Methodology and Approach

KPMG

Valuation Methodology and Approach

Methodology and Approach

The Valuation has been performed as per internationally accepted valuation methodologies and in cognizance of international valuation standards and ICAI Valuation Standards 2018 issues by the Institute of Chartered Accountants of India.

KPMG

©2024 KPMG Valuation Services LLP, an Indian limited liability partnership firm and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Valuation Methodologies - Income Approach

Discounted Cash Flows ("DCF")

- Under a DCF approach, forecast cash flows are discounted back to the present date, generating a net present value for the cash flow stream of the business. A terminal value at the end of the explicit forecast period is then determined and that value is also discounted back to the Valuation Date to give an overall value for the business.
- A discounted cash flow methodology typically requires the forecast period to be of such a length to enable the business to achieve a stabilized level of earnings, or to be reflective of an entire operation cycle for more cyclical industries.
- The rate at which the future cash flows are discounted ("the discount rate") should reflect not only the time value of money, but also the risk associated with the business' future operations. The discount rate most generally employed is weighted average cost of capital ("WACC"), reflecting an optimal as opposed to actual financing structure.
- In calculating the terminal value, regard must be had to the business' potential for further growth beyond the explicit forecast period. The "constant growth model", which applies an expected constant level of growth to the cash flow forecast in the last year of the forecast period and assumes such growth is achieved in perpetuity, is a common method. These results would be cross-checked, however, for reasonability to implied exit multiples.
- Due to the finite life of the concession period of the Target, we have not computed a terminal value for the valuation of the Target
- The rate at which future cash flows are discounted should reflect not only the time value of the cash flows but also the risk associated with the business' future operations. This means that in order for a DCF to produce a sensible valuation figure, the importance of the quality of the underlying cash flow forecasts is fundamental.
- The DCF approach has been applied in the valuation of the Target.

KPMG

©2024 KPMG Valuation Services LLP, an Indian limited liability partnership firm and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Valuation Methodologies - Market Approach

Comparable Companies ("CoCo")

- Under comparable companies method, the value of shares / business of a company is determined based on market multiples of publicly traded comparable companies. Although no two companies are entirely alike, the companies selected as comparable companies should be engaged in the same or a similar line of business as the subject company.
- The appropriate multiple is generally based on the performance of listed companies with similar business models and size.
- The CoCo methodology has been not been applied in the valuation of the Target.
- The list of companies in the road segment have mix of assets which are at different stages of operation / development / revenue mix/ leasing period. Therefore, comparable companies' method is not considered.

Comparable Transactions ("CoTrans")

- Under comparable transactions method, the value of shares / business of a company is determined based on market multiples of publicly disclosed transactions in the similar space as that of the subject company. Due to different purposes of investments, transaction rationale and synergy benefits, different control premiums and minority discounts are embedded in the transaction values.
- Multiples are generally based on data from recent transactions in a comparable sector, but with appropriate adjustment after consideration has been given to the specific characteristics of the business being valued.
- The list of transactions in the road segment have mix of assets which are at different stages of operation / development / revenue mix/ leasing period. Therefore, Therefore, comparable transactions method has not been considered for the valuation of the Target.

Market Price Method

- Under this approach, the value of the business is arrived at considering the market price of the company based on the daily moving averages of the last six-month volume traded weighted average of closing price on the stock exchange where the company's shares are most frequently traded.
- The market price methodology has not been considered in the valuation of the Target as it is not publicly listed or traded on any stock exchange.

KPMG

©2024 KPMG Valuation Services LLP, an Indian limited liability partnership firm and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Valuation Methodologies – Cost Approach

Net Asset Value ("NAV") Method

- Under the net asset value approach, total value is based on the sum of net asset value as recorded on the balance sheet.
- A net asset methodology is most applicable for businesses where the value lies in the underlying assets and not the ongoing operations of the business.
- The net assets methodology has not been considered for the valuation of the Target as the Target is operational and the financials are made on a going concern basis.

Replacement Cost New

- The replacement cost of a business is the cost of acquiring similar assets employed in the business and/or reaching a similar level of development. A purchaser, faced with a build versus buy scenario, may be prepared to pay significantly over and above this cost to obtain advantages including time saved in developing a similar business, and risk of failure.
- The replacement cost method quantifies the cost and risk to reach the present stage of development.
- This approach is often used for start-up/non-mature technology or biotech businesses.
- Hence, the replacement cost method has not been considered.

Market Value of Assets or Realizable Value

- Under the market value methodology, total value is based on the sum of market value of asset value less market value of liabilities plus, the value of intangible assets not recorded on the balance sheet.
- This methodology is most applicable for businesses where the value lies in the underlying assets and not the ongoing operations of the business.
- Hence, the market value method has not been considered.

KPMG

WACC Analysis

Discount Rate and Terminal Value

Discount rate

In order to determine the discount rate, we have used the WACC methodology as set out below:

WACC = Ke * (E/(D + E)) + Kd * (1-T) * (D/(D + E))

Where:	Ke	=	cost of equity
	E	=	market value of equity
	Kd	=	cost of debt
	D	=	market value of debt
	T	=	corporate taxation rate

The cost of equity is derived using the Capital Asset Pricing Model ("CAPM") as follows:

	Ke	=	Rf + ß * (Rm – Rf) + α
Where:	Rf	=	the current return on risk-free assets
	Rm market	=	the expected average return of the
	(Rm – Rf)	=	the average risk premium above the risk - free rate that a "market" portfolio of assets is earning
	ß	=	the beta factor, being the measure of the systematic risk of a particular asset relative to the risk of a portfolio of all risky assets
	α	=	company specific risk factor (alpha)

Terminal Value

- Due to the finite life of the concession period of the Target, we have not computed a terminal value for the valuation of the Target.

KPMG

©2024 KPMG Valuation Services LLP, an Indian limited liability partnership firm and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

Summary - WACC

Risk free rate (Rf) 6.9%	• The nominal risk-free rate is based on our understanding of the analysis of 10 year benchmark government of India securities yield as well analysis of the consensus forecast yield.
Equity risk premium 7%	• Equity risk premium is estimated based on KPMG's understanding of prevailing market return in India. We have considered historical long term equity market return in India and considering the risk-free rate of 6.9 per cent, the resulting ERP is estimated ~7.0 per cent.
Re-levered beta 0.8	• Beta is a measure of the risk of the shares of a company. ß is the co-variance between the return on sample stock and the return on the market. In order to determine the appropriate beta factor for the Target, consideration must be given either to the market beta of the comparable quoted companies. • We have considered companies involved in the road operating industry and infrastructure investment trusts. • Betas are low in this industry due to the stable nature of the road operating industry and low level of cash flow volatility due to the relatively steady usage of roads. Refer annexure 3.
Alpha 1%	• Alpha is the company specific risk premium. Given that the project is currently under construction and is a state government project, We have considered the same to be 1%.
Cost of equity 13.5%	• Based on above parameters cost of equity is 13.5%.
Post Tax Cost of Debt (Kd) **7.4 per cent**	• Existing debt facilities of the Target carry interest rate of 10.7 per cent (MCLR +1.75% margin) as on the Valuation Date. Based on discussion with the Management and typical practice in this industry, We understand that interest rates on borrowings will be revised on completion of the construction due to improvement in credit ratings and/or refinancing the debt. Management has estimated cost of borrowings to go down by 75 basis point during the tolling period. Hence, pre-tax cost of debt has been estimated to be c.10.0 per cent. Based on a Pre-tax cost of debt of c.10 per cent and tax rate of c. 25.17 per cent which is the tax rate applicable to the Target, post-tax cost of debt is arrived at by multiplying pre-tax cost of debt by (1-Tax Rate).
WACC **10.2 per cent**	• Project cost for MBEL is financed using 55% debt and 45% equity. Since the project is under construction and comparable companies have multiple projects in different stages of operation, their debt-equity ratio is not directly comparable. Hence, We have used actual Debt to Equity ratio of the Target i.e. 122.2%. • Considering the above cost of equity of 13.5 per cent, the post-tax cost of debt of 7.4 per cent and the debt-to-equity ratio of 122.2%, the estimated weighted average cost of capital (WACC) is 10.2 per cent.

5.

Valuation of MBEL

Overview

Project details

MBEL has entered into concession agreement with UPEIDA for development, maintenance and management of Ganga expressway for section from km 7.9 to km 137.6 (Meerut - Budaun section) on the NH334 on a DBFOT basis. The project stretch is 129.7 kms, 6 lane road stretching between Meerut and Budaun.
The project is currently under construction and tolling is expected to commence from October 2025.

Concession period

The term of the concession agreement is for a period of 30 years commencing from the appointed date.
Probable extension of concession period is estimated according to article 29 of concession agreement which comes to about 6 years.

Project Cost and Grant

Total project cost is appraised to be INR 6,538 cr. As per concession agreement MBEL will receive a grant of INR 1,746 crore from UPEIDA as equity support for towards construction cost. The Grant due to be received till 30 September 2024 is INR 341.6 crore and the amount of grant pending to accrue is INR 1,274.41 crore.

Remaining project cost of INR 4,792 cr is proposed to be financed in 55:45 ratio of debt and equity. 100 per cent equity contribution in project cost amounting to INR 2,133 cr has already infused by shareholders in form of equity shares and NCDs.

Key Assumptions

a. Modification in concession period

- As per Clause 29.2 of the concession agreement between UPEIDA and MBEL, *"In the event actual average traffic shall have fallen short of the target traffic by more than 5%, then for every 1% shortfall as compared to the target traffic, the concession period shall, subject to payment of concession fee and additional concession fees in accordance with this agreement, be increased by 1% thereof; provided such increase in concession period shall not in any case exceed 20% of the concession period"*.

- Forecast traffic is estimated to be lower than target traffic by more than 20 per cent in all target traffic dates. Hence, Management has considered maximum possible extension in the concession period, 6 years and revised concession period till 10 October 2058 in the forecast. Thus, the explicit period for the current valuation analysis exercise has been considered from 1 October 2024 to 10 October 2058.

- Calculation of 20 per cent extension in the concession period as per the above explanation as follows:

Particulars						
Target Traffic year	**2025-26**	**2030-31**	**2035-36**	**2040-41**	**2045-46**	**2050-51**
Weighted Average daily traffic forecast	5,649	8,042	10,998	14,654	18,267	22,420
Target average daily traffic	25,719	40,759	61,199	87,256	1,18,274	1,48,644
Revised target traffic		32,607	48,959	69,805	94,619	1,18,915
Percent difference from target traffic	(78%)	(60%)	(78%)	(79%)	(81%)	(81%)
Percent difference exceeding 5%	(73%)	(55%)	(73%)	(74%)	(76%)	(76%)
Percent difference exceeding 5% Upto 20%	(20%)	(20%)	(20%)	(20%)	(20%)	(20%)

Source: Traffic Study Report

b. Revenue

- Toll revenue has been considered basis the pessimistic scenario presented in the "Traffic Study for Ganga Expressway" ("Traffic Study Report") prepared by an independent consultant appointed by the Management.

- Traffic volume for the forecast period has been considered based on traffic report prepared by independent consultant in December 2024, which considers the GDP growth rate of India (as per OECD forecast and National Rail plan) and elasticity value of different vehicle type for computing the traffic growth rate. Please refer Section 4 of the Traffic Study Report for Ganga Expressway for detailed traffic volume analysis.

Source(s): Management information

- Annual revision of toll rate for the forecast period shall be in accordance with The Uttar Pradesh Expressway (Levy of Tolls and fixing of Fees and Realization Thereof) (Fourth Amendment) Rules, 2017 and amendment thereto. As per the said rules, the applicable base rate shall be revised annually on April 1 to reflect the increase in wholesale price index ("WPI") but such revision shall be restricted to 40% of the increase in WPI on overall basis during the concession period. As given in the traffic report, WPI has been projected to grow by 4%. Please refer section 5.2 of the Traffic Study Report base toll rate and toll rate estimates.

c. Periodic maintenance & routine maintenance costs

- Periodic and routine maintenance is based on the agreement with IRB Infrastructure Developers Limited till FY 2032. For the forecast period post FY 32 the periodic and routine maintenance cost have been considered based on the technical assessment done by the management and forecast submitted to the lenders.

d. Depreciation & amortization

- Management has forecast project cost net of grant to be depreciated in proportion to forecast revenue.

e. Tax

- Management represented that the Target has adopted the new tax regime. Thus, tax outflows for the forecast have been calculated based on the new regime of income tax.

f. Capex

- MBEL has entered into fixed price EPC contract for construction of the expressway with the sponsor. EPC cost for the project is agreed at INR 5,912 Cr excluding GST. As at Valuation Date INR 1,742 cr of project cost including EPC Cost, contingencies and pre operative expenses (excluding interest during construction) are pending to be incurred of which INR 1,274 cr is to funded from grant to be received from UPEIDA. Balance capex of INR 468 cr is forecast to be incurred between Valuation Date to construction completion date which is expected to be 10 October 2025.

Valuation conclusion	
INR Crore	
Present value of cash flows	3,956
Present value of release of working capital	(0)
Enterprise Valuation	**3,955**
Less: term loan from bank & financial institutions	(1,696)
Less: capital creditors	(245)
Less: unsecured loan from related party	(60)
Add: surplus assets	163
Add: cash and cash equivalent	10
Equity Value (100% Stake) including NCD's	**2,127**
Equity Value (80.4% Stake) including NCD's	**1,710**
WACC	**10.2%**

Present value of release in working capital represent negative working capital of INR 11 Cr released at the end of the concession period.

Basis the above and using a WACC of 10.2%, the Enterprise Value of MBEL on 30 September 2024 is INR 3,955 crore and Equity Value of 100% stake (including NCDs) is 2,127 crore.

Refer page no 22 for detailed WACC analysis

Valuation Conclusion

Valuation Conclusion

Equity Value of Target

Valuation conclusion	
INR Crore	
Present value of cash flows	3,956
Present value of release of working capital	(0)
Enterprise Valuation	**3,955**
Less: term loan from bank & financial institutions	(1,696)
Less: capital creditors	(245)
Less: unsecured loan from related party	(60)
Add: surplus assets	163
Add: cash and cash equivalent	10
Equity Value (100% Stake) including NCD's	**2,127**
Equity Value (80.4% Stake) including NCD's	**1,710**

The Enterprise Value of the MBEL is INR 3,955 crores and Equity Value (including NCDs) of 100 per cent stake of MBEL is estimated to be INR 2,127 crores as on 30 September 2024.

Enterprise value adjustments

1	Cash and cash equivalents comprise cash in hand and balance with banks as at 30 September 2024.
2	Surplus assets primarily comprise of Grant receivable of INR 131 Cr and GST receivable from concessionaire on account of change in law of INR 32 Cr as at 30 September 2024.
3	Debt primarily represents loan from banks and financial institutions of INR 1,696 Cr as at 30 September 2024.
4	Unsecured loan from related party represent repayable loan taken from related parties as at 30 September 2024 to cover project cost against grant receivable.
5	Capital creditors of INR 245 Cr have been considered debt like in nature and adjusted from the Enterprise Value to arrive at the Equity Value of MBEL. Management represented that they do not consider these liabilities as part of the working capital and thus they have not been considered as part of the forecast working capital.
6	Our Valuation conclusion assumes that outstanding Non Convertible debentures (“NCDs”) of INR 1600 Cr issued to shareholders in proportion of their shareholding as a part of their equity contribution in the project cost are treated as quasi equity and not adjusted as debt like item in arriving from enterprise value to equity value. This assumption is based on representation from Management of the Trust that the acquisition consideration will be inclusive of consideration towards acquisition of 80.4 per cent stake including both equity shares and NCDs.

Annexures

Annexure 1: Sources of Information

This Report is prepared based on the below sources of information as provided to us by the Management:

The following information provided to KPMG by Management was used in preparation of the Valuation Report:

- Financial projections of MBEL from 01 October 2024 till the end of the concession period
- Limited review financial statements of MBEL for half year ended on 30 September 2024
- Other data for MBEL which is as follows –
    - Concession Agreement with UPEIDA
    - Traffic Report prepared by T&T consultants
    - Extract of O&M agreement with IRBIDL
    - Extract of Project Implementation agreement with IRBIDL
    - Monthly Progress report prepared by external agency
    - Project cost certificate
- List of approvals, permits, licenses and litigations for MBEL as at 30 September 2024.
- Management has provided project cost certificate and monthly progress report from external agency for physical and financial progress, project cost incurred and pending to be incurred as on 30 September 2024.
- Management has provided Traffic Study Report prepared by T&T Consultants (appointed independently by Client) dated December 2024 for MBEL. Management has confirmed that the traffic Study Report shared is the most recent study available. Forecast revenue has been considered from “Pessimistic Scenario” presented in the aforesaid Traffic Study Report for the Target. Considering technical nature of the traffic study and forecast, We have relied on work of the aforesaid consultant.
- Based on Management representation We have considered appointed date for the commencement of the concession period to be 12 October 2022.
- Management has informed us that routine and periodic maintenance for MBEL has been considered from a technical feasibility study performed by the Management. Given the technical nature of this study, review of the same is not part of our scope of work. Hence, We have considered the routine and periodic maintenance based on Management representation
- Given the nature of the liability, capital creditors of INR 245 Cr outstanding in the books of the SPVs have been considered debt like in nature and adjusted from the enterprise value to arrive at the equity value of the Target.
- Existing debt facilities of the Target carry interest rate of 10.7 per cent as on the Valuation Date. Based on discussion with the Management and industry practice, We understand that interest rates on borrowings will be revised on completion of the construction due to improvement in credit ratings and/or refinancing the debt. Management has estimated cost of borrowings to go down by 75 basis point during the tolling period. Hence, we have considered the cost of borrowing of 10.0 per cent.

Annexure 1: Sources of Information

- Besides the above, there may be other information provided by the Management which may not have been perused by us in any detail, if not considered relevant for our defined scope.
- In addition to the above, we have also obtained such other information and explanations from the Management, either verbally or in written form, as were considered relevant for the purpose of the valuation. We had discussions with the key members of the Management.
- The following external sources were used in the preparation of the report:
  - External databases such as Capital IQ, Mergermarket, etc.
  - Relevant information made available to us by Management at our request.
  - Publicly available information and secondary information.

Annexure 3: Other disclosures as required under SEBI InvIT Regulations

The following disclosures are as at 30 September 2024 for the Target

1. **Valuation of the project in the previous 3 years:** Management has represented that no previous valuation of the project has been undertaken.
2. **List of one-time sanctions/approvals which are obtained or pending/ List of up to date/overdue periodic clearances:** Refer annexure 3a for the aforementioned information.
3. **Estimates of already carried as well as proposed major repairs and improvements along with estimated time of completion:** Refer annexure 3b for the aforementioned information.
4. **Purchase price of the project by the InvIT:** Not Applicable as acquisition is not yet completed
5. **On-going and closed material litigations including tax disputes in relation to the assets, if any:** Management represented that there are no on-going and closed material litigations in the Target.
6. **Statement of assets**: Refer Annexure 3c for the aforementioned information.
7. **Revenue pendencies including local authority taxes associated with InvIT asset and compounding charges, if any:** Management represented that there are no revenue pendencies including local authority taxes and compounding charges with respect to the Target.
8. **Vulnerability to natural or induced hazards that may not have been covered in town planning/ building control:** Management represented that there are no such natural or induced hazards which have been not considered in town planning/building control with respect to the Target.
9. **Latest pictures of the SPV:** Refer annexure 3d for the aforementioned information.
10. **Related party transaction:** Management has represented that IRBI Trust shall acquire 80.4 per cent stake in MBEL from IRB Infrastructure Developers Ltd and Anahera Investments Pte. Ltd., who are also shareholders and related party of IRB Infrastructure Trust. IRB Infrastructure Developers Limited is sponsor of the Trust.
11. **Nature of interest in SPV:** IRBI Trust proposes to acquire 80.4 per cent stake in MBEL by way acquisition of equity shares and 80.4 per cent of outstanding NCD's from existing shareholder and debenture holders of the Target.
12. **Date of site inspection**: During the month of December 2024.

8.

Scope & Limitations

Scope & Limitations (1/3)

Terms of Engagement

- KPMG Valuation Services LLP ("KPMG" or "we" or "us" or "Valuer") has been appointed by IRB Infrastructure Trust ("IRBI Trust/Trust" or "the Company"), MMK Toll Road Private Limited ("Investment Manager") and IDBI Trusteeship Services Limited ("Trustee") (together referred as "the Clients" or "You") in relation to carrying out valuation of Meerut Budaun Expressway Limited ("MBEL" or "Target") as on the 30 September 2024 in accordance with sub regulation 8 under Regulation 21 of the Securities Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 where valuation is required to be conducted by a registered valuer (as defined under section 247 of the Companies Act, 2013) and such valuation report ("Report") is required to be in compliance with the SEBI InvIT Regulations ("Engagement"or"Valuation").
- The terms of the Engagement are set out in our letter of engagement dated 17 September 2024 along with Addendum to the letter of engagement dated 10 December 2024 (together referred as "LoE").
- The date of Valuation is 30 September 2024 ("Valuation Date").
- This Report sets out KPMG's conclusions on the Valuation and has been prepared in accordance with LoE. Our Report is confidential to the Client and will be used by the Client only for purposes mentioned in the LoE. The Report will be issued by us on the express understanding that it shall not be copied, disclosed or circulated or referred to in correspondence or discussion with any third party. This Report is confidential to the Client and it is given on the express understanding that it is not communicated, in whole or in part, to any third party without KPMG's prior written consent. Neither the Report nor its content may be used for any other purpose without prior written consent of KPMG. This Report has a limited scope as specified in it. KPMG will not accept any responsibilities to any other party to whom the Report may be shown or who may acquire a copy of the Report.
- We are not responsible to any other person/ party for any decision of such person/ party based on this Report. Any person/ party intending to provide finance/ invest in the shares/ businesses of the Target/ their holding companies/ subsidiaries/ group companies, if any, shall do so after seeking their own professional advice and after carrying out their own due diligence procedures to ensure that they are making an informed decision. If any person/ party (other than the Client) chooses to place reliance upon any matters included in the report, they shall do so at their own risk and without recourse to the Valuer. It is hereby notified that usage, reproduction, distribution, circulation, copying or otherwise quoting of this Report or any part thereof, except for the purpose as set out earlier in this report, without our prior written consent, is not permitted, unless there is a statutory or a regulatory requirement to do so.
- We are aware that the Report may have to be shared with certain regulatory authorities in India and stock exchanges in India. We also understand from you that the Report may be included in the offer document for the rights issue and therefore, we understand that the Report may enter public domain and hereby provide our consent to such sharing subject to the following:
  - You shall indemnify and hold us harmless against any loss that may be incurred by us arising out of or relating to sharing of the Report with regulatory authorities in India or stock exchanges in India, or the Report entering the public domain as mentioned herein, as also against all costs, charges and expenses (including legal expenses) suffered or incurred by us on account of the aforesaid. In this clause "us" shall include all Firm Persons and "you" shall include Other Beneficiaries (as these terms have been defined in the LoE).
  - Such Report shall be disclosed in full and strictly in such forms as KPMG has provided to the Client without any deviation.
  - KPMG shall not be liable to any person or party for any reason and under any circumstances.
  - The readers of the Report shall not bring any claim against KPMG for matters arising out of or consequent upon disclosure of the Report.
  - The Report shall be issued with all the disclaimers as provided by KPMG at the time of issuance of the Report.

KPMG

Scope & Limitations (2/3)

Disclosure of Interest/Conflict

- KPMG is not affiliated to IRBI Trust in any manner whatsoever. Further, KPMG does not have a prospective interest in the business which is the subject of this engagement.
- KPMG's fee is not contingent on an action or event resulting from the analyses, opinions or conclusions in this Report.
- You are aware that KPMG is already providing/has provided valuation services to IRB InvIT Fund and IRBIDL. Notwithstanding the aforesaid past/ongoing relationship with you, we do not perceive any conflict in undertaking this engagement.
- We have previously carried out valuation of IRBI Trust and its SPVs as per SEBI InvIT Regulations in FY2024 and for period ending September 2024, pursuant to appointment as a registered valuer by IRBI Trust.

Basis of Value

- The report has been prepared on the basis of "Fair Value" as at Valuation Date. The generally accepted definition of "Fair Value" is the value as applied between a hypothetical willing vendor and a hypothetical willing prudent buyer in an open market and with access to all relevant information.

Premise of Value

- The report has adopted "Going Concern Value" as the premise of value in the given circumstances. The generally accepted definition of Going concern value is the value of a business enterprise that is expected to continue to operate in the future.
- The valuation has been performed as per internationally accepted valuation methodologies and in cognizance of international valuation standards and ICAI Valuation Standards 2018 issued by the Institute of Chartered Accountants of India.

Scope and Limitations

- This Report is based on the information provided by the Clients and has been confirmed by the Clients. KPMG have not independently verified or checked the accuracy or timeliness of the same. KPMG have indicated within this Report the sources of the information presented and have satisfied ourselves, so far as possible, that the information presented is consistent with other information which is made available to us in the course of our work in accordance with the terms of this engagement letter. KPMG have not, however, sought to establish the reliability of the sources by reference to other evidence, except as may be specifically agreed in writing between us.
- KPMG has read, analyzed and discussed the financial information and underlying management assumptions pertaining to the Target as provided by the Management. This information has been solely relied upon by KPMG for the Valuation.
- We have based our analysis on the historical audited financial statements of the Target and limited review financial statements of the Target for the period from 01 April 2024 to 30 September 2024. Additionally, our analysis is based on the business plan of the Target for the period from 1 October 2024 to the end of the concession period as provided by the Management ("Management Business Plan") and key underlying assumptions. Any changes in the assumptions or methodology used to consolidate the financial statements may significantly impact our analysis and therefore the Valuation.
- KPMG has read and analyzed but have not commented on the appropriateness of or independently verified the Management Business Plan and underlying data and assumptions and accordingly provided no opinion on the same. If there were any omissions, inaccuracies or misrepresentations of the information provided by the Management, this may have a material effect on our findings and therefore the Valuation.
- The realization of the projections in the Management Business Plan will be dependent on the continuing validity of assumptions on which it is based. Our analysis therefore will not and cannot be directed to providing any assurance about the achievability of the future plans. Since the projections relate to the future, actual results are likely to be different from the projected results because events and circumstances do not occur as expected and the differences may be material.

KPMG

Scope & Limitations (3/3)

- This Report makes reference to 'KPMG analysis'. This indicates only that we have (where specified) undertaken certain analytical activities on the underlying data to arrive at the information presented.
- Our work did not constitute an audit of the financial statements and accordingly, we do not express any opinion on the truth and fairness of the financial position as indicated in this Report. Our work did not constitute a validation of the financial statements of the Target, and accordingly, we do not express any opinion on the same.
- We have carried out the Valuation based on Management Business Plan received. Our scope of work does not include any commercial / legal / technical due diligence or carrying out any environmental / technical feasibility analysis or comparison of Management Business Plan with approved budgets / annual operating plans of the Target. We have relied on Management's representation on such considerations and any changes in the same may significantly impact our analysis and therefore the Valuation.
- Wherever applicable, we have relied upon the legal opinion document / affidavit copies provided by Management in relation to the current status of the projects. We have not carried out / sought any independent legal opinion, nor have we verified the accuracy of the legal opinion shared. Any discrepancy in the same may significantly impact our analysis and therefore the Valuation.
- Our opinion is based on prevailing market, economic, and other conditions at the Valuation Date. It should be appreciated that these conditions can change over relatively short periods of time, not only as a result of internal factors, but because of external factors, which could impact the value, either positively or negatively.
- For our analysis, we have relied on published and secondary sources of data, whether or not made available by the Clients. We have not independently verified the accuracy or timeliness of the same.
- Neither KPMG nor any of its affiliates worldwide are responsible for updating this Report because of events or transactions occurring subsequent to the date of this Report. Any updates or second opinions in this Report cannot be sought by the Management from external agencies including global offices of KPMG without the prior written permission of KPMG.
- KPMG has not considered any finding made by other external agencies in carrying out the Valuation analysis other than the one mentioned herein.
- For the purpose of the Valuation, our scope does not include valuation or legal due diligence of current assets and liabilities and as represented by the Management, the same has been considered at their respective book value.
- For the purpose of this Engagement and Report, we have made no investigation of, and assume no responsibility for the title to, or liabilities against the Target. Our conclusion of value assumes that the title to the assets and liabilities of the Target reflected in the financial statements as on Valuation Date is intact as at the date of this Report.
- Any discrepancies in any table/ annexure between the total and the sums of the amounts listed are due to rounding-off.
- The Report should be read in the light of these limitations, and we caution that had these matters been within the scope of our review, our conclusions may have changed, and that change could be material.
- The information presented in this Report does not reflect the outcome of any due diligence procedures. The reader is cautioned that the outcome of due diligence process could change the information herein and our Valuation, and that change could be material.
- This Report forms an integral whole and cannot be split in parts. The outcome of the Valuation can only lead to proper conclusions if the Report as a whole is taken into account.

Management representation

- This Report is prepared on the basis of the sources of information listed in Annexure 1. KPMG has relied upon written representation provided by the Management that the information contained in the Report is materially accurate and complete, fair in its manner of portrayal and therefore forms a reliable basis for the Valuation.
